This document is available from the Clearinghouse for Federal Scientific and Technical Information (CFSTI), Springfield, Virginia 22151, for \$3.00.

Introduction

This Cumulative Index to NASA Tech Briefs lists the technological innovations published in this form during the period from 1963 through 1967. The main section is arranged in six categories: Electrical (including Electronic); Physical Sciences (Energy Sources); Materials (including Chemistry); Life Sciences; Mechanical; and Computer Programs. A typical entry has these elements.

To help users locate information of value, three indexes are provided. The first is a subject index, arranged alphabetically:

Note that in this index several routes are opened for obtaining further information. If the title seems promising, the Tech Brief number and category may be used to locate the abstract, which will be found in the main section arranged sequentially by Tech Brief number

5:1

within each category. Further, the Tech Brief number can of course be used for obtaining a copy of the original Tech Brief.

The second index relates all items by the originating source and number to the Tech Brief number and category.

The third index relates all items by the Tech Brief number and category to the originating source and number.

Copies of all Tech Briefs cited in this Index are available on subscription or in single copy as follows:

Availability of Tech Briefs

Annual subscriptions to Tech Briefs may be purchased from:

Clearinghouse for Federal Scientific and Technical Information Springfield, Virginia 22151

Attn: Code 410.14

The annual subscription rates by subject category are:

| Electrical (Electronic) | \$6.00 |
|------------------------------------|--------|
| Physical Sciences (Energy Sources) | \$2.50 |
| Materials (Chemistry) | \$5.00 |
| Life Sciences | \$2.50 |
| Mechanical | \$6.00 |
| Computer Programs | \$6.00 |

The annual subscription rate for all six categories is \$20.00.

The purchase price of a set of Tech Briefs issued prior to January 1967 is \$30.00. The purchase price of individual Tech Briefs, also available from the Clearinghouse, is 15ϕ each.

Other information on the availability of Tech Briefs may be obtained from:

TECHNOLOGY UTILIZATION DIVISION NATIONAL AERONAUTICS AND SPACE ADMINISTRATION Washington, D.C. 20546

This Cumulative Index replaces all previous issues of the Index to NASA Tech Briefs (NASA SP-5021) and supplements.

01 ELECTRICAL (ELECTRONIC)

٤

B63-10006 SETTING OF ANGLES ON MACHINE TOOLS SPEEDED BY MAGNETIC PROTRACTOR VALE, L. B. MAY 1964 ARC-5

An adjustable protractor facilitates transference of angles to remote machine tools. It has a magnetic base incorporating a beam which can be adjusted until its shadow coincides with an image on the screen of a projector.

B63-10024 SOLENGID PERMITS REMOTE CONTROL OF STOP WATCH AND ASSURES RESTARTING KODAI, C. JUN. 1964 FRC-17

A stop watch which may be remotely controlled by the use of a solenoid mechanism is described. When the solenoid is energized the coil spring pulls the lever arm and starts the balance wheel. When it is not energized, the spring pulls the lever and stops the watch.

B63-10027
INCREASED PERFORMANCE RELIABILITY OBTAINED
WITH DUAL /REDUNDANT/ OSCILLATOR SYSTEM
NOLIS, W. M. /IBM/ MAR. 1964
GSFC-36

Two crystal-controlled oscillators, each with an associated buffer stage, provide an output at a common point. The circuit design gives high reliability control of output frequency and amplitude.

B63-10033
INDIUM FOIL WITH BERYLLIA WASHER IMPROVES
TRANSISTOR HEAT DISSIPATION
HILLIARD, J. JOHN, J. E. A. APR. 1964 /SEE
NASA-TN-D-1753/
GSFC-42

Indium foil, used as an interface material in transistor mountings, greatly reduces the thermal resistance of beryllia washers. This method improves the heat dissipation of power transistors in a vacuum environment.

B63-10091
MODIFIED FILTER PREVENTS CONDUCTION OF MICROWAVE SIGNALS ALONG HIGH-VOLTAGE POWER SUPPLY LEADS
MATHISON, R. P. MAY 1964
JPL-63

Very lossy powdered iron material, in the lining of a polyester resin, replaces the dielectric material in the short coaxial transmission line of a simple filter. The lossy material absorbs microwave signals along high voltage power supply leads.

B63-10118
STEPPING SWITCH WITH SIMPLE ACTUATOR PROVIDES
MANY CONTACTS IN SMALL SPACE
MILLER, J. V. MAY 1964
JPL-122

To reduce the space required for a stepping switch with many contacts, a simple electromochanical

actuator with a maximum number of wipers has been incorporated into a compact assembly. This small sized unit is inexpensive to fabricate.

B63-10174
MODULAR CHASSIS SIMPLIFIES PACKAGING AND
INTERCONNECTING OF CIRCUIT BOARDS
AREMS, W. E. BOLINE, K. G. MAY 1964
JPL-236A

A system of modular chassis structures has simplified the design for mounting a number of printed circuit boards. This design is structurally adaptable to computer and industrial control system applications.

B63-10193
REMOVABLE PREHEATER ELEMENTS IMPROVE OXIDE INDUCTION FURNACE LEIPOLD, M. H. JAN. 1964
JPL-288

Heat and corrosion resistant preheater elements are used in oxide induction furnaces to raise the temperature to the level for conducting electricity. These preheater elements are then removed and the induction coil energized.

B63-10227
ELECTROMECHANICALLY OPERATED CAMERA SHUTTER PROVIDES UNIFORM EXPOSURE FORD, A. G. MAR. 1964
JPL-357

A unidirectional camera shutter employing a solenoid and mechanical linkages permits uniform exposure and minimizes distortion of the image formed in the camera.

B63-10229 FLANGE ON MICROWAVE ANTENNA SUBREFLECTOR CUTS GROUND NOISE POTTER, P. D. MAY 1964 JPL-362

The subreflector of a microwave antenna has been redesigned so that its outer edge has a conical flange. This reduces noise by causing ground energy radiation to cancel out before entering the

B63-10238 SHAPED SUPERCONDUCTOR CYLINDER RETAINS INTENSE MAGNETIC FIELD HILDEBRANDT, A. F. WAHLQUIST, H. MAY 1964 JPL-381

The curve of the inner walls of a superconducting cylinder is plotted from the flux lines of the magnetic field to be contained. This shaping reduces maximum flux densities and permits a stronger and more uniform magnetic field.

B63-10250 LEVEL OF SUPER-COLD LIQUIDS AUTOMATICALLY MAINTAINED BY LEVELOMETER TENER, W. M. MAR. 1964 JPL-397

A levelometer system, in which the level of cryogenic liquid to be controlled affects the level of an electrolyte, automatically switches a pump on and off. A pressure sensitive diaphragm can also throw a microswitch to start or stop the pump.

B63-10255
TRANSFLUXOR CIRCUIT AMPLIFIES SENSING CURRENT FOR COMPUTER MEMORIES
MILLIGAN, G. C. MAR. 1964
JPL-406

To transfer data from the magnetic memory core to an independent core, a reliable sensing amplifier has been developed. Later the data in the independent core is transferred to the arithmetical section of the computer.

B63-10258
DOUBLE-THROW MICROWAVE DEVICE SWITCHES TWO
LINES QUICKLY
CLAUSS, R. STELZRIED, C. T. FEB. 1964
JPL-410

By combining a single-throw microwave switch with a microwave circulator in a circuit, two input lines can be switched quickly. There is only a brief transition time when both /or neither/ of the two lines are connected to an output line.

B63-10262
IGNITING SYSTEM FOR MERCURY VAPOR LAMPS PROTECTS
TRANSISTORIZED SUSTAINING SUPPLY
GUISINGER, J. E. JUL. 1964
JPL-421

A current from a sustaining power supply flows through the mercury vapor lamp and, as there are no resistors in series with this supply, the power is efficiently used. This high voltage igniting device protects the transistorized high current, low voltage power supply.

B63-10264 NOVEL HORN ANTENNA REDUCES SIDE LOBES, IMPROVES RADIATION PATTERN POTTER, P. D. APR. 1964 JPL-425

JPL-0021

A horn antenna, combining two propagation modes at selected power ratios, reduces side lobes, and improves the radiation characteristics. Noise and unwanted signals are considerably suppressed.

B63-10280 METER ACCURATELY MEASURES FLOW OF LOW-CONDUCTIVITY FLUIDS LOVE, E. G. MAY 1964

An electromagnetic flowmeter has been adjusted to minimize the errors inherent in measuring the flow of low conductivity fluids. This is done through use of a direct-coupled, differential cathodefollower, whose grid potential is adjustable with respect to ground levels.

B63-10284 SMALL DIGITAL RECORDING HEAD HAS PARALLEL BIT CHANNELS, MINIMIZES CROSS TALK ELLER, E. E. LAUE, E. G. MAY 1964 JPL-0029

A small digital recording head consists of closely spaced parallel wires, imbedded in a ferrite block to concentrate the magnetic flux. Parallel-recorded information bits are converted into serial bits on moving magnetic tape and cross talk is suppressed.

B63-10321
IMPROVED VARIABLE-RELUCTANCE TRANSDUCER MEASURES
TRANSIENT PRESSURES
MORTON, R. W. PATTERSON, J. L. MAY 1964
LANGLEY-10

A flush-diaphragm pickup and a feedbackstabilized carrier amplifier are among the features incorporated into an improved variable-reluctance transducer. This lowimpedance device responds to steady-state as well as transient pressures.

B63-10338
OPTICS USED TO MEASURE TORQUE AT HIGH
ROTATIONAL SPEEDS
KRSEK, A., JR. TIEFERMAN, M. DEC. 1964
LEWIS-13

In measuring torque transmitted by a high speed rotation shaft, an apparatus has been devised which includes a shaft, an optical system and readout servomechanism. This highly accurate method uses only optical contact with moving part and is statically calibrated.

B63-10342
RADIANT HEATER FOR VACUUM FURNACES OFFERS HIGH STRUCTURAL RIGIDITY, LOW HEAT LOSS VARY, A. MAY 1964
LEWIS-39

Some problems associated with high temperature heaters for vacuum furnaces have been eliminated by the use of shaped filaments of refractory metal. These filaments, supported in cylindrical array by ceramic spacers, operate with high voltage, low current power.

B63-10440
NEW APPARATUS INCREASES ION BEAM POWER DENSITY
BALDWIN, L. V. SANDBORN, V. A. JUN. 1964
LEWIS-73

To increase ion engine or rocket power, an ion source and emitter, an ion beam focusing electrode, and an ion accelerator are incorporated into the system. In operation the space charge surrounding the ion emitter decreases, the ion beam density accelerates, and engine power increases.

B63-10443
IMPROVED SENSOR COUNTS MICROMETEOROID
PENETRATIONS
DAVISON, E. H. MAY 1964
LEWIS-76

A sensor, consisting of a thin dual-capacitor assembly with an outer film of thermal-control material, is used to detect micrometeoroid particles. A coincidence counting circuit is used to count the penetrations.

B63-10493
TWO-STAGE EMITTER FOLLOWER IS TEMPERATURE
STABILIZED
SCHMIDT, M. H. /MCDONNELL AIRCRAFT CORP./ MAY
1964
MSC-20

Two-stage temperature stabilized circuit using two transistors is described. Increase in temperature causes the base-to-emitter voltage of n-p-n transistor to become less positive whereas the base-to-emitter voltage of p-n-p transistor becomes less negative, so the temperature-induced variation in V sub 1 and V sub 2 cancel out.

B63-10508
CIRCUIT SWITCHES LATCHING RELAY IN RESPONSE TO SIGNALS OF DIFFERENT POLARITY
SMITH, L. S. /ELECTRO-OPTICAL SYSTEMS, INC./ MAY 1964
WOO-055

A circuit using one power supply and two storage capacitors, which may be separately discharged in opposite directions through a relay in response to change in polarity of a signal, is described.

B63-10511
FREQUENCY-SHIFT-KEYER CIRCUIT IMPROVES PCM
CONVERSION FOR RADIO TRANSMISSION
MIKSZAN, D. P. /WESTINGHOUSE ELEC. CORP./ JUN.
1964
6SFC-80

A data logic circuit employing a fixed frequency, square-wave oscillator and flip-flop gates allows for the shifting from one frequency to the other at the end of a whole number of cycles of one shift frequency and at the beginning of a cycle of the second shift frequency.

B63-10512 LOW-COST TAPE SYSTEM MEASURES VELOCITY OF ACCELERATION HARTENSTEIN, R. JUN. 1964 GSFC-85

By affixing perforated magnetic recording tape to the falling end of a body, acceleration and velocity were measured. The measurement was made by allowing the tape to pass between a light source and a photoelectric sensor. Data was obtained from a readout device.

B63-10514 COMPUTER CIRCUIT WILL FIT ON SINGLE SILICON CHIP SMITH, C. JUN. 1964 JPL-513

A simplified computer logic circuit of two NAND/NOR gates and three additional inputs to accomplish the count and shift function is described. The circuit has capacity for parallel read-in, counting, serial shiftout, complement input and set and reset.

B63-10529
CONNECTOR FOR THERMOCOUPLE LEADS SAVES COSTLY WIRE, MAKES RELIABLE CONNECTORS MILLER, H. B. APR. 1964
LANGLEY-26

A connector for use in the thermocouple circuits which is silver-brazed to the metal thermocouple sheath on one end and crimped over the insulation

of the flexible lead on the other, assures protection against breakage and abrasion. A moisture-proof insulating material is used to encapsulate the wire junctions.

B63-10536 HOT-AIR SOLDERING TECHNIQUE PREVENTS OVERHEATING OF ELECTRICAL COMPONENTS INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ FEB. 1964 GSFC-91

By using a hot-air gun with a small orifice, heat may be localized to the soldering area of the chassis. The solder is placed around the capacitor which is inserted in the mounting hole so the ring is in contact with the chassis.

B63-10537
SIMPLE CIRCUIT PROVIDES ADJUSTABLE VOLTAGE
WITH LINEAR TEMPERATURE VARIATION
MOEDE, L. W. /DATAMETRICS CORP./ MAR. 196

A bridge circuit giving an adjustable output voltage that varies linearly with temperature is formed with temperature compensating diodes in one leg. A resistor voltage divider adjusts to temperature range across the bridge. The circuit is satisfactory over the temperature range of -20 degrees centigrade to +80 degrees centigrade.

B63-10551 UNMANNED SEISMOMETER LEVELS SELF, CORRECTS DRIFT ERRORS SUTTON, G. /COLUMBIA U./ MAY 1964 GSFC-100

An unmanned, self-leveling seismometer is developed which contains three subsystems, a mechanical, an electronic pickoff and feedback, and a leveling and vertical centering subsystem. Earth motions are detected by means of a seismic mass coupled to a coil-magnet assembly and a differential capacitor plate assembly.

B63-10553
TRANSISTORIZED TRIGGER CIRCUIT IS FREQUENCY-CONTROLLABLE
MOORE, E. T. /DUKE U./ JUN. 1964
GSFC-11

A trigger circuit employing two unijunction transistor oscillators, whose frequency is varied by changing the base-to-base voltage, provides variable electrical control of the frequency.

B63-10554
HIGHLY EFFICIENT SQUARE-WAVE OSCILLATOR OPERATOR
AT HIGH POWER LEVELS
HALL, J. E., JR. /DUKE U./ JUN. 1964
GSFC-112

A square-wave oscillator circuit containing only simple resistor-capacitor combinations and transistors operates with high efficiency at relatively high power levels.

B63-10555 COMPUTER DETERMINES HIGH-FREQUENCY PHASE STABILITY NICHOLS, G. B. JUL. 1964 GSFC-113

Determination of phase stability of a high frequency signal using a computer is accomplished by a circuit using two auxiliary oscillators, multipliers and low-pass filters in cross correlation with the oscillator producing the signal of interest.

B63-10561
TINY SENSOR-TRANSMITTER CAN WITHSTAND EXTREME ACCELERATION, GIVES DIGITAL OUTPUT
MOSSINO, R. L. ROBINSON, G. NOV. 1964
ARC-22

A self-pulsing oscillator transmits a pulsed signal. The time between pulses and the frequency are controlled by two networks. Variations in the component values in each of the two networks, due to environmental changes, appear as changes in frequency and time between pulses in the transmitted signal. Such a sensor is used to measure physical magnitudes.

B63-10567
SIMPLE CIRCUIT CONTINUOUSLY MONITORS
THERMOCOUPLE SENSOR
GREENWOOD, T. L. AUG. 1964
M-FS-61

A series circuit was developed to check the continuity in thermocouple sensors. This method may be used in monitoring continuity in any dc voltage-operated control circuit.

B63-10572
DEVICE CALIBRATES VIBRATION TRANSDUCERS AT AMPLITUDES UP TO 20G
GREENWOOD, T. L. AUG. 1964
M-FS-86

A plezoelectric transducer provides accurate calibration of vibration amplitudes to 20 G. The calibration system uses an electromagnetically driven resonant beam to generate mechanical vibrations at a fixed frequency.

B63-10579
SMALL FOAMED POLYSTYRENE SHIELD PROTECTS LOWFREQUENCY MICROPHONES FROM WIND NOISE
TEDRICK, R. N. MAY 1964
M-FS-123

A foamed polystyrene noise shield for microphones has been designed in teardrop shape to minimize air turbulence. The shield slips on and off the microphone head easily and is very effective in low-frequency sound intensity measurements.

B63-10596 FRONT AND BACK PRINTED CIRCUIT LAYOUTS PRESENTED ON SINGLE SHEET PERRY, J. OCT. 1964 GSFC-93

A diazo photographic process of clear plastic masters is used in reproducing front and back printed circuit layouts of differing intensity on a single sheet.

B63-10597
PRECISION GAGE MEASURES ULTRAHIGH VACUUM
LEVELS
HUDSON, J. B. SEARS, G. W. /GEN. DYN. CORP./
JUN. 1964
GSFC-114

An ionization gauge in which internally generated X-rays are minimized is described. This gauge permits the measurement of gas pressures in ultrahigh systems of micro-pico torr /10 -18/.

B63-10599
LIQUID SWITCH IS REMOTELY OPERATED BY LOW DC VOLTAGE
MOORE, E. T. /DUKE U./ MAY 1964
GSFC-119

A liquid switch which does not depend on any mechanical, gravitational, or inertial actuation is developed for use in space environments. It may be remotely operated on low dc voltage.

B63-10600 CIRCUIT CONTROLS TRANSIENTS IN SCR INVERTERS MOORE, E. T. WILSON, T. G. /DUKE U./ JUN. 1964 GSFC-120

The elimination of starting difficulties in SCR inverters is accomplished by the addition of two taps of the output winding of the inverter. On starting or under transient loads the two additional taps deliver power through diodes without requiring quenching of SCR currents in excess of normal starting load.

B63-10603 MONOSTABLE CIRCUIT WITH TUNNEL DIODE HAS FAST RECOVERY HEFFNER, P. MAY 1964 GSFC-132

A monostable multivibrator circuit using a tunnel diode makes it possible for the MSMV to exceed the performance of present multivibrators in two respects. The rise time of the output voltage is faster and the duty cycle is raised to approximately 95 percent.

B63-10606 New Sintering Process adjusts Magnetic Value OF FERRITE CORES VINAL, A. W. /IBM/ MAY 1964 GSFC-129

A two-phase sintering technique based on time and temperature permits reversible control of the coercive threshold of sintered ferrite cores. Threshold coercivity may be controlled over a substantial range of values by selective control of the cooling rate.

B63-10609
TEMPERATURE-SENSITIVE NETWORK DRIVES ASTABLE
MULTIVIBRATOR
INNOVATOR NOT GIVEN /RCA/ OCT. 1964
GSFC-137

The development of a simple circuit using two zener diodes and five resistors, which provides a temperature-sensitive voltage to drive the astable multivibrator, is described.

B63-10613 CRYOGENIC WAVEGUIDE WINDOW IS SEALED WITH PLASTIC FOAM CLAUSS, R. STELZRIED, C. T. JUN. 1964 JPL-559

Waveguide windows made with polystyrene preformed plastic and sealed with foamed-in-place plastic are useful in any microwave waveguide system using cryogenic cooling.

B64-10002 CIRCUIT RELIABILITY BOOSTED BY SOLDERING PINS OF DISCONNECT PLUGS TO SOCKETS PIERCE, W. B. MAR. 1964 JPL-447

.-447
Where disconnect pins must be used for wiring and testing a circuit, improved system reliability is obtained by making a permanent joint between pins and sockets of the disconnect plug. After the circuit has been tested, contact points may be fused through soldering, brazing, or welding.

B64-10004
ULTRA-SENSITIVE TRANSDUCER ADVANCES MICROMEASUREMENT RANGE
ROGALLO, V. L. MAY 1964
ARC-26

An ultrasensitive piezoelectric transducer, that converts minute mechanical forces into electrical impulses, measures the impact of micrometeoroids against space vehicles. It has uniform sensitivity over the entire target area and a high degree of stability.

B64-10007 LOW-POWER TRANSISTORIZED CIRCUIT PROVIDES STAIRCASE WAVEFORM BREEN, G. D. JUL. 1964 GSFC-48

A low input power transistorized circuit is used to generate a staircase waveform of high step uniformity. Other characteristics are low step droop, fast transition time, and no feedback.

B64-10010
MODIFIED RF COAXIAL CONNECTOR ENDS VACUUM
CHAMBER WIRING PROBLEM
WEINER, D. MAY 1964
GSFC-150

A standard radio frequency coaxial connector is modified so that a plastic insulating sleeve can be mounted in the wall of a vacuum chamber. This eliminates ground loops and interference from cable connections.

B64-10016 COMPACT COAXIAL CONNECTOR FOR PRINTED CIRCUIT ADDS RELIABILITY RADECKE, T. F. MAY 1964 MSC-57

Soldering and welding techniques are used to connect a coaxial cable to a printed circuit board. This device aids reliability control of equipment as standard connectors are bulky and

B64-10017 BLOCKING OSCILLATOR USES LOW TRIGGERING VOLTAGE INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DEC. 1964 MSC-58

To prevent premature triggering of a blocking oscillator, a smaller magnetic core is added to the conventional oscillator circuit. This serves as a second blocking oscillator and has a lower triggering threshold.

B64-10019
NEW METHOD USED TO FABRICATE GALLIUM ARSENIDE
PHOTOVOLTAIC DEVICE
ELLIS, S. G. /RCA/ JUN. 1964
WD0-062

A new method for fabricating photocells, or solar cells, substitutes copper iodide for zinc diffusion. This produces a p-type surface layer and a photovoltaic junction.

B64-10024 EFFICIENT CIRCUIT TRIGGERS HIGH-CURRENT, HIGH-VOLTAGE PULSES GREEN, E. D. /WESTINGHOUSE ELEC. CORP./ JUN. 1964 MSC-14

A modified circuit uses diodes to effectively disconnect the charging resistors from the circuit during the discharge cycle. Result is an efficient parellel charging, high voltage pulse modulator with low voltage rating of components.

B64-10042 OHMETER SENSES DEPLETION OF LUBRICANT IN JOURNAL BEARINGS ROSS, A. O. DEC. 1964 LEWIS-37

An ohmmeter is used as a sensor to determine when the lubricating oil in a high speed journal bearing becomes depleted.

B64-10064
DIGITAL LOGIC ELEMENTS PROVIDE ADDITIONAL FUNCTIONS FROM ANALOG INPUT MATTY, T. C. /MCDONNELL AIRCRAFT CORP./ JUN. 1964
MSC-64

A dc analog input can be used to produce an integrator with high dynamic range or a position servo with inherent stability. This is done by a switching system using digital-to-analog converters and an electronic switch to obtain the desired outputs.

B64-10065
CONTINUITY TESTER SCREENS OUT FAULTY SOCKET
CONNECTIONS
GOLDING, G. MAY 1964
JPL-596

A device, used before and after assembly, tests the continuity of an electrical circuit through each pin and socket of multiple connector sockets. Electrically insulated except at the contact area, a test probe is dimensioned to make contact only in properly formed sockets.

B64-10080
IMPROVED INSERTION-LOSS TESTER
FINNIE, C. J. SCHUSTER, D. JUN. 1964
JPL-358

An improved test method accurately measures the insertion loss of RF components while avoiding amplifier drift. Currents are balanced across a bridge transformer with shorted probes and then with each component to be tested. Differences in adjustments indicate the loss.

B64-10109
ANALOG DEVICE SIMULATES PHYSIOLOGICAL
WAVEFORMS
HICKMAN, D. M. NOV. 1964
MSC-51

An analog physiological simulator generates representative waveforms for a wide range of physiological conditions. Direct comparison of these waveforms with those from telemetric inputs permits quick detection of signal parameter degradation.

4

•

AUXILIARY SILVER ELECTRODE ELIMINATES TWO-STEP VOLTAGE DISCHARGE CHARACTERISTIC OF SILVER-ZINC CELLS CHREITZBERG, A. M. /ELEC. STORAGE BATTERY CO./ JUN. 1964

GSFC-169 In silver-zinc cells, an auxiliary silver electrode is electrically connected to the positive terminal only during discharge. This eliminates the two-step discharge characteristic of such cells.

USE OF PHOTOGRAPHS SPEEDS INSPECTION OF PRINTED-CIRCUIT BOARDS STARK, E. /IBM/ JUL. 1964

The projected images of a printed circuit board and the engineering drawing are superimposed on a screen for visual comparison. This technique speeds inspection, reduces the incidence of error.

B64-10122 SIMPLE TRANSDUCER MEASURES LOW HEAT-TRANSFER RATES LAUMANN, E. A. OCT. 1964 JPL-466

A simple transducer is used to measure low rates of convective and conductive heat transfer from a fluid to a cooled surface under steady-state conditions. Temperature drop is measured by two thermocouples imbedded in a rod of low thermal conductivity.

B64-10143 FIELD-EFFECT TRANSISTOR IMPROVES ELECTROMETER AMPLIFIER MUNOZ, R. NOV. 1964 ARC-36

An electrometer amplifier uses a field effect transistor to measure currents of low amperage. The circuit, developed as an ac amplifier, is used with an external filter which limits bandwidth to achieve optimum noise performance.

B64-10144 RING COUNTER MAY BE ADVANCED OR RETARDED BY COMMAND SIGNAL LIBBY, J. N. MOORE, H. D. JUL. 1964 GSFC-101

A power logic circuit, with bidirectional capability, is used to drive small loads in planned sequence. This is designed in the form of a shift register, with a reversible ring counter.

NOVEL CIRCUIT COMBINES PULSE STRETCHER WITH NOR GATE CLIFF, R. A. OCT. 1964 GSFC-187

A pulse-stretching circuit added to a conventional NOR gate circuit detects a preselected state and produces a pulse that the pulse stretcher maintains for a long enough period to reset all counter stages.

B64-10158 EMISSION TESTER FOR HIGH-POWER VACUUM TUBES LUNDY, C. OCT. 1964 JPL-628

A simple emission-testing circuit for high power vacuum tubes to check their output stability is described. With modification it may be useful in testing mercury-arc rectifiers.

B64-10163 FIELD EFFECT TRANSISTORS USED AS VOLTAGE-CONTROLLED RESISTORS INNOVATOR NOT GIVEN NOV. 1964 M-FS-174

Two new methods of incorporating field effect to new methods of incorporating field effect transistors into circuit designs have resulted in linear response of this type transistor over a wide range of controlled voltage levels. This increases its usefulness as a voltage-controlled resistor.

B64-10171 SUBMINIATURE BIOTELEMETRY UNIT PERMITS REMOTE PHYSIOLOGICAL INVESTIGATIONS DCT- 1964 ARC-39

A subminiature biotelemetry transmitter permits the measurement of biopotential response in humans or animals to controlled environmental stimuli without discomfort while engaged in normal activities.

B64-10173 HIGH-PASS RF COAXIAL FILTER REJECTS DC AND LOW FREQUENCY SIGNALS BAILEY, J. W. MC AFEE, D. F. OCT. 1964 GSFC-73

A low-loss RF filter element for coaxial transmission provides de isolation and eliminates low frequency signals. The characteristic impedance of the transmission line is not affected, as the design permits direct connection of the filter to the line.

B64-10200 BINARY SYSTEM GENERATES SIDEREAL RATE FROM STANDARD SOLAR RATE GRANATA, R. MC CAUL, P. DCT. 1964 GSFC-190

A sidereal rate output from mean solar rate input is derived from a sidereal generator that uses digital division and multiplication techniques.

B64-10209 RASTER LINEARITY OF VIDEO CAMERAS CALIBRATED WITH PRECISION TESTER
INNOVATOR NOT GIVEN /RCA/ DEC. 1964 GSFC-200

The time between transitions in a camera*s video output is measured when registered at reticle marks on the vidicon faceplate. This device permits precision calibration of raster linearity of television camera tubes.

B64-10222 COMPACT CARTRIDGE DRIVES CODED TAPE AT CONSTANT READOUT SPEED AUSTIN, D. C. OCT. 1964 JPL-472

To facilitate storage and repetitive reading of short-program coded tape, a cartridge case, containing mechanical drive and readout assemblies, has been fabricated. The drive transports the tape past a conventional pickup device during the reading function. device during the reading function.

B64-10226 TEMPERATURE-COMPENSATION CIRCUIT STABILIZES PERFORMANCE OF VIDICONS NOV. 1964 JPL-486

A simple transistor circuit uses a thermistor to change the vidicon target potential in relation to temperature differences.

B64-10237 APPARATUS MEASURES CONCENTRATION OF SUSPENDED DROPLETS IN GAS STREAMS BOOTH, F. W. DEC. 1964 LANGLEY-31

An apparatus, operating on the principle of wetand dry-bulb thermometry, permits intermittent or continuous measurement of the concentration of droplets dispersed in a gas stream over a wide range of gas pressure.

B64-10255 ELECTRONIC DEVICE SIMULATES RESPIRATION RATE AND DEPTH THOMAS, J. A. NOV. 1964 MSC-89

An oscillator circuit and a thermistor, in close proximity to a light bulb, periodically alter the heat output of the bulb by varying the voltage across its filament. Use of this simulator permits checkout tests on pneumographs.

B64-10258 DIGITAL CARDIOMETER COMPUTES AND DISPLAYS HEARTBEAT RATE

MITCHELL, V. M. NOV. 1964

1SC-93

To compute the heartbeat rate from the waveform output of an electrocardiogram, a digital cardiometer with solid state circuit elements has been developed. This computes the beat every 15 seconds and visually presents the data on numerical display tubes.

B64-10259
PNEUMOTACHOMETER COUNTS RESPIRATION RATE OF
HUMAN SUBJECT
GRAHAM, O. NOV. 1964
MSC-92

To monitor breaths per minute, two rate-to-analog converters are alternately used to read and count the respiratory rate from an impedance pneumograph over fixed intervals. The converter outputs are sequentially displayed numerically on electroluminescent matrices.

B64-10271
IMPROVED TECHNIQUE FOR LOCALIZING ELECTROPOLISHING FEATURES NOVEL NOZZLES
INNOVATOR NOT GIVEN /GEN. DYN./ASTRONAUTICS/ NOV.
1964
WOO-101

Impingement electropolishing is accomplished by use of an electrolyte film, which is evenly distributed by an insulated nozzle designed to match the contour of the workpiece to be treated. The workpiece is connected to the positive terminal of a generator and the nozzle to the negative terminal.

B64-10280 SERVO SYSTEM FACILITATES PHOTOELASTIC STRAIN MEASUREMENTS ON RESINS OTTS, J. W. NOV. 1964

To facilitate photoelastic measurements of the strains developed by stresses applied to birefringent resins, a servomechanism is employed.

B64-10281 PTC THERMISTOR PROTECTS MULTILOADED POWER SUPPLIES LEVERONE, H. MANDELL, N. NOV. 1964 GSFC-236

A PTC /positive-temperature-coefficient/
thermistor placed in series with each branch load
of a multiload circuit prevents power loss in
parallel branches. This thermistor may be used in
any circuit requiring current limiting or intended
overload resetting.

B64-10283
MOUNTING FOR DIODES PROVIDES EFFICIENT HEAT SINK
SINK
INNOVATOR NOT GIVEN /RCA/ NOV. 1964
M-FS-197

Efficient heat sink is provided by soldering diodes to metal support bars which are brazed to a ceramic base. Electrical connections between diodes on adjacent bars are made flexible by metal strips which aid in heat dissipation.

B64-10299
RADIATION DETECTOR-OPTICAL HANGING DEVICE IS
OF SIMPLIFIED CONSTRUCTION
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
JAN. 1965
GSFC-251

A simplified radiation detector was designed which employs an activated continuous front surface consisting of either the diffused or barrier type of semiconducting material with a grid structure on the nonactivated side of the detector. Its form may be either a rectangular coordinate or a polar coordinate system.

864-10305
TRANSISTORIZED CONVERTER PROVIDES NONDISSIPATIVE
REGULATION
INNOVATOR NOT GIVEN /DUKE U./ DEC. 1964
GSFC-238

A transistorized regulator converter efficiently converts fluctuating input voltages to a constant output voltage, avoiding the use of saturable

reactors. It is nondissipative in operation and functions in an open loop through variable duty cycles.

B64-10309
WELDING PROCEDURE IMPROVES QUALITY OF WELDS,
OFFERS OTHER ADVANTAGES
DEC. 1964
M-FS-32

An improved procedure for arc spot welding uses the SIGMA /submerged inert gas metallic arc/ method. This has resulted in welds of higher quality than are obtainable by conventional means.

B64-10320
VOLTAGE GENERATOR SWEEPS OSCILLATOR FREQUENCY
LINEARLY WITH TIME
INNOVATOR NOT GIVEN /MELPAR, INC./ JAN. 1965
M-FS-219

A voltage-tuned oscillator circuit is described which sweeps the output signal frequency linearly exponentially varying with time.

B64-10330 ECONOMICAL FABRICATION PROCESS PRODUCES HIGH-QUALITY JUNCTION TRANSISTORS INNOVATOR NOT GIVEN /IBM/ DEC. 1964 JPL-SC-065

A convenient, three-step fabrication process, with a p-type layer of gallium arsenide vapordeposited on a starting wafer of germanium, is used to produce heterojunction-homojunction p-n-p transistors. These are of high quality with good injection efficiency and low capacitance.

B64-10349
BANDWIDTH SWITCHING IS TRANSIENT-FREE, AVOIDS
LOSS OF LOOP LOCK
INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DEC.
1964
W00-054

A circuit, in a wide bandwidth mode, overcomes transient-producing capacitance switching by maintaining an equivalent voltage at all times. Bandwidth switching may be done at any time, and integrity of the loop lock is maintained.

B65-10001 CIRCUIT CONVERTS AM SIGNALS TO FM FOR MAGNETIC RECORDING INNOVATOR NOT GIVEN /RCA/ JAN. 1965

Convert AM signals to FM for magnetic recording by relaxation-type voltage-controlled oscillator /VCO/. This circuit may be used in radar, telemetry, and test equipment.

B65-10002 TUNNEL-DIODE CIRCUIT FEATURES ZERO-LEVEL CLIPPING BUSH, E. G. JAN. 1965 GSFC-241

Tunnel-diode circuit starts clipping action as input voltage crosses zero axis. This clipper circuit is effective as limiter in FM receiver.

B65-10005
COMPUTER MODIFICATION REDUCES TIME OF
PERFORMING ITERATIVE DIVISION
INNOVATOR NOT GIVEN /IBM/ FEB. 1965
M-FS-166

Time reduction in performing iterative division results from using a serial-by-parallel divider employing a look-ahead feature that predetermines the sign relationships of several iterations before the computer cycle begins. This method can be employed in any data handling system performing high-speed division.

B65-10006
MODIFICATION INCREASES LIGHT OUTPUT OF
INJECTION-LUMINESCENT DIODES
INNOVATOR NOT GIVEN /RCA/ JAN. 1965 SEE ALSO
B64-10283
M-FS-192

Removing a section of the electrode area from the N-face of injection-luminescent diodes for pumping lasers substantially increases light output. Light is emitted from the N-face as well

41

as from the four edges of the diode.

B65-10010 INEXPENSIVE, STABLE CIRCUIT MEASURES HEART RATE VICK, H. A. JAN. 1965 MSC-95

Inexpensive transistorized circuit provides reliable analog indications of heart rate in response to preamplified electrocardiograph signal applied to its input.

B65-10011 CIRCUIT IMPROVEMENT PRODUCES MONOSTABLE MULTIVIBRATOR WITH LOAD-CARRYING CAPABILITY GOLDMAN, N. E. SCHAFFERT, J. C. JAN. 1965 GSFC-34A

Improved circuit provides greater reliability and load-carrying capabilities for monostable multivibrator.

HELICAL COAXIAL-RESONATOR MAKES EXCELLENT RF FILTER INNOVATOR NOT GIVEN /RCA/ JAN. 1965 1965 GSFC-243

Isolation of closely spaced transmitting and receiving frequencies of an antenna without insertion loss by filtering the receiver input is accomplished by an inner conductor with two winding helices and an outer conductor of aluminum. A tuning slug is at either end of the inner conductor form.

B65-10013 ZENER DIODE FUNCTION GENERATOR REQUIRES NO EXTERNAL REFERENCE VOLTAGE BOLTE, G. BURNS, R. JAN. 1965 JPL-33

Function generator utilizing parallel impedance networks with zener diodes produces functions which are discontinuous in slope. The function generated appears at the output of the parallel network in the form of a voltage varying in time.

B65-10018 CARBON ARC IGNITION IMPROVED BY SIMPLE AUXILIARY CIRCUIT INNOVATOR NOT GIVEN /RCA/ JAN. 1965 MSC-103

High voltage, low current pulse in series with arc power supply efficiently ignites a carbon arc.
The easily and economically produced circuit is useful with arc burners and searchlights and with plasma jets.

B65-10023 MINIATURE STRESS TRANSDUCER HAS DIRECTIONAL CAPABILITY SAN MIGUEL, A. SILVER, R. H. JAN. 1965 JPL-591

Miniature stress transducer uses a semiconductive piezoresistive element to detect stress only on specific axes. Measurement of internal mass stress is based on the compressive deformation of the transducer. The device is applicable to constant stress monitoring in building and dam structural parts.

R65-10025 LOGIC REDUNDANCY IMPROVES DIGITAL SYSTEM RELIABILITY INNOVATOR NOT GIVEN /STANFORD RES. INST./ FEB. 1965 JPL-SC-069

Redundant-channel system automatically corrects any single error in a set of three binary signal channels. This system is especially applicable to digital computers where data is transmitted in parallel channels.

B65-10026 STEPPING MOTOR DRIVE CIRCUIT DESIGNED FOR LOW POWER DRAIN INNOVATOR NOT GIVEN /HARVARD COLL./ FEB. 1965 GSFC-198

High power drain is eliminated by a circuit consisting of a divide-by-two stage, two identical inputs, a wiggle amplifier, driver, and power

output stages to drive the step motor.

B65-10028 TRANSISTOR VOLTAGE COMPARATOR PERFORMS OWN SENSING CLIFF, R. A. FEB. 1965 GSFC-228

Detection of the highest voltage input among a group of varying voltage inputs is accomplished by a transistorized voltage comparison circuit. The collector circuits of the transistors perform the sensing function. Input voltage levels are governed by the transistors.

B65-10030 LIBRARY OF DOCUMENTS COMPRESSED INTO LAP-HELD DISPLAY KIT INNOVATOR NOT GIVEN /NATL. CASH REGISTER CO./ FEB. 1965 MSC-125

A lightweight Apollo flight kit containing microfilmed data is packaged in a hinged box with a viewing screen cover, and a writing surface. It is secured to the users lap.

B65-10033 PHOTOELECTRIC SEMICONDUCTOR SWITCH OPERATES WITH LOW LEVEL INPUTS INNOVATOR NOT GIVEN /IBM/ FEB. 1965 JPL-SC-068

Photoelectric semiconductor switch with a buried emitter region avoids high-leakage currents across the emitter. It exhibits high emitter-to-collector transport efficiency beta at low signal levels.

B65-10041 PULSE HEIGHT ANALYZER OPERATES AT HIGH REPETITION RATES, LOW POWER INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS., INC./ FEB. 1965 WDD-046

Simple multistage transistor gating circuit provides a pulse height analyzer that operates at high repetition rates and low power. The circuit compares the input pulse heights to discrete reference voltages.

