# NASA TECH BRIEF

NASA Tech Briefs are issued to summarize specific innovations derived from the U.S. space program, to encourage their commercial application. Copies are available to the public at 15 cents each from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151.

## Closed Circuit TV System Monitors Welding Operations

A TV camera system incorporating a special vidicon tube with a gradient density filter has been devised for use in remote monitoring of TIG (tungsten-inert gas) welding of stainless steel. The welding operations involve complex assembly welding tools and welding skates in areas of limited accessibility. The welding skates include servo motors for feeding and positioning the filler wire, torch positioning, arc length control, and skate drive control. The camera is positioned so that the weld puddle, the filler wire feeding into the puddle, the torch, and the seam to be welded are in full view of the camera. This system enables the operator to make remote precision adjustments while viewing the actual welding operation on the TV screen. A permanent record of the welding process can be recorded on tape for later study.

### Note:

Inquiries concerning this invention may be directed to:

Technology Utilization Officer  
Manned Spacecraft Center  
Houston, Texas 77058  
Reference: B67-10162

### Patent status:

Inquiries about obtaining rights for the commercial use of this invention may be made to NASA, Code GP, Washington, D.C. 20546.