THERMISTOR CONNECTOR ASSEMBLY INCREASES ACCURACY OF MEASUREMENTS INNOVATOR NOT GIVEN /ATLANTIC RES. CORP./ FEB. 1965 LANGLEY-62

Isolation of the thermistor from spurious heat transfer for accurately measuring ambient air temperatures is accomplished by a mounting consisting of a transparent plastic film bonded to a U-shaped phenolic board with depositions of aluminum on each face and upper edge, and a variable capacitor for fine tuning.

CIRCUIT DETECTS ERRORS IN ADDRESS CURRENTS FOR MAGNETIC CORE ARRAYS
INNOVATOR NOT GIVEN /IBM/ FEB. 1965 M-FS-234

Address current error detector generates a signal whenever any error producing conditions arise in magnetic core arrays. Can be used with test equipment and memory storage units.

B65-10048 MICROPARTICLE IMPACT SENSOR MEASURES ENERGY DIRECTLY ALEXANDER, W. M. BERG, O. E. FEB. 1965

Construction of a capacitor sensor consisting of a dielectric layer between two conductive surface layers and connected across a potential source through a sensing resistor permits measurement of energy of impinging particles without degradation of sensitivity. A measurable response is produced without penetration of the dielectric layer.

B65-10050 NULLING PYROMETER USES KERR CELL SHUTTER FOR FAST RESPONSE INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ FEB. 1965 NU-0010

Conventional pyrometer, in which Kerr cell replaces mechanical shutter and polarizers are added to filters, yields rapid shutter response.

B65-10051 METAL SHEATH IMPROVES THERMOCOUPLE USING GRAPHITE IN ONE LEG INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ FEB. 1965 NU-0011

Thermocouple using graphite in one leg is sealed in a moistureproof metal sheath which permits high EMF output and good mechanical strength.

B65-10052
ZENER DIODE IS STARTER FOR TRANSISTORREGULATED POWER SUPPLY
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
FEB. 1965
NU-0015

Zener diode in parallel with a silicon transistor supplies the starting current for a transistor-regulated power supply.

B65-10054
PULSE GENERATOR PERMITS NONDESTRUCTIVE
TESTING OF COMPONENT BREAKDOWN VOLTAGE
INNOVATOR NOT GIVEN /HONEYWELL/ MAR. 1965
MSC-122

Nondestructive testing of the breakdown voltage of transistors and other electronic components is achieved by a simple relay circuit. The circuit operates by applying low-energy, high-voltage microsecond pulses to the components under test.

B65-10055 FM OSCILLATOR USES TETRODE TRANSISTOR BOENSEL, D. W. MAR. 1965 JPL-82

Tetrode-driven crystal oscillator achieves large frequency variations for a given input signal. Frequency control is obtained by variation of the second base current of the tetrode.

B65-10056
VIBRATING-MEMBRANE ELECTROMETER HAS HIGH
CONVERSION GAIN
COON, G. W. DIMEFF, J. APR. 1965
ARC-38

Vibrating-membrane transducer in a circuit can measure current below 10 to-the-minus 17 ampere. This electrometer has a high conversion gain and a minimum internal power consumption.

B65-10057 FEED-THROUGH HAS POLYTERMINAL FEATURE SANDERS, L. H. MAR. 1965 M-FS-25

Feed-through connector with individual solder pots in the polyterminal side provides good connections with small amounts of solder and permits visual inspection of bonds. Polyterminal also provides a friction mechanical bond to position conductors prior to soldering.

METAL DIAPHRAGM USED TO CALIBRATE MINIATURE TRANSDUCERS INNOVATOR NOT GIVEN /ASTRO-SPACE LABS./ MAR. 1965

Dynamic comparative calibration system measures response of miniature pressure transducers. The system is composed of an electromechanically driven metal diaphragm, a calibrated and an uncalibrated transducer and an oscillator.

B65-10061 SIMPLE CONTROL DEVICE SENSES SOLAR POSITION LONBORG, J. O. RANDALL, J. C. MAR. 1965 JPL-638

The amount of solar radiation incident on a specially prepared bimetallic strip is simply and reliably controlled by a light valve. This device is valuable for systems requiring temperature regulation.

B65-10062
PULSED PLASMA ACCELERATOR OPERATES
REPETITIVELY WITHOUT COMPLEX CONTROLS
SABOL, A. P. MAR. 1965
LANGLEY-48

Self-repeating pulsed plasma accelerator operates with a wide variety of gases over a large range of pressures without complex control equipment. The accelerator combines a circular channel with a tangential channel at the entrance way of a high-velocity gas.

B65-10066 FUEL CELL SERVES AS DXYGEN LEVEL DETECTOR INNOVATOR NOT GIVEN /GE/ MAR. 1965 JPL-SC-072

Monitoring the oxygen level in the air is accomplished by a fuel cell detector whose voltage output is proportional to the partial pressure of oxygen in the sampled gas. The relationship between output voltage and partial pressure of oxygen can be calibrated.

B65-10067 SENSITIVE LEVEL SENSOR MADE WITH SPIRIT LEVEL, GIVES ELECTRICAL DUTPUT BRYANT, E. L. MAR. 1965 LANGLEY-49

Sensor incorporating a circular spirit level, electrical lamp and two pairs of photocells, provides an electrical indication of flat surface level deviation.

B65-10068 AUTOMATIC THERMAL SWITCH ACCELERATES COOLING-DOWN OF CRYOGENIC SYSTEM WIEBE, E. R. MAR. 1965 JPL-655

Automatic switch uses short stainless steel tube with copper heat sinks to accelerate helium gas cooling and provides good thermal conductivity and good thermal insulation.

B65-10069
FEEDBACK OSCILLATOR FUNCTIONS AS LOW-LEVEL
PULSE STRETCHER
INNOVATOR NOT GIVEN /SPERRY RAND CORP./ MAR. 1965
GSFC-261

Low trigger pulses of the pulse stretcher circuit are obtained by forward biasing the transistor oscillator. The loop gain is kept below unity and prevents free-running oscillation. Two parallel feedback loops improve the stretching capabilities.

B65-10072 SYNCHRONIZED PULSE GENERATOR NEEDS NO EXTERNAL POWER CANCRO, C. A. JANNICHE, P. J., JR. MAR. 1965 GSFC-274

Simple circuit with high input and low output impedance generates a fast rise-time pulse synchronized with an input pulse of slower rise and fall times. Circuit requires no external power.

B65-10073 SYSTEM MEASURES ANGULAR DISPLACEMENT WITHOUT CONTACT DAVIS, W. T. MAR. 1965 LANGLEY-46

Optic system coupled to an electronic detection and measuring system converts angular movement of reflected light to a direct readout, without any direct contact with the object.

B65-10076 LIGHT-SENSITIVE POTENTIOMETER MEASURES PRODUCT OF TWO VARIABLES HAERTSCH, O. C. MAR. 1965 GSFC-240

The output voltage from a photoconductive potentiometer circuit using a galvanometer mirror reflecting the light beam is directly proportional to the product of the input voltage.

B65-10079
PHOTOELECTRIC SENSOR OUTPUT CONTROLLED BY
EYEBALL MOVEMENTS

INNOVATOR NOT GIVEN /SPACO/ MAR. 1965

3

4

The difference between the infrared absorption of the iris and infrared reflectivity of the eyeball controls the operation of a device consisting of an infrared source and amplifier, a cadmium selenide infrared sensor, and an infrared filter.

B65-10080
PHASE DETECTOR CIRCUIT SYNTHESIZES OWN
REFERENCE SIGNAL
INNOVATOR NOT GIVEN /FAIRCHILD STRATOS CORP./
MAR. 1965
M-FS-247

Circuit with isolation amplifier connected to a frequency multiplier and synchronous phase detector synthesizes the phase reference signal from the phase modulated input signal.

B65-10085
TRANSDUCER SENSES DISPLACEMENTS OF PANELS
SUBJECTED TO VIBRATION
PEA, R. O. MAR. 1965
ARC-37

Inductive vibration sensor measures the surface displacement of nonferrous metal panels subjected to vibration or flutter. This transducer does not make any physical contact with the test panel when measuring.

B65-10086 SYSTEM SELECTS FRAMING RATE FOR SPECTROGRAPH CAMERA INNOVATOR NOT GIVEN /AM. OPT. CO./ MAR. 1965 LANGLEY-55

Circuit using zero-order light is reflected to a photomultiplier in the spectrograph monitors incoming radiation to provide an error signal which controls the advancing and driving rate of the film through the camera.

B65-10087
APPARATUS MEASURES SWELLING OF MEMBRANES IN ELECTROCHEMICAL CELLS
HENNIGAN, T. J. APR. 1965
GSFC-280

Apparatus consisting of a pressure plate unit, four springs of known spring constant and a micrometer measures the swelling and force exerted by the polymer membranes of alkaline electrochemical cells.

B65-10089
TRANSDUCER MEASURES TEMPERATURE DIFFERENTIALS
IN PRESENCE OF STRONG ELECTROMAGNETIC FIELDS
APR. 1965
ARC-27

Measurement of temperature rise of cooling water under pressure and in strong electromagnetic fields is accomplished by a transducer using a magnetically shielded thermocouple arrangement. The thermocouple junctions are immersed in oil to isolate them from electric currents in the water.

B65-10091 SIMULATOR PRODUCES PHYSIOLOGICAL WAVEFORMS EKEROOT, S. MAR. 1965 MSC-94

Physiological waveform simulator capable of producing signals to simulate an axiliary and a sternal electrocardiogram, blood pressure, respiratory rate and body temperature. This may be used to check out bioinstrumentation.

B65-10093 COMPUTER PROGRAMS SIMPLIFY OPTICAL SYSTEM ANALYSIS INNOVATOR NOT GIVEN /HONEYWELL/ APR. 1965 GSFC-306

The optical ray-trace computer program performs geometrical ray tracing. The energy-trace program calculates the relative monochromatic flux density on a specific target area. This program uses the ray-trace program as a subroutine to generate a representation of the optical system.

B65-10096 Digital System Accurately Controls Velocity Of Electromechanical Drive NICHOLS, G. B. APR. 1965 GSFC-287

U-287
Digital circuit accurately regulates
electromechanical drive mechanism velocity. The
gain and phase characteristics of digital circuits
are relatively unimportant. Control accuracy
depends only on the stability of the input signal
frequency.

B65-10097
VARIABLE VOLTAGE SUPPLY USES ZENER DIODE AS REFERENCE
KLEINBERG, L. L. LAVIGNE, R. C. APR. 1965
GSFC-262

Using a zener diode as the reference element, a simple transistorized circuit provides a stable variable reference voltage.

B65-10102 SIMPLE CIRCUIT FUNCTIONS AS FREQUENCY DISCRIMINATOR FOR PFM SIGNALS BILLINGSLEY, J. APR. 1965 GSFC-267

Simple circuit monitors the frequency of PFM /pulse frequency modulated/ telemetry signals. This discriminator can be used as a constant current integrator in such circuits as linear sweep and time delay.

B65-10103 IMPROVED MAGNETOMETER USES TOROIDAL GATING COIL INNOVATOR NOT GIVEN /CORNELL UNIV./ APR. 1965 GSFC-249

Improved magnetometer employs a cylindrical, high permeability magnetic core with a toroidal gating coil and a solenoid pickup coil. Flux interaction can be reduced by electrostatically shielding the pickup coil from the gating coil. The magnetometer principle can be applied to navigation devices.

B65-10105
VARIABLE LOAD AUTOMATICALLY TESTS DC POWER
SUPPLIES
BURKE, H. C., JR. SULLIVAN, R. M. APR. 1965
GSFC-291

Continuously variable load automatically tests do power supplies over an extended current range. External meters monitor current and voltage, and multipliers at the outputs facilitate plotting the power curve of the unit.

MAGNETIC FIELD CONTROLS CARBON ARC TAIL FLAME INNOVATOR NOT GIVEN /RCA/ APR. 1965
MSC-139

Polarity of two electromagnets placed near the exhaust flue cancels out a high carbon-arc field. The arc tail flame is correctly drawn to the exhaust flue and contamination is diverted. This device should reduce maintenance cycles on any arc-powered illuminator.

B65-10112
UNIJUNCTION FREQUENCY DIVIDER IS FREE OF
BACKWARD LOADING
FAIRBANKS, A. F. APR. 1965
JPL-W00-010

Simple frequency divider composed of relaxation oscillators uses unijunction transistors to reduce backward loading to a minimum. This circuit design is applicable in timing devices and sync generators for television systems.

B65-10118
TRANSISTORIZED CIRCUIT CLAMPS VOLTAGE WITH
0.1 PERCENT ERROR
INNOVATOR NOT GIVEN /RCA/ APR. 1965
GSFC-196

Transistorized clamping circuit clamps either of two voltage levels to input of digital-to-analog resistive matrix with 0-1 percent error. Clamping circuit technique has analog, digital, and hybrid circuit applications.

B65-10119 VARIABLE FREQUENCY TRANSISTOR INVERTERS USE MULTIPLE CORE TRANSFORMERS INNOVATOR NOT GIVEN /DUKE UNIV./ APR. 1965 GSFC-183

Magnetic-coupled multivibrators containing two or more square-loop cores with multiple windings in a single transformer package, provide indirect frequency control and improved operational characteristics. This multivibrator can be used for power oscillators, nonlinear magnetic circuitry and telemetry circuits.

B65-10120 MULTIPLE TEST TUBES STIRRED MECHANICALLY LEON, H. J. STRONG, I. J. APR. 1965 ARC-42

Mechanical device simultaneously stirs multiple test tubes under controlled laboratory conditions. The invention provides a variable stirring rate, minimal amount of contamination of tube contents, unattended and simple operation, and easy maintenance and cleaning.

B65-10123 EFFICIENT THIN FILM HEATING ELEMENT TAKES MINIMUM SPACE BUSCH, A. H. APR. 1965 GSFC-289

Light, thin-film heating element is formed by vacuum deposition of metal onto a nonconductive surface to be heated. This small-sized heater has a very fast response time.

B65-10124
VARIABLE FREQUENCY MAGNETIC MULTIVIBRATOR GENERATES STABLE SQUARE-WAVE OUTPUT PAULL, S. MAY 1965
GSFC-AE-21

Variable frequency magnetic multivibrator operates in a full wave fashion to provide a stable square wave output over wide variations in temperature and power supply potential. This invention is applicable in clocks and control devices.

B65-10125 SIMPLIFIED ELECTROMETER HAS EXCELLENT OPERATING CHARACTERISTICS BRANTNER, R. E. MAY 1965 JPL-413

Simplified and improved electrometer circuit provides high-input impedance, stability of gain and operating point, linear response, and low power requirements.

B65-10127
TRAVELING-WAVE TUBE CIRCUIT SIMPLIFIES
MICROWAVE RELAY
ALLEN, W. K. IPPOLITO, L. J. NACE, D. A. MAY
1965
05FC-299

Circuit with a sawtooth-modulated traveling-wave tube, which acts as a frequency converter and as an amplifier, simplifies microwave transmission. Lower power losses and reduced size and weight are also realized in this circuit.

B65-10128
PIEZORESISTIVE GAGE TESTS PIN-CONNECTOR
SOCKETS
BOND, W. W. MAY 1965
JPL-675

Connector pin consisting of a piezoresistive crystal, retainer spring and a bridge circuit with voltmeter is used to test connector sockets and may be adapted for multiple socket testing.

B65-10137
INSTRUMENT CALIBRATES LOW GAS-RATE FLOWMETERS
COPELAND, A. C. FULTON, W. C. SMITHER, M. A.
MAY 1965
MSC-134

Electronically measuring the transit time of a soap bubble carried by the gas stream between two fixed points in a burette calibrates flowmeters used for measuring low gas-flow rates.

B65-10138
HIGH-GAIN AMPLIFIER HAS EXCELLENT STABILITY
AND LOW POWER CONSUMPTION
KLEINBERG, L. L. MAY 1965
GSFC-272

Transistorized amplifier, in which an external reference voltage controls gain, combines high gain with stability and low power consumption. This circuit is useful in electronic servo and portable audio equipment.

B65-10139
SPHERICAL ELECTRODE ELIMINATES HIGH-VOLTAGE
BREAKDOWN
FINKE, R. C. VETRONE, R. H. MAY 1965
LEWIS-155

Spherical electrodes surrounding electrode—
dielectric junctions eliminate high-voltage
breakdown. The gap between the spherical
electrode and the dielectric must be of an optimum
size for proper operation. Modified, this
electrode should be suitable as a high-voltage
feedthrough between various liquid and gaseous
media.

B65-10142
AUXILIARY CIRCUIT ENABLES AUTOMATIC MONITORING
OF EKG*S
INNOVATOR NOT GIVEN /TEX. INST. FOR
REHABILITATION AND RES./ MAY 1965 SEE ALSO
B65-10143 AND B65-10010
MSC-106

Auxiliary circuits allow direct, automatic monitoring of electrocardiograms by digital computers. One noiseless square—wave output signal for each trigger pulse from an electrocardiogram preamplifier is produced. The circuit also permits automatic processing of cardiovascular data from analog tapes.

B65-10143
DIGITAL-OUTPUT CARDIOTACHOMETER MEASURES RAPID
CHAMGES IN HEARTBEAT RATE
VICK, H. MAY 1965 SEE ALSO B65-10010 AND
B65-10142
B65-10143

Cardiotachometer circuits produce an output voltage proportional to the heartbeat rate on a beat-by-beat basis. This is less complex and less costly than the digital cardiotachometers.

B65-10145 LOGARITHMIC AMPLIFIER USES FIELD EFFECT TRANSISTORS STEWART, J. L. MAY 1965 JPL-509

Solid-state amplifier utilizes field effect transistors and planar junction diodes to provide a logarithmic response to a wide range of input signals.

B65-10146 FREQUENCY OFFSET IN LINEAR FM/CW TRANSPONDER ELIMINATES CLUTTER INNOVATOR NOT GIVEN /MELPAR/ MAY 1965 M-FS-249

Clutter is eliminated by offsetting the frequency of a transponder signal with respect to an interrogation signal. This improves the tracking of aircraft and spacecraft by FM/CW transponders.

B65-10151 ROTOR POSITION SENSOR SWITCHES CURRENTS IN BRUSHLESS DC MOTORS INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ MAY 1965 GSFC-315

Reluctance switch incorporated in an induction motor is used for sensing rotor position and switching armature circuits in a brushless dc motor. This device drives the solar array system of an unmanned space satellite.

B65-10152 CIRCUIT REDUCES DISTORTION OF FM MODULATOR INNOVATOR NOT GIVEN /RCA/ MAY 1965 GSFC-257

Correction circuit improves the linearity of a voltage-variable capacitor used to modulate a free-running oscillator. This improvement only applies to audio frequency modulation and will not correct for slowly varying dc input in some telemetry systems

B65-10158 LASER BEAM TRANSMITS ELECTRIC POWER INNOVATOR NOT GIVEN /RCA/ JUN. 1965 GSFC-293

1

41

Semiconductor laser beam supplies sustained level of electrical power to remote location not served by conventional conductors. This system would be useful where transmission of energy is critical, such as in nuclear reactors, or other hazardous environments.

B65-10159
SOLID-STATE SWITCHING USED TO SPEED UP CAPACITIVE INTEGRATOR NEWCOMB, A. L., JR. JUN. 1965
LANGLEY-104

Capacitive integrator circuit using silicon controlled switches /SCS/ insures output voltage linearly proportional to input pulse width. This circuit provides high input impedance and relatively low output impedance.

B65-10161
INTERFEROMETER COMBINES LASER LIGHT SOURCE
AND DIGITAL COUNTING SYSTEM
INNOVATOR NOT GIVEN /MIT/ JUN. 1965
MSC-151

Measurement of small linear displacements in digital readouts with extreme accuracy and sensitivity is achieved by an interferometer. The instrument combines a digital electro-optical fringe-counting system and a laser light source.

B65-10165
SUPERCONDUCTOR MAGNETS USED FOR STAGGER-TUNING
TRAVELING-WAVE MASER
INNOVATOR NOT GIVEN /RCA/ JUN. 1965
GSFC-292

Superconducting materials reduce size and weight of magnets used for stagger-tuning individual traveling-wave maser crystals. The invention is useful in microwave communication systems requiring a high information rate.

B65-10169
PHASE SHIFT FREQUENCY SYNTHESIZER IS
EFFICIENT, SMALL IN SIZE
INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ JUN.
1965
M-FS-250

Phase shift frequency synthesizer produces suppressed-carrier signals at the sum and difference frequencies. All unwanted frequencies are suppressed by this small-sized synthesizer.

B65-10178
DC TJ AC CONVERTER OPERATES EFFICIENTLY AT LOW INPUT VOLTAGES
INNOVATOR NOT GIVEN /DUKE UNIV./ JUN. 1965
GSFC-130

Self-oscillating dc to ac converter with transistor switching to produce a square wave output is used for low and high voltage power sources. The converter has a high efficiency throughout a wide range of loads.

B65-10182 FORCE CONTROLLED SOLENOID DRIVES MICROWELD TESTER INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1965 WOO-125

Solenoid-driven device tests the integrity of a microweld joint between an electronic component lead wire and a wire ribbon by applying tension stress to the joint. Variable measured force is provided when either destructive or nondestructive testing is performed.

B65-10183 MODIFIED INTERELEMENT SPACING IMPROVES YAGI ANTENNA ARRAY BECK, F. B. JUN. 1965 LANGLEY-130

Symmetrical antenna array is designed by adjusting the Yagi disk interelement spacing so that the grating lobe of the array factor coincides with the first sidelobe of the element pattern.

B65-10184
PRESSURE SENSOR RESPONDS ONLY TO SHOCK WAVE INNOVATOR NOT GIVEN /BOEING CO./ JUN. 1965

M-FS-238

Pressure sensor responds only to high pressure crest of a shock wave, and will not respond to conditions of overpressure. The sensor uses plates of a battery to produce voltage output used to actuate an alarm signal or crew escape system.

B65-10187 CRYSTAL MEASURES-SHORT TERM, LARGE-MAGNITUDE FORCES PFEIFFER, C. G. JUN. 1965 JPL-77

By using the magnitude of piezoelectric crystal response to distortion and compression, this device measures transient accelerations and their rate of change. The invention could be used in a servo control system by supplementing the accelerometer and taking over its function when its range was exceeded.

B65-10193 LOGIC CIRCUIT EXHIBITS OPTIMUM PERFORMANCE HUSSON, C. JUN. 1965 LANGLEY-129

Performance of circuits are compared to determine the optimum circuit configuration for implementation into microelectronic functions. Comparison is made in terms of power drain, propagation time, and component variations with temperature and load.

B65-10194
ANALOG-TO-DIGITAL CONVERTER HAS INCREASED RELIABILITY AND REDUCED POWER CONSUMPTION THORNWALL, J. C. JUN. 1965
GSFC-246

Eight-bit analog-to-digital converter decreases average power consumption and increases component reliability. The converter uses solid-state components in pulse operation and magnetic core components for minimizing power consumption. The magnetic core components also increase reliability.

B65-10195
DEVICE MEASURES FLUID DRAG ON TEST VEHICLES
FREEMAN, R. JUDD, J. H. LEISS, A. JUN. 1965
LANGLEY-34

Electromechanical drag balance device measures the aerodynamic drag force acting on a vehicle as it moves through the atmosphere and telemeters the data to a remote receiving station. This device is also used for testing the hydrodynamic drag characteristics of underwater vehicles.

B65-10196
INEXPENSIVE ELECTRICAL CONNECTOR IS MOISTURE
AND CORROSIOMPROOF
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1965
1965
MSC-164

Compression-sealed electrical connector made principally of plastic components is used in a corrosive atmosphere. This inexpensive and moisture proof connector can be modified to provide a multiple-pin connector.

B65-10197
IMPROVED SOLDERLESS CONNECTOR IS EASILY
DISCONNECTED
INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ JUN.
1965
JPL-SC-060

Compression type solderless connector is easily disconnected and reassembled and resists vibration. The connector, which uses a tapered, split sleeve that is tightened by a nut into a mating bug, is used in place of standard solder lugs and to connect unsolderable wire.

B65-10199
MODULAR THERMOELECTRIC CELL IS EASILY PACKAGED
IN VARIOUS ARRAYS
EPSTEIN, J. JUN. 1965
GSFC-339

Modular thermoelectric cells are easily packaged in various arrays to form power supplies have desirable voltage and current output characteristics. The cells employ two pairs of thermoelectric elements, each pair being connected in parallel between two sets of aluminum plates. They can be used as solar energy conversion devices.

B65-10200
DENSITY TRACE HADE WITH COMPUTER PRINTOUT
WILSON, M. JUN. 1965
GSFC-322

Special drum for a computer-controlled printer improves density trace of scientific data. The drum provides uniformly shaped characters and evenly spaced variations of print density that precisely reflect data magnitude. This device plots teaperature profiles, geographic contours, pressure gradients, electric potential gradients, and magnetic field configurations.

B65-10202
QUICK-DISCONNECT COUPLING SAFE TRANSFER OF HAZARDOUS FLUIDS
DEWITT, R. L. SCHMIDT, H. W. JUN. 1965
LEWIS-125

Quick-disconnect coupling is used for uncoupling of plumbing during ground-to-wehicle transfer of cryogenic and hazardous fluids. The coupling allows remote positive control of liquid pressure and flow during the transfer operation, remote connection and separation capabilities, and negligible liquid spillage upon disconnection.

B65-10203 TINY BIOMEDICAL AMPLIFIER COMBINES HIGH PERFORMANCE, LOW POWER DRAIN DEBOO, G. J. JUL. 1965 ARC-41

Transistorized, portable, high performance amplifier with low power drain facilitates biomedical studies on mobile subjects. This device, which utilizes a differential input to obtain a common-mode rejection, is used for amplifying electrocardiogram and electromyogram signals.

B65-10204 VOLTAGE VARIABLE OSCILLATOR HAS HIGH PHASE STABILITY HEARN, C. P. JUL. 1965 LANGLEY-123

Two or more series RLC circuits are used with a negative feedback amplifier to make a voltage variable oscillator. This combination results in high phase stability and optimum frequency modulation.

B65-10206 SENSITIVE ELECTROMETER FEATURES DIGITAL OUTPUT DOONG, H. JUL. 1965 GSFC-288

Four-stage transistorized electrometer eliminates the need for a logarithmic compression network. It measures very low currents and produces a digital output directly indicative of the input current magnitude.

B65-10208
HYBRID COMPUTER TECHNIQUE YIELDS RANDOM SIGNAL PROBABILITY DISTRIBUTIONS CAMERON, W. D. JUL. 1965
ARC-34

Hybrid computer determines the probability distributions of instantaneous and peak amplitudes of random signals. This combined digital and analog computer system reduces the errors and delays of manual data analysis.

B65-10209
OSCILLATOR CIRCUIT MEASURES LIQUID LEVEL IN TANKS
INNOVATOR NOT GIVEN /IBM/ Jul. 1965
M-FS-245

Oscillator circuits automatically measure the liquid level in tanks. The circuit employs a twin transmission line as a liquid level probe.

B65-10212
DETECTOR CIRCUIT COMPENSATES FOR VIDICON BEAM
CURRENT VARIATIONS

INNOVATOR NOT GIVEN /RCA/ JUL. 1965 GSFC-310

Signal detector circuit compensates for black level shifts in vidicons by dark current cancellation. It clamps the video signal to the dark current component of the signal. The device also compensates for background noise variation or transducer bias fluctuations in other repetitive pulse systems.

B65-10213 MULTIAXIAL ANALYZER DETECTS LOW-ENERGY ELECTRONS LIND, D. L. OGILVIE, K. W. WILKERSON, T. D. JUL. 1965 GSFC-329

Three curved plate energy analyzers coupled with three electron multiplier tubes detect and measure low energy electron flux in several directions simultaneously.

B65-10215
ELECTRICAL PROBE ENSURES RELIABLE CONTACT IN SOCKET
INNOVATOR NOT GIVEN /IBM/ JUL. 1965
M-FS-315

Spring-loaded probe makes a reliable electrical contact by producing a circular wiping motion at the tip when inserted into a mating socket.

B65-10218
GRAPHITE ELEMENT SERVES AS RADIANT HEAT SOURCE
JUL. 1965
M-FS-105

Radiators using a graphite heating element as a radiant heat source have high heat flux and long operational lives. They are used to test the thermal resistance of materials.

B65-10221
INSTRUMENT ACCURATELY MEASURES EXTREMELY LOW
AIR DENSITIES
INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/
AUG. 1965
M-FS-193

Gauge accurately measures low air densities in high-vacuum systems. It relies on the detection of near-visible light radiated from nitrogen molecules present in the system.

B65-10223
VOLTAGE CONTROLLED OSCILLATOR IS EASILY ALIGNED, HAS LOW PHASE NOISE SYDNOR, R. L. AUG. 1965
JPL-510

Voltage controlled oscillator /VCO/, represented by an equivalent RF circuit, is easily adjusted for optimum performance by varying the circuit parameter. It contains a crystal drive level which is also easily adjusted to obtain minimum phase noise.

B65-10225 SIMPLE BCD CIRCUIT ACCURATELY COUNTS TO 24 SPAFFORD, M. L. AUG. 1965 GSFC-317

Ripple-through counter with divide-by-24 output pulse is used in digital control clocks to register hours and give a daily output signal. It uses commercially available digital modules that incorporate AND/gates with flip-flops.

B65-10226
MAGNETIC-SHIFT-REGISTER CIRCUIT CONTROLS STEP
MOTOR OPERATIONS
VEILLETTE, L. J. AUG. 1965
GSFC-340

Magnetic-shift-register circuit controls bidirectional operations of a phase-pulsed step motor. The circuit draws no power in standby, is nonregenerative, and is insensitive to switching transients.

B65-10228 SIMPLE CIRCUIT PRODUCES HIGH-SPEED, FIXED DURATION PULSES GARRAHAN, N. M. AUG. 1965 GSFC-285 ۱

from a variable width input pulse. The circuit consists of a tunnel diode in parallel with an inductance driven by a constant current generator. It is used for pulsed communication equipment design.

B65-10232 FIELD EFFECT TRANSISTOR PRESENTS HIGH INPUT IMPEDANCE IN AC AMPLIFIER MARSHALL, J. H. AUG. 1965 JPL-500

Four-stage transistorized ac amplifier provides high input impedance and operates at low intrinsic noise levels. It is suited to carrier or narrow band sine wave applications.

B65-10233 HIGH-SPEED SQUARE-WAVE CURRENT LIMITER OPERATES EFFICIENTLY INNOVATOR NOT GIVEN /LABKO SCI./ AUG. 1965 JPL-SC-073

Transistorized high speed circuit limits currents from a square-wave ac power supply. The current limiter resets after each half cycle of the square wave and thus minimizes power losses.

B65-10234 SIMPLE CIRCUIT REDUCES TRANSISTOR SWITCHING TIME INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ AUG. 1965 GSFC-314

Silicon-controlled rectifier /SCR/, gated by a voltage divider, controls the potentiometer in transistorized switching circuits. The SCR acts as a gate to trigger the switching transistor only when the input signal reaches an amplitude that will switch the transistor rapidly.

B65-10237 BRUSHLESS DC MOTOR USES ELECTRON BEAM SWITCHING TUBE AS COMMUTATOR STUDER, P. AUG. 1965 GSFC-345

Electron beam switching tube eliminates physical contact between rotor and stator in brushless dc motor. The tube and associated circuitry control the output of a dc source to sequentially energize the motor stator windings.

B65-10238
SOLID-STATE LASER TRANSMITTER IS AMPLITUDE
MODULATED
BILDERBACK, R. AUG. 1965
MSC-121

Amplitude modulated laser transmitter affords radio frequencies unlimited bandwidth. The system, which is solid state and compact, uses a gallium arsenide diode that emits in the near infrared.

B65-10242 ELECTROMETER HAS AUTOMATIC ZERO BIAS CONTROL INNOVATOR NOT GIVEN /APPLIED PHYSICS CORP./ AUG. 1965 GSFC-350

Zero biasing circuit in a vibrating reed type electrometer counterbalances residual potential. It charges a capacitor to the residual potential and connects that capacitor in series with the vibrating reed so that the voltages cancel. This enables the electrometer to read zero output potential in the absence of an input current.

B65-10243 NOVEL PROBE SIMPLIFIES ELECTRONIC COMPONENT TESTING SYNER, W. F. GSFC-342

Test probe, in conjunction with standard equipment, tests axial-lead electronic components in their original packages. The probe can be modified to test any electronic component with automatic or nonautomatic equipment.

B65-10244 Lightweight Coaxial Cable Connector Reduces Signal Loss Brejcha, A. G., Jr. Aug. 1965 JPL-720

NU-0029

Connectors with milled interface surfaces for perfect electrical contact eliminate secondary—emission discharge and low signal loss in RF coaxial cables. The connectors which contain alignment and centering components for proper joint concentricity are used in communications systems designs.

B65-10247 SERVO CALORIMETER MEASURES MATERIAL HEATING RATE GILMOUR, G. WILSON, J. H. /WESTINGHOUSE ELEC. CORP./ AUG. 1965 NU-0024

Servo calorimeter accurately measures the heating rate of a material exposed to nuclear radiation independently of the specific heat thermal conductivity of the material. The electrical power used is a direct measure of the nuclear heating rate.

B65-10249
MANUAL-FEED ADAPTER PERMITS MICROFILMING OF
CONTINUOUS OSCILLOGRAPH OUTPUT
BENNETT, J. /WESTINGHOUSE ELEC. CORP./ AUG. 1965

A manual-feed adapter used with a microfilm recording unit permits continuous filming and reduces oscillograph output to manageable dimensions.

B65-10255 BORON TRIFLUORIDE NUCLEAR DETECTOR PREAMPLIFIER USES SINGLE-CABLE CONNECTION HECKELMAN, J. D. SHUMAKER, R. E. AUG. 1965 LEWIS-178

Preamplifier for a nuclear particle detector operates with a single interconnecting cable. Isolating and bypass networks permit this single cable operation.

B65-10257
INDUCTOR FLYBACK CHARACTERISTIC GIVES VOLTAGE
REGULATOR FAST RESPONSE
SMITH, G. D. AUG. 1965
GSFC-361

Voltage regulator alternately connects an inductor in parallel and in series with the input voltage source. This flyback voltage regulator provides a regulated dc voltage to varying loads from a varying dc supply and gives fast response to load and supply changes.

B65-10258
GAPPED TOROID PROVIDES INFINITE RESOLUTION
OF DELAY-LINE PICKUP
ROBINSON, G. B. AUG. 1965
GSFC-370

Gapped toroid magnetically coupled to a delay line provides continuous adjustment of the time delay line signal retrieval. A rotating screw moves the toroid pickup parallel to the delay line. This device can be used in signal detection devices and instrumentation equipment.

B65-10259
INCREASED JUNCTION LEAD INDUCTANCE BALLASTS
HIGH-FREQUENCY TRANSISTORS
GILBERT, G. J. /RCA/ SEP. 1965
GSFC-387

Segmentation of transistor bonding stripes and the inherent inductance of individual leads provides ballast for even current distribution across the junction of a high-frequency transistor.

B65-10260 SIMPLE PULSE COUNTING CIRCUIT COMPUTES SUM OF SQUARES SCHAEFER, D. H. SEP. 1965 GSFC-391

Pulse counting circuit with an extra chain of flip-flops, delay lines, and AND/gates computes the sum of the squares of the pulse sequences. A pulse train and the sum of the squares of the pulses are simultaneously completed.

B65-10263 Indexing Device Ensures Proper Mating Of ELECTRICAL CONNECTORS
JENKINS, L. M. SIMMONS, W. H.
SEP. 1965
MSC-155

Indexing splines with modified standard male and female connectors eliminates the possibility of incorrect mating. Large stock quantities of differently indexed connectors are unnecessary since connectors from a single stock can be indexed as desired at installation time.

B65-10264
PLASTIC BAGS IN EVACUATED CHAMBER MAKE LIGHTWEIGHT GAS SAMPLING SYSTEM SHAFFERNOCKER, W. M. /GE/ SEP. 1965 FRC-31

Portable, lightweight system collects the exhaust gas of an aircraft during flight for use in analyzing combustion efficiency. The system uses an evacuated chamber and plastic bags.

B65-10265
WELD LEAKS RAPIDLY AND SAFELY DETECTED
INNOVATOR NOT GIVEN /BOEING CO./ SEP. 1965
M-FS-362

Test method detects leaks that occur during hydrostatic pressure testing of welded joints in metal tanks. A strip of aluminum foil and a strip of water-soluble paper are placed over the weld. A voltage applied between the tank wall and the foil strip is monitored to detect a decrease in ohmic resistance caused by water leakage into the paper layer.

B65-10267 ELECTROMETER PREAMPLIFIER HAS DRIFT CORRECTION FEEDBACK LABARTHE, L. C. /LABKO SCI./ SEP. 1965 JPL-SC-074

Negative feedback circuit corrects output drift in an electrometer. The negative feedback is used in the no signal state to maintain the output level at zero reference. Drift voltage storage in the signal on state is also used to provide a drift-free readout.

B65-10268
MULTIPLE TEST CHAMBER EXPOSES MATERIALS TO VARIOUS ENVIRONMENTS
JOHNSTON, R. L. SEP. 1965
MSC-179

Multiple compartment test chamber exposes several material specimens to various environmental conditions for prolonged periods. The specimens are individually mounted in chamber compartments, rotated to various positions, and measured through optical windows to determine progressive changes in the material properties.

B65-10269
SIMPLE DEVICE PRODUCES ACCELEROMETER
CALIBRATION PULSE
INNOVATOR NOT GIVEN /LOCKHEED MISSILES AND SPACE
CO./ SEP. 1965
M-FS-363

Shock-impulse exciter produces a remote checkout of the amplitude calibration and frequency response of a piezoelectric vibration accelerometer. The exciter employs a bimetal spring to apply a mechanical acceleration pulse of a known amplitude and frequency to the accelerometer.

B65-10271
COMPOSITE SEAL REDUCES ALKALINE BATTERY
LEAKAGE
CLATTERBUCK, C. H. PLITT, K. F. SEP. 1965
GSFC-337

Composite seal consisting of rubber or plastic washers and a metal washer reduces alkaline battery leakage. Adhesive is applied to each washer interface, and the washers are held together mechanically.

865-10273
ELECTROMECHANICAL FLOWMETER ACCURATELY MONITORS FLUID FLOW GRANT, D. J. SEP. 1965
GSFC-357

Electromechanical flowmeter remotely and accurately monitors the flow rate and total volume of a transparent liquid discharged from a dispensing system. A dual dispensing tube system provides a relative reference level which permits compensation for temperature variations.

B65-10274
ELECTRONIC OHMMETER PROVIDES DIRECT DIGITAL OUTPUT
SEMYAN, J. SEP. 1965
GSSC-363

Self-balancing wheatstone bridge acts as allelectronic digital readout ohmmeter.

B65-10275
IMPROVED CIRCUIT MINIMIZES GENERATION OF
PSEUDONOISE CHECK BITS
ANDERSON, T. O. LUSBAUGH, W. A. SEP. 1965
JPL-698

Computer switching network consists of parallel and series combinations of mod 2 adders using the minimum number of gating levels. This network minimizes the propagation time in which a sequence of pseudonoise check bits are generated.

B65-10276
ADDED DIODES INCREASE OUTPUT OF BALANCED
MIXER CIRCUIT
ROBINSON, G. B. SEP. 1965
GSFC-354

Two diodes added to a conventional balanced mixer circuit increase the output signal level. The resulting half-wave carrier switch balanced modulator is used in radio equipment.

B65-10277
NONLINEAR FEEDBACK REDUCES ANALOG-TO-DIGITAL
CONVERTER ERROR
MUNOZ, R. M. SEP. 1965
ARC-46

Nonlinear analog-to-digital converter measures the analog input level and continuously adjusts the digital readout scale sensitivity to effectively increase the accuracy. It is able to acquire more accurate low-level data.

B65-10278
MODIFIED DEVELOPER INCREASES LINE RESOLUTION
IN PHOTOSENSITIVE RESIST
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
SEP. 1965
GSFC-386

co-soo Standard developer solution is mixed with dipropyl carbonate. This reduces swelling in the photosensitive resist and permits application of relatively thick films with minimal pinhole formation and increased line resolution.

B65-10279
INFLATABLE BLADDER PROVIDES ACCURATE
CALIBRATION OF PRESSURE SWITCH
SMITH, N. J. /BOEING CO./ SEP. 1965
M-FS-367

chalibration of a pressure switch is accurately checked by a thin-walled circular bladder. It is placed in the pressure switch and applies force to the switch diaphragm when expanded by an external pressure source. The disturbance to the normal operation of the switch is minimal.

B65-10281
CIRCUIT MAINTAINS DIGITAL DECISION THRESHOLD
AT PRESET LEVEL
INNOVATOR NOT GIVEN /AVCO CORP./ SEP. 1965
M-FS-331

Optimum decision-level circuit maintains the decision threshold at any preselected percentage of the input-signal amplitude. Communications equipment involving recognition of transmitted digital information can benefit from this circuit.

B65-10282
CONSTANT-CURRENT REGULATOR IMPROVES TUNNEL
DIODE THRESHOLD-DETECTOR PERFORMANCE
CANCRO, C. A. SEP. 1965
GSFC-239

Grounded-base transistor is placed in a tunnel diode threshold detector circuit, and a bias

voltage is applied to the tunnel diode. This provides the threshold detector with maximum voltage output and overload protection.

B65-10284
FIELD-EFFECT TRANSISTOR REPLACES BULKY
TRANSFORMER IN ANALOG-CATE CIRCUIT
INNOVATOR NOT GIVEN /RADIATION, INC./ SEP. 1965

)

Metal-oxide semiconductor field-effect transistor /MOSFET/ analog-gate circuit adapts well to integrated circuits. It provides better system isolation than a transformer, while size and weight are appreciably reduced.

B65-10286
UPPERCASE AND LOWERCASE COMPUTER PRINTOUT
INCREASES READABILITY
HAND, W. W. /DOC., INC./ JONSBERG, M. B SEP.
1965
HQ-12

Print chain of 120 characters facilitates production of computer printout in both uppercase and lowercase characters. Although the output speed is reduced, the use of the print chain increases the computer printout readability.

B65-10287
PHOTORESISTANCE ANALOG MULTIPLIER HAS WIDE RANGE
HARTENSTEIN, R. G. SEP. 1965
GSFC-360
Photosoptimated bridge facilitates again

Photoactivated bridge facilitates equal performance of analog multipliers over a wide frequency range. The multiplier operates from direct current to an upper frequency limited by either the light source or the closed-loop amplifier.

B65-10289
BORON NITRIDE HOUSING COOLS TRANSISTORS
INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ SEP.
1965 SEE ALSO B63-10033 AND B65-10186
WOO-079

Boron nitride ceramic heat sink cools transistors in RF transmitter and receiver circuits. Heat dissipated by the transistor is conducted by the boron nitride housing to the metal chassis on which it is mounted.

B65-10290 FM/CW SYSTEM MEASURES AIRCRAFT ATTITUDE INNOVATOR NOT GIVEN /MELPAR/ SEP. 1965 M-FS-276

FM/CW radar system measures attitude of an approaching aircraft relative to a ground station. The FM/CW transmitter on board the aircraft transmits through two antennas to a ground-based receiver.

B65-10293
ELECTROSTATICALLY DRIVEN DYNAMIC CAPACITOR EMPLOYS CAPACITIVE FEEDBACK LONBORG, J. O. OCT. 1965
JPL-771

Three-part signal electrode provides capacitive feedback to an oscillator driven dynamic capacitor in an electrometer circuit.

B65-10298
TITANIUM DIAPHRAGM MAKES EXCELLENT AMPLITRON
CATHODE SUPPORT
TEICH, W. W. /RAYTHEON CO./ OCT. 1965
GSFC-394

Cathode support structure designed around a titanium diaphragm prevents radial misalignment between the cathode and anode in amplitrons. The titanium exhibits low thermal conductivity, tolerates lateral thermal expansion of the cathode, and is a poor primary and secondary emission medium.

B65-10299
ELECTROPNEUMATIC RHEOSTAT REGULATES HIGH
CURRENT
HAACKER, J. F. JEDLICKA, J. R. WAGDNER, C. B.
DCT. 1965
ARC-44
Electropneumatic rheostat maintains a constant

direct current in each of several high-power parallel loads, of variable resistance, across a single source. It provides current regulation at any preset value by dissipating the proper amount of energy thermally, and uses a column of mercury to vary the effective length of a resistance element.

B65-10300
IMPURITY DIFFUSION PROCESS FOR SILICON
SEMICONDUCTORS IS FAST AND PRECISE
MC LOUSKI, R. M. SKOUSON, G. W. /WESTINGHOUSE
ELEC. CORP./ OCT. 1965
GSFC-397

Impurity diffusion process produces precision silicon semiconductor junctions economically and fast. Oxide is deposited on a silicon wafer and a controlled concentration of impurity atoms in gaseous form is simultaneously introduced into the reaction.

B65-10301 REMOTE RAPIDLY VARYING PRESSURES ACCURATELY MEASURED INNOVATOR NOT GIVEN /GE/ OCT. 1965 FRC-28

Transmitting-damping tube with one end closed, the other open to a pressure source, has a pressure sensor connected to a port close to the pressure source. This accurately measures transient or rapidly varying fluid pressures.

B65-10304
IMPROVED STRAIN-WIRE FLOWMETER HAS FAST
RESPONSE TIME
DILLON, R. C. DUNBAR, W. R. OCT. 1965
LEWIS-241

Strain-sensitive resistance wires in a wheatstone bridge arrangement from the sensing element of a flowmeter. The change in resistance of the wires is measured as a function of stream velocity. Thus the electrical output is a measure of both rapidly varying and steady fluid-flow rates.

B65-10305
THIN-FILM RESISTORS USED IN FUNCTIONAL
ELECTRONIC BLOCKS
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
OCT. 1965
GSFC-380

Vapor-deposited thin-film resistors replace diffused resistors in R-C tank circuits in a solid state electronic block. This allows an optimum parallel capacitance to be obtained for circuit applications requiring a high resistance and a low capacitance.

B65-10306

OPAQUE MICROFICHE MASTHEAD PERMITS EASY READING

LOWE, E. M. /DOC., INC./ OCT. 1965
HO-7

White-pigmented backing applied to the reverse side of microfiche mastheads makes the area opaque and easily readable. This technique is of value for organizations involved in large volume information storage and retrieval.

B65-10307 FREQUENCY CORRECTION DEVICE USES DIGITAL CIRCUITRY SCHAEFER, D. OCT. 1965 GSFC-268

Signal acquisition and tracking system covering a wide range of frequencies uses a digital circuit to sample the frequency of an incoming signal and provide correction pulses to the voltage—controlled oscillator. The circuit can also sense the presence of a signal on any one of the input lines.

B65-10308
ELECTRONIC AMPERE-HOUR INTEGRATOR IS ACCURATE TO ONE PERCENT PAULKOVICH, J. OCT. 1965
GSFC-203

Electronic ampere-hour integrator is based on current-to-frequency conversion. It operates or low power and is accurate to one percent. This

device can measure the ampere-hour capacity of batteries and can be adapted for other functions.

B65-10309 THERMOELECTRIC ELEMENTS DIFFUSION-BONDED TO TUNGSTEN ELECTRODES INNOVATOR NOT GIVEN /TYCO LABS./ OCT. 1965 SEE ALSO B65-10220 GSFC-346

Solid-state diffusion process bonds lead telluride and lead telluride-tin telluride thermoelectric elements to tungsten electrodes. The resulting bond is nonmagnetic and has high strength and low electrical and thermal resistance. This method is also used with tantalum electrodes.

THRESHOLD DETECTOR PRODUCES NARROW PULSES AT HIGH REPETITION RATES GARRAHAN, N. M. OCT. 1965

Solid state device generates fixed width output pulses from variable width input pulses in the nanosecond range. The circuit produces pulse repetition rates in the megacycle range and exhibits low power drain.

PCM MAGNETIC TAPE SYSTEM EFFICIENTLY RECORDS AND REPRODUCES DATA COLE, P. T. OCT. 1965 GSFC-375

Split-phase PCM technique consists of data and clock signal recording and reproduction systems.
This PCM magnetic tape system achieves a high
packing density on the tape and provides a
symmetrical reproduction of the recorded signal.

PLANETARY CAMERA CONTROL IMPROVES MICROFICHE PRODUCTION CHESTERTON, W. L. LEWIS, E. B. /DOC., INC./ OCT. 1965 HQ-1 HQ-5

Microfiche is prepared using an automatic control system for a planetary camera. The system provides blank end-of-row exposures and signals card completion so the legend of the next card may be photographed.

B65-10314 HYBRID CIRCUIT ACHIEVES PULSE REGENERATION WITH LOW POWER DRAIN CANCRO, C. A. OCT. 1965 GSFC-382

Hybrid tunnel diode-transistor circuit provides a solid-state, low power drain pulse regenerator, frequency limiter, or gated oscillator. When the feedback voltage exceeds the input voltage, the circuit functions as a pulse normalizer or a frequency limiter. If the circuit is direct coupled, it functions as a gated oscillator.

MAGNETOMETER MEASURES ORTHOGONAL COMPONENTS OF MAGNETIC FIELDS INNOVATOR NOT GIVEN /SPECTRA PHYS./ OCT. 1965

Driven magnetometer accurately measures the components of a low strength magnetic field in each of three mutually perpendicular directions. To accomplish this, it employs the principle of magnetic resonance in optically pumped rubidium

INSTRUMENT PERFORMS NONDESTRUCTIVE CHEMICAL TURKEVICH, A. /CHICAGO UNIV./ OCT. 1965 JPL-SC-078

vapor.

Instrument automatically performs a nondestructive chemical analysis of surfaces and transmits the data in the form of electronic signals. It employs solid-state nuclear particle detectors with a charged nuclear particle source and an electronic pulse-height analyzer.

B65-10318 REMOTE CONTROL ELECTRICAL SWITCHING SYSTEM HAS 1000-OUTPUT CAPABILITY INNOVATOR NOT GIVEN /IBM/ OCT. 1965 M-FS-380

Electromechanical remote control system has a capacity of 1000 individual on-off functions yet uses only seven pairs of telephone-type lines for interconnection. Installation and maintenance costs are decreased by using this system.

RUGGED PRESSED DISK ELECTRODE HAS LOW CONTACT POTENTIAL MOSIER, B. /INST. OF RES. AND INSTRU-OCT. 1965 SEE ALSO B64-10025 DAY, J. L. MENTATION/ MSC-158

Pressed-disk electrode with low contact potential monitors physiological processes. It consists of silver and silver chloride combined with bentonitic clay. The clay affords a surface that permits use over extended periods without contact deterioration.

B65-10322 CAM-OPERATED LIMIT SWITCH FEATURES SAFE FUSE REPLACEMENT WEBER, G. J. /MCDONNELL AIRCRAFT CORP./ OCT. 1965 MSC-218

Two hermetically sealed, short travel, limit switches permit fuse replacement without danger of a spark or arcing. The switches are wired in parallel circuits and actuated by manually operated cams containing the circuit fuses.

B65-10324 SELENIUM BOND DECREASES ON RESISTANCE OF LIGHT-ACTIVATED SWITCH
INNOVATOR NOT GIVEN / IBM/ NOV. 1965 JPL-SC-101

Vitrified amorphous selenium bond decreases the ON resistance of a gallium arsenide-silicon light-activated, low-level switch. The switch is used under a pulse condition to prolong switch life and minimize errors due to heating, devitrification, and overdrawing.

B65-10325 DIRECT FORCE-MEASURING TRANSDUCER USED IN BLOOD PRESSURE RESEARCH EIGE, J. J. /STANFORD RES. INST./ NEWGARD, P. M. PRESSMAN, G. L. NOV. 1965 ARC-53

Direct force-measuring transducer acts as an arterial tonometer, gives a direct readout to instrumentation, and is unaffected by ambient noise. It uses a semiconductor strain gauge which is deflected by pressure pulses in the artery. The deflection changes the resistance of the gauge and alters the voltage reading on the associated instrumentation.

B65-10328 FEED-THROUGH CONNECTOR WITHSTANDS HIGH TEMPERATURES IN VACUUM ENVIRONMENT KREISMAN, W. S. /GEOPHYS. CORP. OF AM./ NOV. 1965 GSFC-442

Feed-through connector with sealing action augmented by any temperature increase can be used through the wall of a vacuum device. It retains vacuum integrity through successive cycles of high temperature.

B65-10329 BAKING ENABLES MCLEOD GAUGE TO MEASURE IN ULTRAHIGH VACUUM RANGE KREISMAN, W. S. /GEOPHYS. CORP. OF AM./ NOV. 1965 GSFC-440

Accurate measurements in the ultrahigh vacuum range by a conventional McLeod gauge requires degassing of the gauge*s glass walls. A closed system, in which mercury is forced into the gauge by gravity alone, and in which the gauge components are baked out for long periods, is used to achieve this degassing.

B65-10333 COMMUNICATION SYSTEM USES MODULATED LASER BEAM MINOTT, P. O. NOV. 1965 GSFC-377

Electro-optical system is placed on a satellite to effect communications between two remote stations. The system employs an essentially passive, retrodirective, laser beam modulator-reflector.

JPL-155

>

PREQUENCY DIVIDER IS FREE OF SPURIOUS OUTPUTS MC DERMOND, D. NOV. 1965 GSFC-308

Frequency divider provides sixteen output states free of spurious pulses from four input circuits. The input is binary coded, and a change of one in the input only changes the number of output states by one.

B65-10340 MINIATURE SERVO ACCELEROMETER IS FORCE-BALANCED JOHNSTON, A. R. /CALIF. INST. RES. FOUND./ NOV.

L-155
Miniature servo accelerometer measures unusually small forces of torques. The pendulous mass of the accelerometer is suspended by fused quartz torsion fibers in an electromagnetically force-balanced environment. It is used in gravity surveys for exploring mineral deposits.

B65-10343 DELAYED RIPPLE COUNTER SIMPLIFIES SQUARE-ROOT COMPUTATION CLIFF, R. NOV. 1965 GSFC-398

Ripple subtract technique simplifies the logic circuitry required in a binary computing device to derive the square root of a number. Successively higher numbers are subtracted from a register containing the number out of which the square root is to be extracted. The last number subtracted will be the closest integer to the square root of the number.

B65-10345

VARIABLE WORD LENGTH ENCODER REDUCES TV BANDWIDTH REQUIREMENTS SIVERTSON, W. E., JR. NOV. 1965 LANGLEY-87

Adaptive variable resolution encoding technique provides an adaptive compression pseudo-random noise signal processor for reducing television bandwidth requirements. Complementary processors are required in both the transmitting and receiving systems. The pretransmission processor is analog-to-digital, while the postreception processor is digital-to-analog.

B65-10347 COMPACT SCR TRIGGER CIRCUIT FOR IGNITRON SWITCH OPERATES EFFICIENTLY FOSTER, L. E. NOV. 1965 M-FS-371

Trigger circuit with two series-connected SCR triggers an ignitron switch used to discharge high-energy capacitor banks. It does not require a warmup period and operates at relatively high efficiency.

B65-10349 EFREQUENCY DISCRIMINATOR WITH BINARY OUTPUT ELIMINATES TUNED CIRCUITS DE VELDE, E. /IBM/ NOV. 1965 M-FS-376

Frequency discriminator has a binary output and permits microminiaturized packaging techniques. It uses a bandpass amplifier and standard logic elements that convert two input frequencies into two discrete logic pulses.

B65-10350 ZENER DIODE CONTROLS SWITCHING OF LARGE DIRECT CURRENTS INNOVATOR NOT GIVEN /IBM/ NOV. 1965 MSC-188

High-current zener diode is connected in series with the positive input terminal of a dc supply to block the flow of direct current until a high-frequency control signal is applied across

the zener diode. This circuit controls the switching of large dc signals.

B65-10352 VIBRATING DIAPHRAGM MEASURES HIGH ELECTROSTATIC FIELD STRENGTHS
INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ NOV. 1965 MSC-189

Meter with flexible conductive diaphragm measures electrostatic charge density on a conducting surface in a vacuum. The diaphragm is supported from an insulated conductive support ring rigidly attached to the conductive surface whose electrostatic charge density is to be measured.

B65-10353 MULTIPHASE CLOCK-PULSE GENERATOR USES SIMPLIFIED CIRCUITRY INNOVATOR NOT GIVEN /IBM/ NOV. 1965 M-FS-297

Multiphase clock-pulse generator converts a simple pulse train into nonoverlapping clock pulses. The generator employs multistable circuits to minimize the number of electronic components.

SIMPLE CIRCUIT PERFORMS BINARY ADDITION AND SUBTRACTION CLIFF, R. A. GSFC-399 SCHAEFER. D. H. NOV. 1965

Ripple adder reduces the number of logic circuits required to perform binary addition and subtraction. The adder uses dual input and delayed output flip-flops in one register. The contents of this register are summed with those of a standard register through conventional AND/ gates.

B65~10359 IMPROVED WIRE MEMORY MATRIX USES VERY LITTLE FEDDE, G. A. /SPERRY RAND CORP./ NOV. 1965 JPL-SC-167

Thin-film, plated-wire memory matrix for computer applications requires little power yet has higher speed and four times greater storage capacity than ferrite-core memories of the same size.

B65-10361 HIGH-INTENSITY FLASHING BEACON POWERED BY MERCURY CELLS NOV. 1965 LANGLEY-80

Pair of xenon flashlamps powered by mercury batteries in a transistorized circuit provides a flashing beacon with an effective intensity of a second-magnitude star at a distance of ten statute miles. This beacon is lightweight, long lasting and it withstands shock and vibration.

B65-10362 TEMPERATURE TRANSDUCER HAS HIGH DUTPUT, IS TIME STABLE FOLLETT, W. H. /BALL BROTHERS RES. CORP./ NOV. 1965 GSFC-446

Compact, lightweight temperature transducer requires no amplification of its output signal and is time stable. It uses the temperature-dependent characteristics of a silicon transistor to provide a zero-to-five-volt signal proportional to temperature.

B65-10363 B65-10363
REGENERATIVE FUEL CELL COMBINES HIGH
EFFICIENCY WITH LOW COST
DOYLE, H. FRANK, H. STEPHENS, C. W.
/ELECTRO-OPT. SYSTEMS/ DEC. 1965 W00-090

Hydrogen/oxygen regenerative fuel cell stores electrical energy efficiently and inexpensively.

The fuel cell has a high energy-to-weight ratio,
and is adapted for a large number of cycles with deep discharge.

B65-10369 RESPIRATORY TRANSFER VALUE HAS FAIL-SAFE PUCCINELLI, A. A. SMITH, J. R., JR. DEC. 1965 ARC-1

Quick-acting, remote controlled valve connects either one of two oxygen or air supplies to a breathing tube. The valve, which is fail-safe, incorporates a cammed piston arrangement that is driven by a remote controlled reversible rotary solenoid or reversible electric motor.

B65-10376
THREE-POSITION ROCKER SWITCH ACTUATOR HAS
POSITIVE CENTERING
BOGLEY, R. L. /N. AM. AVIATION/ DEC. 1965
MSC-261

Three-position rocker switch actuator provides positive center positioning to inhibit possible override. Switch position is visually identified by rocker position, and functions can be shown on tabs and bars.

B65-10377
BINARY COUNTER USES FLUID LOGIC ELEMENTS
INNOVATOR NOT GIVEN /RAND CORP./ DEC. 1965
M-FS-323

Binary counter with two fluid flip-flops in each stage has an output taken from the output of the second flip-flop. The flip-flops each contain three fluid logic elements.

B65-10379
THREE-DIMENSIONAL WIRE-MESH CAPACITOR SYSTEM
MEASURES FLUID DENSITY
INNOVATOR NOT GIVEN /GARRETT CORP./ DEC. 1965
WOO-194

Gaging system automatically measures the bulk density of a stored, electrically nonconductive fluid containing varying portions of liquid and vapor. The system employs a three-dimensional wire-mesh capacitor whose capacitance varies with the bulk density of the fluid dielectric medium between the capacitor plates.

B65-10380
DEVICE DETECTS UNBONDED AREAS IN PLASTIC
LAMINATES
INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ DEC.
1965
4000-206

Device generates an acoustic signal whose frequency changes disclose the presence of delaminated or unbonded areas in plastic laminates. A microphone makes the frequency change audible.

B65-10381
KEYED PLUGS AND SOCKETS PREVENT IMPROPER
CONNECTIONS
BUCKEY, D. L. LANKFORD, H. /MCDONNELL AIRCRAFT
CORP./ DEC. 1965
MSC-231

Plugs and sockets individually keyed so that no plug can be mated with other than its proper socket facilitates multiple connection in electrical systems.

B65-10382
PHOTOELECTRIC SYSTEM CONTINUOUSLY MONITORS
LIQUID LEVEL
INNOVATOR NOT GIVEN /BOEING CO./ DEC. 1965
M-FS-417

Immersion probe presents a depth-sensitive optical transmission path between a light source and a photoelectric cell to continuously monitor the level of a transparent liquid in a tank. This system operates automatically, without moving parts, and provides output signals to a remote recorder.

B65-10387
SHRINKABLE SLEEVE ELIMINATES SHIELDING GAP
IN RF CABLE
INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/ DEC. 1965
WOO-207

RF shielding gap between an RF cable and a multipin connector is eliminated by a sleeve assembly installed between the connector and the terminated portion of the shielding. The assembly is enclosed in a heat-shrinkable plastic sleeve which completes the continuous RF shield.

B65-10389
INSULATOR-HOLDER PROTECTS TRANSISTORS IN DENSE
ELECTRONIC ASSEMBLIES
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
DEC. 1965
BSC-214

Moided insulating spacer with one or more cavities is used as an insulated holder for mounting metal—case transistors in a chassis containing densely packed electronic components. The transistors are mechanically supported on their bases and electrically isolated from each other by the holder.

B65-10392
NONCONTACTING VIBRATION TRANSDUCER HAS CONSTANT SENSITIVITY
FLAGGE, B. DEC. 1965
LANGLEY-99

Noncontacting transducer with constant sensitivity automatically measures the vibration amplitudes along the span of a vibrating structure of irregular contour. A system employing a feedback control positions the transducer at a constant height above the test surfaces. A differential transformer facilitates calibration and extends the amplitude range of the system.

B65-10396
ADHESIVE-BACKED TERMINAL BOARD ELIMINATES
MOUNTING SCREWS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ DEC. 1965
MSC-173

Low-profile terminal board is used in dense electronic circuits where mounting and working space is limited. The board has a thin layer of pressure-sensitive adhesive backing which eliminates the need for mounting screws.

B65-10399
BINARY COUNTER ACCUMULATES TIME BY
COMPLEMENTARY PRESET
MARRINER, G. E. /N. AM. AVIATION/ DEC. 1965
MSC-242

Binary counter reduces the number of logic elements required to furnish electrical control functions. The counter is automatically preset to the complement of the desired time increments in milliseconds. An output pulse is produced each time it reaches its capacity.

B65-10400
ELECTRICALLY HEATED DIAPHRAGM ELIMINATES USE
OF PYROTECHNICS
MATHEWSON, R. C. /N. AM. AVIATION/ DEC. 1965
MSC-241

Membrane-type diaphragm is used in systems where fluids are contained under pressure until a certain pressure threshold or point of time has been reached when the fluids are automatically released. The diaphragm is resistance heated until its strength is degraded to the point of rupture, thus releasing the contained fluids.

B66-10002 DUAL-VOLTAGE POWER SUPPLY HAS INCREASED EFFICIENCY STURMAN, J. C. JAN. 1966 LEWIS-107A

Simple circuit provides two different dc output voltages from an ac source. It employs a full-wave rectifier connected to two passive branches from which the separate dc voltages are taken. The outputs have low ripple and good voltage regulation.

B66-10006
COMPUTER CIRCUIT CALCULATES CARDIAC OUTPUT
MC CULLOUGH, C. E. /KAMAN AIRCRAFT CORP./ JAN.
1966
MSC-274

Electronic circuitry automatically calculates cardiac output. This computer is used for basic research in physiology and as a diagnostic instrument by doctors.

B66-10012 THIN-FILM SEMICONDUCTOR RECTIFIER HAS IMPROVED PROPERTIES INNOVATOR NOT GIVEN /MELPAR/ JAN. 1966 MSC-207

1

Cadmium selenide-zinc selenide film is used as a thin film semiconductor rectifier. The film is vapor-deposited in a controlled concentration gradient into a glass substrate to form the required junctions between vapor-deposited gold electrodes.

B66-10013
REACTION HEAT USED IN STATIC WATER REMOVAL
FROM FUEL CELLS
PLATNER, J. L. /ALLIS-CHALMERS MFG. CO./ JAN.
1966
M-FS-532

Reaction heat is used for removal of water formed at the hydrogen fuel electrode in a hydrogenoxygen fuel cell. A portion of the heat inherent in the fuel cell current generation reaction is used to transfer excess water into water vapor and cause it to be exhausted from the cell by a porous vapor transport membrane adjoining a vapor cavity.

B66-10015
ELECTRODELESS DISCHARGE LAMP IS EASILY
STARTED, HAS HIGH STABILITY
BELL, W. E. BLOOM, A. L. /VARIAN ASSOCIATES/
JAN. 1966
WOO-030

Electrodeless discharge borosilicate glass lamp is used in various high-resolution optical systems. It is partially charged with krypton, contains small amounts of rubidium, and is enclosed in a hermetically sealed envelope that maintains the lamp at an optimum temperature during discharge. The lamp is quickly started by its excitation coil.

B66-10021
SPECIAL MOUNT IMPROVES REMOTE TRANSDUCER
ACCURACY
LAYTON, J. P. /PRINCETON UNIV./ JAN. 1966
LEWIS-269

Transducer-mounting device allows measurement of transient pressure in a hostile environment. The device provides free passage areas and a controlled environment for the measuring instrument.

B66-10025 CUPROUS SELENIDE AND SULFIDE FORM IMPROVED PHOTOVOLTAIC BARRIERS INNOVATOR NOT GIVEN /RCA/ JAN. 1966 WOO-212

Photovoltaic barriers formed by depositing a layer of polycrystalline cuprous sulfide or cuprous selenide on gallium arsenide are chemically and electrically stable. The stability of these barrier materials is significantly greater than that of cuprous jodide.

B66-10026
IMPROVED CARBON ELECTRODE REDUCES ARC
SPUTTERING
INNOVATOR NOT GIVEN /UNION CARBIDE CORP./ JAN.
1966
MSC-219

Carbon rod cores with a smaller proportion of rare earth compounds than in standard cores reduce arc sputtering in optical equipment. This core is produced without additional cost or equipment.

B66-10028
PORTABLE SELF-POWERED DEVICE DETECTS INTERNAL
FLAWS IN TUBULAR STRUCTURES
GILMOUR, G. /WESTINGHOUSE ELEC. CORP./ JAN. 1966
NU-0019

Portable probe and eddy-current-sensitive circuitry detects internal flaws or hard spot impurities in an electrically conductive tubular channel by recording the conductivity change at the defect point.

B66-10031
PRESSURE TRANSDUCERS DYNAMICALLY TESTED WITH
SINUSOIDAL PRESSURE GENERATOR
JONES, H. B., JR. /PRINCETON UNIV./ JAN. 1966
LEWIS-268

115-268 Sinusoidal pressure generator assembly dynamically tests and calibrates pressure transducers by using a chamber whose lowest resonant mode is above the audiofrequency range.

B66-10034 CIRCUIT EXHIBITS POWER EFFICIENCY GREATER THAN 75 PERCENT MANKOVITZ, R. J. /N. AM. AVIATION/ FEB. 1966 MSC-254

Variable duty cycle pulser increases circuit power efficiency by more than 75 percent when operating solenoid valves. The pulser provides a low-level holding current after a high-level current has actuated the solenoid valves.

B66-10036 FLOWMETER MEASURES LOW GAS-FLOW RATES WELLS, F. E. FEB. 1966 M-FS-215

Positive-displacement flowmeter measures low gas-flow rates by gauging the time required for a slug of mercury to pass between two reference levels in a tube of known volume.

B66-10038
CIRCUIT OPERATES AS SINE FUNCTION GENERATOR
BOGART, T., JR. /N. AM. AVIATION/ FEB. 1966
MSC-255

Electronic circuit drives sine function generator using square wave and sawtooth sweep generators. The circuit replaces electromechanical driver and increases accuracy.

B66-10039
CONTROL SYSTEM MAINTAINS SELECTED LIQUID LEVEL
BERGESON, R. L. SCHUCK, J. W. /HONEYWELL/ FEB.
1966
M-FS-470

Single-sensor control system maintains liquid hydrogen at a preselected desired level within a tank, regardless of boiloff. It calibrates output in percentage. Thus, when the fuel is at the desired level, the system output will indicate 100 percent regardless of what percent of tank capacity the fuel has reached.

B66-10041 COLD CATHODE IONIZATION GAUGE HAS RIGID METAL HOUSING HERZOG, R. KREISMAN, W. S. /GEOPHYS. CORP. OF AM./ FEB. 1966 GSFC-445

Cold cathode ionization gauge in a stainless steel housing accurately measures high pressures. The Penning effect is used with a high voltage discharge in the presence of a magnetic field for an ion current proportional to the gas pressure in the gauge.

B66-10042 VIBRATION TESTS ON VIDICONS MADE BY IMPROVED METHOD INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ FEB. 1966 JPL-SC-115

Sensitive method is used for checking the performance of vidicons in mechanical vibration tests. The image of the desired fine-detail test pattern is stored in the photosensitive surface of the vidicon while the system is free of mechanical vibration. Mechanical excitation is then applied, and its effects observed.

B66-10046
LAMP AUTOMATICALLY SWITCHES TO NEW FILAMENT
ON BURNOUT
INGLE, W. B. /N. AM. AVIATION/ FEB. 1966
M-FS-498

Lamp with primary and secondary filaments has a means for automatic switching to the secondary filament at primary filament burnout. Lamp failures and resultant expenses during oscillograph printing are appreciably reduced.

B66-10048
NONCONTACTING TRANSDUCER MEASURES SHAFT TORQUE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ FEB. 1966
M-FS-474

Transducer for measuring the output torque of a

rotating shaft uses a magnetically permeable sleeve fitted over a section of the shaft which deflects axially in direct proportion to the output torque. A corresponding change in reluctance occurs in pickup coils mounted in close proximity to the sleeve. This change is measured by attached conventional circuitry.

B66-10050 SINGLE CONNECTOR PROVIDES SAFETY FUSES FOR MULTIPLE LINES WEBER, G. J. /MCDONNELL AIRCRAFT./ FEB. 1966 MSC-199

Fuse-bearing sleeve which is inserted between the male and female members of a multiple-line connector contains a safety fuse for each pin of the connector assembly. The sleeve is easily and quickly opened for fuse replacement.

B66-10051 FERROELECTRIC BOLOMETER MEASURES RF ABSOLUTE POWER AT SUBMILLIMETER WAVELENGTHS COHN, M. RODGERS, J. D. /ADVANCED TECHNOL. CORP./ FEB. 1966 GSFC-422

Two ferroelectric bolometer sensing elements measure low RF absolute power at millimeter and submillimeter wavelengths. The sensing elements are mounted in sections of waveguide and connected in series in a standard temperature compensating bridge circuit.

B66-10057 MINIATURE BIOELECTRIC DEVICE ACCURATELY MEASURES AND TELEMETERS TEMPERATURE FRYER, T. B. FEB. 1966 SEE ALSO B64-10171 ARC-52

C-52
Miniature micropower solid-state circuit measures and telemeters the body temperature of laboratory animals over periods up to two years. The circuit employs a thermistor as a temperature sensing element and an FM transmitter. It is constructed from conventional discrete components or integrated circuits.

B66-10062 FORTRAN PROGRAM FLOWCHART IS AUTOMATICALLY PRODUCED CLARK, D. J. WILLIAMS, D. /GE/ FEB. 1966 M-FS-369

Computer under control of the FLO-TRAN program automatically produces and updates flowcharts of Fortran program source decks fed to it. The flowcharts are produced on either 35mm film or paper.

B66-10064
TRANSMISSION SYSTEM ISOLATES PRESSURE
TRANSDUCER FROM SEVERE ENVIRONMENT
INNOVATOR NOT GIVEN /SPACE-GEN. CORP./ FEB. 1966

Pressure transmission system measures the pressure of a high temperature, chemically active fluid by isolating the pressure transducer from the process fluid without component disconnections.

B66-10066 ANTENNA CONFIGURATIONS PROVIDE POLARIZATION DIVERSITY SCHUMACHER, C. N. /CUTLER HAMMER/ FEB. 1966

GSFC-74

Compact back-to-back trapezoidal tooth logperiodic /TTLP/ antenna with frequency-

compact back-to-back trapezoidal tooth logperiodic /TTLP/ antenna with frequencyindependent characteristics is formed by reducing the angle between the two elements of a basic TTLP to zero. The back-to-back antenna, arranged in various configurations, provides monopulse operations in one or two planes and in various polarizations.

B66-10067 AUXILIARY COIL CONTROLS TEMPERATURE OF RF INDUCTION HEATER INNOVATOR NOT GIVEN /GEN. DYN./ELECTRON./ FEB. 1966 GSFC-428

Auxiliary coil controls the temperature of an RF induction furnace that is powered by a relatively unstable RF generator. Manual or servoed

adjustment of the relative position of the auxiliary coil, which is placed in close proximity to the RF coil, changes the looseness of the RF coil and hence the corresponding heating effect of its RF field.

B66-10068
SENSOR DETECTS HYDROCARBON OIL CONTAMINANTS
IN FLUID LINES
ROTH, B. /N. AM. AVIATION/ FEB. 1966 SEE ALSO
B63-10311
M-FS-522

Sensor with ultraviolet light monitors and detects hydrocarbon oil contaminants present in fluid lines. The light causes the oil particles to fluoresce. This light emitted by the oil particle is detected by a photocell which is relatively insensitive to ultraviolet radiation.

B66-10082
ROD AND DISH CATHODE IMPROVES PENNING-TYPE
VACUUM GAUGE
PEPPIN, G. B. /HUGHES AIRCRAFT CO./ MAR. 1966
GSFC-447

Improved penning-type ionization gauge provides range and sensitivity required to measure gas pressure below .01 torr under high vacuum conditions. The gauge uses a highly conductive cathode composed of two disks of high magnetic permeability separated by a rod of low magnetic permeability.

B66-10084
REFRACTORY COATING PROTECTS INTRICATE GRAPHITE
ELEMENTS FROM HIGH-TEMPERATURE HYDROGEN
FERRIS, J. R. PATTERSON, R. L. STEFFEN, R. J.
VOGEL, C. E. /WESTINGHOUSE ASTRONUCL. LAB./ MAR.
1966
NU-0027

Refractory coating protects graphite heater elements operating at high temperature in a hydrogen atmosphere. The coating is formed by painting the graphite elements with a composition containing powdered tungsten, and heat-treating it.

B66-10085
SEISMOMETER DESIGNED FOR REMOTE OPERATION IN RANDOM ORIENTATION
LEHNER, F. E. /CALIF. INST. OF TECH./ MAR. 1966
JPL-320

Portable seismometer mounted in a rugged housing can be placed in inaccessible locations and operate efficiently in other than a vertically upright position. The instrument housing contains an amplifier, transmitter, and antenna to relay measurement data to a receiving station.

B66-10088
GELATIN COATED ELECTRODES ALLOW PROLONGED
BIOELECTRONIC MEASUREMENTS
INNOVATOR NOT GIVEN /INST. OF RES. AND
INSTRUMENTATION/ MAR. 1966 SEE ALSO B64-10025,
B65-10015, AND B65-10320
MSC-153

Silver electrodes treated with an anodizing electrolyte containing gelatin are used for long term monitoring of bioelectronic potentials in humans. The electrodes do not interact with perspiration, cause skin irritation, or promote the growth of bacteria.

B66-10089
AUTOMATIC GAIN CONTROL CIRCUIT HANDLES WIDE
INPUT RANGE
BLACK, S. H. /SPERRY GYROSCOPE CO./ MAR. 1966
MSC-166

Automatic gain control circuit for a radio receiver handles a wide range of input signal levels without overloading the output stage. The transistorized circuit maintains a relatively constant output by varying attenuation of the input signal.

B66-10091
VAPOR GROWN SILICON DIOXIDE IMPROVES
TRANSISTOR BASE-COLLECTOR JUNCTIONS
CARLEY, D. R. /RCA/ DUCLOS, R. A. MAR. 1966
GSFC-389

Vapor grown silicon dioxide layer protects basecollector junction in silicon planar transistors during the emitter diffusion process. This oxide fills in any imperfections that exist in the thermally grown oxide layer and is of greater thickness than that layer. This process is used to deposit protective silicon dioxide coatings on optical surfaces.

B66-10094
SYSTEM PROPORTIONS FLUID-FLOW IN RESPONSE
TO DEMAND SIGNALS
INNOVATOR NOT GIVEN /CURTISS-WRIGHT CORP./
GSFC-457

Control system provides proportioned fluid flow rates in response to demand signals. It compares a digital signal, representing a flow demand, with a reference signal to yield a control voltage to one or more solenoid valves connected to orifices of a predetermined size.

B66-10097
COMPUTER PROGRAM SIMPLIFIES SELECTION OF STRUCTURAL STEEL COLUMNS
VISSING, G. S. MAR. 1966
NU-0044

Computer program rapidly selects appropriate size steel columns and base plates for construction of multistory structures. The program produces a printed record containing the size of a section required at a particular elevation, the stress produced by the loads, and the allowable stresses for that section.

B66-10099 CAPACITIVE SYSTEM DETECTS AND LOCATES FLUID LEAKS

INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1966 M-FS-478

Electronic monitoring system automatically detects and locates minute leaks in seams of large fluid storage tanks and pipelines covered with thermal insulation. The system uses a capacitive tapesensing element that is adhesively bonded over seams where fluid leaks are likely to occur.

B66-10101
RING COUNTER CIRCUIT SWITCHES MULTIPHASE
MOTOR DIRECTION OF ROTATION
FAIRBANKS, A. F. /SPACE TECH. LABS./ MAR. 1966
JPL-SC-166

Solid state three-phase counter circuit reverses the direction of rotation of a multiphase motor without changing the phase wiring of the supply current source.

B66-10103
MOUNT MAKES LIQUID NITROGEN-COOLED GAMMA RAY
DETECTOR PORTABLE
FESSLER, T. E. MAR. 1966
LEWIS-259

wib-259
Liquid nitrogen-cooled gamma ray detector system
is made portable by attaching the detector to a
fixture which provides a good thermal conductive
path between the detector and the liquid nitrogen
in a Dewar flask and a low heat leak path between
the detector and the external environment.

B66-10105
ANGULAR ACCELERATION MEASURED BY DEFLECTION
IN SENSING RING
RICHARD, R. R. MAR. 1966
MSC-250

Small, lightweight angular accelerometer performs reliably when subjected to harsh temperature and vibration environments. The device uses strain gauges to measure the amount of deflection in a metal ring caused by movement of inertial masses mounted through the ring. Range of the instrument is varied by varying the value of inertial masses.

B66-10106 LOW-POWER RING COUNTER DRIVES HIGH-LEVEL LOADS INNOVATOR NOT GIVEN /SPERRY RAND/ MAR. 1966 GSFC-431

Ring counter dissipates very low power in standby conditions, yet drives high-current loads on a low

duty-factor basis. Complementary transistors are used so that in one selected stage both transistors are conducting while the transistors of the other stage are cut off.

B66-10112
NEW TELEVISION CAMERA ELIMINATES VIDICON TUBE
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
MAY 1966
M-FS-472

Small, lightweight camera systems use solid state imaging devices in the form of phototransistor mosaic sensors instead of vidicon tubes for light sensing and image conversion. The digital logic circuits scan the sensor mosaic at 60 frames per second to produce pictures composed of a series of dots rather than lines.

B66-10113
IMPROVED CHOPPER CIRCUIT USES PARALLEL
TRANSISTORS
INNOVATOR NOT GIVEN /IBM/ MAR. 1966
M-FS-468

Parallel transistor chopper circuit operates with one transistor in the forward mode and the other in the inverse mode. By using this method, it acts as a single, symmetrical, bidirectional transistor, and reduces and stabilizes the offset voltage.

B66-10126
VARIABLE-CAPACITANCE TACHOMETER ELIMINATES
TROUBLESOME MAGNETIC FIELDS
INNOVATOR NOT GIVEN /BENDIX CORP./ MAR. 1966
GSFC-435

Dual variable-capacitance tachometer measures angular speed and sense of rotation without magnetic components. Thus it eliminates magnetic flux interference with associated instrumentation in an electromechanical system.

B66-10127
APPARATUS MEASURES THERMAL CONDUCTIVITY OF HONEYCOMB-CORE PANELS
MAR. 1966
LANGLEY-202

Overall thermal conductivity of honeycomb-core panels at elevated temperatures is measured by an apparatus with a heater assembly and a calibrated heat-rate transducer. The apparatus has space between the heater and transducer for insertion of a test panel and insulation.

B66-10128
OPTICAL GYRO PICKOFF OPERATES AT CRYOGENIC
TEMPERATURES
INNOVATOR NOT GIVEN /GE/ MAR. 1966
M-FS-407

Two-axis pickoff for cryogenic gyros uses solidstate light sources and sensors. This compact system operates efficiently at cryogenic temperatures.

B66-10129
DIGITALLY CONTROLLED PULSE-LEVEL DISCRIMINATOR OPERATES OVER WIDE VOLTAGE RANGE CANCRO, C. A. MAR. 1966
GSFC-324

Low power drain discriminator circuit generates an output pulse when an input pulse exceeds a discrete digitally controlled threshold voltage. The discriminator operates over a wide linear or nonlinear range of threshold levels. It uses several amplifier stages ahead of a fixed-reference threshold detector.

B66-10130
MATERIALS PHYSICALLY TESTED IN VARIABLEENVIRONMENT CHAMBER
KNOELL, A. C. MAR. 1966
JPL-789

Controlled environment chamber for physical tests of crushable materials encloses both the test specimen and the devices for performing the tests. The chamber may be stepped through a range of changing environment.

866-10133 CMNIDIRECTIONAL ANTENNAS TRANSMIT AND RECEIVE OVER LARGE BANDWIDTH WOODWARD, O. M., JR. /RCA/ MAR. 1966 GSFC-436

For exchanging wideband signals between two distant ground stations, low-gain antennas with wide angular coverage and circular polarization are mounted on a single mast extending from a satellite. The transmitting antenna has two decoupled ports or inputs for eliminating switching problems when using two transmitters on different frequencies.

B66-10134
HIGH TEMPERATURE THERMOCOUPLE OPERATES
IN REDUCTION ATMOSPHERE
HOFF, R. G. /AEROJET-GEN. CORP./ MAR. 1966

Thermocouple continuously measures a flowing gas up to 4500 degrees F in a hazardous environment. The thermocouple combines rhenium and tungsten in the probe, housing, and swaged extension lead. The wires extend continuously from the cold junction to the probe tip to eliminate errors from secondary thermocouple effects.

B66-10141
OPTICALLY DRIVEN SWITCH TURN-OFF TIME REDUCED
BY OPAQUE COATINGS
INNOVATOR NOT GIVEN /IBM/ APR. 1966
JPL-SC-107

Turn-off response time of an optically driven switch is reduced by placing an opaque covering over the passivating silicon dioxide members. The coating prevents photon absorption so that carriers are not trapped or stored on the base region, thus shortening turn-off time.

B66-10142
DIFFUSION TECHNIQUE STABILIZES RESISTOR
VALUES
GALLAGHER, R. C. GIULIANO, M. N. /WESTINGHOUSE
ELEC. CORP./ APR. 1966

MSC-205
Reduction of the contact resistance stabilizes the values, over a broad temperature range, of resistors used in linear integrated circuits.
This reduction is accomplished by P-plus diffusion under the alloyed aluminum contacts.

B66-10144
MOUNTING IMPROVES HEAT-SINK CONTACT WITH
BERYLLIA WASHER
INNOVATOR NOT GIVEN /COLLINS RADIO CO./ APR.
1966 SEE ALSO B63-10033
MSC-194

To conduct heat away from electrical components that must be electrically insulated from a metal heat sink, a metal washer and a coil spring are placed between one end of the electrical component and the beryllia washer mounted on the heat sink. The thermal paths are formed by the component lead and base, the metal and beryllia washers, and the compressed spring.

B66-10147
POLYMER DEFORMATION GAUGE MEASURES THICKNESS CHANGE IN TENSILE TESTS
BROYLES, H. F. BROYLES, H. H. APR. 1966
JPL-745

Lightweight deformation gauge attached to a polymer specimen determines the thickness changes undergone by the specimen during the testing of its tensile and elongation properties. Mechanical noise from outside sources is dampened when the assembly is hung on a light rubber band.

866-10148
TESTER PERIODICALLY REGISTERS DC AMPLIFIER
CHARACTERISTICS
CREE, D. WENZEL, G. E. APR. 1966
MSC-190

Motor-driven switcher-recorder periodically registers the zero drift and gain drift signals of a dc amplifier subjected to changes in environment. A time coding method is used since several seasurements are shared on a single recorder trace.

B66-10158
SWITCHING MECHANISM SENSES ANGULAR
ACCELERATION
INNOVATOR NOT GIVEN /BALL BROS. RES. CORP./
APR. 1966
GSFC-462

Switching mechanism actuates an electrical circuit when a predetermined angular acceleration and displacement are reached. A rotor in the mechanism overcomes the restraint of a magnetic detent when the case in which the detent is mounted reaches the predetermined angular acceleration.

B66-10159
IMPROVED SYSTEM MEASURES OUTPUT ENERGY OF
PYROTECHNIC DEVICES
SHORTLY, E. M. /N. AM. AVIATION/ APR. 1966
WOD-256

System for measuring the output energy of pyrotechnic devices discharges the reaction products into a test chamber. It measures the radiant heat output from a pinhole aperture as well as internal pressure changes on a common time base.

B66-10160
ELECTROPNEUMATIC TRANSDUCER AUTOMATICALLY
LIMITS MOTOR CURRENT
LOVITT, T. F. APR. 1966
LEWIS-253

Pneumatic controller regulates the load on a centrifugal freon compressor in a water cooling system, thus limiting the current input to an electric motor driving it. An electromechanical transducer monitoring the motor input current sends out air signals which indicate changes in the current to the pneumatic controller.

B66-10161
TRANSDUCER MEASURES FORCE IN VACUUM
ENVIRONMENT
GLENN, D. C. APR. 1966
LEWIS-218

Transducer assembly measures force in a vacuum environment. The assembly consists of a standard capacitance probe and a torque beam. This transducer can be used in high-pressure as well as in low-pressure environments for static and dynamic force measurements.

B66-10162 FIXTURE AIDS SOLDERING OF ELECTRONIC COMPONENTS ON CIRCUIT BOARD ROSS, M. H. APR. 1966 ARC-56

Spring clamp fixture holds small electronic components in a desired position while they are being soldered on a circuit board. The spring clamp is clipped on the edge of the circuit board and an adjustable spring-steel boom holds components against the board. The felt pad at the end of the boom is replaced with different attachments for other holding tasks.

B66-10163
TWO-LIGHT CIRCUIT CONTINUOUSLY MONITORS AC GROUND, PHASE, AND NEUTRAL WIRES MEE, R. W. /N. AM. AVIATION/ APR. 1966
MSC-356

Two-transformer, two-lamp circuit monitors the continuity of ac ground, neutral, and phase wires. The circuit gives different visual indications if any one of the three lines should become open circuited.

B66-10164
FATIGUE TESTER ACHIEVES TRUE AXIAL MOTION
THROUGH FLEX PLATES AND BARS
HENGSTENBERG, T. F. /WESTINGHOUSE ASTRONUCLEAR
LAB./ KURINKO, C. D. APR. 1966
NU-0021

Lever load-amplifying fatigue testing machine with a load cycle frequency of 100 to 900 cycles per minute applies the load through true axial motion. Pivot friction and bearing wear are eliminated by replacing these parts with flex plates and bars.

R66-10170 SCANNING PHOTOMETER SYSTEM AUTOMATICALLY DETERMINES ATMOSPHERIC LAYER HEIGHT WOLFF, M. /MIT/ APR. 1966 MSC-245

'n

Two photometers, placed a given distance apart, determine the height of nonuniform luminous layers in a synchronous manner. Photometer outputs are correlated by a simple analog correlation computer to automatically give the luminous layer height. This system is used to determine visibility ceilings at airports.

BINARY FLUID AMPLIFIER SOLVES STABILITY AND LOAD PROBLEMS LARKIN, B. D. RI CORP./ MAY 1966 ERC-15 READER, T. D. /GIANNINI CONTROLS

Digital fluid amplifier has load intensity, high stability, and operates at low Reynolds numbers. It contains specially designed nozzles to provide uniform exit-velocity profiles and to ensure jets of low turbulence.

COMPLEMENTARY MONOSTABLE CIRCUITS ACHIEVE LOW POWER DRAIN AND HIGH RELIABILITY KLEINBERG, L. L. LAVIGNE, R. C. MAY 1966 GSFC-433

Two-transistor multivibrator has minimum power dissipation and maximum reliability. It minimizes the use of components that are subject to enviromental changes or other unpredictable behavior.

B66-10180 THIN-FILM GAGE MEASURES LOW HEAT-TRANSFER SPITZER, C. R. MAY 1966 LANGLEY 205

Low heat-transfer gauge facilitates determination of the transition between laminar and turbulent conditions, in the boundary layer surrounding slender and moderately slender cones under test in a hypersonic blowdown helium tunnel. The gauge consists of a thin layer of vacuum- evaporated platinum on a heat resistant glass substrate contoured to fit model surfaces.

B66-10182 SUBMINIATURIZED GAS CHROMATOGRAPH GIVES FAST, EFFICIENT ANALYSIS

EFFICIENT ANALYSIS
WILHITE, W. F. MAY 1966
JPL-735 JPL-736 JPL-737 JPL-740
Space oriented, lightweight, subminiaturized gas chromatograph analyzes gas samples in a few seconds with a carrier gas flow of one milliliter per second. In extraterrestrial exploration, the system could be used with a mass spectrometer for detection of life-supporting compounds.

B66-10192 COATING PERMITS USE OF STRAIN GAGE IN WATER AND LIQUID HYDROGEN BERVEN, B. B. /N. AM. AVIATION/ MAY 1966 M-FS-594

'S-594
Strain gauge installation covered with a three-layer coating of commercial materials makes measurements in water and liquid hydrogen. It consists of a selected foil strain gauge bonded with a modified commercial heat-curing epoxy cement. The outer protective layer of the gauge cement. The outer protective layer of the gauge installation may develop cracks when immersed in liquid hydrogen.

B66-10193 SOLID STATE THERMOSTAT HAS INTEGRAL PROBE AND CIRCUITRY INNOVATOR NOT GIVEN /METRO PHYS.. INC./ MAY 1966 M-FS-434

Compact, reliable thermostat provides a temperature readout signal and a continuous temperature-control output for temperature monitoring by automatic checkout equipment or telemetry systems. It employs a solid state circuit in a housing rigidly attached to a thermistor probe.

B66-10198 DEVICE WITHOUT ELECTRICAL CONNECTIONS IN TANK MEASURES LIQUID LEVEL SHENKMAN, J. S. /V. K. C. AEROJET-GEN. CORP./ MAY 1966 W00-235 Vertical static float in a tank measures the liquid level without the use of electrical connections in the tank. The float transmits the buoyant force of the liquid to an external force transducer. It is insensitive to tank pressure and temperature changes.

B66-10200 APPARATUS PRESENTS VISUAL DISPLAY OF SEMICONDUCTOR SURFACE CHARACTERISTICS SUMMERS, R. A. MAY 1966 JPL-665

Apparatus provides a representation of the physicochemical condition of the surface layers of a semiconductor. It is based on the principle that the surface layers of a semiconductor will conduct an electric current when exposed to a beam of light.

B66-10203 SOLDERING IRON TEMPERATURE IS AUTOMATICALLY REDUCED LUM, J. Y. MAY 1966 ARC-57

Hinged cradle-microswitch arrangement maintains a soldering iron at less than peak temperature when not in use. The microswitch introduces a voltage reducing element into the soldering iron power circuit when the iron is placed on the cradle. The iron, when removed from the cradle, returns to operating temperature in 15 to 30 seconds.

B66-10205 WIDE-RANGE INSTRUMENT MONITORS FLOW RATES
OF CHEMICALLY ACTIVE FLUIDS
INNOVATOR NOT GIVEN /SPACELABS/ MAY 1966 MSC-186

In-like transducers system measures flow rate of chemically active propellant fluids. The system uses one low-flow transducer and one high-flow transducer. Each consists of separate heater and temperature-sensing elements.

B66-10220 ULTRASONIC RECORDING SCANNER USED FOR NONDESTRUCTIVE WELD INSPECTION
INNOVATOR NOT GIVEN /BOEING CO./ MAY 1966 SEE ALSO B66-10178 M-FS-284

Portable ultrasonic recording scanner is used for nondestructive inspection of welds. It is adaptable to continuous operation in one direction while maintaining oscillatory motion at a right angle to this direction. The scanning speed and oscillation frequency are independently adjustable.

B66-10223 MULTICOLOR STROBOSCOPE PINPOINTS RESONANCES IN VIBRATING COMPONENTS
INNOVATOR NOT GIVEN /CALIF. INST. RES. FOUND./ MAY 1966 JPL-0033

Stroboscopic system, which uses three different colored lights, rapidly scans a multicomponent assembly and provides a visual indication of resonant components. The lights are pulsed at the same flash frequency but at different phases.

B66-10224 Fet comparator detects analog signal levels WITHOUT LOADING ANALOG DEVICE WALLACE, H. L. /GE/ M-FS-503 MAY 1966

FET comparator circuit detects discrete analog computer output levels without excessively loading the output amplifier of the computer. An FET common source amplifier is coupled by a differential amplifier to a bistable transistor flip-flop. This circuit provides a digital output for analog voltages above or below a predetermined level.

B66-10225 SINGLE-CRYSTAL SEMICONDUCTOR FILMS GROWN ON FOREIGN SUBSTRATES VOHL, P. /RCA/ MAY 1966 W00-076

Intermediate alloy formed between foreign substrates and semiconductor material enable the growth of single crystal semiconductor films on the alloy layer. The melted film must not ball up on the surface of the substrate and neither chemically react nor alloy with the intermediate alloy formed on the substrate.

B66-10232 ELECTRONIC PHASE-LOCKED-LOOP SPEED CONTROL SYSTEM IS STABLE STONE, F. A. /RAYMOND ENG. LAB./ JUN. 1966 JPL-SC-084

Phase locked-loop circuit is used for playback motors in digital tape recorders where the reproducer output remains in exact synchronism with an external reference clock over extended periods. It removes the motor dynamics from the control loop so that the loop is stable without damping.

RUGGED MICROELECTRONIC MODULE PACKAGE SUPPORTS CIRCUITRY ON HEAT SINK

JOHNSON, A. L. /MINNEAPOLIS-HONEYWELL REGULATOR CO./ JUN. 1966 MSC-81A

Rugged module package for thin film hybrid microcircuits incorporated a rigid, thermally conductive support structure, which serves as a heat sink, and a lead wire block in which T-shaped electrical connectors are potted. protects the circuitry from shock and vibration loads, dissipates internal heat, and simplifies electrical connections between adjacent modules.

POLARIZING KEYS PREVENT MISMATCH OF CONNECTOR PLUGS AND RECEPTACLES CHIAPUZIO, A. /N. AM. AVIATION/ JUN. 1966 MSC-443

Keying prevents mismatching of plugs and receptacles in connector patching of instrumentation involving several thousand leads. Each receptacle and plug contains three polarizing keys that must mate in a complementary mode before the connector pins and sockets will engage.

MULTIPLE TEMPERATURES SAMPLED USING ONLY ONE REFERENCE JUNCTION COPE, G. W. JUN. 1966 GSFC-485

In a multitemperature sampling system where the reference thermocouples are a distance from the test thermocouples, an intermediate thermal junction block is placed between the sets of thermocouples permitting switching between a single reference and the test thermocouples. This reduces the amount of cabling, reference thermocouples, and cost of the sampling system.

SIMPLIFIED CIRCUIT CORRECTS FAULTS IN PARALLEL BINARY INFORMATION CHANNELS GOLDBERG, J. /STANFORD RES. INST./ JUN. 1966 SEE ALSO B65-10025

Corrective circuit prevents the appearance of erroneous output signals from the possible failure of any single-channel element interconnected in parallel binary information channels. The circuit is simplified and economical because it does not use redundant channels.

B66-10264 BINARY SEQUENCE DETECTOR USES MINIMUM NUMBER OF DECISION ELEMENTS PERLMAN, M. JUN. 1966 JPL-673 Detector of an n bit binary sequence code within a serial binary data system assigns states to memory elements of a code sequence detector by employing the same order of states for the sequence detector as that of the sequence generator when the linear recursion relationship employed by the sequence generator is given.

B66-10270
MAGNETICALLY OPERATED LIMIT SWITCH HAS
IMPROVED RELIABILITY, MINIMIZES ARCING
STEINER, R. /N. AM. AVIATION/ JUN. 1966 MSC-422

Limit switch for reliable, low-travel, snap action with negligible arcing uses an electrically nonconductive permanent magnet consisting of a ferrimagnetic ceramic and ferromagnetic pole shoes which form a magnetic and electrically conductive circuit with a ferrous-metal armature.

B66-10271 PN ACQUISITION DEMODULATOR ACHIEVES AUTOMATIC SYNCHRONIZATION OF A TELEMETRY CHANNEL COUVILLON, L. JUN. 1966 JPL-612

Data demodulator for automatic sync acquisition provides an automatic means for obtaining initial word and bit synchronization in a pulse-code-modulated/phase-shift-keyed digital communications system.

B66-10272 EXCLUSIVE-OR LOGIC CIRCUIT HAS USEFUL PROPERTIES BATTE, W. G. JUN. 1966 LANGLEY-214

Single, simple exclusive-or logic connective eliminates excessive hardware and the number of interconnections between logic modules. This circuit performs the necessary switching for the exclusive-or operation and amplifies, restores, and inverts the signal.

B66-10274 BRAZE ALLOYS USED AS TEMPERATURE INDICATORS
RICE, R. E. /AEROJET-GEN. CORP./ SHURLEY, L. A.
JUN. 1966 NU-0063

Patches of braze alloys having known fusion are applied to portions of a metal surface where temperature indicators are required. This method is used to measure temperatures over the range of 175 degrees to 2100 degrees fahrenheit where it is not feasible to employ conventional temperature detectors.

B66-10280 STRAIN GAUGE NETWORK DISTINGUISHES BETWEEN THERMAL AND MECHANICAL DEFORMATIONS CEPOLLINA, F. J. JUN. 1966 GSFC-478

Strain gauge network measures the thermal coefficient of linear expansion of composite metal structures. The network consists of a test gauge and two dummy gauges arranged to distinguish thermally induced deformation from mechanical strain.

B66-10282 SIMPLE CIRCUIT PROVIDES RELIABLE MULTIPLE SIGNAL AVERAGE AND REJECT CAPABILITY OPENSHAW, R. L. /AEROJET-GEN. CORP./ JUN. 1966

Summation average and reject circuit based on diode clamping allows detection of individual functional deviations in a multiple signal system without shutting down the entire system.

B66-10286 VACUUM TEST FIXTURE IMPROVES LEAKAGE RATES MEASUREMENTS MAIER, H. MARX, H. /GRUMMAN AIRCRAFT CORP./ JUN. 1966 MSC-271

Cylindrical chamber, consisting of two matching halves, forms a vacuum test fixture for measuring leakage rates of individual connections, brazed joints, and entrance ports used in closed fluid flow line systems. Once the chamber has been sufficiently evacuated, atmospheric pressure holds

the two halves together.

ŀ

B66-10287
DETECTION SYSTEM ENSURES POSITIVE ALARM
ACTIVATION IN DIGITAL MESSAGE LOSS
BOKROS, P. BURSTEIN, A. HEWITT, E. D. /RCA/
JUN. 1966
WOO-208

Lost Word Detection System /LDWDS/ provides
special identification for each error detection
message transmitted from receiver to transmitter.
The message is identified as an original message
or an n-times retransmitted message so the
receiver can detect where a retransmission request
was not fulfilled and activate an alarm.

B66-10291
LARGE CAPACITOR PERFORMS AS A DISTRIBUTED PARAMETER PULSE LINE GOODING, T. J. /GEN. DYN./ASTRONAUTICS/ JUL. 1966
LEWIS-176

Capacitor of extended foil construction performs as a distributed parameter pulse line in which current, amplitude, and period are readily controlled. The capacitor is used as the energy storage element in a pulsed plasma accelerator.

B66-10292 CIRCUIT PROTECTS REGULATED POWER SUPPLY AGAINST OVERLOAD CURRENT AIRTH, H. B. /WESTINGHOUSE ELEC. CORP./ JUL. 1966 GSFC-453

Sensing circuit in which a tunnel diode controls a series regulator transistor protects a low voltage transistorized dc regulator from damage by excessive load currents. When a fault occurs, the faulty circuit is limited to a preset percentage of the current when limiting first occurs.

B66-10293
DAMPING TECHNIQUE GIVES ACCELEROMETER FLAT
FREQUENCY RESPONSE
WING, T. /GULTON IND./ JUL. 1966
M-FS-471

Piezoelectric accelerometer uses a viscous damping technique to achieve a flat frequency response over a wide frequency range in high acoustic environments. This eliminates the electrical overload on associated electronics and loss of useful data caused by oscillations of the accelerometer.

B66-10295 SUBSTITUTING TRANSISTOR FOR DIODE IMPROVES RECTIFYING MEANS MULLER, R. M. JUL. 1966 GSFC-474

Unusual transistor connection that substitutes for a silicon diode and allows significantly higher repetition rates without increasing power loss rectifies an alternating current. Operation speed is improved by a factor of 10 or more when a given diode is replaced by this transistor circuit.

B66-10300 COMPUTER PROGRAM DETERMINES GAS FLOW RATES IN PIPING SYSTEMS FRANKE, R. /BOEING CO./ JUL. 1966 M-FS-443

Computer program calculates the steady state flow characteristics of an ideal compressible gas in a complex piping system. The program calculates the stagnation and total temperature, static and total pressure, loss factor, and forces on each element in the piping system.

B66-10306
INSTRUMENT CALCULATES MOMENTS OF INERTIA OF
COMPLEX PLANE FIGURES
MYERS, W. J. /N. AM. AVIATION/ JUL. 1966
MSC-628

Instrument consisting of a narrow field scanner coupled with a simple preprogrammed computer calculates distributive—area proporties of complex or irregular plane figures representing cross

sections of structural members. The calculator obtains the properties quickly and with a high degree of accuracy.

B66-10308
MICROPHONE MULTIPLEX SYSTEM PROVIDES MULTIPLE
OUTLETS FROM SINGLE SOURCE
LAUVER, R. E. AUG. 1966
GSFC-426

Microphone multiplex system accepts an audio signal from a single source and provides any number of low impedance outputs at microphone level with complete isolation between output channels. Any input or output may be converted to high impedance by eliminating the associated transformer.

B66-10309 HIGH-PERFORMANCE RC BANDPASS FILTER IS ADAPTED TO MINIATURIZED CONSTRUCTION JUL. 1966 ARC-60

Miniaturized bandpass filter with RC networks is suitable for use in integrated circuits. The circuit consists of three stages of amplification with additional resistive and capacitive components to obtain the desired characteristics. The advantages of the active RC filter network are the reduction in size and weight and elimination of magnetic materials.

B66-10315 SYSTEM LOCATES RANDOMLY PLACED REMOTE OBJECTS LOVELADY, R. W. MC FALL, J. C., JR. JUL. 1966 LANGLEY-209

System to locate objects submerged underwater uses active/passive sonar techniques in which a transmitter is attached to the object to be recovered and a receiver is used for search. The system is rugged, has a long term operating life, and furnishes a precise bearing on the object.

Photometric analyzer measures NVR /nonvolatile residue/ in trichloroethylene and other organic solvents. The analyzer converts the liquid solvent to aerosol and passes it between an optically focused light beam and a photodetector that is connected to standard amplifying and readout equipment.

B66-10324
INSTRUMENT TRANSMITS VANISHING POINT TO
ILLUSTRATION POINT
ALVAREZ, M. M. /N. AM. AVIATION/ JUL. 1966
MSC-267A

Instrument transmits the vanishing point of an illustration to a point on the illustration on a diminishing scale that also serves as a straightedge.

B66-10331
CIRCUIT PROVIDES ACCURATE FOUR-QUADRANT
MULTIPLICATION
MC GOWAN, G. F. /MARTIN-MARIETTA CORP./ JUL.
1966
W00-272

Solid state circuit provides four-quadrant multiplication at frequencies ranging from dc to 100 cps using pulse-width and -height multiplication techniques. The circuit consumes little power and has an accuracy of approximately one percent.

ULTRASONIC EMISSION METHOD ENABLES TESTING OF ADHESIVE BONDS FRANK, L. SCHMITZ, G. /GEN. AM. TRANSPORTATION CORP./ AUG. 1966 M-FS-799

Detection of acoustic energy emitted by adhesive bonds subjected to tensile stresses at frequencies above sixteen kilocycles per second is used as a method for determining bond strength. This method is used in measuring adhesive bond strengths on metal honeycomb core panels.

B66-10344
PHASE INVERTER PROVIDES VARIABLE REFERENCE
PUSH-PULL OUTPUT
INNOVATOR NOT GIVEN /RCA/ AUG. 1966
H0-23

Dual-transistor difference amplifier provides a push-pull output referenced to a dc potential which can be varied without affecting the signal levels. The amplifier is coupled with a feedback circuit which can vary the operating points of the transistors by equal amounts to provide the variable reference potentials.

B66-10347 DUST PARTICLE INJECTOR FOR HYPERVELOCITY ACCELERATORS PROVIDES HIGH CHARGE-TO-MASS RATIO BERG, O. E. AUG. 1966 GSFC-509

Injector imparts a high charge-to-mass ratio to microparticles and injects them into an electrostatic accelerator so that the particles are accelerated to meteoric speeds. It employs relatively large masses in the anode and cathode structures with a relatively wide separation, thus permitting a large increase in the allowable injection voltages.

B66-10349
ELECTRICALLY CONDUCTIVE FIBERS THERMALLY
ISOLATE TEMPERATURE SENSOR
DE WAARD, R. NORTON, B. /BARNES ENG. CO./ AUG.
1966
GSFC-456

Mounting assembly provides thermal isolation and an electrical path for an unbacked thermal sensor. The sensor is suspended in the center of a plastic mounting ring from four plastic fibers, two of which are coated with an electrically conductive material and connected to electrically conductive coatings on the ring.

B66-10350
TRANSISTOR CIRCUIT INCREASES RANGE OF
LOGARITHMIC CURRENT AMPLIFIER
GILMOUR, G. /WESTINGHOUSE ASTRONUCL. LAB./ AUG.
1966
NU-0018

Circuit increases the range of a logarithmic current amplifier by combining a commercially available amplifier with a silicon epitaxial transistor. A temperature compensating network is provided for the transistor.

B66-10351 FUNCTION GENERATOR ELIMINATES NECESSITY OF SERIES SUMMATION CALLAN, J. D. MC CALL, A. J. MEAD, D. /HUGHES AIRCRAFT CO./ AUG. 1966 GSFC-214

Diode generator using four building-block circuits produces complex waveforms without the necessity of series summation. This highly specialized method of producing complex waveforms requires less power than present methods and uses simpler circuitry.

B66-10353 ACCELERATION-COMPENSATED PRESSURE TRANSDUCER HAS FAST RESPONSE INNOVATOR NOT GIVEN /CORNELL AERON. LAB./ AUG. 1966 LANGLEY-113

Flush-diaphragm transducer accurately measures small dynamic pressures when it is subjected to high accelerations and severe temperature environments. The transducer uses piezoelectric crystals for measuring the pressure and balancing out acceleration forces.

866-10355
BRUSHLESS DC MOTOR HAS HIGH EFFICIENCY, LONG
LIFE
STUDER, P. A. AUG. 1966
GSFC-181
Brushless dc motor operates as a commutator in a

vacuum environment with high efficiency and long life. Because of its excellent response time, it can be used in the servomechanism field.

SNIFFER USED AS PORTABLE HYDROGEN LEAK
DETECTOR
DAYAN, V. H. ROMMEL, M. A. /N. AM. AVIATION/
AUG. 1966
M-FS-846 M-FS-806
Sniffer type portable monitor detects hydrogen in
air. oxygen. nitrogen. or helium. It indicates

B66-10356

Sniffer type portable monitor detects hydrogen in air, oxygen, nitrogen, or helium. It indicates the presence of hydrogen in contact with activated palladium black by a change in color of a thermochromic paint, and indicates the quantity of hydrogen by a sensor probe and continuous readout.

B66-10359
DEVICE SERVES AS HINGE AND ELECTRICAL
CONNECTOR FOR CIRCUIT BOARDS
BETHEL, P. G. HARRIS, G. G. /CHRYSLER CORP./
AUG. 1966
M-FS-743

Hinge makes both sides of electrical circuit boards readily accessible for component checkout and servicing. The hinge permits mounting of two circuit boards and incorporates connectors to maintain continuous electrical contact between the components on both boards.

B66-10361
NEW COMPUTER SYSTEM SIMPLIFIES PROGRAMMING OF MATHEMATICAL EQUATIONS
REINFELDS, J. SEITZ, R. N. WOOD, L. H. AUG. 1966
M-FS-441

Automatic Mathematical Translator /AMSTRAN/
permits scientists or engineers to enter
mathematical equations in their natural
mathematical format and to obtain an immediate
graphical display of the solution. This
automatic-programming, on-line, multiterminal
computer system allows experienced programmers to
solve nonroutine problems.

B66-10362 AUTOMATED DRAFTING SYSTEM USES COMPUTER TECHNIQUES MILLENSON, D. H. /N. AM. AVIATION/ AUG. 1966 M-FS-788

Automated drafting system produces schematic and block diagrams from the design engineers freehand sketches. This system codes conventional drafting symbols and their coordinate locations on standard size drawings for entry on tapes that are used to drive a high speed photocomposition machine.

B66-10363
INFRARED TELEVISION USED TO DETECT HYDROGEN
FIRES
PROFFITT, R. T. /N. AM. AVIATION/ AUG. 1966
M-FS-654

Standard, commercially available closed circuit television system detects hydrogen fires in test facilities. It sees in the infrared and displays on a standard cathode ray monitor screen.

B66-10368
HYDROGEN FIRE DETECTION SYSTEM FEATURES SHARP
DISCRIMINATION
BRIGHT, C. S. /N. AM. AVIATION/ AUG. 1966
M-FS-643

Hydrogen fire detection system discovers fires by detecting the flickering ultraviolet radiation emitted by the OH molecule, a short-lived intermediate combustion product found in hydrogen-air flames. In a space application, the system discriminates against false signals from sunlight and rocket engine exhaust plume radiation.

B66-10374
PNEUMATIC BINARY ENCODER REPLACES MULTIPLE
SOLEMOID SYSTEM
INNOVATOR NOT GIVEN /WESTON HYDRAULICS/ AUG. 1966
M-FS-665

Pneumatic binary encoder replaces solenoid system in the pilot stage of a digital actuator. The

encoder operates in flip-flop manner to valve gas at either high or low pressures. By rotating the disk in a pinion-to-encoding gear ratio, six to eight adder circuits may be operated from single encoder.

B66-10376
EFFICIENT DC TO DC CONVERTER ELIMINATES
LARGE STRAY MAGNETIC FIELDS
TUMS, E. O. /CHICAGO UNIV./ AUG. 1966
GSFC-463

1

Two-core nonsaturating dc to dc converter provides high switching efficiency without producing large stray magnetic fields. It uses one core to provide positive feedback and the combination of the two cores for the transformer.

B66-10377
SINGLE CHANNEL PULSE-HEIGHT ANALYZER OPERATES
IN SUBNANOSECOND RANGE
AUG. 1966 SEE ALSO NASA-TN-D-2673
LEWIS-267

Single-channel pulse-height analyzer measures nuclear state lifetimes shorter than one nanosecond. The customary logic arrangement is reversed to reduce timing errors.

B66-10379
HUMAN TRANSFER FUNCTIONS USED TO PREDICT
SYSTEM PERFORMANCE PARAMETERS
AUG. 1966 SEE ALSO NASA-TN-D-1952, NASA-TN-D2177, NASA-TN-D-2394, AND NASA-TN-D-2569
LANGLEY-203

Automatic, parameter-tracking, model-matching technique compares the responses of a human operator with those of an analog computer model of a human operator to predict and analyze the performance of mechanical or electromechanical systems prior to construction. Transfer functions represent the input-output relation of an operator controlling a closed-loop system.

B66-10382
FEEDBACK LOOP COMPENSATES FOR RECTIFIER
NONLINEARITY
INNOVATOR NOT GIVEN /SPERRY GYROSCOPE CO./ AUG.
1966
M-FS-384

Signal processing circuit with two negative feedback loops rectifies two sinusoidal signals which are 180 degrees out of phase and produces a single full-wave rectified output signal. Each feedback loop incorporates a feedback rectifier to compensate for the nonlinearity of the circuit.

B66-10386
PARALLEL LINE RASTER ELIMINATES AMBIGUITIES IN READING TIMING OF PULSES LESS THAN 500 MICROSECONDS APART HORNE, A. P. SEP. 1966
JPL-805

Parallel horizontal line raster is used for precision timing of events occurring less than 500 microseconds apart for observation of hypervelocity phenomena. The raster uses a staircase vertical deflection and eliminates ambiguities in reading timing of pulses close to the end of each line.

B66-10389
SYSTEM MONITORS DISCRETE COMPUTER INPUTS
BURNS, J. /RCA/ AUG. 1966
M-FS-1021

Computer system monitors inputs from checkout devices. The comparing, addressing, and controlling functions are performed in the I/O unit. This leaves the computer main frame free to handle memory, access priority, and interrupt instructions.

B66-10391
JUNCTION CONNECTORS PERMIT STRATEGIC
PLACEMENT OF TELEVISION CAMERAS
KEMPSON, A., JR. SEP. 1966
KSC-66-22

Cable run circuit with switching junction connectors at strategic locations enables television cameras to be plugged in with minimum effort wherever needed. Crimp-type contacts for

mating connections reduce installation time and require a lesser level of technician skill than do soldered and potted connections.

B66-10392 INDUCTIVE SYSTEM DETECTS LEVEL OF CONDUCTING FLUIDS ROESKE, P. W. AUG. 1966 LEWIS-322

Inductive system monitors the liquid level of a conductive fluid that is at a high temperature in a fully closed opaque container. The system is useful in any high temperature liquid-metal system. It shows fast response and is relatively insensitive to temperature fluctuations.

B66-10393 CHOPOSITE FILTER STEEPENS REJECTION SLOPES IN MICROWAVE APPLICATION INMOVATOR NOT GIVEN /DORNE AND MARGULIN/ AUG. 1966 GSFC-480

Composite filter is used to obtain sharp rejection slopes in microwave transmission by filtering techniques, It consists of a bandpass filter to shape the passband and a bandreject filter on each edge of the bandpass filter to steepen the rejection slopes.

B66-10394
HIGH PRESSURE CRYOGENIC LIQUID FLOW SIGHT
ASSEMBLY PROVIDES STREAMLINED FLOW FOR EASY
OBSERVATION
HOBART, H. E. MINKIN, H. L. AUG. 1966
LEWIS-310

Window assembly facilitates observation of cryogenic liquids flowing through a smooth pipe at pressures up to several hundred pounds per square inch. This high-pressure cryogenic observation assembly which houses a thin wall glass pipe held within a steel retainer can accommodate fluids under a wide range of pressures and temperatures.

B66-10396
SOLID STATE DETECTORS MONITOR RELAY CONTACTS QUINN, J. D. SEPT. 1966
JPL-785

Hand carried, solid state, 18-channel detector system constantly monitors contact conditions in relays. The system is relatively insensitive to external noise and is powered by standard 110 voltage.

B66-10397
MINIMUM PERMISSIBLE LEAKAGE RESISTANCE
ESTABLISHED FOR INSTRUMENTATION SYSTEMS
PERRIN, J. L. /N. AM. AVIATION/ SEP. 1966
M-FS-848

Mathematical formulas are used to determine if, and to what extent, an instrumentation system that has been exposed to the elements should be dried out to restore minimum permissible leakage resistance to ground. Formulas are also derived and used for an intermediate number of systems that are exposed to moisture penetration.

B66-10401 DIELECTROMETER DESIGN PERMITS MEASUREMENT IN VACUUM UNDER IRRADIATION INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ SEP. 1966 M-FS-359

Dielectrometer permits measurement of dielectric constant and dielectric losses in a vacuum environment exposed to radiation. It is not necessary to remove the sample from the chamber during testing.

B66-10404
NEW COMPUTER PROGRAM SOLVES WIDE VARIETY OF
HEAT FLOW PROBLEMS
ALMOND, J. C. /BOEING CO./ SEP. 1966
M-FS-421

S-421
Boeing Engineering Thermal Analyzer /BETA/
computer program uses numerical methods to provide
accurate heat transfer solutions to a wide variety
of heat flow problems. The program solves
steady-state and transient problems in almost any
situation that can be represented by a

resistance-capacitance network.

B66-10407
DIRECTION INDICATOR SYSTEM DOES NOT REQUIRE
COMPLICATED OPTICS
MILDICE, J. W. /GEN. DYN./CONVAIR/ SEP. 1966
W00-305

Direction indicator which aligns a system relative to a light source uses two photocells as light sensors to form a set. Each set indicates one direction. This indicator has no moving parts and provides very fine vernier acquisition.

B66-10409
MODULAR POROUS PLATE SUBLIMATOR /MPPS/
REQUIRES ONLY WATER SUPPLY FOR COOLANT
RATHBUN, R. J. /IBM/ SEP. 1966
M-FS-1374

Modular porous plate sublimators, provided for each location where heat must be dissipated, conserve the battery power of a space vehicle by eliminating the coolant pump. The sublimator requires only a water supply for coolant.

B66-10412 LEAK LOCATOR FOR VACUUM JACKETED PIPELINES ELIMINATES NEED FOR REMOVAL OF OUTER JACKET WELLS, G. H. /N. AM. AVIATION/ SEP. 1966 M-FS-888

Device for locating leaks in a vacuum-jacketed liquid-hydrogen transfer line consists of two Mylar discs, a source of nitrogen and helium gas, and a mass spectrometer. The outer jacket of the pipeline does not need to be removed for the locator to be used.

B66-10413 ANALOG SOLAR SYSTEM MODEL RELATES CELESTIAL BODIES SPATIALLY BAERG, H. R. SEP. 1966 JPI-195

Portable analog planetarium indicates the relative time and space angular locations of the Sun and planets. Distance measuring scales, angular direction indicators, and typical probe trajectories are included.

B66-10414
ELECTRICALLY CONTROLLED OPTICAL LATCH AND SWITCH REQUIRES LESS CURRENT PIECZONKA, W. A. ROY, M. M. YEH, T. H. /IBM/SPP. 1966
JPL-SC-111 JPL-SC-112

Electrically controlled optical latch consists of a sensitive phototransistor and a solid-state light source. This design requires less current to activate an optically activated switch than in prior art.

B66-10419
METAL OXIDE SILICON /MOS/ TRANSISTORS
PROTECTED FROM DESTRUCTIVE DAMAGE BY WIRE
DEVICE
DEBUO, G. J. DEVINE, E. J. SEP. 1966
ARC-65

Loop of flexible, small diameter, nickel wire protects metal oxide silicon /MOS/ transistors from a damaging electrostatic potential. The wire is attached to a music-wire spring, slipped over the MOS transistor case, and released so the spring tensions the wire loop around all the transistor leads, shorting them together. This allows handling without danger of damage.

B66-10420 ELECTRONIC BIDIRECTIONAL VALVE CIRCUIT PREVENTS CROSSOVER DISTORTION AND THRESHOLD EFFECT

KERNICK, A. /WESTINGHOUSE ELEC. CORP./ SEP. 1966 MSC-193

Four-terminal network forms a bidirectional valve which will switch or alternate an ac signal without crossover distortion or threshold effect. In this network, an isolated control signal is sufficient for circuit turn-on.

B66-10423 AN INVESTIGATION OF PHASE-LOCK LOOP SWEPT-FREQUENCY SYNCHRONIZATION DYE, R. A. /LOCKHEED MISSILES AND SPACE CO./ SEP. 1966 M-FS-656

FS-656
Rapid synchronization of phase-locked oscillators is best achieved by the swept-frequency acquisition technique, wherein the Voltage-Controlled Oscillator /VCO/ is linearly swept through the uncertainty band. The theoretically predicted sweep rates of this technique and the observed experimental results differ by less than seven percent.

1

B66-10426
COMPUTER SIMULATION PROGRAM IS ADAPTABLE TO INDUSTRIAL PROCESSES
SCHULTZ, F. E. /GE/ OCT. 1966
LEWIS-240

The Reaction Kinetics Ablation Program /REKAP/, developed to simulate ablation of various materials, provides mathematical formulations for computer programs which can simulate certain industrial processes. The programs are based on the use of nonsymmetrical difference equations that are employed to solve complex partial differential equation systems.

B66-10427
ELECTRICAL CABLING WITHSTANDS SEVERE
ENVIRONMENTAL CONDITIONS
HATHAWAY, J. D. /N. AM. AVIATION/ SEP. 1966
M-FS-1585

Multiconductor electrical cables retain their circuit integrity and remain flexible and abrasion resistant in severe environmental conditions of heat, vibration, and water.

B66-10429
VIDEO SIGNAL PROCESSING SYSTEM USES GATED
CURRENT MODE SWITCHES TO PERFORM HIGH SPEED
MULTIPLICATION AND DIGITAL-TO-ANALOG
CONVERSION

GILLILAND, M. G. ROUGELOT, R. S. SCHUMAKER, R. A. /GE/ OCT. 1966
MSC-781

Video signal processor uses special-purpose integrated circuits with nonsaturating current mode switching to accept texture and color information from a digital computer in a visual spaceflight simulator and to combine these, for display on color CRT with analog information concerning fading.

B66-10430 SOLLD-STATE SWITCH INCREASES SWITCHING SPEED MC GOWAN, G. F. /MARTIN CO./ OCT. 1966 WOO-298

Solid state switch for commutating capacitors in an RC commutated network increases switching speed and extends the filtering or commutating frequency spectrum well into the kilocycle region. The switch is equivalent to the standard Double-Pole Double-Throw /DPDT/ relay and is driven from digital micrologic circuits.

B66-10431
CONTROL CIRCUIT MAINTAINS UNITY POWER FACTOR
OF REACTIVE LOAD
KRAMER, M. MARTINAGE, L. H. /IBM/ OCT. 1966
MSC-192

Circuit including feedback control elements automatically corrects the power factor of a reactive load. It maintains power supply efficiency where negative load reactance changes and varies by providing corrective error signals to the control windings of a power supply transformer.

B66-10432 REMOTE PREAMPLIFIER CIRCUIT MAINTAINS STABILITY OVER WIDE TEMPERATURE RANGE MAC NAUGHTON, R. G. /VARIAN ASSOCIATES/ OCT. 1966 WOO-278

Circuit remains stable over a wide temperature range while preamplifying light signals falling on a photocell and transmitting them through a transmission line to a remote amplifier. The circuits preamplifier consists of a grounded emitter npn stage followed by a pnp emitter.

B66-10433 LINEAR SIGNAL NOISE SUMMER ACCURATELY SUNDRY, J. L. /WESTINGHOUSE ELEC. CORP./ OCT. 1966 JPL-SC-152

Linear signal noise summer precisely controls the relative power levels of signal and noise, and mixes them linearly in accurately known ratios. The S/N ratio accuracy and stability are greatly improved by this technique and are attained simultaneously.

B66-10436

1

SHAFT ENCODER PRESENTS DIGITAL DUTPUT
HILLIS, D. A. /HUGHES AIRCRAFT CO./ OCT. 1966
JPL-SC-191

L-SC-191
Circuits that include compensation circuitry time a capacitance relative to a reference voltage so that a digital presentation occurs that is representative of the positional condition of the mechanical shaft being monitored. This circuitry may be employed in multiples to furnish binary encoding of a number of rotating devices. encoding of a number of rotating devices simultaneously.

B66-10437 SINGLE-SIDEBAND MODULATOR ACCURATELY REPRODUCES PHASE INFORMATION IN 2-MC SIGNALS STRENGLEIN, H. F. /SPERRY MICROWAVE ELECTRON. CO./ OCT. 1966 M-FS-664

Phase-locked oscillator system employing solid state components acts as a single-sideband modulator to accurately reproduce phase information in 2-mc signals. This system is useful in telemetry, aircraft communications and position-finding stations, and VHF test circuitry.

B66-10438

DENSITOMETER SYSTEM FOR LIQUID HYDROGEN HAS HIGH ACCURACY, FAST RESPONSE INNOVATOR NOT GIVEN /FRANKLIN GNO CORP./ OCT. 1966

M-FS-909

ERC-10

Developmental densitometer system for cryogenic liquids uses two balanced ionization chambers containing xenon gas, with X-rays as the radiation source. The X-rays are heavily filtered with a lead shield to make the energy spectrum much less dependent on the voltage applied to the X-ray tube.

B66-10439 ION CHAMBERS SIMPLIFY ABSOLUTE INTENSITY MEASUREMENTS IN THE VACUUM ULTRAVIOLET SAMPSON, J. A. R. /GEOPHYS. CORP. OF AM./ OCT. 1966

S-10

Single or double ion chamber technique measures absolute radiation intensities in the extreme vacuum ultraviolet region of the spectrum. The ion chambers use rare gases as the ion carrier. Photon absorbed by the gas creates one ion pair so a measure of these is a measure of the number of incident photons.

PHOTOELECTRIC SCANNER MAKES DETAILED WORK FUNCTION MAPS OF METAL SURFACE RASOR, N. S. /THERMO ELECTRON ENG. CORP./ OCT. 1966 JPL-SC-176

Photoelectric scanning device maps the work function of a metal surface by scanning it with a light spot and measuring the resulting photocurrent. The device is capable of use over a range of surface temperatures.

866-10441 STANDARD ARC WELDERS PROVIDE HIGH AMPERAGE DIRECT CURRENT SOURCE BEASLEY, W. D. BROOKS, J LANGLEY-267 LANGLEY-268 J. D. OCT. 1966

Standard arc welders or power supplies are hooked up in parallel or series connections to obtain an adequate supply of current or voltage for various purposes. This method provides maximum flexibility in a wide range of voltages and

B66-10442 AN IMPROVED METHOD FOR TESTING PERFORMANCE OF VIDICONS DURING VIBRATION
CORSON, B. R. /HUGHES AIRCRAFT CO./ OCT. 1966
JPL-SC-113

Vidicon electron beam modulation is used for checking the performance of vidicons in mechanical vibration tests. The vidicon electron beam is modulated with an external signal during the **write** period thereby storing the image on the vidicon face.

THERMIONIC SCANNER PINPOINTS WORK FUNCTION OF EMITTER SURFACES RASOR, N. S. /THERMO ELECTRON ENG. CORP./ OCT. 1966 JPL-SC-177

In the electron tube testing, a thermionic scanner makes accurate spatial resolution measurements of the metallic surface work functions of emitters. The scanner determines the emitter function and its local departures from the mean value on a point-by-point basis for display on an oscilloscope.

B66-10447 SENICONDUCTORS CAN BE TESTED WITHOUT REMOVING THEM FROM CIRCUITRY ALLEN, B. C. /N. AM. AVIATION/ NOV. 1966 M-FS-1163

Oscilloscope, with specially developed test circuitry, quickly checks semiconductors without removing them from the circuitry. For transistors, approximate gain and linearity, as well as pnp or npn determinations are made. When testing diodes, open or short circuits, and reverse polarity show up plainly.

B66-10449 DAVIES, H. N. /RECON, INC./ OCT. 1966 M-FS-867

Investigation of standard suppression methods facilitates switching of inductively loaded circuits which causes interference in adjacent electronic equipment. The data are reduced to tabular form and rapid selection of components by the designer can be made without lengthy calculations or trial and error manipulations.

RECTILINEAR ACCELEROMETER POSSESSES SELF-CALIBRATION FEATURE HENDERSON, R. B. /SAUNDERS ASSOC., INC./ OCT. 1966

Rectilinear accelerometer operates from an ac source with a phase-sensitive ac voltage output proportional to the applied accelerations. The unit includes an independent circuit for self-test which provides a sensor output simulating an acceleration applied to the sensitive axis of the accelerometer.

PULSE GENERATOR USING TRANSISTORS AND SILICON CONTROLLED RECTIFIERS PRODUCES HIGH CURRENT PULSES WITH FAST RISE AND FALL TIMES WOOLFSON, M. G. /WESTINGHOUSE ELEC. CORP./ OCT. 1966 MSC-405

Electrical pulse generator uses power transistors and silicon controlled rectifiers for producing a high current pulse having fast rise and fall times. At quiescent conditions, the standby power consumption of the circuit is equal to zero.

B66-10461 MODIFIED THERMOCOUPLE IS EFFECTIVE FROM MINUS 250 DEG TO 5000 DEG F
MOEN, W. K. /N. AM. AVIATION/ NOV. 1966 MSC-420

Modified, commercially available thermocouple which measures the temperature of a spacecraft heat shield, is capable of continuous measurement in the range of minus 250 deg to 5000 deg F.
The modified thermocouples may be used inside
metal treating furnaces in high temperature
technology, and in certain corrosive environments.

B66-10462
INSTRUMENT AUTOMATICALLY SELECTS PEAK
ACCELERATION SIGNAL FROM SEVERAL
ACCELEROMETERS
CHAPMAN, C. P. OCT. 1966
JPL-A16

Solld state circuit selects the highest of several ac accelerometer signals and gates this signal to an output amplifier, preserving all the frequency information in the peak signal. If the amplitudes of the accelerometer signals change with time, the circuit will continually switch to the highest signal, rejecting the smaller signals.

B66-10465
SOLID STATE CIRCUIT SWITCHES AC LOAD
CHAPMAN, C. P. RUPNIK, D. R. OCT. 1966
JPL-798

Differential amplifier circuit switches ac signals with peak amplitudes greater than 5 volts. This solid state circuit biases a switching transistor on and off by a 0.1 to 5.0 dc control voltage.

B66-10466
STUDY COMPARES METHODS FOR THE NUMERICAL
SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS
INNOVATOR NOT GIVEN /GEORGIA INST. OF TECHNOL./
OCT. 1966 SEE ALSO NASA-CR-61060
M-FS-830

Study compares the use of five different methods for the computer solution of the restricted three-body problem. It describes the implementation of each method on a Burroughs B-5000 computer and in terms of speed and accuracy.

B66-10469
BIPOLAR CURRENT DRIVER FOR MEMORY CIRCUITS
CHONG, C. F. NELSON, C. A. /SPERRY RAND CORP./
NOV. 1966
GSFC-213

Circuit which logically determines the state of a flip-flop and amplifies the current from a clock pulse provides a bipolar driving current to a memory circuit, the polarity of which is determined by the state of a flip-flop. This principle may be applied to various memory driving circuits where power dissipation must be minimized.

B66-10476
DEVICE TO COLOR MODULATE A STATIONARY LIGHT
BEAM GIVES HIGH INTENSITY
GANTZ, W. A. /CALIF. UNIV./ DEC. 1966
HQ-44

Signal controlled system color modulates a beam of light while also providing high intensity and a stationary beam, either collimated or focused. The color modulation acquired by the presented system can be compatible with any color film by employing color filters formed to provide a color wedge having a color distribution compatible with the film*s color sensitivity.

B66-10478
PLUG-IN CONNECTOR SOCKET ACCEPTS COAXIAL
CABLE END
MITCHELL, D. VAN LOON, J. NOV. 1966
ARG-9

Connector which includes a spring-loaded contact to receive a protruding center conductor and an internal collet to clamp against a collar attached to a woven outer conductor, is used as a receptacle for the end of a coaxial cable. This plug-in connector socket is used successfully with remote manipulators.

B66-10480
SIMPLE, ONE TRANSISTOR CIRCUIT BOOSTS PULSE
AMPLITUDE
KEON, T. MATCHETT, M. W. /CUTLER HAMMER/ OCT.
1966
GSFC-501
Simple circuit that uses a single transistor to

accomplish capacitor storage followed by common-base switching supplies a pulse voltage, higher than that normally available from emitter-follower circuits, to drive a 100-watt transmitter.

B66-10481 MODIFIED MCLEOD PRESSURE GAGE ELIMINATES MEASUREMENT ERRORS KELLS, M. C. NOV. 1966 ARC-62

Modification of a McLeod gauge eliminates errors in measuring absolute pressure of gases in the vacuum range. A valve which is internal to the gauge and is magnetically actuated is positioned between the mercury reservoir and the sample gas chamber.

B66-10482 AUTOMATIC CRYOGENIC LIQUID LEVEL CONTROLLER IS SAFE FOR USE NEAR COMBUSTIBLE SUBSTANCES KREJSA, M. DCT. 1966 LEWIS-195

Automatic mechanical liquid level controller that is independent of any external power sources is used with safety in the presence of combustibles. A gas filled capillary tube which leads from a pressurized chamber, is inserted into the cryogenic liquid reservoir and becomes a liquid level sensing element or probe.

B66-10486
SOLID STATE CIRCUIT CONTROLS DIRECTION, SPEED,
AND BRAKING OF DC MOTOR
HANNA, M. F. OCT. 1966
JPL-757

Full-wave bridge rectifier circuit controls the direction, speed, and braking of a dc motor. Gating in the circuit of Silicon Controlled Rectifiers /SCR*s/ controls output polarity and braking is provided by an SCR that is gated to short circuit the reverse voltage generated by reversal of motor rotation.

B66-10488
SPIRAL SPRING/STRAIN GAGE COMBINATION
ACCURATELY MEASURES SHOCK INDUCED DEFLECTION
BERVEN, B. R. WALKER, R. R. /N. AM. AVIATION/
OCT. 1966
MSC-789

Spiral springs equipped with strain gauges which are hard-wired to readout instrumentation, measure deflection between two relatively inaccessible surfaces in a drop test that causes them to close to near flatness. This technique has been successfully used on Apollo drop tests to measure deflection between aft bulkhead and heatshield.

B66-10490
SOLENGID MAGNETIC FIELDS CALCULATED FROM SUPERPOSED SEMI-INFINITE SOLENGIDS BROWN, G. V. FLAX, L. NOV. 1966 SEE ALSO NASA-TN-D-2494
LEWIS-184

Calculation of a thick solenoid coil*s magnetic field components is made by a superposition of the fields produced by four solenoids of infinite length and zero inner radius. The field produced by this semi-infinite solenoid is dependent on only two variables, the radial and axial field point coordinates.

B66-10491
MINIATURE CAPACITIVE ACCELEROMETER IS
ESPECIALLY APPLICABLE TO TELEMETRY
COON, G. W. HARRISON, D. R. NOV. 1966 SEE ALSO
B63-10429
ARC-72

Capacitive accelerometer design enables the construction of highly miniaturized instruments having full-scale ranges from 1 g to several hundred g. This accelerometer is applicable to telemetry and can be tailored to cover any of a large number of acceleration ranges and frequency responses.

B66-10492 CIRCUIT PREVENTS OVERCHARGING OF SECONDARY CELL BATTERIES HENNIGAN, T. J. POTTER, N. H. SIZEMORE, K. O. NOV. 1966 GSFC-454

7

Circuit prevents battery cell overcharging by detecting and reducing the charging voltage to the open-circuit voltage of the battery when this current falls to a predetermined value. The voltage control depends on the fact that the charging current falls significantly when the battery nears its fully charged state.

B66-10493 STUDY SHOWS EFFECT OF SURFACE PREPARATIONS ON IMPROVING THERMIONIC EMISSION VAN SOMEREN, L. /THERMO ELECTRON ENG. CORP./ NOV. 1966 JPL-SC-140

Specimen thermionic emitters were electropolished and electroetched to study the effect of surface preparations on improving thermionic emission. The best technique found was to electropolish the annealed rhenium surface and then electroetch it. The effect of electroetching was to remove other crystal planes faster than basal planes.

B66-10494
OPTICAL MONITOR PANEL PROVIDES FLEXIBLE TEST
PANEL CONFIGURATIONS
GRIFFIN, F. D. NOV. 1966
KSC-66-18

Optical monitor panel projects a chosen panel configuration upon a translucent screen by using a master projector and appropriate slide to project panel board nomenclature and a series of smaller individual projectors to superimpose monitor indicators upon the projected panel board.

B66-10496
COMPUTER PROGRAM PERFORMS FLOW ANALYSIS
THROUGH TURBINES
KATSANIS, T. NOV. 1966 SEE ALSO NASA-TN-D-2546
AND NASA-TN-D-2809
LEWIS-236

Computer program based on an equation for the velocity gradient along an arbitrary quasiorthogonal analyzes flow through a turbomachine.
The program obtains meridional solutions for a hub-to-shroud analysis and blade-to-blade analysis at the hub, mean, and shroud surfaces in a single computer run.

B66-10497 HIGH VOLTAGE POTENTIAL DIVIDER CALIBRATED BY SIMPLE DEVICE LEWIS, R. N. NOV. 1966 ARG-83

Resistance bridge device incorporates a potentiometer, switches, and a null detector to calibrate high potential dividers under high voltage operation conditions. Calibration can be performed with this device in less than 1 minute at an accuracy of 0.001 percent.

B66-10500
DIGITAL SYSTEM PROVIDES SUPERREGULATION OF NANOSECOND AMPLIFIER-DISCRIMINATOR CIRCUIT FORGES, K. G. NOV. 1966
ARG-61

Feedback system employing a digital logic comparator to detect and correct amplifier drift provides stable gain characteristics for nanosecond amplifiers used in counting applications. Additional anticoincidence logic enables application of the regulation circuit to the amplifier and discriminator while they are mounted in an operable circuit.

B66-10501
ELECTRONIC CIRCUIT DELIVERS PULSE OF HIGH
INTERVAL STABILITY
FISHER, B. /N. AM. AVIATION/ NOV. 1966
MSC-673

Circuit generates a pulse of high interval stability with a complexity level considerably below systems of comparable stability. This circuit is being used as a linear frequency discriminator in the signal conditioner of the Apollo command module. B66-10502
POINT-SOURCE LIGHT SENSOR CIRCUIT IS
INSENSITIVE TO BACKGROUND LIGHT
DAVIS, E. S. NOV. 1966
JPL-778

Circuit incorporating a bisynchronous demodulator for an electro-optical star-tracking sensor provides a signal proportional to star intensity without interference from background light in the field of view. The system works best on a sharply focused star image and requires a 50 percent duty cycle.

B66-10503 COMPUTER PROGRAM DETERMINES PERFORMANCE EFFICIENCY OF REMOTE MEASURING SYSTEMS MEREWETHER, E. K. /N. AM. AVIATION/ NOV. 1966 M-FS-1137

Computer programs control and evaluate instrumentation system performance for numerous rocket engine test facilities and prescribe calibration and maintenance techniques to maintain the systems within process specifications. Similar programs can be written for other test equipment in an industry such as the petrochemical industry.

B66-10504
SUBBOUTINE ALLOWS EASY COMPUTATION IN
EXTENDED PRECISION ARITHMETIC
BERGGREN, R. L. GYSBERS, J. C. /N. AM. AVIATION/
NOV. 1966
M-FS-1136

Subroutine called NPREC allows relatively simple computation of very large numbers or very small fractions with extreme accuracy. This subroutine handles numbers that consist of 35 binary bits /1 word/ for the exponent and 70 bits /2 words/ for the fraction.

B66-10505
SOLID STATE ANNUNCIATOR FACILITATES COMPLEX
SYSTEM TROUBLESHOOTING
HOFER, H. P. /N. AM. AVIATION/ NOV. 1966
M-FS-1258

Solid state annunciator monitors up to 60 parameters for a dc voltage change from zero to 28 volts in the testing of complex systems. This annunciator is presently being used for testing of the complex J-2 rocket engine.

B66-10506 COMPUTER PROGRAM DETERMINES INVENTORY SIZE KASPAR, H. /N. AM. AVIATION/ NOV. 1966 M-FS-1135

Fortran IV computer program calculates optimum size of a small inventory of relatively complex or expensive items. This program can be used in situations where the initial cost of purchase is large or when there is a need for a balanced inventory, on a short production run.

B66-10509
PULSE STRETCHER HAS IMPROVED DYNAMIC RANGE
AND LINEARITY
LARSEN, R. N. NOV. 1966
ARG-82

Current-switching pulse stretcher overcomes the diode nonlinearity and capacitive feedthrough of voltage switching diode-capacitor stretchers and lengthens nanosecond pulses so that their amplitude may be determined and extends the dynamic range of the pulse stretcher. The rise time of the output pulse in response to a step function is approximately 5 nanoseconds.

B66-10510
LOW LEVEL ACCELEROMETER TEST METHODS ARE
INVESTIGATED
NELSON, R. H., JR. PLOURDE, H. S. /DYN. RES.
CORP./ NOV. 1966
M-FS-908

FS-908
Problems associated with testing accelerometers to an accuracy where the standard error is less than .0000001 g are centered around the elimination of uncertainties in the acceleration input to the accelerometer. By placing a test rig in free fall, the uncertainty in the earth*s gravity field can be eliminated.

B66-10511
COMPUTER ROUTINE ADDS PLOTTING CAPABILITIES
TO EXISTING PROGRAMS
HARRIS, J. C. LINNEKIN, J. S. /LITTON IND. /
NOV. 1966
GSFC-490
PLOTAN, a generalized plot analysis routine
written for the IBM 7094 computer minimiz

PLOTAN, a generalized plot analysis routine written for the IBM 7094 computer minimizes the difficulties in adding plot capabilities to large existing programs. PLOTAN is used in conjunction with a binary tape writing routine and has the ability to plot any variable on the intermediate binary tape as a function of any other.

B66-10512 NIXIE TUBE DISPLAY UNIT EMPLOYS TIME-SHARED LOGIC GRAY, J. NOV. 1966 ARG-117

Cathodes of display tubes wired in parallel achieve input switching simplication of a Nixie tube display system. Use of time-shared logic energizes the appropriate anode and inhibits all unecessary cathodes.

B66-10516
DIGITAL SYSTEM DETECTS BINARY CODE PATTERNS
CONTAINING ERRORS
MULLER, R. M. THARPE, H. M., JR. NOV. 1966
GSFC-541

System of square loop magnetic cores associated with code input registers react to input code patterns by reference to a group of control cores in such a manner that errors are canceled and patterns containing errors are accepted for amplification and processing. This technique improves reception capabilities in PCM telemetry systems.

B66-10518
ANTENNA SIMULATOR PERMITS PREINSTALLATION
SYSTEM CHECKOUT
ELIA, A. D. SCHMIDT, R. F. NOV. 1966
GSFC-522

Antenna simulator provides for evaluation checkout of corporate feeds, monopulse sum-and-difference networks, etc. in a shielded environment prior to system checkout on an antenna pattern range. This technique is useful wherever simulation of monopulse antenna element characteristics is desired for checkout of ancillary equipment in a controlled environment.

B66-10520
PYROMETRY HANDBOOK DESCRIBES PRACTICAL
ASPECTS OF SURFACE TEMPERATURE MEASUREMENTS
OF OPAQUE MATERIALS
BRANSTETTER, J. R. BUCHELE, D. R. NOV. 1966 SEE
ALSO NASA-TN-D-3604
LEWIS-349

Handbook contains extensive reference literature and results from pertinent experiments to provide a collection of applied technology and reference sources for engineers and technicians. Fundamental equations of radiation, off-design corrections, characteristics of pyrometers, and calibration apparatus and techniques are discussed.

B66-10521 FLOWMETER MEASURES FLOW RATES OF HIGH TEMPERATURE FLUIDS VARY, A. NOV. 1966 LEWIS-328

AIS-328
Flowmeter in which flow rate is determined by measuring the position and thus the displacement of an internal float acted upon by the flowing fluid determines the flow rates of various liquid metals at elevated temperatures. Viscous forces cause the float to move from its mounted position, affording several means for measuring this motion and the flow rate.

B66-10524 STUDY OF VORTEX VALVE FOR MEDIUM TEMPERATURE SOLID PROPELLANTS HOLT, W. D. RIVARD, J. G. /BENDIX CORP./ DEC. 1966 LANGLEY-204 Fluid state vortex valve secondary injection control system shows considerable promise for future application to solid propellant rocket engine thrust vector control. The single axis injection system tested would be capable of providing secondary injection thrust vector control using 2000 deg F gas.

B66-10525
COMPUTER PROGRAM PERFORMS STATISTICAL
ANALYSIS FOR RANDOM PROCESSES
NEWBERRY, M. H. NOV. 1966 SEE ALSO
NASA-TM-X-53359
M-FS-723

Random Vibration Analysis Program /RAVAN/
performs statistical analysis on a number of
phenomena associated with flight and captive
tests, but can also be used in analyzing data from
many other random processes.

B66-10526
IMPROVED DESIGN PROVIDES FASTER RESPONSE
TIME IN PHOTOMULTIPLIER
INNOVATOR NOT GIVEN /HALLICRAFTERS CO./ NOV. 1966
GSFC-451

Dynamic crossed-field electron multiplying /DCFEM/ light demodulator avoids the normal response time limitations inherent in static field devices, by using time varying crossed electric and static magnetic fields to eliminate the transit time spread that affects electrons as they proceed along the secondary emission stages of the tube.

B66-10529
COMPUTER PROGRAM SEARCHES CHARACTERISTIC
DATA OF DIODES AND TRANSISTORS
INNOVATOR NOT GIVEN /BOOZ-ALLEN APPL. RES. CORP./
NOV. 1966
GSFC-493

Semiconductor information storage and retrieval system provides a comprehensive, accurate, and ready reference to characteristic data of diodes and transistors. The system can be used to supply a complete listing of technical component information necessary for circuit designers, reliability engineers, and quality assurance personnel.

B66-10531
HEAT FLUX SENSOR DESIGN REDUCES EXTRANEOUS SOURCE EFFECTS
CROFTS, E. D. ROBINSON, G. P. /MCDONNELL AIRCRAFT CORP./ NOV. 1966
MSC-400

Heat flux sensor isolates the sensor and its transmitting thermocouple from undesirable heat sources by incorporating a radiator section that forms a radiation shield between mounting cup and sensor. Bonding of the thermocouple cable to the underside of the radiator provides a conductive path to dissipate extraneous heat that might otherwise reach the sensor.

B66-10533
METHOD PERMITS MECHANICAL AND ELECTRICAL
CHECKOUT OF PIEZOELECTRIC TRANSDUCERS WHILE
INSTALLED IN A SYSTEM
JENKINS, R. S. RUGALLO, V. L. NOV. 1966 SEE
ALSO B66-10534
ARC-73

Known de voltage is applied and then removed suddenly in a method to permit checkout of the mechanical and electrical condition of piezoelectric transducers of the cantilever beam type, while installed in a system.

B66-10534
MINIATURE PIEZOELECTRIC TRIAXIAL
ACCELEROMETER MEASURES CRANIAL ACCELERATIONS
DE BOD, G. J. ROGALLO, V. L. NOV. 1966 SEE ALSO
B64-10004 AND B66-10533
ARC-71

Tiny triaxial accelerometer whose sensing elements are piezoelectric ceramic beams measures human cranial accelerations when a subject is exposed to a centrifuge or other simulators of genvironments. This device could be considered for application in dental, medical, and automotive

safety research.

B66-10536
HELMET SYSTEM BROADCASTS
ELECTROENCEPHALOGRAMS OF WEARER
WESTBROOK, R. M. ZUCCARO, J. J. NOV. 1966 SEE
ALSO B65-10203
ARC-70

EGG monitoring system consisting of nonirritating sponge-type electrodes, amplifiers, and a battery-powered wireless transmitter, all mounted in the subject*s helmet obtains electroencephalograms /EEG*s/ of pilots and astronauts performing tasks under stress. After a quick initial fitting, the helmet can be removed and replaced without further adjustment.

B66-10539
COMPUTER PROGRAMS PERFORM SPECTRAL
ANALYSES OF UP TO SEVEN TIME SERIES
BYARS, B. J. DUBMAN, M. R. /N. AM. AVIATION/
NOV. 1966
M-FS-1133 M-FS-1134

Computer programs perform statistical spectral analyses of up seven time series. These programs should have applicability to a variety of engineering systems in the fields of geophysics, physiology, acoustics, and structural analysis.

B66-10541 COMPUTER USED TO PROGRAM NUMERICALLY CONTROLLED MILLING MACHINE HARRIS, T. C. /GE/ NOV. 1966 M-FS-1608

Computer program automatically directs a numerically controlled milling machine through a series of cutting and trimming actions. It accepts engineering data points, passes smooth curve segments through the points, breaks the resulting curves into a series of closely spaced points, and transforms these points into the form required by the mechanism.

B66-10542
PREREGULATOR FEEDBACK CIRCUIT UTILIZES
LIGHT ACTUATED SWITCH
HAYSER, T. P. /IBM/ NOV. 1966
M-FS-1180

Preregulator Teedback circuit employing a Light Actuated Switch /LAS/ provides a simple and efficient feedback device in a power supply preregulator which maintains dc isolation between input and output grounds. The LAS consists of a diode pn junction infrared source close to, but electrically isolated from, a photodetector.

B66-10543 HIGH-RELUCTANCE ROTOR RINGS IMPROVE HOMOPOLAR GENERATOR PERFORMANCE MUSSET, E. E. NOV. 1966 ARG-104

Nonmagnetic metal rings imbedded in a homopolar generator rotor normal to its axis keep the induction flux entering the rotor in a radial path. Use of the rings permits optimum rotor design for any given set of operating requirements and simplifies the task of predicting the operation characteristics of the generator.

B66-10544
ULTRASONIC QUALITY INSPECTION OF BONDED
HONEYCOMB ASSEMBLIES IS AUTOMATED
KAMMERER, C. C. /N. AM. AVIATION/ NOV. 1966
MSC-859

Inspection system for bonded honeycomb assemblies is accurate, fast, and automated. The ultrasonic system consists of inner and outer transducer positioning assemblies with suitable motor controls, a centerless turntable assembly, water squirter assemblies, and an inspection program completely encoded on tape suitable for use on a high speed computer.

B66-10548
SECURITY WARNING SYSTEM MONITORS UP TO FIFTEEN REMOTE AREAS SIMULTANEOUSLY FUSCO, R. C. /RCA/ NOV. 1966
KSC-66-39
Security warning system consisting of 15

television cameras is capable of monitoring several remote or unoccupied areas simultaneously. The system uses a commutator and decommutator, allowing time-multiplexed video transmission. This security system could be used in industrial and retail establishments.

B66-10549
MINIATURE ELECTROMETER PREAMPLIFIER
EFFECTIVELY COMPENSATES FOR INPUT
CAPACITANCE
BURROUS, C. N. DE BOO, G. J. NOV. 1966
ARC-69

Negative capacitance preamplifier using a dual MOS /Metai Oxide Silicon/ transistor in conjuction with bipolar transistors is used with intracellular microelectrodes in recording bioelectric potentials. Applications would include use as a pickup plate video amplifier in storage tube tests and for pH and ionization chamber measurements.

B66-10552
NONELECTROLYTIC TANTALUM CAPACITORS DEVELOPED
INNOVATOR NOT GIVEN /CORNELL-DUBILER ELEC. CORP./
NOV. 1966
M-FS-1546

rs-1546
Large area, nonelectrolytic tantalum foil
capacitor has capacitance of approximately 1
microfarad and is capable of operating at 125 deg
C at 150 volts with and insulation resistance of
at least 1 megohm. In tests at a potential of
100 volts, capacitors remained stable through a
temperature range from 25 deg to 125 deg C.

B66-10553 COMPUTER PROGRAMS CALCULATE POTENTIAL AND CHARGE DISTRIBUTIONS IN A PLASMA JEFFERIES, N. P. PRINCE, D. C. /GE/ NOV. 1966 M-FS-871

Computer program determines the potential and charge distributions between two electrodes in a plasma. Solutions of the Vlasov equations for plane, cylindrical, and spherical geometries is determined and density distributions are found for each of these configurations over a range of conditions.

B66-10555 A FAST-NEUTRON SPECTROMETER OF ADVANCED DESIGN MOLER, R. B. PRESTON, C. C. /IIT RES. INST./ NOV. 1966 M-FS-1664

Fast neutron spectrometer combines helium filled proportional counters with solid-state detectors to achieve the properties of high efficiency, good resolution, rapid response, and effective gamma-ray rejection.

B66-10556 SIMPLIFIED FIXTURE PERMITS PRECISION ALIGNMENT OF AN OPTICAL TARGET MAGURA, P. /IBM/ NOV. 1966 M-FS-1181

Optical target holder is permanently placed for instrument sighting, yet is adjustable and easily aligned.

B66-10557 TRISPHERE SPARK GAP ACTUATES OVERVOLTAGE RELAY CAMACHO, S. L. DEC. 1966 ARC-68

Trisphere spark gap and high voltage relay provides a positive, fast response, high current capacity device that will sense an overvoltage condition and remove power from the circuit before insulation breakdown. When an overvoltage occurs, the spark gap breaks down and conducts an actuating current to the relay which removes power from the circuit.

B66-10559
ONE-COUNT MEMORY CIRCUIT PREVENTS MACHINE MODE INTERACTION
DE FOREST, B. DEC. 1966
ARG-90

One-count memory logic circuit used with

electromechanical counter-printer machines operates in either count or print mode. The circuit advances the counter when the machine is in the count mode and provides storage for the count pulse when the machine is in the print mode.

B66-10561
PULSE TECHNIQUE PROVIDES MORE ACCURATE
CHECKOUT OF EXPLODING BRIDGE WIRE DEVICE
PETRICK, J. R. /GE/ DEC. 1966
H0-62

Exploding Bridge Wire /EBW/ is treated as a transmission line system and pulse reflection techniques are used for checking the electrical integrity of an EBW cartridge. A step voltage is propagated into the system and the reflected voltage waves are monitored.

B66-10563
COLLECTOR/COLLECTOR GUARD RING BALANCING
CIRCUIT ELIMINATES EDGE EFFECTS
LIEB, D. P. /THERMO ELECTRON ENG. CORP./ DEC.
1966
JPL-SC-143

Circuit in which an emitter is maintained opposite a concentric collector and guard structure is achieved by matching the temperature and potential of the guard with that of the collector over the operating range. This control system is capable of handling up to 100 ampers in the guard circuit and 200 ampers in the collectors circuit.

B66-10564
PHOTOCELL SHADOWING TECHNIQUE IMPROVES LIGHT
SOURCE DETECTOR
CARPENTER, D. G. HOOPER, G. E. DEC. 1966
JPL-809

Lightweight, compact modular system that includes an acquisition photocell is used as a light source tracking detector that exhibits minimum scale factor change with increased light source angle. Photocells of various types, responsive to other portions of the spectrum, could be used to acquire and track infrared, ultraviolet, and other source fluxes.

B66-10566
COMPUTATIONAL PROCEDURE FOR FINITE DIFFERENCE
SOLUTION OF ONE-DIMENSIONAL HEAT CONDUCTION
PROBLEMS REDUCES COMPUTER TIME
IIDA, H. T. /N. AM. AVIATION/ NOV. 1966
MSC-1120

Computational procedure reduces the numerical effort whenever the method of finite differences is used to solve ablation problems for which the surface recession is large relative to the initial slab thickness. The number of numerical operations required for a given maximum space mesh size is reduced.

B66-10568
MONITORING CIRCUIT ACCURATELY MEASURES
MOVEMENT OF SOLENOID VALVE
GILLETT, J. D. /N. AM. AVIATION/ DEC. 1966
M-FS-1829

Solenoid operated valve in a control system powered by direct current issued to accurately measure the valve travel. This system is currently in operation with a 28-vdc power system used for control of fluids in liquid rocket motor test facilities.

B66-10569
DEVICE ACCURATELY MEASURES AND RECORDS LOW
GAS-FLOW RATES
BRANUM, L. W. /N. AM. AVIATION/ DEC. 1966
M-FS-1077

Free-floating piston in a vertical column accurately measures and records low gas-flow rates. The system may be calibrated, using an adjustable flow-rate gas supply, a low pressure gauge, and a sequence recorder. From the calibration rates, a nomograph may be made for easy reduction. Temperature correction may be added for further accuracy.

866-10574 NONDESTRUCTIVE TEST METHOD ACCURATELY SORTS MIXED BOLTS DEZEIH, C. J. DEC. 1966 M-FS-1426

Neutron activation analysis method sorts copper plated steel bolts from nickel plated steel bolts. Copper and nickel plated steel bolt specimens of the same configuration are irradiated with thermal neutrons in a test reactor for a short time. After thermal neutron irradiation, the bolts are analyzed using scintillation energy readout equipment.

B66-10576
A CONTINUOUSLY OPERATING SOURCE OF VACUUM
ULTRAVIOLET BELOW 500 ANGSTROM
INNOVATOR NOT GIVEN /SPACE SCI. INC./ DEC. 1966
GSFC-545

Duo plasmatron type source of ultraviolet radiation operates in the wavelength region below 500 angstrom. Since the spectra produced are determined aimost completely by the gas injected, and because the source operates continuously, this arrangement is beneficial in the development and calibration of filters and detectors within discrete wavelength ranges.

B66-10577
ULTRASONIC WATER COLUMN PROBE SPEEDS UP
TESTING OF WELDS
HOOP, J. M. MC DONALD, J. A. /GE/ DEC. 1966
HQ-58

Ultrasonic device consisting of a coaxial rod and transducer enclosed in a cylindrical probe which is filled with deionized or distilled water speeds up the testing of welds. Rubber diaphragm is molded to produce the desired test beam angle.

B66-10579
AN ORTHONORMALIZATION PROCEDURE FOR MULTIVARIABLE FUNCTION APPROXIMATION INGRAM, H. L. DEC. 1966
M-FS-1313

Where a function of several variables is given numerically in tabular form, an orthonormalization technique allows an approximation of the numerical data to be determined in a convenient functional form. In this technique, the speed and accuracy of coefficient computation are much improved.

B66-10580 RESISTOR MONITORS TRANSFER OF LIQUID HELIUM HESKETH, W. D. DEC. 1966 LANGLEY-229

Large resistance change of a carbon resistor at the liquid helium temperature distinguishes between the transfer of liquid helium and gaseous helium into a closed dewar. The resistor should be physically as small as possible to reduce the heat load to the helium.

B66-10581
DETECTOR MEASURES POWER IN 50 TO 30,000 GHZ
RADIATION BAND
ARAMS, F. R. WANG, M. T. /AIRBORNE INSTR. LAB./
DEC. 1966
ERC-26

Broadband power detector assembly measures electromagnetic radiation in the 50 to 30,000 GHz band. The assembly includes a matched pair of detectors which incorporate thin-film radiation absorbers. The detector is effective with either coherent or incoherent radiation.

B66-10584
OPTICAL SUPERHETERODYNE RECEIVER USES LASER
FOR LOCAL OSCILLATOR
LUCY, R. F. /SYLVANIA ELECTRON. SYSTEMS/ DEC.
1966
M-FS-1605

Optical superheterodyne receiver uses a laser coupled to a frequency translator to supply both the incident signal and local oscillator signal and thus permit reception of amplitude modulated video bandwidth signals through the atmosphere. This receiver is useful in scientific propagation experiments, tracking experiments, and communication experiments.

B66-10590 STUDY MADE OF APPLICATION OF STEREOSCOPIC DISPLAY SYSTEM TO ANALOG COMPUTER SIMULATION KENNEL, H. F. DEC. 1966 NASA-CR-61116 M-FS-1263

1

Stereoscopic visual display system provides both a qualitative and measurable presentation for functions of several variables. A primary application of such a display system is in analog computer simulation of sets of differential equations.

B66-10591
ELECTRONIC CIRCUIT PROVIDES ACCURATE
SENSING AND CONTROL OF DC VOLTAGE
LOFTUS, W. D. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1966
NU-0089

Electronic circuit used relay coil to sense and control dc voltage. The control relay is driven by a switching transistor that is biased to cutoff for all input up to slightly less than the threshold level.

B66-10592 SENSORS MEASURE SURFACE ABLATION RATE OF REENTRY VEHICLE HEAT SHIELD RUSSEL, J. M., III DEC. 1966 SEE ALSO NASA-TN-D-3686 LANGLEY-287

Sensors measure surface erosion rate of ablating material in reentry vehicle heat shield. Each sensor, which is placed at precise depths in the heat shield is activated when the ablator surface erodes to the location of a sensing point. Sensor depth and activation time determine ablator surface erosion rate.

B66-10598
DESIGN CONCEPT FOR PRESSURE SWITCH
CALIBRATOR
SLINGERLAND, M. G. /GE/ DEC. 1966
HQ-36

Calibrator and switch design enables pressure switches to operate under 150 g shock loads. The design employs a saturated liquid-to-wapor phase transition at constant pressure to produce a known force independent of displacement over a usable range.

B66-10599
PRESSURE PROBE COMPENSATES FOR DIMENSIONAL
TOLERANCE VARIATIONS
BIRNER, R. A. /AEROJET-GEN. CORP./ DEC. 1966
LEWIS-302

Flexible, compressible spring-loaded pressure probe measures the static pressure between the rotor stages on an axial-flow fuel pump. This probe is used in installation where a drilled static pressure tap or a rigid impulse tube cannot be used. Its parameters must be specially determined for each installation.

B66-10600 HIGH FREQUENCY WIDE-BAND TRANSFORMER USES COAX TO ACHIEVE HIGH TURN RATIO AND FLAT RESPONSE DE PARRY, T. DEC. 1966 ARG-107

Center-tap push-pull transformer with toroidal core helically wound with a single coaxial cable creates a high frequency wideband transformer. This transformer has a high-turn ratio, a high coupling coefficient, and a flat broadband response.

B66-10603
MOSFET ANALOG MEMORY CIRCUIT ACHIEVES LONG
DURATION SIGNAL STORAGE
INNOVATOR NOT GIVEN /IBM/ DEC. 1966

N=800

Memory circuit maintains the signal voltage at the output of an analog signal amplifier when the input signal is interrupted or removed. The circuit uses MOSFET /Metal Oxide Semiconductor Field Effect Transistor/ devices as voltage-controlled switches, triggered by an external voltage-sensing device.

B66-10605 ELECTRICAL CONTINUITY SCANNER FACILITATES IDENTIFICATION OF WIRES FOR SOLDERING TO CONNECTORS
BOULTON, H. C. DICLEMENTE, R. A. /N. AM. AVIATION/ DEC. 1966
MSC-626

Electrical continuity scanner automatically scans
50 wires in 2 seconds to correlate all wires in a
circuit with their respective known ends.
Modifications made to the basic plan provide
circuitry for scanning up to 250 wires.

B66-10606 A RADIOMETER-PYROMETER DEC. 1966 NASA-TN-D-2405 LEWIS-284

Radiometer-pyrometer measures the spectral absorption, emission, and temperature of gases. The major problems involved in spectroradiometric measurements are nonuniform spectral sensitivity, nonlinearity, poor absolute accuracy, wide range of intensities, and wide range of wavelengths.

B66-10607
DEVELOPMENTAL INSTRUMENT SUPPLIES ACCURATE
ATTITUDE AND ATTITUDE-RATE DATA
INNOVATOR NOT GIVEN /BOLT, BERANEK, AND NEWAN,
INC./ DEC. 1966
HQ-57

Three orthogonal-plane projection provides accuracy of readout of both attitude and attitude-rate information in an easily interpreted, uncluttered arrangement where blind navigation of a moving body is involved. The longitudinal length of the projection is constant, and independent of the pitch and roll attitudes of the moving body.

B66-10612
RESISTANCE THERMOMETER HAS LINEAR
RESISTANCE-TEMPERATURE COEFFICIENT AT LOW
TEMPERATURES
KUZYK, w. /GEN. DYN./ DEC. 1966
W00-190

resistance thermometer incorporating a germanium resistance element with a platinum resistance element in a Wheatstone bridge circuit has a linear temperature-resistance coefficient over a range from approximately minus 140 deg C to approximately minus 253 deg C.

B66-10614
STUDY OF THEORY AND APPLICATION OF LONG
DURATION HEAT FLUX TRANSDUCERS
HEAMAN, J. P. ROBERTSON, S. J. /HEAT TECHNOL.
LAB./ DEC. 1966
M-FS-1265

Theory and application of transducers used to measure heat flux in tests of more than one second duration.

B66-10617
IMPROVED MEMORY WORD LINE CONFIGURATION ALLOWS HIGH STORAGE DENSITY
INNOVATOR NOT GIVEN /UNIVAC/ DEC. 1966
GSFC-559

Plated wire memory word drive line allows high storage density, good plated wire transmission and a simplified memory plane configuration. A half-turn word drive line with a magnetic keeper is used. The ground plane provides the return path for both the word current and the plated wire transmission line.

B66-10619
COMPUTER PROGRAM SIMPLIFIES TRANSIENT AND
STEADY-STATE TEMPERATURE PREDICTION FOR
COMPLEX BODY SHAPES
GIEBLER, K. N. /N. AM. AVIATION/ DEC. 1966
MSC-989

Computer program evaluates heat transfer modes and calculates either the transient or steady-state temperature distributions throughout an object of complex shape when heat sources are applied to specified points on the object. It uses an electrothermal model to simulate the conductance, heat capacity, and temperature potential of the object.

B66-10621 CONNECTOR ACTS AS QUICK COUPLING IN COAXIAL CABLE APPLICATION BREJCHA, A. G., JR. DEC. 1966 JPL-803

Quick-coupling connector whose inner shells are threaded to the cable ends and whose outer shells have tracks that register in channels machined in the inner shells are rotated 45 deg to effect a locking of the coupling. This connector faithfully reproduces excellent electrical characteristics no matter how frequently assembled and disassembled.

POINT-SOURCE DETECTION SYSTEM REJECTS SPATIALLY EXTENDED RADIATION SOURCES
MAXWELL, R. F., JR. /WESTINGHOUSE ELEC. CORP./ DEC. 1966 GSFC-486

System employing digital space correlation to suppress false target signals in a point-target tracking device is a reliable method for discriminating a distant target from false targets in the field of view of an infrared detection system or tracking device.

B66-10623 THERMOCOUPLES ELECTRICALLY CHECKED WHILE CONNECTED TO DATA SYSTEM INNOVATOR NOT GIVEN /REP. AVIATION CORP./ DEC. 1966

LANGLEY-182

Constant current source is connected across the input of the millivolt measuring system to monitor the electrical continuity and resistance of multiple thermocouple installations without disconnecting them from a data system. This technique monitored gauge thermocouple leads during the assembly and preflight testing of the Project Fire reentry packages.

B66-10624 MINIATURE TELEMETRY SYSTEM ACCURATELY MEASURES PRESSURE FRYER, T. B. DEC. 1966 SEE ALSO B64-10171 AND B66-10057 ARC-74

Miniature, low power, telemetry system that can be used with commercially available strain gauge pressure transducers accurately measures pressure with a small implantable pressure cell and transmitter. The system has been used to date only with pressure transducers, but the circuit is equally applicable to any measurement using a strain gauge sensor.

B66-10625 COMPACT MICROWAVE MIXER HAS HIGH CONVERSION EFFICIENCY PENQUE, N. J. ROSEN, H. A. /HUGHES AIRCRAFT CO./ DEC. 1966 GSFC-197

Compact, lightweight microwave mixer has a relatively high conversion efficiency and power output. The mixer employs a pair of back-to-back voltage-variable capacitors in a stripline network.

B66-10629 PRECISION CW LASER AUTOMATIC TRACKING SYSTEM INVESTIGATED LANG, K. T. LUCY, R. F. MC GANN, E. J. PETERS, C. J. /SYLVANIA ELECTRON. SYSTEMS/ DEC. 1966 M-FS-1606

Precision laser tracker capable of tracking a low acceleration target to an accuracy of about 20 microradians rms is being constructed and tested. This laser tracking has the advantage of discriminating against other optical sources and the capability of simultaneously measuring range.

B66-10632 ACCURATE DEPTH CONTROL PROVIDED FOR THERMOCOUPLE JUNCTION LOCATIONS
RICHARDSON, N. R. DEC. 1966 SEE ALSO NASA-TN-364
LANGLEY-289

Flight reentry experiments define the total heating on a large blunt-nosed body by means of

imbedded thermocouples. The thermocouples, installed in a beryllium layered forebody, were designed to provide minimum feasible disturbance of local heat flow with accurate depth control of the thermocouple junction locations.

B66-10636 AUTOMATIC SYSTEM DETERMINES HOMENTS OF INERTIA OF ASYMMETRICAL OBJECTS INNOVATOR NOT GIVEN /SPACO, INC./ DEC. 1966 M-FS-1769

Automatic system rapidly and accurately determines moments and products of inertia of asymmetrical objects. The system combines a torsional pendulum arrangement and a precision rate table with simplified analog computers to determine the desired quantities directly, without the need for additional calculations.

B66-10637 INSTRUMENT ACCURATELY MEASURES SMALL TEMPERATURE CHANGES ON TEST SURFACE
HARVEY, W. D. MILLER, H. B. DEC. 1966 SEE ALSO
NASA-TN-D-2846 LANGLEY-174

Calorimeter apparatus accurately measures very small temperature rises on a test surface subjected to aerodynamic heating. A continuous thin sheet of a sensing material is attached to a base support plate through which a series of holes of known diameter have been drilled for attaching thermocouples to the material.

B66-10640 VOLUME-RATIO CALIBRATION SYSTEM FOR VACUUM GAGES DEC. 1966 SEE ALSO NASA-TN-D-3100 LEWIS-303

Volume-ratio calibration system consists of a gas plume-ratio calibration system consists of a gas source, high pressure gauge, small volume tank, large volume chamber, plus appropriate piping, valves, and vacuum source. This system used in conjunction with commercial vacuum gauges evaluates its ability to accurately produce desired pressures in the .000001 to .01 torr range.

B66-10644 THREE-AXIS ATTITUDE AND DIRECTION REFERENCE INSTRUMENT HAS ONLY ONE MOVING PART BOSSLER, F. B. /BELL AEROSPACE CORP./ DEC. 1966 M-FS-1819

Lunar vehicle instrument combines the functions of that vehicle instrument complies the functions of attitude reference, direction reference, and display in a unit having only one moving part. The device, using bubble levels and a calibrated dial, is used as a sextant prior to takeoff, and as a backup navigation system during flight.

B66-10645 CONCEPT FOR USING LASER BEAMS TO MEASURE ELECTRON DENSITY IN PLASMAS LONGO, S. E. /BOEING CO./ DEC. 1966 M-FS-965

Concept is proposed for using laser beams as means of measuring electron density at various points in flame or plasma exhausts. Measurement of the electron density is obtained by detecting reflected waves in the plasma that were activated by the laser.

MAGNETORESISTOR MONITORS RELAY PERFORMANÇE KREBS, D. Q. /BOEING CO./ DEC. 1966 M-FS-1754

Magnetoresistor monitors the action of relays without disturbing circuit parameters or degrading relay performance. The magnetoresistor measures the relay magnetic flux produced under transient conditions to establish the characteristic signature of the relay.

B66-10653 THERMOCOUPLES EASILY INSTALLED IN HARD-TO-GET-TO PLACES
GUENTHER, F. G. /N. AM. AVIATION/ DEC. 1966
M-FS-1946

Thermocouple wires attached to charged capacitors are inserted in a drilled hole. An electric

charge fuses the thermocouple wires to the host material. This method has shown excellent results in fusing nichrome, chromel, Inconel, and stainless steel wires to nickel, beryllium, iron, steel, Inconel, and stainless steel.

B66-10658
DIGITAL FREQUENCY COUNTER PERMITS READOUT
WITHOUT DISTURBING COUNTING PROCESS
WINKELSTEIN, R. DEC. 1966
JPL-906

ţ

Digital frequency counter system enables readout accurately at one-second intervals without interrupting or disturbing the counting process. The system incorporates a master counter and a slave counter with novel logic interconnections. The counter can be readily adapted to provide frequency readouts at 0.1 second intervals.

B66-10659 LOGIC CIRCUITRY USED TO AUTOMATICALLY TEST SHIELDED CABLES DIBB, G. /GE/ DEC. 1966 HQ-60

Automatic cable tester checks multiple shielded conductors assembly cable connections. The tester uses logic circuitry to sequentially test all conductors and their shields to reveal any connection error in a GO-NO GO test.

B66-10661 STUDY OF FAST RESPONSE THERMOCOUPLE MEASUREMENT OF TEMPERATURES IN CRYOGENIC GASES BIELAWSKI, T. LOWRIE, A. R. ROBINSON, C. C. /BEECH AIRCRAFT CORP./ DEC. 1966 M-FS-1659

Thermocouples fabricated from uninsulated small diameter wire have fast reproducible response times. The thermocouple is thermally isolated from its supports by making the leads of sufficient length so that the heat conduction down the leads is small and assuming that the leads adjacent to the junction are subjected to the same thermal conditions.

B66-10664
PACKAGING OF ELECTRONIC MODULES
KATZIN, L. DEC. 1966
JPL-801

Study of design approaches that are taken toward optimizing the packaging of electronic modules with respect to size, shape, component orientation, interconnections, and structural support. The study does not present a solution to specific packaging problems, but rather the factors to be considered to achieve optimum packaging designs.

B66-10668
PHOTOGRAPHIC METHOD MEASURES PARTICLE SIZE
AND VELOCITY IN FLUID STREAM
DICKERSON, R. A. /N. AM. AVIATION/ DEC. 1966
M-FS-1536

Method employing a nonframing motion picture camera, a continuous front light source, and a strobe light determines the size and velocity of small particles in nonturbulent fluid streams. This method is used in the study of the motion of solid and liquid particles in research and industrial fluid flow systems.

B66-10669
GAS LEAK DETECTOR IS SIMPLE AND INEXPENSIVE MITCHELL, D. K. /BOEING CO./ DEC. 1966
M-FS-1206

Pressure sensor monitors small gas leaks in piping and pressure vessels. A combination of a paper ribbon and adhesive plastic tape is used to cover the area to be monitored and the pressure sensor is placed over a hole in the tape and paper.

B66-10670
COMPUTER PROGRAM DETERMINES CHEMICAL
COMPOSITION OF PHYSICAL SYSTEM AT
EQUILIBRIUM
KWONC, S. S. /N. AM. AVIATION/ DEC. 1966
MSC-1119

Fortran IV digital computer program calculates equilibrium composition of complex, multiphase chemical systems. This is a free energy minimization method with solution of the problem reduced to mathematical operations, without concern for the chemistry involved. Also certain thermodynamic properties are determined as byproducts of the main calculations.

B66-10671
COMPUTER PROGRAM DETERMINES CHEMICAL
EQUILIBRIA IN COMPLEX SYSTEMS
GORDON, S. ZELEZNIK, F. J. DEC. 1966 SEE ALSO
NASA-TN-D-1454
LEWIS-281

Computer program numerically solves nonlinear algebraic equations for chemical equilibrium based on iteration equations independent of choice of components. This program calculates theoretical performance for frozen and equilibrium composition during expansion, Chapman-Jouguet flame properties, studies combustion and designs hardware.

B66-10675
GAGE ACCURATELY CONTROLS FORCE FOR PLACING CHIPS ON SUBSTRATES
BENZIE, W. P. /IBM/ DEC. 1966
M-FS-1941

Device is developed to control the force used in manually placing chips on substrates. It controls the compression load between 2 small members at loads as low as 25 grams by means of a force control gauge that is preset by varying the spring deflection.

B66-10679
BLACKBODY CAVITY RADIOMETER HAS RAPID RESPONSE
HALEY, F. C. DEC. 1966
JPL-521

Fast response, spectrally linear standard detector in the form of a blackbody cavity radiometer calibrates rapidly responding photodetectors against a calibrated standard detector. A power amplifier with maximum available gain reduces error signal without stability loss. It may be used as a blackbody radiator by manipulation of the bridge variable arm.

B66-10680
SLIDE RULE-TYPE COLOR CHART PREDICTS
REPRODUCED PHOTO TONES
GRIFFIN, J. D. /N. AM. AVIATION/ DEC. 1966
MSC-1227

Slide rule-type color chart determines the final reproduced gray tones in the production of briefing charts that are photographed in black and white. The chart shows both the color by drafting paint manufacturer*s name and mixture number, and the gray tone resulting from black and white photographic reproduction.

B66-10685
PROCESS REDUCES SECONDARY RESONANT EMISSION
IN ELECTRONIC COMPONENTS
ERPENBACH, H. DEC. 1966
JPL-934

Process reduces secondary electron emission in coaxial connector and in waveguides in the atmosphere. The assembly is placed in a vacuum chamber and is gradually vented to the atmosphere. It is exposed to high voltage, argon gas, and a hydrocarbon gas during the process.

B66-10687
STUDY OF HOT WIRE TECHNIQUES IN LOW DENSITY
FLOWS WITH HIGH TURBULENCE LEVELS
HANSON, A. R. KRAUSE, F. R. LARSON, R. E. DEC.
1966
M-FS-1269

Prediction of heat, mass, species, and momentum fluxes in a space vehicle and aerodynamic noise production by supersonic jet and rocket exhausts requires a predictability of the associated turbulence fields. The hot wire is a technique that will allow an experimental determination of turbulent properties.

B66-10689
LOW INPUT VOLTAGE CONVERTER/REGULATOR
MINIMIZES EXTERNAL DISTURBANCES
INNOVATOR NOT GIVEN /HONEYWELL/ DEC. 1966
GSFC-527

Low-input voltage converter/regulator constructed in a coaxial configuration minimizes external magnetic field disturbance, suppresses radio noise interference, and provides excellent heat transfer from power transistors. It converts the output of fuel and solar cells, thermionic diodes, thermoelectric generators, and electrochemical batteries to a 28 vdc output.

B66-10690
EQUIVALENT CIRCUIT FOR A FIELD EFFECT
TRANSISTOR ESTABLISHED FOR COMPUTER
SIMULATION
MING, L. J. /IBM/ DEC. 1966
M-FS-1752

Equivalent circuit for the field effect transistor made up of circuit elements can be simulated by existing computer programs.

B66-10691
SOLID-STATE RECOVERABLE FUSE FUNCTIONS AS CIRCUIT BREAKER
THOMAS, E. F., JR. DEC. 1966
GSFC-560

Molded, conductive—epoxy recoverable fuse protects electronic circuits during overload conditions, and then permits them to continue to function immediately after the overload condition is removed. i. has low resistance at ambient temperature, and high resistance at an elevated temperature.

B66-10692 HERMETICALLY SEALED CELLS PROTECTED FROM INTERNAL GAS PRESSURE CARSON, W. N. /GE/ DEC. 1966 GSFC-555

Manufacturing process prevents damage to hermetically sealed nickel-cadmium secondary cells by buildup of gas pressure during overcharging and reversed charging conditions. The cells are manufactured with less charge capacity in the positive electrode than in the negative electrode, and two additional electrodes are added.

B66-10696 LOW RATE FLOW SWITCH CAN BE USED FOR GAS OR LIQUID BATES, E. T., JR. DEC. 1966 JPL-867

Flow switch operable at low flow rates is used for detecting the flow of a water coolant in a vacuum deposition apparatus. This switch utilizes one or more reed switches which are actuated by a sliding magnet.

B66-10699
MONITORING SYSTEM DETERMINES AMPLITUDE AND
TIME OF VIBRATION CHANNEL PEAKS
ANDERSON, T. O. DEC. 1966
JPL-879

Adaptive scheme advocated in this innovation will reduce processing time and is applicable to environmental testing and to space- or aircraft-borne vibration monitoring devices requiring a large number of channels.

B66-10706
LOGARITHMIC CURRENT SIMULATOR GENERATES
ELECTRICAL CURRENTS ACCURATELY BETWEEN 10 TO
THE MINUS 11 AMPERE TO 10 TO THE MINUS 3
AMPERE
WILSON, J. /WESTINGHOUSE ASTRONUCL. LAB./ DEC.
1966

NU-0087

Current generator accurately simulates electric currents in the range of .000000001 ampere to 01. ampere. Compensation networks have been devised to improve the accuracy at the lower current levels.

B66-10709 THERMOCOUPLE-FLEXIBLE CABLE CONNECTOR INSULATOR IS HIGHLY RELIABLE GRACEY, C. M. /AEROJET-GEN. CORP./ DEC. 1966 NU-0082

Plastic /polycarbonate/ insulator improves thermocouple reliability in test operations. The insulator is molded in half sections, assembled mechanically and eliminates electrical shorting.

B67-10001
PROGRAM COMPUTES SINGLE-POINT FAILURES IN CRITICAL SYSTEM DESIGNS
BROWN, W. R. /N. AM. AVIATION/ JAN. 1967
MSC-603

Computer program analyzes the designs of critical systems that will either prove the design is free of single-point failures or detect each member of the population of single-point failures inherent in a system design. This program should find application in the checkout of redundant circuits and digital systems.

B67-10002 COMPUTER PROGRAM DETECTS TRANSIENT MALFUNCTIONS IN SWITCHING CIRCUITS CALVIN, E. L. /N. AM. AVIATION/ JAN. 1967 MSC-604

A program which accepts a system model in the form of Boolean equations and solves these equations using a ternary algebra will determine the response of large combinational and sequencial switching circuits to given input changes, taking into account malfunctions due to races, hazards, and oscillations.

B67-10009
TESTER FOR STUDY OF ROLLING ELEMENT BEARINGS
ZARETSKY, E. V. FEB. 1967
LEWIS-305

Five-ball fatigue tester makes possible the study of rolling element phenomena. The device consists of a driven test ball pyramided upon four lower balls positioned by a separator and free to rotate in an angular contact raceway.

B67-10013 SELF-STARTING PROCEDURE SIMPLIFIES NUMERICAL INTEGRATION JAN. 1967 SEE ALSO NASA-TN-D-2936 ARC-50

A self-starting, multistep procedure for the numerical integration of ordinary differential equations is devised to produce all the required backward differences directly from the initial equations. The self-starting element eliminates nonessential tallying to determine starting values.

B67-10015
ALUMINIZED THIN-WINDOW PROPORTIONAL-COUNTER
TUBE IS STRONGER, MORE RESPONSIVE IN LONG
WAVELENGTH REGION
SCHNOPPER, H. W. SHIELDS, R. A. /CORNELL UNIV./
JAN. 1967
JPL-689

A thin-window proportional counter tube of 0.25-mil Mylar with a thin aluminum coating on one side permits efficient detection of long wavelength X-rays. It is sufficiently rugged for long-term use in space or other demanding environments.

B67-10017 SHORTENED HORN-REFLECTOR ANTENNA LANTZ, P. A. JAN. 1967 GSFC-502

A shortened horn-reflector antenna overcomes the mechanical disadvantages and complexity of the conventional horn-reflector antenna. The shortened antenna offers broadband performance, economic construction, very low antenna temperature, and excellent pattern performance.

B67-10020 MINIATURE CAPACITOR FUNCTIONS AS PRESSURE SENSOR HARRISON, R. G. FEB. 1967 JPL-903

Miniature capacitor operates as a differentialpressure telemetry sensor during free flight of test model in a hypersonic wind tunnel. The

capacitor incorporates a beryllium copper diaphragm. It is also used as an absolute pressure sensor.

B67-10022

ŧ

VARIABLE-PULSE SWITCHING CIRCUIT ACCURATELY CONTROLS SOLENOID-VALVE ACTUATIONS GILLETT, J. D. /N. AM. AVIATION/ FEB. 1967 M-FS-1895

Solid state circuit generating adjustable square wave pulses of sufficient power operates a 28 volt dc solenoid valve at precise time intervals. This circuit is used for precise time control of fluid flow in combustion experiments.

B67-10025 COMPUTER/PERT TECHNIQUE MONITORS ACTUAL VERSUS ALLOCATED COSTS HOURY, E. WALKER, J. D. FEB. 1967 LEWIS-260

A computer method measures the user*s performance in cost-type contracts utilizing the existing NASA program evaluation review technique without imposing any additional reporting requirements.

Progress is measured by comparing actual costs with a value of work performed in a specific period.

B67-10027

FEED-THROUGH CONNECTOR COUPLES RF POWER INTO VACUUM CHAMBER GRANDY, G. L. /WESTINGHOUSE ASTRONUCL. LAB./ FEB. 1967 NU-0096

Feed-through device connects RF power to an RF coil in a vacuum chamber. The coil and leads are water cooled and vacuum tight seals are provided at the junctions. The device incorporates silver soldered copper tubes, polytetrafluoroethylene electrical insulators, and O-ring vacuum seals.

B67-10028 MONITOR ASSURES AVAILABILITY AND QUALITY OF COMMUNICATION CHANNELS SMITH, G. P. /RCA/ FEB. 1967 KSC-66-38

System monitors a communication channel for proper circuit parameters and energizes an alarm if these parameters do not fall within allowable limits. It comprises a monitor-signal transmitter at the transmitting end of the channel and a monitor-signal receiver at the receiving end.

INSTRUMENT SEQUENTIALLY SAMPLES AC SIGNALS FROM SEVERAL ACCELEROMETERS
CHAPMAN, C. P. FEB. 1967 SEE ALSO B66-10462

Scanner circuit sequentially samples the ac signals from accelerometers used in conducting noise vibration tests, and provides a time-averaged output signal. The scanner is used in conjunction with other devices for random noise vibration tests.

LOCAL MEASUREMENTS IN TURBULENT FLOWS
THROUGH CROSS CORRELATION OF OPTICAL SIGNALS FISHER, M. J. FEB. 1967 M-FS-1268

Crossed beam correlation method measures turbulent fluctuations in transonic and supersonic flows. Two collimated beams of radiation are crossed at the point of interest in the flow, and the power loss of each beam is measured with two independent photodetectors, which yield information about the turbulent properties.

B67-10031 HIGH TRANSIENTS SUPPRESSED IN ELECTROMAGNETIC DEVICES

MARION, C. W. FEB. 1967 KSC-66-13

A bifilar winding around the magnetic core of electromagnetic devices suppresses high transient voltages. The winding is alternately spaced vertically and radially from the core to achieve a high coefficient of coupling.

B67-10035 THERMOELECTRIC METAL COMPARATOR DETERMINES COMPOSITION OF ALLOYS AND METALS STONE, C. C. WALKER, D. E. FEB. 1967 ARG-235

EMF comparing device nondestructively inspects metals and alloys for conformance to a chemical specification. It uses the Seebeck effect to measure the difference in EMF produced by the junction of a hot probe and the junction of a cold contact on the surface of an unknown metal.

B67-10038 RESIDUAL MAGNETISM HOLDS SOLENOID ARMATURE IN DESIRED POSITION CRAWFORD, R. P. /GEN. DYN./ MAR. 1967 LEWIS-343

Holding solenoid uses residual magnetism to hold its armature in a desired position after excitation current is removed from the coil. Although no electrical power or mechanical devices are used, the solenoid has a low tolerance to armature displacement from the equilibrium position.

B67-10040

STUDY MADE OF EXPLOSIVE CUTTING IN SIMULATED SPACE ENVIRONMENTS
COLEMAN, E. R. HAMILTON, L. D. /HAYES INTERN.
CORP./ MAR. 1967 SEE ALSO NASA-TM-X-53440 CORP./ M. M-FS-1597

Study indicates the feasibility of explosive cutting and establishes techniques applicable to in-space cutting operations. Results show no degradation of the explosive and that work hardening of the target material is limited to the cut edge.

B67-10041
ABSOLUTE VISCOSITY MEASURED USING INSTRUMENTED PARALLEL PLATE SYSTEM BROYLES, H. H. MAR. 1967

An automatic system measures the true average shear viscosity of liquids and viscoelastic materials, using the parallel plate method and automatically displays the results on a graphic record. This eliminates apparatus setup and extensive calculations.

B67-10042 IMPROVED FLUID CONTROL CIRCUIT OPERATES ON LOW POWER INPUT GEBBEN, V. MAR. 1967 LEWIS-325

Standard electromagnetic relay actuates fluid control circuits with low level electrical signals by switching a fluid amplifier that drives a spool

B67-10046 MULTIPURPOSE INSTRUMENTATION CABLE PROVIDES INTEGRAL THERMOCOUPLE CIRCUIT ZELLNER, G. /WESTINGHOUSE ASTRONUCL. LAB./ MAR. NU-0108

Multipurpose cable with an integral thermocouple circuit measures strain, vibration, pressure, throughout a wide temperature range. This cable reduces bulky and complex circuitry by eliminating separate thermocouples for each transducer.

B67-10053 SOLID-STATE TIME-TO-PULSE-HEIGHT CONVERTER DEVELOPED LYNCH, R. J. RODDICK, R. G. MAR. 1967 ARG-170

Solid-state circuit produces an output pulse with an amplitude directly proportional to the time interval between two input pulses. It uses selected circuit options to achieve variable mode operation and a tunnel diode controls the charging time of a capacitor in proportion to the time interval being measured.

CIRCUIT MULTIPLIES PULSE WIDTH MODULATION, EXHIBITS LINEAR TRANSFER FUNCTION CARLSON, A. W. FURCINITI, A. MAR. 1967

HQ-56

Modulation multiplier provides a simple means of multiplying the width modulation of a pulse train by a constant factor. It operates directly on a pulse width modulated input signal to generate an output pulse train having a greater degree of width modulation than the input signal.

B67-10060
ELECTRON MULTIPLIER HAS IMPROVED
PERFORMANCE AND STABILITY
INNOVATOR NOT GIVEN /G.C.A. CORP./ MAR. 1967
GSFC-546

Electron multiplier contains a series of massive metal dynodes, compactly secured with ceramic rods for operation in a metal housing. The housing is rigidly mounted within a soft steel vacuum enclosure which shields the multiplier from the effects of external electromagnetic fields.

B67-10061 CONTROL CIRCUIT ENSURES SOLAR CELL OPERATION AT MAXIMUM POWER PAULKOVICH, J. MAR. 1967 GSFC-432

Control circuit enables a solar cell power supply to deliver maximum electrical power to a load. It senses the magnitude of the slope of the voltage-current characteristic curve and compares it to a reference voltage which represents the slope corresponding to the desired operating limits.

B67-10065
PORTABLE DETECTOR SET DISCLOSES HELIUM
LEAK RATES
ANDERSON, G. E. /N. AM. AVIATION/ APR. 1967
M-FS-1733

Portable helium detector measuring helium leak rates makes possible the use of the inert gas helium as a tracer. This helps solve safety and contamination problems in detecting leaks in closed fluid systems.

B67-10074
FLOW-TEST DEVICE FITS INTO RESTRICTED
ACCESS PASSAGES
FITZGERALD, J. J. OBERSCHMIDT, M. ROSENBAUM, B.
J. APR. 1967
MSC-1078

Test device using a mandrel with a collapsible linkage assembly enables a fluid flow sensor to be properly positioned in a restricted passage by external manipulation. This device is applicable to the combustion chamber of a rocket motor.

B67-10076
CLEARROOM AIR SAMPLER COUNTS, CATEGORIZES,
AND RECORDS PARTICLE DATA
NELSON, M. B. /IIT RES. INST./ JUN. 1967
M-FS-2221

Light scattering particle counter monitors particles in a clean room. It categorizes and records the particles according to size and functions simultaneously in three separate areas. The counter uses a transducer head to transform light signals into electric signals.

B67-10077
COMPUTER PROGRAM SIMULATES DESIGN, TEST,
AND ANALYSIS PHASES OF SENSITIVITY
EXPERIMENTS
ALEXANDER, M. J. ROTHMAN, D. ZIMMERMAN, J. M.
/N. AM. AVIATION/ APR. 1967

M-FS-1496

Modular program with a small main program and several specialized subroutines provides a general purpose computer program to simulate the design, test and analysis phases of sensitivity experiments. This program allows a wide range of design-response function combinations and the addition, deletion, or modification of subroutines.

B67-10080
INSTRUMENT CONTINUOUSLY MEASURES DENSITY
OF FLOWING FLUIDS
JACOBS, R. B. MACINKO, J. MILLER, C. E. /NBS/
APR. 1967

LEWIS-309

Electromechanical densitometer continuously measures the densities of either single— or two-phase flowing cryogenic fluids. Measurement is made on actual flow. The instrument operates on the principle that the mass of any vibrating system is a primary factor in determining the dynamic characteristics of the system.

B67-10084
CIRCUIT INCREASES CAPABILITY OF HYSTERESIS SYNCHRONOUS MOTOR MARKOWITZ, I. N. /RCA/ APR. 1967
MSC-1080

Frequency and phase detector circuit enables a hysteresis synchronous motor to drive a load of given torgue value at a precise speed determined by a stable reference. This technique permits driving larger torgue loads with smaller motors and lower power drain.

B67-10085
TRIPLE MODULAR REDUNDANCY /TMR/ COMPUTER
OPERATION IMPROVED
BALL, M. HARDIE, F. H. /IBM/ APR. 1967
MSC-831

Switching off a failed element plus one of the good elements in the TMR computer operation keeps the reliability curve from crossing the simplex curve. This method increases reliability and prevents system failure.

B67-10086 AUTOMATIC CHANNEL SWITCHING DEVICE BALL, M. OLNOWICH, H. T. /IBM/ APR. 1967 MSC-832 MSC-834

Automatic channel switching device operates with all three triple modular redundant channels when there are no errors. When a failure occurs, channel and module switching isolate the failure to a specific channel. Since only one must operate correctly, reliability is increased.

B67-10087
TRANSLATOR PROGRAM CONVERTS COMPUTER
PRINTOUT INTO BRAILLE LANGUAGE
POWELL, R. A. /BOEING CO./ APR. 1967
M-FS-2061

Computer program converts print image tape files into six dot Braille cells, enabling a blind computer programmer to monitor and evaluate data generated by his own programs. The Braille output is printed 8 lines per inch.

B67-10090 SYSTEM AUTOMATICALLY SUPPLIES PRECISE ANALYTICAL SAMPLES OF HIGH-PRESSURE GASES LANGDON, W. M. /IIT RES. INST./ APR. 1967 M-FS-1814

High-pressure-reducing and flow-stabilization system delivers analytical gas samples from a gas supply. The system employs parallel capillary restrictors for pressure reduction and downstream throttling valves for flow control. It is used in conjunction with a sampling valve and minimizes alterations of the sampled gas.

B67-10091
SYSTEM MAINTAINS CONSTANT PENETRATION
DURING FUSION WELDING
COOK, G. /MERRIK ENG./ MC CAMPBELL, W. M. APR.
1967
M-FS-937

Servo system senses variations in fusion welding process, and adjusts the control parameters to compensate for them. The system assumes a correlation between uniform weld penetration and temperature gradients near the molten puddle. It senses weld properties and makes adjustments to travel speed and weld current.

B67-10092 GREMEX-A NEW MANAGEMENT TRAINING CONCEPT DENAULT, M. F. VACCARO, M. J. APR. 1967 GSFC-574

Goddard Research Engineering Management Exercise provides experience in R+D project decision making from a management rather than technological view. The participant directs a hypothetical project presented in the management simulation technique. He uses old or new methods without concern for rewards or penalties existing in real life.

B67-10093

STRAIN GAGE CIRCUITRY PROVIDES FATIGUE
TESTING MACHINE WITH ACCURATE CYCLE COUNT
PARK, R. /WESTINGHOUSE ASTRONUCL. LAB./ APR. 1967

NU-0114

fatigue tester determines the number of cycles to fatigue failure of brittle specimens. A strain gage on the loading arm records the loading applied to the component. As the component starts to break, the load is reduced and the strain gage stops the cycle counter.

B67-10097

HEATER CONTROL CIRCUIT PROVIDES BOTH FAST AND PROPORTIONAL CONTROL BASLOCK, R. W. /IBM/ APR. 1967 M-FS-906

Proportional control circuit supplies a heater with full current, from a pulsating dc source, to a present temperature and then switches to a present temperature and then switches to proportional control for fine temperature regulation. Two resistors and a diode are added to the existing circuit. The circuit can be adapted to control other functions.

B67-10099

SYSTEM ENABLES MORE COMPLETE CALIBRATIONS OF DYNAMIC-PRESSURE TRANSDUCERS PERNET, D. F. /IIT RES. INST./ APR. 1967 M-FS-2063

Absolute pressure calibration system using a Michelson interferometer calibrates phase characteristics and pressure sensitivities of the transducers that monitor acoustic or aerodynamic pressure fields. The interferometer uses a helium-neon laser light source and interchangeable acoustic signal generators to produce acoustic

DOUBLE EMITTER SUPPRESSED CARRIER MODULATOR USES COMMERCIALLY AVAILABLE COMPONENTS HAIST, C. F. PISCOPO, A. /IBM/ APR. 1967

Double emitter suppressed carrier modulator develops a signal-to-carrier minimum output ratio of 40 db and signal input of 2.5 volts. The circuit uses a commercially available double emitter chopper transistor. It eliminates tuning potentiometers and reduces sideband harmonics.

B67-10103

POLYNOMIAL MANIPULATOR AP-168 TUTT, G. E. /N. AM. AVIATION/ MAY 1967 MSC-1231

Linear Systems Design Evaluation Program, AP-168 combines the many different analysis techniques used to evaluate and manipulate polynomials. polynomials. The single program is a pseudo instruction abstraction. It allows the user to enter polynomials of the Laplace operators and to manipulate them freely.

B67-10104

PARAMETRIC UP-CONVERTER INCREASES FLEXIBILITY OF MASER

SUMMY, R. H. APR. 1967 KSC-67-98

Parametric up-converter translates a broad band of signals to the fixed tuned input frequency of a maser. This modified maser can operate in the 1700-2300 Mc range, eliminating the need to duplicate equipment. It may be applied in communications and radio astronomy.

B67-10106

RF INDUCTOR HAS HIGH Q, IS STABLE AT HIGHER TEMPERATURES WILER, E. M. MAY 1967 JPL-1019

Encapsulated RF inductor with an insulated coil has a high Q and remains stable for long periods of time at high temperatures. The coil is wound on a core and both are encapsulated in an epoxy resin. Two terminals are soldered to the coil.

B67-10108

B67-10108
COMPUTER PROGRAM REDUCES CALCULATION TIME
OF NORMAL RESPONSE FUNCTIONS
ALEXANDER, M. J. ROTHMAN, D. ZIMMERMAN, J. M.
//N. AM. AVIATION/ MAY 1967
H-FS-1517

Fortran II computer program rapidly calculates parameters of maximum likelihood estimates from sensitivity experiment data populations. The program uses the Newton-Raphson iterative procedure to calculate the mean and standard deviation of portions of the cumulative normal response function.

B67-10111

FIXTURE TESTS BELLOWS RELIABILITY THROUGH REPETITIVE PRESSURE/TEMPERATURE CYCLING LEVINSON, C. /SPERRY GYROSCOPE CO./ MAY 1967 MSC-1176

Fixture explores the reliability of bellows used in precision in inertial systems. The fixture establishes the ability of the bellows to withstand repetitive over-stress pressure cycling at elevated temperatures. It is applicable in quality control and reliability programs.

LIQUID HYDROGEN DENSITOMETER UTILIZES
OPEN-ENDED MICROWAVE CAVITY
SMETANA, J. WENGER, N. C. APR. 1967 SEE ALSO SMETANA, J. W NASA-TN-D-3680 LEWIS-390

Open-ended microwave cavity directly measures the density of flowing liquid, gaseous, or two-phase hydrogen. Its operation is based on derived relations between the cavity resonant frequency and the dielectric constant and density of

B67-10116

DETECTION OF ENTRAPPED MOISTURE IN HONEYCOMB SANDWICH STRUCTURES
HALLMARK, W. B. /N. AM. AVIATION/ MAY 1967 MSC-1103

Thermal neutron moisture detection system detects entrapped moisture in intercellular areas of bonded honeycomb sandwich structures. A radium/beryllium fast neutron source bombards a specimen. The emitted thermal neutrons from the target nucleus are detected and counted by a boron trifluoride thermal neutron detector.

TV SYNCHRONIZATION SYSTEM FEATURES STABILITY AND NOISE IMMUNITY LANDAUER, F. P. MAY 1967 JPL-915

Horizontal jitter in the video presentation in television systems is prevented by using an additional sync level. This circuitry uses simultaneous signals at both sync and porch frequencies, providing a sync identification from which a coincidence circuit can generate pulses having the required stability and noise immunity.

B67-10119

PERSONAL COMMUNICATION SYSTEM COMBINES HIGH PERFORMANCE WITH MINIATURIZATION ATLAS, N. D. /N. AM. AVIATION/ MAY 1967 MSC-720 MSC-722

Personal communication system provides miniaturized components that incorporate high level signal characteristics plus noise rejection in both microphone and earphone circuitry. The microphone is designed to overcome such spacecraft flight problems as size, ambient noise level, and RF interference.

EDGE-TYPE CONNECTORS EVALUATED BY ELECTRICAL NOISE MEASUREMENT BRUMMETT, S. L. /BOEING CO./ MAY 1967 M-FS-2243

Electrical noise measurement system measures noise generated by edge-type connectors and circuit cards when they are subjected to sinusoidal

vibration. It provides a signal across the contact area and monitors the signal change during vibration. Noise measured can be expressed as a varying change in total contact resistance.

B67-10127
CALIBRATING ULTRASONIC TEST EQUIPMENT FOR
CHECKING THIN METAL STRIP STOCK
PETERSON, R. M. /AEROJET-GEN. CORP./ JUN. 1967
NUC-10009

Calibration technique detects minute laminar-type discontinuities in thin metal strip stock. Patterns of plastic tape are preselected to include minutely calculated discontinuities and the tape is applied to the strip stock to intercept the incident sonic beam.

B67-10130 MODIFIED UNIVIBRATOR COMPENSATES FOR OUTPUT TIMING ERRORS STRAUSS, M. G. MAY 1967

One-stage, delay compensation amplifier, added to conventional univibrator circuitry time-synchronizes the trailing edge of the output pulse with the origin of the input pulse. The trailing edge is independent of the amplitude of the input pulse.

B67-10135
INTEGRATOR CAN EASILY BE SET AND RESET WITH
AN ELECTRONIC SWITCH
DEBOO, G. J. MAY 1967
ARC-10002

Electronic switch sets and resets integrator circuit to some initial condition using a grounded capacitor. This circuit also uses four equal resistors and an operational amplifier.

B67-10136
COMPUTER PROGRAM CALCULATES MONOTONIC
MAXIMUM LIKELIHOOD ESTIMATES USING METHOD
OF REVERSALS
ALEXANDER, M. J. /N. AM. AVIATION/ MAY 1967
M-FS-1516

Fortran II computer program calculates maximum estimates of a monotonic non-decreasing response function. The program uses the method of reversals algorithm which applies to the analysis of univariate or multivariate sensitivity experiments.

B67-10137
VARIABLE RELUCTANCE SWITCH AVOIDS CONTACT
CORROSION AND CONTACT BOUNCE
WATSON, P. C. /MIT/ MAY 1967
MSC-1178

Variable reluctance switch avoids contact corrosion and bounce in a hostile environment. It consists of a wire-wound magnetic core and moveable bridge piece that alters the core flux pattern to produce an electrical output useful for switching control media.

B67-10139
RECORDING AND TIME EXPANSION TECHNIQUE FOR HIGH-SPEED, SINGLE-SHOT TRANSIENT VIDEO SIGNAL HRUBY, R. J. SANDER, R. C. MAY 1967
ARC-10003

High-speed, single shot, transient voltage is recorded on a video tape recorder, which, when played back, converts the single signal to a repetitive signal. This drives a sample data translator which lengthens the original transient production time, suiting it to an x-y plotter or computer tape recorder use.

B67-10140
CLAMP PROVIDES EFFICIENT CONNECTION FOR HIGH-DENSITY CURRENTS
MC CARTHY, J. R. TREBES, D. M. /N. AM. AVIATION/MAY 1967
M-FS-2417

Electrical connector clamp /bus bar/ gives high contact-surface efficiency for providing a high current to thin wall stainless steel tubing containing hydrogen gas. It uses lead solder film to provide the electrical equivalent of a fusion bond without degrading the grain structure, permitting disassembly and reuse of the components.

B67-10142
THIN FILM PROCESS FORMS EFFECTIVE ELECTRICAL
CONTACTS ON SEMICONDUCTOR CRYSTALS
FORMIGONI, N. P. ROBERTS, J. S. /WESTINGHOUSE
ELEC. CORP./ MAY 1967
M-FS-2343

Process makes microscopic, low-resistance electrical contacts on hexagonal n-type silicon carbide crystals used for microelectronic devices. A vacuum deposition of aluminum is etched to expose the bare silicon carbide where the electrical contacts are made. Sputtering alternating layers of tantalum and gold forms the allow film.

B67-10143
DESIGN CONCEPTS USING RING LASERS FOR FREQUENCY STABILIZATION MOCKER, H. /HONEYWELL INC./ MAY 1967
M-FS-2448

Laser frequency stabilization methods are based on a frequency discriminant which generates an unambiguous deviation signal used for automatic stabilization. Closed-loop control stabilizes cavity length at a null point. Some systems have a stabilized ring laser using a piezoelectric dither and others use a Doppler gain tube.

B67-10144
PROCESS FACILITATES PHOTORESIST MASK
ALIGNMENT ON SIC CRYSTALS
FORMIGONI, N. P. ROBERTS, J. S. /WESTINGHOUSE
ELEC. CORP./ MAY 1967
M-FS-2394

Growth of silicon dioxide on a silicon carbide crystal ensures proper orientation of photoresist masks on the crystals used for semiconductor devices. The crystal is heated in a water vapor-saturated gas to delineate p-n junctions that intersect the crystal surface.

B67-10145
TEST INSTRUMENTATION EVALUATES ELECTROSTATIC
HAZARDS IN FLUID SYSTEM
COLLINS, L. H. HENRY, R. KREBS, D. /BOEING CO./
MAY 1967
M-FS-2277

RJ-1 fuel surface potential is measured with a probe to determine the degree of hazard originating from static electricity buildup in the hydraulic fluid. The probe is mounted in contact with the fluid surface and connected to an electrostatic voltmeeter.

B67-10146
HYDROGEN MASER AS A HIGHLY STABLE FREQUENCY
REFERENCE
VANIER, J. VESSOT, R. /VARIAN ASSOC./ MAY 1967
M-FS-2437

Hydrogen maser is stable short— and long-term frequency reference for precision tracking systems. Its resettability is expressed as the rms deviation from the mean.

B67-10150
MULTIPLEXING CONTROL DEVICE ENABLES HANDLING
OF WIDE VARIATIONS IN SAMPLING RATES
INNOVATOR NOT GIVEN. /WESTINGHOUSE ELEC. CORP./
JUN. 1967
M-FS-1871

ESS telecommunication system concept provides the ability to change according to needs indicated by the data without any change to the lunar experiment equipment. The system will include a magnetic core memory as the data multiplexing control device.

B67-10151 ELECTRONIC FREQUENCY DISCRIMINATOR REID, W. J. /MOTOROLA, INC./ JUN. 1967 M-FS-2434

Digital comparator permits discrimination at accuracy of reference frequency. The compare circuit is a shift register element.

B67-10152
MEANS FOR IMPROVING APPARENT RESOLUTION OF
TELEVISION
HILBORN, E. H. MAY 1967
ERC-65

٠

Technique using short term temporal integration characteristics of the observer*s visual system improves the apparent resolution of television video presentations. The raster is displaced slightly on each frame so the eye can integrate the information in each raster grain. This phase shift uses a switching time delay.

B67-10153 STUDY OF YTTRIUM IRON GARNET RODS REVEALS NEW MAGNETOSTATIC ECHO MODE KEDZIE, R. W. /SPERRY RAND RES. CENTER/ JUN. 1967 ERC-37

Echo mode in YIG rods has different behavior in magnetic fields. This mode, discovered at 8.5 gigahertz, experiences a linear variation. The time delay exhibited is a linear function of the applied magnetic field and the input pulse frequency.

B67-10155
SUBMINIATURE DEFLECTION CIRCUIT OPERATES
INTEGRATED SWEEP CIRCUITS IN TV CAMERA
SCHAFF, F. L. /WESTINGHOUSE ELEC. CORP./ MAY
1967
MSC-1263

Small magnetic sweep deflection circuits operate a hand-held lunar television camera. They convert timing signals from the synchronizer into waveforms that provide a raster on the vidicon target. Raster size remains constant and linear during wide voltage and temperature fluctuations.

B67-10156
VOLTAGE REGULATOR/AMPLIFIER IS SELF-REGULATED
DAY, W. E. PHILLIPS, D. E. /COLLINS RADIO CO./
MAY 1967
MSC-1240

Signal modulated, self-regulating voltage regulator/amplifier controls the output b+ voltage in modulated regulator systems. It uses self-oscillation with feedback to a control circuit with a discontinuous amplitude action feedback loop.

B67-10157
DESIGN CONCEPT FOR IMPROVED PHOTO-SCAN TUBE
MALLING, L. R. JUN. 1967
JPL-818

--oio Conceptual photo-scan tube avoids complexity of internal beam scanning and beam-current adjustment by optical scan readout. It differs from a conventional image orthicon in its use of an external oscilloscope tube.

B67-10160 A POWER-SPECTRAL-DENSITY COMPUTER PROGRAM CHAPMAN, C. P. JUN. 1967 NPO-10126

Computer program simplifies and clarifies randomnoise vibration test results. It also varies PSD test specifications, sets up automatic equalization equipment, and calculates an exact acceleration level for the random noise prior to the test.

B67-10161
SENSING DISKS FOR SLUG-TYPE CALORIMETERS
HAVE HIGHER TEMPERATURE STABILITY
INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ JUN.
1967
M-FS-1867

Graphite sensing disk for slug-type radiation calorimeters exhibits better performance at high temperatures than copper and nickel disks. The graphite is heat-soaked to stabilize its emittance and the thermocouple is protected from the graphite so repeated temperature cycling does not change its sensitivity.

B67-10162 CLOSED CINCUIT TV SYSTEM HONITORS WELDING OPERATIONS GILMAN, M. /N. AM. AVIATION/ JUN. 1967 MSC-11002

TV camera system that has a special vidicon tube with a gradient density filter is used in remote monitoring of TIG welding of stainless steel. The welding operations involve complex assembly welding tools and skates in areas of limited accessibility.

B67-10165
HYBRID SOLID STATE SWITCH REPLACES MOTORDRIVEN POWER SWITCH
BOOTH, R. A. SCHLOSS, A. I. JUN. 1967
JPL-931

Hybrid solid state switch replaces existing motor-driven power switches used on spacecraft. It uses a transistor circuit to limit the open circuit voltage and allow small relay contacts to handle high transient currents at reasonable cycle life.

B67-10166
EFFICIENT MILLIMETER WAVE /140 GHZ/ DIODE
FOR HARMONIC POWER GENERATION
INNOVATOR NOT GIVEN /ADVAN. TECHNOL. CORP./ JUN.
1967
HO-61

Epitaxial gallium arsenide diode junction formed in a crossed waveguide structure operates as a variable reactance harmonic generator. This varactor diode can generate power efficiently in the low-millimeter wavelength.

B67-10170
DATA RETRIEVAL SYSTEM PROVIDES UNLIMITED
HARDWARE DESIGN INFORMATION
RAYSON, R. D. SWANSON, R. L. /N. AM. AVIATION/
JUN. 1967
JUN. 1967

Data is input to magnetic tape on a single format card that specifies the system, location, and component, the test point identification number, the operator*s initial, the date, a data code, and the data itself. This method is efficient for large volume data storage and retrieval, and permits output variations without continuous program modifications.

B67-10171 STRUCTURAL ANALYSIS AND MATRIX INTERPRETIVE SYSTEM /SAMIS/ INNOVATOR NOT GIVEN /PHILCO CORP./ JUN. 1967 NPO-10130

Structural Analysis and Matrix Interpretive
System eliminates high-speed digital computer
restrictions of lack of generalization and lack of
flexibility. Programming concepts of the system
are standardization, modularity, and programming
for intermediate-size problems.

B67-10175
NUMERICAL DATA FRAME READOUT SYSTEM USED IN
TESTING TELEMETRY SYSTEMS
COTE, C. E. CRESSEY, J. R. JUN. 1967
GSFC-551

Digital telemetry systems are tested by a display system that offers direct readout as high data rates. The rates appear in numerical format and are adaptable to photographic recording techniques. The system can show bit dropouts at a memory output or locate a malfunction in a system.

B67-10176
THERMAL AND BIAS CYCLING STABILIZES PLANAR
SILICON DEVICES
HARRIS, R. E. MEINHARD, J. E. /N. AM. AVIATION/
JUN. 1967
ERC-48

Terminal burn-in or baking step time in the processing of planar silicon devices is extended to reduce their inversion tendencies. The collector-base junction of the device is also cyclically biased during the burn-in.

B67-10179
A THEORETICAL MODEL FOR DETERMINING TURBINE FLOWMETER SENSITIVITY
SMITH, R. L. /N. AH. AVIATION/ JUN. 1967

M-FS-1172

Analytical model of turbine-type flowmeter guides in the selection of valid extrapolation of available calibration data. An expression for flowmeter performance is developed to include the effects of fluid friction, bearing drag, and magnetic drag upon helical rotor design.

B67-10181 STUDY INDICATES FLUID DIGITAL COMPUTATION SYSTEMS ARE FEASIBLE INNOVATOR NOT GIVEN /GE/ JUN. 1967 M-FS-520

Digital computation systems using fluid amplifiers are proven practical. The response speed is adequate for space applications and they are reliable in adverse environments. The systems may be feasible for satellite attitude controls and guidance computers for manned orbital stations.

B67-10190
SWITCHING-TYPE REGULATOR CIRCUIT HAS
INCREASED EFFICIENCY
CLAPP, W. M. /SANDERS ASSOCIATES, INC./ JUN.
1967
MSC-1063

Switching series regulator circuit uses an inductive network to feed most of the current applied to the control circuit to the load. This circuit eliminates resistive losses and the need for heat sinks.

B67-10192
FAST-ACTING CALORIMETER MEASURES HEAT OUTPUT
OF PLASMA GUN ACCELERATOR
DETHLEFSON, R. LARSON, A. V. LIEBING, L. /GEN.
DYNAMICS/CONVAIR DIV./ JUN. 1967
LEWIS-388

Calorimeter measures the exhaust energy from a shot of a pulsed plasma gun accelerator. It has a fast response time and requires only one measurement to determine the total energy. It uses a long ribbon of copper foil wound around a glass frame to form a reentrant cavity.

B67-10196
TECHNIQUE FOR STRIP CHART RECORDER TIME
NOTATION
INNOVATOR NOT GIVEN /ROBACK CORP./ JUN. 1967
GSFC-473

Single recorder channel helps determine the time an event is recorded on the readout of a strip chart recorder. It presents hours, tens of minutes, and minutes by a unique method of time increment identification. This facilitates recording timing marks.

B67-10199
ELECTROMETER AMPLIFIER OPERATES OVER
DYNAMIC RANGE OF FIVE ORDERS OF MAGNITUDE
KATZ, N. /MARSHALL LAB./ JUN. 1967
ARC-75

Special purpose electrometer amplifier is capable of operation over a dynamic range of five orders of magnitude. This is achieved by using a zener controlled attenuator in the feedback path for the amplifier.

B67-10201
ELECTRONIC CIRCUITRY USED TO AUTOMATE PAPER
CHROMATOGRAPHY
STEFFENSEN, G. R. JUN. 1967
JPL-840

Electronic circuit is used in a paper chromatograph instrument that has excellent sensitivity and furnishes a printed record of each test. The circuit measures and records changes in conductivity in a strip of chromatographic paper as different solutions are placed on it.

B67-10203 AUTOMATED MICROSYRINGE IS HIGHLY ACCURATE AND RELIABLE STUART, J. L. JUN. 1967 NPO-10142

Syringe meters small volumes of fluid used in chemical analysis. The standard body and plunger are adapted to fit with a motor driven micrometer,

making a reliable and convenient device.

B67-10204 A CONCEPTUAL, PARALLEL OPERATING DATA COMPRESSION PROCESSOR ANDERSON, T. O. JUN. 1967 NPO-10068

Data compressor processor concept envisions a simplified system for telemetry communications. It is simultaneously a zero-order processor and a floating aperture, a variable aperture, and a binary integer aperture with a decoded buffet fullness counter.

B67-10205 QUARTZ CRYSTALS DETECT GAS CONTAMINANTS DURING VACUUM CHAMBER EVACUATION STEPHENS, J. B. JUN. 1967 NPO-10144

Piezoelectric quartz crystals detect condensable gas contaminants backstreaming into a vacuum chamber when a pump is evacuating the chamber. One crystal acts as a thermometer, the other detects mass change. They are energized by electronic equipment which records frequency changes.

B67-10206
PLOTTER DESIGN SIMPLIFIES DETERMINATION OF IMAGE SENSOR TRANSFER CHARACTERISTIC BAKER, L. R. JUN. 1967
NPO-10164

Transfer characteristic of vidicons and other image sensors are measured by light from a calibrated electroluminescent panel as a function of the current output of the image sensor. The plot of current output versus the calibrated light output is the transfer characteristic.

B67-10213
FM CARRIER DEVIATION MEASURED BY
DIFFERENTIAL PROBABILITY METHOD
DAQUIN, A. F., JR. HADDICAN, J. /BOEING CO./
JUN. 1967
M-FS-2166

FS-2166

Differential probability FM system measures deviation of a carrier modulated by a complex signal. The peak-to-peak amplitude is measured and related to the frequency shift of the carrier signal. The deviation is described in terms of a probability as well as a peak value.

B67-10215
RUN NUMBERING SYSTEM FOR USE WITH DATA
RECORDERS
PEASE, L. L. /BOEING CO./ JUN. 1967
M-FS-2557

Run numbering identification system provides a permanent identification on the recorder traces of data runs. It automatically enters, by pulse coding, the number of the current data run on the recorder trace. The system uses a keyboard, registers, converters, amplifiers, and a pulse generator.

B67-10220 LOW SPEED, LONG TERM TRACKING ELECTRIC DRIVE SYSTEM HAS ZERO BACKLASH RICHTER, H. L. STOLLER, F. W. JUL. 1967 NPO-10173

Electric drive system provides low speed, long term tracking of targets that move at a sidereal rate. It utilizes eddy-current energized actuators that are free from radio frequency interference generation and a solid state feedback amplifier with provisions for antibacklash biasing.

B67-10221
AMPLIFIER PROVIDES DUAL OUTPUTS FROM A SINGLE SOURCE WITH COMPLETE ISOLATION DIPPLE, C. R. /WESTINGHOUSE ASTRONUCL. LAB./ NEFF, G. A. /NEFF INSTR. CORP./ JUL. 1967 NUC-10056

Amplifier provides two amplified outputs from a single input signal with complete transformer isolation. It uses modulation techniques to obtain the separated output. B67-10226
LABORATORY PULSE MODULATOR USES MINORITY
CARRIER STORAGE DIODES
INNOVATOR NOT GIVEN /SYLVANIA ELECTRON. SYSTEMS/
JUL. 1967
M-FS-2442

5,

Pulse modulator is capable of continuously variable pulse width over a 10 to 1 range of 1.0 microsecond to 0.1 microsecond and operates over a wide range of pulse repetition rates. Pulse width diversity is obtained by operating step-recovery diodes in the reverse conduction mode.

B67-10229
GLOW DISCHARGE DENSITY SENSOR PROBE LIFE IS EXTENDED
MAHUGH, R. A. /BOEING CO./ JUL. 1967
M-FS-1707

Excitation of the glow discharge probes with a high peak-to-peak voltage square wave reduces instability of density sensors. This results in good probe life plus output stability over a wide range.

B67-10230
FUSED DIODE PROVIDES VISUAL INDICATION OF
FUSE CONDITION
JENKINS, K. H. JUL. 1967
KSC-67-16

:-67-16
Fused diode combines a semiconductor diode and a circuit protective fuse within a common transparent cartridge. It provides visual indication of fuse condition which precludes the necessity of making resistance checks with an ohymeter.

B67-10231
IMPROVED ATMOSPHERIC PARTICLE ANALYZER
INNOVATOR NOT GIVEN /BLOCK ENG./ JUL. 1967
ERC-33

Nephelometer measures aerosol particles in wide concentration and size distribution ranges. It measures the light scattered from the aerosol particles at a controlled sampling rate to ensure laminar flow through the sample tube, and thereby eliminate the need for sheath air.

B67-10234 AN IMPROVED NUCLEAR MAGNETIC RESONANCE SPECTROMETER ELLEMAN, D. D. MANATT, S. L. JUL. 1967 JPL-762

Cylindrical sample container provides a high degree of nuclear stabilization to a Nuclear Magnetic Resonance /NMR/ spectrometer. It is placed coaxially about the NMR insert and contains reference sample that gives a signal suitable for locking the field and frequency of an NMR spectrometer with a simple audio modulation system.

B67-10239 A PHONOCARDIOGRAM SIMULATOR KEEFER, J. M. JUL. 1967 KSC-67-94

Simulator calibrates and checks out phonocardiograms used in physiological monitoring of astronauts in flight and during flight simulation. It is also used to check out telemetry systems and instrumentation systems for phonocardiogram monitoring in hospitals and medical care centers, and in training personnel to use such systems.

B67-10242
WEB BELT LOAD MEASURING INSTRUMENT HAS
EXCELLENT STABILITY
WALKER, R. R. /N. AM. AVIATION/ JUL. 1967
MSC-921

Web belt system measures belt or strap load. It is partially disassembled and installed on an existing belt without cutting or re-threading the belt. A strain gauge, installed on one of the support beams, eliminates errors due to uneven loading.

B67-10246
IHPROVED TELEVISION SIGNAL PROCESSING SYSTEM
WONG, R. Y. JUL. 1967 SEE ALSO B67-10005

NPO-10140

Digital system processes spacecraft television pictures by converting images sensed on a photostorage vidicon to pulses which can be transmitted by telemetry. This system can be applied in the processing of medical X-ray photographs and in electron microscopy.

B67-10248
RECTILINEAR DISPLAY GIVES ACCELERATION LOAD
FACTOR AND VELOCITY INFORMATION
FRANK, A. J. JOHNSON, B. C. /N. AM. AVIATION/
JUL. 1967
MSC-1045

Spacecraft Entry Monitoring System /EMS/ gives a rectilinear display of acceleration load factor and velocity information. This allows an astronaut to respond with manual spacecraft attitude corrective maneuver commands.

B67-10249
COMPUTER PROGRAM SAMPLES DIGITAL DATA FOR
CRT DISPLAY
DAY, D. J. WICKES, W. H. /N. AM. AVIATION/ JUL.
1967
MSC-999

High volume, multichannel data reduction computer program permits selection of the rates at which digital data is sampled. The program, written in Fortran IV source language, also permits accessibility to the original mass of data.

B67-10250
EXPERIMENTAL COHERENT FRACTIONAL FREQUENCY
MULTIPLIER AT S-BAND
MOSTRUM, R. A. /SMITH ELECTRONICS CO./ JUL. 1967
M-FS-2427

Experimental circuit produces an efficient fractional frequency multiplier that will operate on a 5.6 mm, 2101.8 MHz input signal to achieve an output-to-input frequency ratio of 240/221. Step-recovery diodes used in all frequency-changing stages result in a coherent offset frequency.

B67-10251
AN EFFICIENT, TEMPERATURE-COMPENSATED
SUBCARRIER OSCILLATOR
LAWRENCE, E. D. MEAD, D. C. /HUGHES AIRCRAFT
CO./ AUG. 1967
JPL-SC-091

Telemetry subcarrier oscillator has temperature stability, consumes a minimum of power, and has a high input impedance. Its output frequency is a linear function of the magnitude of an input signal. A circuit using an input buffer with a field effect transistor serves as the temperature-compensating element.

B67-10253
SOLID STATE PHASE DETECTOR REPLACES BULKY
TRANSFORMER CIRCUIT
MOBERLY, C. L. /MOTOROLA/ JUL. 1967
MSC-11007

Miniature solid state phase detector using MOSFETs is used in a phase lock loop with a sun-bit detector in an integrated data-link circuit. This replaces bulky transformer circuits. It uses an inverter amplifier, a modulator switch, and a buffer amplifier.

B67-10254 A CALIBRATION MEANS FOR SPECTRUM ANALYZERS LARSON, M. S. JUL. 1967 MSC-10987

Spectrum analyzer calibration system is rapid and provides an accurate family of adjustable markers at any point in the spectrum. Pulse width controls determine the number of markers. The unit operates with a repetition rate from 300 cps to 40 kc at a center frequency from 10 kc to 2 Mc.

B67-10255
ABSOLUTE FREQUENCY STABILIZATION OF LASER
OSCILLATOR AGAINST LASER AMPLIFIER
SIEGMAN, A. E. /SYLVANIA ELECTRON. SYSTEMS/ JUL.
1967
M-FS-2559

Long-term absolute frequency stabilization of a laser oscillator is obtained when the laser*s oscillation frequency is referenced to the exact center of an atomic transition. A laser amplifier acts as a discriminant to indicate when the laser frequency deviates from the center of its atomic transistion.

B67-10257
FAST-RESPONSE FREQUENCY-TO-ANALOG CONVERTER
HAGIHARA, F. S. /N. AM. AVIATION/ JUL. 1967
M-FS-709

Frequency-to-analog converter has a fast response time and a low ripple. The circuit uses a frequency-to-pulse converter which provides two pulse trains, both at the same frequency as that of the input signal, but with a 10 microsecond difference between the trains.

B67-10258
MULTICHANNEL PULSE HEIGHT ANALYZER IS
INEXPENSIVE, FEATURES LOW POWER
REQUIREMENTS
EWALD, C. J. SARKADY, A. A. /NEW HAMPSHIRE
UNIV./ AUG. 1967
HQN-10020

Consumption multichannel pulse height analyzer performs balloon and rocket investigations of solar neutrons with energies greater than 10 MeV. The lightweight unit can operate in a temperature range of minus 30 degrees to plus 70 degrees C and withstand storage temperatures from minus 50 degrees to plus 90 degrees C.

B67-10259
A PIEZO-BAR PRESSURE PROBE
FRIEND, W. H. MURPHY, C. L. SHANFIELD, I. /MC
GILL UNIV./ JUL. 1967
LEWIS-393

Piezo-bar pressure type probe measures the impact velocity or pressure of a moving debris cloud. It measures pressures up to 200,000 psi and peak pressures may be recorded with a total pulse duration between 5 and 65 musec.

B67-10260
TESTER AUTOMATICALLY CHECKS INSULATION OF
INDIVIDUAL CONDUCTORS IN MULTIPLE-STRAND
CABLES
SHAW, J. VUCKOVICH, M. /WESTINGHOUSE ASTRONUCL.
LAB./ JUL. 1967
NUC-10068

Insulation tester checks multiple-strand electrical cables in nuclear rocket reactors. It has both manual and automatic capabilities and can check the insulation of a cable with 200 or more conductors in a few minutes.

B67-10262
SOLID STATE CIRCUIT AVERAGES MULTIPLE SIGNALS
AND REJECTS THOSE VARYING SIGNIFICANTLY
FROM THE AVERAGE
ELMIGER, R. A. /WESTINGHOUSE ASTRONUCL. LAB./
AUG. 1967
NUC-10066

Average and reject logic control system provides an average of the output signals of transducers measuring critical parameters. It uses a circuit that compares each signal against an average, rejects any signal that departs significantly from the average, and supplies an average of the acceptable signals.

B67-10263
AUTOMATED TESTER PERMITS PRECISE CALIBRATION
OF PRESSURE TRANSDUCERS FROM 0 TO 1050 PSI
BRINDA, J. KRISTOFF, L. SHAW, J. VUCKOVICH, M.
/WESTINGHOUSE ASTRONUCL. LAB./ AUG. 1967
MUC-10067

Automated portable checker allows last-minute calibration of pressure transducers before testing. It uses a pressure console and equipment that can produce test pressures of 0-1050 psi. The console can be connected to other apparatus for measurement and visual display of the electrical output.

B67-10267 TESTER AUTOMATICALLY CHECKS PAPER TAPE PUNCH AND READER AFTER MAINTENANCE MAZER, L. MC MURCHY, D. D. AUG. 1967 ARC-66

2-66
Device automatically bench tests paper tape punches and readers in a simulated operating environment following routine maintenance. The reader and punch operate back-to-back and the paper tape output feeds the reader. The tape leader is prepunched with an arbitrary pattern that is continuously reproduced during the check.

B67-10268
SELF-BALANCING LINE-REVERSAL PYROMETER
AUTOMATICALLY MEASURES GAS TEMPERATURES
BUCHELE, D. AUG. 1967
LEWIS-348

Automatic line-reversal pyrometer measures gas temperatures from 2900 degrees to 4500 degrees R. The self-balancing device uses the sodium D-line but replaces the two conventional manual operations of the line-reversal method and can be used by semiskilled personnel.

B67-10269
OSCILLOSCOPE USED AS X-Y PLOTTER OR
TWO-DIMENSIONAL ANALYZER
HANSEN, D. ROY, N. /THOMPSON-RAMO-WOOLDRIDGE/
AUG. 1967
LEWIS-311

Oscilloscope used as an X-Y plotter or twodimensional analyzer tags each point with a yes or no, depending on a third parameter. The usual square-wave pulse is replaced on the scope by a single information-bearing dot which lengthens to a dash in response to a simultaneous event.

B67-10270
ELECTRONIC SHUTTER GATES IMAGE ORTHICON ON AND OFF
SENSENING, W. A. /RCA/ AUG. 1967

TV camera system contains an electronic shutter that gates the image orthicon photocathode on during expose time and off at all other times. The system records images of diffuse light-scattering regions in the solar system.

B67-10274
HIGH IMPACT PRESSURE REGULATOR WITHSTANDS
IMPACTS OF OVER 15,000 G
BILES, J. E., JR. FLOYD, E. L. TOPITS, A. N.,
JR. AUG. 1967
NPO-10175

High impact pressure regulator used with a high impact gas scannograph withstands impacts of over 15,000 g. By the passage of fluid through the first and second chambers of the regulator, the pressure of the scannograph is regulated from a specific input valve to the desired output pressure valve.

B67-10275
PRIMARY CELL USES NEITHER LIQUID NOR FUSED
ELECTROLYTES
GUTMANN, F. HERMAN, A. M. REMBAUM, A. AUG. 1967
SEE ALSO B66-10682
NPO-10001

II-10001 Dry, solid state primary battery cell establishes an electrode reaction by a charge transfer mechanism without liquid phase ionization of electrolyte compounds. The charge transfer complex is sufficiently conductive to permit the passage of useful current.

B67-10276
SYSTEM PRECISELY CONTROLS OSCILLATION OF
VIBRATING MASS
HANCOCK, D. J. /BUNKER-RAMO CORP./ AUG. 1967
M-FS-1875

S-1073
System precisely controls the sinusoidal amplitude of a vibrating mechanical mass. Using two sets of coils, the system regulates the drive signal amplitude at the precise level to maintain the mechanical mass when it reaches the desired vibration amplitude.

B67-10277 IR VIDICON SCANNER MONITORS MANY TEST POINTS FORTIER, R. J. /BOEING CO./ AUG. 1967 M~FS-1937

Infrared /IR/ scanners are used in test systems that involve many signal paths from transducers to a central evaluation point. The scanner, an IR-sensitive vidicon, looks at the indicator panels of each subsystem of the equipment being tested and picks up the level of radiation from each IR source mounted thereon.

B67-10284
VIBRATOR ELAPSED TIME IS AUTOMATICALLY
CONTROLLED
BUROWICK, E. A. /N. AM. AVIATION/ AUG. 1967
M-FS-2573

Circuit determines elapsed operating time for vibrators when three vibrators are located in one room and are powered by two amplifiers through either of two control systems. It operates the control system elapsed time clocks only when voltage is applied to the vibrator armatures.

B67-10289
WIDEBAND, HIGH EFFICIENCY OPTICAL MODULATOR
REQUIRES LESS THAN 10 WATTS DRIVE POWER
BECKNELL, W. E. RATTMAN, W. J. YAP, B. K.
/SYLVANIA ELECTRON. SYSTEMS/ AUG. 1967
M-FS-12733

Wideband optical modulation system operates with less than 10-watts drive power. It consists of an optical modulator and transistorized driver that combines small cross-section potassium dideuterium phosphate crystals with laser beam-condensing optics. Optical modulation systems may serve importantly in future space wideband communication systems.

B67-10294
SENSITIVE BRIDGE CIRCUIT MEASURES
CONDUCTANCE OF LOW-CONDUCTIVITY ELECTROLYTE
SOLUTIONS
SCHMIDT, K. AUG. 1967
ARG-147

Compact bridge circuit measures sensitive and accurate conductance of low-conductivity electrolyte solutions. The bridge utilizes a phase sensitive detector to obtain a linear deflection of the null indicator relative to the measured conductance.

B67-10298
ELECTRONIC DUMMY FOR ACCUSTICAL TESTING
BAUER, B. B. DI MATTIA, A. L. ROSENCHECK, A. J.
STERN, M. TORICK, E. L. /CBS LABS./ AUG. 1967
SEE ALSO N66-25565

MSC-206 MSC-1164 MSC-1165 MSC-1166

Electronic Dummy /ED/ used for acoustical testing represents the average male torso from the Xiphoid process upward and includes an acoustic replica of the human head. This head simulates natural flesh, and has an artificial voice and artificial ears that measure sound pressures at the eardrum or the entrance to the ear canal.

B67-10300 CIRCUIT PROVIDES OVERCURRENT PROTECTION TO PUSH-PULL AMPLIFIER SKORRA, D. J. /HONEYWELL/ AUG. 1967

Circuit in push-pull amplifier limits the current flowing to a predetermined level and provides that overcurrent in one half of the amplifier turns off the other half.

B67-10303
PROCESS CONTROLS INTRODUCTION OF SELECTED IMPURITIES INTO SEMICONDUCTOR WAFERS BARTHOLOMAY, W. C. TOPFER, A. R. /RCA/ AUG. 1967
GSFC-523

Modified three-step process controls the concentration of lithium diffused as a dopant into the base region of a diffused n-on-p silicon solar cell wafer. Part of the surface layer of the base region of the p-type silicon containing the diffused dopant is removed, prior to redistributing the remaining portion of the dopant into the bulk of the wafer.

B67-10311
TRANSISTOR BIASED AMPLIFIER MINIMIZES DIODE
DISCRIMINATOR THRESHOLD ATTENUATION
LARSEN, R. N. AUG. 1967
ARG-163

Transistor biased amplifier has a biased diode discriminator driven by a high impedance /several megohms/ current source, rather than a voltage source with several hundred ohms output impedance. This high impedance input arrangement makes the incremental impedance of the threshold diode negligible relative to the input impedance.

B67-10313
PRECISION CAPACITOR HAS IMPROVED TEMPERATURE
AND OPERATIONAL STABILITY
BROOKSHIER, W. K. LEWIS, R. N. AUG. 1967
ARG-189

Vacuum dielectric capacitor is fabricated from materials with very low temperature coefficients of expansion. This precision capacitor in the 1000-2000 picofarad range has a near-zero temperature coefficient of capacitance, eliminates ion chamber action caused by air ionization in the dielectric, and minimizes undesirable electromagnetic field charging effects

B67-10314
SIC/SI DIODE TRIGGER CIRCUIT PROVIDES
AUTOMATIC RANGE SWITCHING FOR LOG AMPLIFIER
INNOVATOR NOT GIVEN /TYCO LABS./ AUG. 1967
M-FS-1879

SiC/Si diode pair provides automatic range change to extend the operating range of a logarithmic amplifier-conversion circuit and assures stability at or near the range switch-over point. The diode provides hysteresis for a trigger circuit that actuates a relay at the desired range extension point.

B67-10317
IMPROVED HEAD-CONTROLLED TV SYSTEM PRODUCES
HIGH-QUALITY REMOTE IMAGE
GOERTZ, R. LINDBERG, J. MINGESZ, D. POTTS, C.
SEP. 1967
ARG-128

Manipulator operator uses an improved resolution TV camera/monitor positioning system to view the remote handling and processing of reactive, flammable, explosive, or contaminated materials. The pan and tilt motions of the camera and monitor are slaved to follow the corresponding motions of the operator's head.

B67-10318
ELECTRONIC TEST INSTRUMENT GENERATES
EXTREMELY SMALL CURRENT SIGNALS
BROOKSHIER, W. K. SEP. 1967
ARG-276

Generator produces dynamic test signals in the range from 10 to the minus fourth and 10 to the minus twelfth amperes. It involves an extension of the technique of applying a triangular voltage waveform to a small capacitor to obtain a square-wave output current. The effects of stray capacitance are minimized by appropriate shielding.

B67-10333
BRAZE JOINT QUALITY TESTED
ELECTROMAGNETICALLY
GRAVES, D. B. MC KOWN, R. D. /N. AM. AVIATION/
SEP. 1967
M-FS-12795

Nondestructive electromagnetic method detects the extent of gold/nickel braze alloy flow in an engine injector sleeve-to-post joint. Voltage is induced in an inductor coil, along with a magnetically permeable material. The effects of altering the quantity of braze alloy present can then be measured.

B67-10334 FIELD EFFECT TRANSISTORS IMPROVE BUFFER AMPLIFIER INNOVATOR NOT GIVEN /DYNATRONICS/ OCT. 1967 H-FS-916

Unity gain buffer amplifier with a field effect transistor /FET/ differential input stage

responds much faster than bipolar transistors when operated at low current levels. The circuit uses a dual FET in a unity gain buffer amplifier having extremely high input impedence, low bias current requirements, and wide bandwidth.

B67-10335
METHOD OF IMPROVING CONTACT BONDS IN
SILICON INTEGRATED CIRCUITS
LYTLE, W. J. SCHUSTER, M. A. /WESTINGHOUSE ELEC.
CORP./ SEP. 1967
M-FS-1753

Fabrication method produces stable and reliable metallic systems for interconnections, contact pads, and bonded leads in silicon planar integrated circuits. The method is based on substrate isolation of the interconnection metal from the contact pad and bonded wire.

B67-10336
DEVICE ENABLES CALIBRATION OF MICROPHONES
AT HIGH SOUND PRESSURE LEVELS
GILLEN, A. /WESTINGHOUSE ELEC. CORP./ SEP. 1967
M-FS-11980

Coupling device accurately calibrates microphones at high sound pressure intensities. The system which uses a liquid as the coupling medium can operate in an automatic mode by using a standard microphone as a control sensor. Feedback from the standard microphone controls the calibration signal level.

B67-10338
ACCURACY OF LASER MEASUREMENTS IMPROVED BY PULSE AUTOCORRELATOR ELECTRONIC SYSTEM CAMPANELLA, S. J. /MELPAR/ SEP. 1967
MSC-10033

Pulse autocorrelator electronic system discriminates between the dispersion effect of a disturbed laser signal and background noise by detecting multipath arrivals of Gaussian-shaped signal pulses. The autocorrelation function is time-dependent and can be determined by integrating the product of a received pulse and its delayed replicas.

B67-10339
VIBRATION ANALYSIS UTILIZING MOESSBAUER
EFFECT
ROUGHTON, N. A. SEP. 1967 SEE ALSO NASA-SP-132
M-FS-11974

Measuring instrument analyzes mechanical vibrations in transducers at amplitudes in the range of a few to 100 angstroms. This instrument utilizes the Mossbauer effect, the phenomenon of the recoil-free emission and resonant absorption of nuclear gamma rays in solids.

B67-10343 LIMIT CIRCUIT PREVENTS OVERDRIVING OF OPERATIONAL AMPLIFIER OPENSHAW, F. L. /AEROJET-GEN. CORP./ SEP. 1967 NUC-10082

Cutoff-type high gain amplifier coupled by a diode prevents overdriving of operational amplifier. An amplified feedback signal offsets the excess input signal that tends to cause the amplifier to exceed its preset limit. The output is, therefore, held to the set clamp level.

B67-10347
CURRENT PULSE AMPLIFIER TRANSMITS DETECTOR
SIGNALS WITH MINIMUM DISTORTION AND
ATTENUATION
BUSH, N. E. /WESTINGHOUSE ASTRONUCL. LAB./ SEP.
1967

NUC-10055

Amplifier translates the square pulses generated by a boron-trifluoride neutron sensitive detector located adjacent to a nuclear reactor to slower, long exponential decay pulses. These pulses are

transmitted over long coaxial cables with minimum distortion and loss of frequency.

B67-10356
REPARABLE, HIGH-DENSITY MICROELECTRONIC
MODULE PROVIDES EFFECTIVE HEAT SINK
CARLSON, K. J. MAYTONE, F. F. /BOEING CO./ OCT.
1967

M-FS-13075

Reparable modular system is used for packaging microelectronic flat packs and miniature discrete components. This three-dimensional compartmented structure incorporates etched phosphor bronze sheets and frames with etched wire conductors. It provides an effective heat sink for electric power dissipation in the absence of convective cooling means.

B67-10357
DIGITAL-TO-ANALOG CONVERTER OPERATES FROM LOW LEVEL INPUTS
WINKELSTEIN, R. A. OCT. 1967
JPL-907

Circuit controls a voltage controlled oscillator from computer output binary data representing a rate at which the oscillator is to change. It operates with low level output devices such as integrated circuit registers and devices with somewhat variable output levels.

B67-10359
TEST DEVICE PREVENTS WELD JOINT DAMAGE BY
ELIMINATING AXIAL PIN FORCES ON UNPOTTED
MODULES
CREE, R. E. /GEN. DYN./CONVAIR/ OCT. 1967
LEWIS-10201

Test device makes electrical connection to pins on unpotted electronic modules without introducing any displacing forces of the pins, thus preventing weld joint damage. The pins are spaced in a potting header, but are free to slide in and out except for restraint from welded wire joints.

B67-10361
POCKET-SIZE MANUAL TAPE READER DEVICE AIDS COMPUTER TAPE CHECKING
ODLE, F. L. /BOEING CO./ OCT. 1967
KSC-10058

Pocket-size plastic manual tape reader device aids in reading, interpreting, and correcting binary and octal coded punched tapes. The coded information is more easily read if the color of the back plate contrasts sharply with that of the tape.

B67-10362 MOVABLE RF PROBE ELIMINATES NEED FOR CALIBRATION IN PLASMA ACCELERATORS MILLER, D. B. /GE/ OCT. 1967 LEWIS-10127

Movable RF antenna probe in plasma accelerators continuously maps the RF field both within and beyond the accelerator. It eliminates the need for installing probes in the accelerator walls. The moving RF probe can be used to map the RF electrical field under various accelerator conditions.

B67-10363 SYSTEM AUTOMATICALLY PROVIDES DYNAMIC LAUNCH DECISION CRITERIA DOIG, J. E. /BOEING CO./ OCT. 1967 M-FS-13063

Saturn V Dynamic Launch Decision Criteria

Model provides instantaneous criteria, derived
from the parametric behavior of a complex system
such as a space launch vehicle plus its payload,
for the decision making of launch management
personnel.

B67-10367
TRANSDUCER MEASURES EMBEDMENT STRESSES IN
ELECTRONIC MODULES
SMITH, M. H. /DOUGLAS AIRCRAFT CO./ OCT. 1967
M-FS-13486

Strain gauge load transducer measures axial embedment stresses in resins used for encapsulation of welded electronic modules. It simulates the geometry of an actual electronic component and can be modified in size, shape, and operating temperature.

B67-10368
SIGMAL GENERATOR CONVERTS DIRECT CURRENT
TO MULTIPHASE SUPPLIES
BAUDE, J. /ALLIS-CHALMERS MFG. CO./ OCT. 1967
MSC-11043

Multiphase wave generator uses multivibrators in a feedback control mode that produces output signal pairs that are impressed on the primary windings of inverter transformers sequentially with a 120 degrees phase shift from each other.

B67-10369
MULTIPLE METER MONITORING CIRCUITS SERVED
BY SINGLE ALARM
BANDINI, U. /GRUMMAN AIRCRAFT ENG. CORP./ OCT.
1967
1967

1,

Circuitry for multiple meter relay circuits provides complete isolation for each circuit served by a single alarm and permits alarm reset after an out-of-tolerance event in one relay circuit so that the remaining relay circuits continue to be alarm protected.

B67-10370
MECHANICAL PROPERTIES OF WIRE INSULATION
AUTOMATICALLY DETERMINED
DAWN, F. S. GILL, W. L. OCT. 1967
MSC-10983

Three separate mechanisms test the insulation on electrical wire specimens for mechanical resistance to flexure, abrasion or wear, and vibration. The test mechanisms perform the evaluation tests on insulated wire specimens in a chamber which can be controlled to simulate space or spacecraft cabin environments.

B67-10376 CIRCUIT AUTOMATICALLY CALIBRATES FLOWMETER AGAINST LIQUID-LEVEL GAGE REFERENCE FIELD, R. J. /N. AM. AVIATION/ OCT. 1967 M-FS-2194

Turbine-type flowmeter uses the flow of liquid from a tank with reed-type liquid-level switches as a calibration reference. A circuit to generate a reliable gate signal consists of an input and switch indentification stage, a monostable and bistable multivibrators, and a signal inverter and pulse output stage.

B67-10378
FLOWMETER DETERMINES MIX RATIO FOR VISCOUS
ADHESIVES
LEMONS, C. R. /DOUGLAS AIRCRAFT CO./ OCT. 1967
M-FS-2308

Flowmeter determines mix ratio for continuous flow mixing machine used to produce an adhesive from a high viscosity resin and aliphatic amine hardener pumped through separate lines to a rotary blender. The flowmeter uses strain gauges in the two flow paths and monitors their outputs with appropriate instrumentation.

B67-10382
USE OF COLOR-CODED SLEEVE SHUTTERS
ACCELERATES OSCILLOGRAPH CHANNEL SELECTION
BOUCHLAS, T. BOWDEN, F. W. /BOEING CO./ OCT.
1967
KSC-10092

Sleeve-type shutters mechanically adjust individual galvanometer light beams onto or away from selected channels on oscillograph paper. In complex test setups, the sleeve-type shutters are color coded to separately identify each oscillograph channel. This technique could be used on any equipment using tubular galvanometer light sources.

B67-10384
CRACK GROWTH MEASURED ON FLAT AND CURVED SURFACES AT CRYOGENIC TEMPERATURES
ORANGE, T. W. SULLIVAN, T. L. OCT. 1967
LEWIS-389

Multiple element continuity gauge measures plane stress crack growth plus surface crack growth under plane strain conditions. The gauge measures flat and curved surfaces and operates at cryogenic temperatures.

B67-10386
CONTINUOUS WAVE DETECTOR HAS WIDE
FREQUENCY RANGE
DEUTSCH, W. F. JARMINSKI, S. J. WHEATLEY, C. E.
/N. AM. AVIATION/ DCT. 1967

M-FS-1849

Portable battery-operated detector indicates the presence of steady state signals exceeding a predetermined value over a wide frequency range, by the closure of output relay contacts. It was designed to monitor electronic equipment used in the Saturn II program.

B67-10387
LAMP ENABLES MEASUREMENT OF OXYGEN
CONCENTRATION IN PRESENCE OF WATER VAPOR
BRISCO, F. J. MOORHEAD, J. E. PAIGE, W. S.
/PERKIN-ELMER CORP./ OCT. 1967
MSC-10043

Open-electrode ultraviolet source lamp radiates sufficient energy at 1800 angstroms and 1470 angstroms for use in a double-beam, dual-wavelength oxygen sensor. The lamp is filled with xenon at a pressure of 100 mm of Hg.

B67-10389
RUGGED SWITCH RESPONDS TO MINUTE PRESSURE
DIFFERENTIALS
FRIEND, L. C. SHAUB, K. D. /BENDIX CORP./ OCT.
1967
M-FS-12704

Pressure responsive switching device exhibits high sensitivity but is extremely rugged and resistant to large amplitude shock and velocity loading. This snap-action, single pole-double throw switch operates over a wide temperature range.

B67-10390
HIGH POWER DC/DC AND DC/AC ELECTRICAL POWER
CONVERSION TECHNIQUES DEVELOPED
BERRYMAN, G. WHITE, W. T. OCT. 1967
M-FS-13227

Small magnetic amplifiers pass square waves through transformers and provide regulation by varying the pulse width on the secondary of the output power transformers. This pulse duration modulation is provided by a control rectifier technique or a phase-shift technique.

B67-10396
MULTIPLEXER USES INSULATED GATE-FIELD
EFFECT TRANSISTORS
GUSSOW, S. S. /BOEING CO./ OCT. 1967
M-FS-13096

Small lightweight multiplexer incorporates IG-FET*s /insulated gate-field effect transistors/ for all digital logic functions, including the internally generated 3.6-kHz clock. It consists of 30 primary channels, each of which is sampled 120 times per second.

B67-10399
POTASSIUM PLASMA CELL FACILITATES THERMIONIC ENERGY CONVERSION PROCESS
RICHARDS, H. K. OCT. 1967 SEE ALSO ANL-6802
ARG-10010

Thermionic energy converter converts nuclear generated heat directly into high frequency and direct current output. It consists of a potassium plasma cell, a tantalum emitter, and a silver plated copper collector. This conversion process eliminates the steam interface usually required between the atomic heat source and the electrical conversion system.

B67-10402 AUTOMATIC TELEMETRY CHECKOUT SYSTEM GEORGE, W. V. /BOEING CO./ NOV. 1967 M-FS-12580

Telemetry checkout station designed to automatically perform measurements on the vehicle telemetry links. Its features include real-time digitizing and computer controlled station setup, data processing, and self-check. The station can handle a wide variety of automatic tests by changing its computer programs.

B67-10404 CONTROL APPARATUS FOR SPECTRAL ENERGY SOURCE GORDON, W. A. NOV. 1967 LEWIS-391

Automatic, light-controlling system for dc arc emission spectrographs controls the vaporization

rate of the sample and stabilizes the dc arc. The output energy is regulated such that advantage can be taken of the highly sensitive dc arc source without sacrificing the desired precision.

B67-10410 CURRENT STEERING COMMUTATOR OFFERS VERSATILITY ZOTTARELLI, L. J. OCT. 1967 JPL-812

Novel current steering commutator capable of stepping to all possible locations from any location by appropriate control logic, and easily tailored to specific user requirements.

B67-10412
TORQUE METER AIDS STUDY OF HYSTERESIS
MOTOR RINGS
COLE, M. /METALS RES./ NOV. 1967
M-FS-12219

Torque meter, simulating hysteresis motor operation, allows rotor ring performance characteristics to be analyzed. The meter determines hysteresis motor torque, the actual stresses of the ring due to its mechanical situation and rotation, aids in the study of asymmetries or defects in motor rings, and measures rotational hysteresis.

B67-10416
DIELECTRIC PRISMS WOULD IMPROVE PERFORMANCE
OF QUASI-OPTICAL MICROWAVE COMPONENTS
CARSON, J. W. OCT. 1967
ERC-10011

The properties of the Brewster angle and internal The properties of the Brewster angle and internal reflection in a dielectric prism are proposed as the basis of a new type of element for use in oversize waveguide in quasi-optical microwave components. Waveguide loss is reduced and precision broadband attenuators, phase shifters, and directional couplers can be constructed on the basis of these properties.

INFRARED RADIOMETER
BIRD, A. N. /SOUTHERN RES. INST./ NOV. 1967
M-FS-13373

Radiometer may be used either with an f/16 telescope to measure thermal radiation from the surface of the dark moon or with a short-range optical system to measure thermal radiation from laboratory samples.

B67-10424
TEMPERATURE-SENSED CRYOGENIC BLEED MAINTAINS
LIQUID STATE IN TRANSFER LINE
LINDGREN, A. R. /N. AM. AVIATION/ OCT. 1967
M-FS-12681

Inverted tee, installed at a high point in a cryogenic transfer line, is equipped with an insulated bleed line that passes a fixed amount of cryogenic fluid at atmospheric pressure. A sensing device activates a vent valve in the tee stack whenever gaseous nitrogen is present.

B67-10425 STUDY MADE OF ANODIZED ALUMINUM CIRCUIT BOARDS JACOBI, C. SEWELL, R. /BOEING CO./ NOV. 1967 M-FS-13580

Hard coated aluminum circuit boards demonstrate the feasibility of obtaining an electrical power circuit of high packaging density with very high thermal conductivity and mechanical strengths.

867-10426
ALUMINUM HEAT SINK ENABLES POWER TRANSISTORS
TO BE MOUNTED INTEGRALLY WITH PRINTED
CIRCUIT BOARD
SEAWARD, R. C. /N. AM. AVIATION/ OCT. 1967

M-FS-13663

Power transistor is provided with an integral flat plate aluminum heat sink which mounts directly on a printed circuit board containing associated circuitry. Standoff spacers are used to attach the heat sink to the printed circuit board containing the remainder of the circuitry.

B67-10433
CONCEPTUAL NONORTHOGONAL GYRO CONFIGURATION FOR GUIDANCE AND NAVIGATION GILHORE, J. P. /MIT/ NOV. 1967
MSC-11363

Nonorthogonal sensor configuration using six single-degree-of-freedom inertial reference gyroscopes and a complete data processing and self-contained failure detection-and-isolation mechanism provides redundant capabilities to guidance and navigation systems. This system has been formulated in a strap-down configuration to attain maximum redundancy.

B67-10434
ALGEBRAIC MONTE CARLO PROCEDURE REDUCES
STATISTICAL ANALYSIS TIME AND COST FACTORS
AFRICANO, R. C. LOGSDON, T. S. /N. AM. AVIATION/
NOV. 1967
M-FS-1887

Algebraic Monte Carlo procedure statistically analyzes performance parameters in large, complex systems. The individual effects of input variables can be isolated and individual input statistics can be changed without having to repeat the entire analysis.

B67-10435
INTERFERENCE EFFECTS ELIMINATED IN RANDOM
ORIENTED SPACE STATION ANTENNA SYSTEM
REILLY, R. R. /LOCKHEED-CALIF. CO./ NOV. 1967
MSC-11004

System eliminates destructive interference effects among multiple omnidirectional or semi-omnidirectional antennas on a large space vehicle that is either spin-stabilized or randomly oriented relative to the ground station with which communication is necessary.

B67-10438
REVIEW OF RESEARCH AND DEVELOPMENT IN FLUID
LOGIC ELEMENTS
READER, T. /SPERRY RAND CORP./ NOV. 1967
M-FS-420

Research and development in multistate fluid logic elements is reviewed in a historical and critical report - The report concludes that in the development of fluid amplifiers, there are elements with very high gain and poor switching speed, and other elements with very high switching speed and poor gain.

B67-10444
ELLIPSOIDAL-MIRROR REFLECTOMETER ACCURATELY
MEASURES INFRARED REFLECTANCE OF MATERIALS
DUNN, S. T. RICHMOND, J. C. /NATL. BUR. OF
STDS./ NOV. 1967
GSFC-566

Reflectometer accurately measures the reflectance of specimens in the infrared beyond 2.5 microns and under geometric conditions approximating normal irradiation and hemispherical viewing. It includes an ellipsoidal mirror, a specially coated averaging sphere associated with a detector for minimizing spatial and angular sensitivity, and an incident flux chopper.

B67-10446
BATTERY CHARGE REGULATOR IS COULOMETER
CONTROLLED
PAULKOVICH, J. NOV. 1967
GSFC-561

Coulometer controlled battery charge regulator controls nickel/cadmium type primary cells used in space applications. The use of the coulometer as an ampere hour measuring device permits all available current to go to the battery until full charge state is reached, at which time the charge rate is automatically reduced.

B67-10447
OSCILLATOR CIRCUIT OPERATES AS DIGITALLY
CONTROLLED FREQUENCY SYNTHESIZER
CLIFF, R. A. NOV. 1967

Oscillator circuit converts digital data from the format of binary information at several input terminals to the format of discrete frequencies at the output terminals. Each state of the input

levels corresponds to one frequency at the output. This device provides a large number of accurately controlled frequencies from a single stable oscillator.

B67-10448 FOIL RADIOMETER ACCESSORY IMPROVES MEASUREMENTS

SCHUMACHER, P. E. /N. AM. AVIATION/ NOV. 1967 M-FS-12684 M-FS-12717 The responsiveness of a foil radiometer is

ne responsiveness of a foil radiometer is increased and its time constant is simultaneously decreased by isolating the foil in a controlled environment. Using an optical system, it is coupled to the media to be measured, and the resulting concentration of energy permits the thermocouple junction temperature to respond auickly.

DIGITAL VOLTAGE-CONTROLLED OSCILLATOR
SALIGA, T. V. SCHAEFER, D. H. STRONG, J. P., III
NOV. 1967

GSFC-512

1:

Digital voltage-controlled oscillator generates a variable frequency signal controlled linearly about a center frequency with high stability and is phase controlled by an applied voltage.
Integration ahead of the digital circuitry
provides linear operation with control voltage having appreciable noise components.

B67-10458 DESIGN FOR HIGH-TEMPERATURE /1800 DEG F/ LIQUID METAL PRESSURE TRANSDUCER ENGDAHL, R. E. /CONSOLIDATED CONTROLS CORP./ NOV. 1967 LEWIS-10144

#IS-10144
Thermionic diode sensor is used as a pressure transducer in advanced space power systems using liquid metals as working and heat transfer media at temperatures up to 1800 deg F. The sensor converts the motion of a pressure actuated refractory alloy capsule into a suitable electrical output.

B67-10459 STABLE AC PHASE AND AMPLITUDE COMPARATOR BRUCE, H. P. /MARTIN CO./ NOV. 1967 M-FS-13086

Stable ac phase and amplitude comparator detects excessive vehicle maneuvering or vibration. It has phase demodulation, low-pass filter, and multiple threshold-setting capability designed specifically for low drifts over a wide range of temperatures.

B67-10460 RANGE RECORDING TECHNIQUE ENABLES FOUR-WAY POLARIZATION MEASUREMENTS SWINDALL, P. M. NOV. 1967 M-FS-12447

Manually tracked antenna is the most critical part of range recording system which has signal strength recording responses from dc to 20 kHz. The system records all polarizations simultaneously.

B67-10461 PROTECTED, HIGH-TEMPERATURE CONNECTING CABLE ENGDAHL, R. E. /CONSOLIDATED CONTROLS CORP./ NOV. 1967 LEWIS-10149

Ceramic insulated, swaged stainless steel, sheathed, protective atmosphere cable admits electrical leads into an 1800 deg F air-environment test chamber. The cable has some bending capability and provides for nine niobium alloy conductors. An argon purge during the TIG weld closure protects internal wires from oxidation and embrittlement.

B67-10467 AUTOMATIC TESTING DEVICE FACILITATES NOISE CHECKS AND ELECTRONIC CALIBRATIONS HARROLD, J. L. WEEGMANN, C. F. NOV. 1967 LEWIS-10173

Automatic Digital Noise Checker determines /1/
the noise content of the many analog inputs of a

data acquisition system and /2/ whether the Electronic Calibrations /EC/ on some data channels are operating properly.

B67-10468 SERIES TRANSISTORS ISOLATE AMPLIFIER FROM FLYBACK VOLTAGE BANKS, W. /GEN. DYN. CORP./ NOV. 1967

MSC-11023

Circuit enables high sawtooth currents to be passed through a deflection coil and isolate the coil driving amplifier from the flyback voltage. It incorporates a switch consisting of transistors in series with the driving amplifier and deflection coil. The switch disconnects the deflection coil from the amplifier during the retrace time.

B67-10469 ULTRAMINIATURE TELEVISION CAMERA DETERVILLE, R. J. DRAGO, N. /TELEDYNE SYSTEMS CO./ NOV. 1967 M-FS-11967

Ultraminiature television camera with a total volume of 20.25 cubic inches, requires 28 vdc power, operates on UHF and accommodates standard 8-mm optics. It uses microelectronic assembly packaging techniques and contains a magnetically deflected and electrostatically focused vidicon, automatic gain control circuit, power supply, and transmitter.

B67-10470 TECHNIQUE ELIMINATES HIGH VOLTAGE ARCING AT ELECTRODE-INSULATOR CONTACT AREA MEALY, G. NOV. 1967 LEWIS-10133

Coating the electrode-insulator contact area with saling the electrode-insulator contact area with silver epoxy conductive paint and forcing the electrode and insulator tightly together into a permanent connection, eliminates electrical arcing in high-voltage electrodes supplying electrical power to vacuum facilities.

B67-10471 TRANSIENT SENSOR DEVELOPMENT CASH, J. /FED. ELEC. CORP./ NOV. 1967 M-FS-13370 M-FS-13371

Pulse width/amplitude- and noise-sensors are updated to integrated circuit design concepts, and upuated to integrated circuit design concepts, and rise time/amplitude sensor design is reduced to an operational prototype to make all the sensors compatable for one system operation. Therefore, transients interfering with the design operation of receivers could be individually isolated and identified. identified.

B67-10475 BLOOD PRESSURE REPROGRAMMING ADAPTER ASSISTS SIGNAL RECORDING VICK, H. A. DEC. 1967 MSC-265

Blood pressure reprogramming adapter separates the two components of a blood pressure signal, a dc pressure signal and an ac Korotkoff sounds signal, so that the Korotkoff sounds are recorded on one channel as received while the dc pressure signal is converted to FM and recorded on a second channel. second channel.

CONVERTER PROVIDES CONSTANT ELECTRICAL POWER AT VARIOUS OUTPUT VOLTAGES PAULKOVICH, J. DEC. 1967 GSFC-519

Power converter, using an inverted flyback technique, transfers electrical energy at a constant rate from a solar cell source to a number of individual batteries, which are to be charged one at a time. The converter inverts the polarity of the solar cell source and provides the correct charging voltage.

B67-10482 SURFACE-CRACK DETECTION BY MICROWAVE METHODS FEINSTEIN, L. HRUBY, R. DEC. 1967 ARC-10009

Microwave surface-crack detection system examines metallic surfaces with a noncontacting probe. The change in the microwave signal reflected from the surface under investigation is an indication of the existence of surface flaws. This technique can detect flaws and scratches as small as 100 microinches.

B67-10487 LONG TIME CONSTANT TIMER REQUIRES NO RECOVERY TIME SOMERLOCK, C. R. DEC. 1967 GSFC-10091

Timing circuit delivers relatively long pulses yet requires no recovery time after turnoff. It can be retriggered before it has timed out and turned

B67-10496
DIGITAL SERVO READOUT SYSTEM INCREASES
RECORDING ACCURACY OF SERVO-BALANCE SCALES
FAUPELL, L. C. /WESTINGHOUSE
ASTRONUCL. LAB./ DAVIES, J. B. /TRIDYNE CORP./
DEC. 1967
NUC-10125

Digital servo readout system increases recording accuracy of servo-balance weighing scales. Reliability is also increased due to the reduction of the number of components.

B67-10497
HIGH TEMPERATURE THERMOCOUPLE DESIGN
PROVIDES GAS COOLING WITHOUT INCREASING
OVERALL SIZE OF UNIT
ZELLNER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1967
NUC-10515

High temperature thermocouple uses a thermoelement of noncircular cross section with insulation of circular cross section to provide space for the flow of coolant gas down the probe.

B67-10499
VANADIUM DIAPHRAGM ELECTRODE SERVES AS
HYDROGEN DIFFUSER IN LITHIUM HYDRIDE CELL
CROUTHAMEL, C. E. HEINRICH, R. R. JOHNSON, C. E.
DEC. 1967 SEE ALSO B67-10189
ARG-10048

Lithium hydride cell uses vanadium diaphragm electrode as a hydrogen diffuser. Vanadium is high in hydrogen gas solubility and permeability, is least sensitive to adverse surface effects, maintains good mechanical strength in hydrogen atmospheres, and appears to be compatible with all alkali-halide electrolytes and lithium metals.

B67-10503
COMPOSITE SOLAR CELL MATRIX IS RELIABLE,
LIGHTWEIGHT AND FLEXIBLE
YASUI, R. K. DEC. 1967
NDC-10821

Conducting strips mechanically and electrically connect individual solar cells into a linear array of cells, called a solar submodule, and then connect in series two or more submodules to form a solar cell matrix. Tiny perforations in the strip make it easy to solder them directly to the individual solar cells.

B67-10505 THIN FILM THERMAL DETECTOR MASERJIAN, J. DEC. 1967 JPL-943

1-943
Abnormally large variation of capacitance with temperature is obtained in thin film capacitors when a fixed ionic space charge is present in sufficient density in a dielectric film. This effect is the basis for a new kind of thin film thermal detector, whose performance at room temperature equals or exceeds that of comparable devices at much lower temperatures.

B67-10506
PERFORMANCE OF TURBINE-TYPE FLOWMETERS IN LIQUID HYDROGEN
DEC. 1967 SEE ALSO NASA-TN-D-3770
LEWIS-10137

Tests using commercially available flowmeters provide information on the constancy in water of the calibration factor /pulses per unit volume/, on the maximum deviation of the factor from its

mean value, and on the probability of predicting the calibration factor of a meter in liquid hydrogen at full scale.

B67-10507
TEST AND INSPECTION FOR PROCESS CONTROL OF MONOLITHIC CIRCUITS
SPANGENBERG, E. /WESTINGHOUSE ELEC. CORP./ DEC. 1967
M-FS-13084

Report details the test and inspection procedures for the mass production of high reliability integrated circuits. It covers configuration control, basic fundamentals of quality control, control charts, wafer process evaluation, general process evaluation, evaluation score system, and diffusion evaluation.

B67-10513
IMPROVED CIRCUIT FOR MEASURING CAPACITIVE
AND INDUCTIVE REACTANCES
DALINS, I. MC CARTY, V. /ALA. UNIV. RES. INST./
DEC. 1967
M-FS-13083

Amplifier circuit measures very small changes of capacitive or inductive reactance, such as produced by a variable capacitance or a variable inductance displacement transducer. The circuit employs reactance-sensing oscillators in which field effect transistors serve as the active elements.

B67-10514
APPARATUS MAKES KLYSTRON OPERATING
FREQUENCY ADJUSTABLE FROM REMOTE POINT
CLAUSS, R. C. DEC. 1967
NPO-09831

Apparatus makes possible proper frequency
adjustment in a receiver using a pump klystron for
a traveling-wave master. It incorporates a
tunable overcoupled cavity with irises of
appropriate size to accomplish frequency spread
over the desired range and to maintain the Q of
the klystron circuit at the optimum value.

B67-10515 VIDEO SYNCHRONIZATION PROCESSOR OVERCOMES POOR SIGNAL-TO-NOISE RATIO WEBB, D. L. DEC. 1967 KSC-10002

Video synchronization processor overcomes poor signal-to-noise ratio which occurs during adverse signal conditions caused by flame attenuation, antenna pattern nulls, and near-horizon tracking. The system maintains sync lock far below the point where excessive noise would normally render the video useless.

B67-10517
CONE AND COLUMN SOLAR ENERGY CONCENTRATOR
MC CUSKER, T. J. /GOODYEAR AEROSPACE CORP./ DEC.
1967 SEE ALSO NASA-CR-52845
LANGLEY-210

Solar energy concentrator consists of a reflective membrane cone and a stepped parabolic column located along the optical axis of the cone. The membrane cone can be folded for packaging and is supported by an expandable ring at the rim of the cone when erected. The stepped parabolic column can be telescoped for packaging.

B67-10519
CIRCUIT MEASURES HYSTERESIS LOOP AREAS AT 30 HZ
HOFFMAN, C. SPILO, D. /MIDWEST APPLIED SCI. CORP./ OCT. 1967
M-FS-13069

Analog circuit measures hysteresis loop areas as a function of time during fatigue testing of specimens subjected to sinusoidal tension—compression stresses at a frequency of 30 Hz. When the sinusoidal stress signal is multiplied by the strain signal, the dc signal component in the product is proportional to the hysteresis loop

B67-10534 FLAME SPRAYED DIELECTRIC COATINGS IMPROVE HEAT DISSIPATION IN ELECTRONIC PACKAGING MACKAY, T. L. MULLER, A. N. VANAMAN, J. B. /DOUGLAS AIRCRAFT CO./ DEC. 1967 M-FS-13569

Heat sinks in electronic packaging can be flame sprayed with dielectric coatings of alumina or beryllia and finished off with an organic sealer to provide high heat and electrical resistivity.

B67-10535 EUTECTIC FUSE PROVIDES CURRENT AND THERMAL PROTECTION UNDER HIGH VIBRATION IEROKOMOS, N. /N. AM. AVIATION/ DEC. 1967 M-FS-13664

Eutectic fuses provide current and thermal protection to an electronic system and maintain this protection under high vibration environments. The fuses are embedded within heat shrinkable sleeving which provides positive closing action under the conditions of high current or temperature.

B67-10538
DOUBLE COPPER SHEATH MULTICONDUCTOR
INSTRUMENTATION CABLE IS DURABLE AND EASILY
INSTALLED IN HIGH THERMAL OR NUCLEAR
RADIATION AREA
MC CRAE, A. W., JR. /AEROJET-GEN. CORP./ DEC.
1967
NUC-10007

Multiconductor instrumentation cable in which the conducting wires are routed through two concentric copper tube sheaths, employing a compressed insulator between the conductors and between the inner and outer sheaths, is durable and easily installed in high thermal or nuclear radiation area. The double sheath is a barrier against moisture, abrasion, and vibration.

B67-10540
AUTOMATIC TRANSDUCER SWITCHING PROVIDES
ACCURATE WIDE RANGE MEASUREMENT OF PRESSURE
DIFFERENTIAL
YODER, S. K. /AEROJET-GEN. CORP./ DEC. 1967
NUC-10001

Automatic pressure transducer switching network sequentially selects any one of a number of limited-range transducers as gas pressure rises or falls, extending the range of measurement and lessening the chances of damage due to high pressure.

B67-10544
ANALOG BUFFER ISOLATES HIGH IMPEDANCE
SOURCE FROM LOW IMPEDANCE LOAD
DENNY, W. A. /DOUGLAS AIRCRAFT CO./ DEC. 1967
M-FS-13481

Analog buffer amplifier isolates a high impedance source from a low impedance load through an impedance ratio of approximately 200 million to one. Isolation is accomplished with little alteration to temperature stability, linearity, and gain parameters.

B67-10545
INSTRUMENTATION MONITORS TRANSPORTED
MATERIAL THROUGH VARIETY OF PARAMETERS
HANSON, H. S. /N. AM. AVIATION/ DEC. 1967
M-FS-12938

Transport instrumentation system used in transporting sensitive or delicate equipment measures the environmental parameters to which the equipment is exposed and records them constantly in time reference. The system provides a complete historical record plus the capability of taking corrective action where indicated by real time readout.

B67-10546
DEVELOPMENT OF LOW TEMPERATURE BATTERY
ARMSTRONG, G. N. /LIVINGSTON ELECTRON CORP./
DEC. 1967 SEE ALSO NASA CR-54970, NASA CR-72173
LEWIS-10326

Self-contained low temperature battery system consisting of a magnesium anode, potassium thiocyanate-ammonia electrolyte and a cathode composed of a mixture of sulfur, carbon, and mercuric sulfate operates for at least seventy-two hours within a discharge temperature range of plus 20 degrees C to minus 90 degrees C.

B67-10548 GMT/LOCAL-TIME CONVERSION CHART CREVELING, C. J. FEB. 1968 GSFC-10521

GMT/local-time conversion is made by a longitude pocket instrument that automatically indicates the desired information by simply manipulating the moveable portion of the instrument in accordance with a set of simple instructions imprinted on the instrument*s reverse side.

B67-10550
HIGH-TEMPERATURE /1100 DEGREES F/ CAPACITORS
OPERATE WITHOUT SUPPLEMENT COOLING
STAPLETON, R. E. /WESTINGHOUSE ELEC./ DEC. 1967
LEWIS-10324

MIS-10324
Multilayered capacitor with one-mil thick
pyrolytic boron nitride and wrap around sputtered
electrodes achieves parallel electrical
interconnections in a stacked configuration of 3
to 9 wafers. These capacitors are compact,
lightweight, and suitable for operation in high
temperatures without supplemental cooling.

B67-10552 LIGHT-CONTROLLED RESISTORS PROVIDE QUADRATURE SIGNAL REJECTION FOR HIGH-GAIN SERVO SYSTEMS MC CAULEY, D. D. /PHILCO/ DEC. 1967 WSCI-340

Servo amplifier feedback system, in which the phase sensitive detection, low pass filtering, and multiplication functions required for quadrature rejection, are performed by light-controlled photoresistors, eliminates complex circuitry. This simplified system also increases gain, improves signal-to-noise ratio, and eliminates the necessity for compensation.

B67-10553 SIMPLE FIRST ORDER DATA COMPRESSION PROCESSOR CONCEPT ANDERSON, T. O. DEC. 1967 NPO-10338

Data-compression processing systems based on an analog-to-digital converter /ADC/, includes a qualitative comparator for comparison of the ADC output with a ramp generator, which is connected as a bidirectional binary counter with selective inputs. A bidirectional ramp counter selects the proper ramp through a ramp generator selection network.

B67-10554
CALIBRATION TECHNIQUE FOR ELECTROMAGNETIC
FLOWMETERS
SAWOCHKA, S. G. ./G E/ DEC. 1967 SEE ALSO
NASA-CR-851
LEVIS-10328

Thermal calorimetric method is used to calibrate electromagnetic flowmeters for liquid alkali metals. The electromagnetic flowmeter is placed in the liquid metal flow system in series with a thermal calorimeter. Therefore, the calculated flow rate through the calorimeter can be compared directly with the respective electromagnetic flowmeter reading.

B67-10557
IMPROVED CAVITY-TYPE ABSOLUTE TOTALRADIATION RADIOMETER
KENDALL, J. M., SR. PLAMONDON, J. A., JR. DEC.
1967
JPL-807

Conical cavity-type absolute radiometer measures the intensity of radiant energy to an accuracy of one to two percent in a vacuum of ten to the minus fifth torr or lower. There is a uniform response over the ultraviolet, visible, and infrared range, and it requires no calibration or comparison with a radiation standard.

B67-10558
SOLID STATE SINGLE-ENDED SWITCHING
DC-TO-DC CONVERTER
HONNELL, M. A. /AUBURN UNIV./ DEC. 1967
H-FS-13598

Solid state, single-ended switching dc-to-dc converter electrically isolated a dc supply from

the prime dc power service.

B67-10559 SOLID STATE ZERO-BIAS BILATERAL SWITCH HUSTED, J. M. /RCA/ DEC. 1967 GSFC-532

Circuit switches a plus or minus 2.5 volt peak, do to 300 kHz input to an operational amplifier. Featured is a bilateral transistor which draws a saturation current of equal amplitude and opposite polarity to the saturation current of the bilateral transistor, cancelling the dc bias effect at the output.

B67-10560 FLAT PACK INTERCONNECTION STRUCTURE SIMPLIFIES MODULAR ELECTRONIC ASSEMBLIES KATZIN, L. DEC. 1967 JPL-819

Flat pack interconnection structure composed of stick modules simplifies modular electronic assemblies by allowing a single axis mother board. Two of the wiring planes are located in the stick module, which is the lower level of assembly, with the third wiring plane in the mother board.

B67-10561
TRANSISTOR **H** PARAMETER CONVERSION SLIDE RULE
BRANTNER, R. E. DEC. 1967
JPL-649

Slide rule enables the ready conversion of transistor **H** parameters from one form to another and reduces calculation time by a factor of 5 to 10. The scales are selected to cover all ranges of each parameter that will normally exist for any transistor, and answers are given in the correct order of magnitude, making powers-of-ten calculations unnecessary.

B67-10562
IMPROVED DIGITAL TV ENCODING AND DECODING
SYSTEM
DEUTERMANN, A. R. /PHILCO-FORD CORP./ DEC. 1967

MSC-11147

Analog-to-digital coder and digital-to-analog decoder system handles wideband TV signals. The system incorporates solid state plug-in modular units and is operated in a VSD /Variable Slope Delta Modulation/ mode or in the conventional one-bit DM /Delta Modulation/ mode.

B67-10565
LOGIC CIRCUIT DETECTS BOTH PRESENT AND MISSING NEGATIVE PULSES IN SUPERIMPOSED WAVETRAINS
RICE, R. E. /DOUGLAS AIRCRAFT/ DEC. 1967
M-FS-12518

Pulse divide and determination network provides a logical determination of pulse presence within a data train. The network uses digital logic circuitry to divide positive and negative pulses to shape the separated pulses, and to determine, by means of coincidence logic, if negative pulses are missing from the pulse train.

B67-10569
MOSFET IMPROVES PERFORMANCE OF POWER SUPPLY
REGULATOR
LOKERSON, D. C. DEC. 1967
GSFC-10022

Circuit with Metal Oxide Semiconductor Field Effect Transistor /MOSFET/ as the voltage reference, provides a high degree of power supply voltage regulation and temperature compensation.

B67-10571 ANALOG VOICING DETECTOR RESPONDS TO PITCH ABEL, R. S. WATKINS, H. E. /PHILCO-FORD CORP./ DEC. 1967 GSFC-10085

Modified electronic voice encoder /Vocoder/
includes an independent analog mode of operation
in addition to the conventional digital mode. The
Vocoder is a bandwidth compression equipment that
permits voice transmission over channels, having
only a fraction of the bandwidth required for
conventional telephone-quality speech
transmission.

B67-10572
TELEPRINTER USES THERMAL PRINTING TECHNIQUE
PERKINS, R. E. /NATL. CASH REGISTER CO./ DEC.
1967
MSC-11327

Alphameric/facsimile printer receives serial digital data in the form of a specified number of bits per group and prints it on thermally sensitive paper. A solid state shift-register memorizes the incoming serial digital data.

B67-10574
NONDESTRUCTIVE TESTING TECHNIQUES USED IN ANALYSIS OF HONEYCOMB STRUCTURE BOND STRENGTH

ERDMAN, D. C. MARTIN, G. MOORE, J. F. THOMAS, G. VARNEY, H. S. /N. AM. AVIATION/ DEC. 1967 M-FS-1214 M-FS-1221

DOT /Driver-Displacement Oriented
Transducer/, applicable to both lap shear type
application and honeycomb sandwich structures,
measures the displacement of the honeycomb
composite face sheet. It incorporates an
electromagnetic driver and a displacement
measuring system into a single unit to provide
noncontact bond strength measurements.

B67-10575 IMPROVED FREQUENCY DIVIDER EMPLOYS TRANSISTOR AVALANCHE EFFECT JOHNS, C. E. DEC. 1967 NPO-10008

New frequency divider circuit can be synchronized over a wider input control frequency range, has greater phase stability, and is less sensitive to temperature changes than conventional synchronized oscillators. The new circuit uses the avaianche breakdown mode of operation of transistors.

B67-10576 MULTIPLEX TELEVISION TRANSMISSION SYSTEM REED, W. R. DEC. 1967 MSC-11595

Time-multiplexing system enables several cameras to share a single commercial television transmission channel. This system is useful in industries for visually monitoring several operating areas or instrument panels from a remote location.

B67-10585 COMPUTER MEMORY ACCESS TECHNIQUE ZOTTARELLI, L. J. DEC. 1967 NPO-10201

Computer memory access commutator and steering gate configuration produces bipolar current pulses while still employing only the diodes and magnetic cores of the classic commutator, thereby appreciably reducing the complexity of the memory assembly.

B67-10587
LASER COMMUNICATION SYSTEM IS INSENSITIVE
TO ATMOSPHERICALLY INDUCED NOISE
PACKARD, J. N. /AIRCRAFT ARMAMENTS/ DEC. 1967
GSFC-10396

Angle modulated transmitted reference heterodyne laser communication system is insensitive to atmospherically induced asplitude noise fluctuations and phase distortions.

B67-10595
CONCEPTUAL SERVO TECHNIQUE FOR CONTROLLING
TAPE DRIVERS
BENTLEY, R. COUCHMAN, R. /KINELOGIC CORP./ DEC.
1967
M-FS-12955

Electronic speed control design maintains magnetic tape in close synchronism at the airborne and ground stationed devices. Use of the servo system during the record and reproduce modes results in the minimum amount of frequency distortion and flutter.

B67-10598
CARDIOTACHOMETER WITH LINEAR BEAT-TO-BEAT
FREQUENCY RESPONSE
DEBOO, G. J. POPE, J. M. SMITH, D. B. D. DEC.
1967

ARC-10033

Cardiotachometer detects and displays the human heart rate during physiological studies. It provides linear response to the heart rate, records heart rate during rest and under heavy stress, provides a beat-to-beat indication of changes in heart rate, and is relatively free of interfering signals from activities other than the heart rate.

B67-10603

MULTIPULSE CURRENT SOURCE OFFERS LOW POWER LOSSES AND HIGH RELIABILITY INNOVATOR NOT GIVEN /STANFORD RES. INST./ DEC. 1967 LANGLEY-68

Pulse current source uses low loss, high reliability, LC circuits to provide the necessary high impedance for magnetic memory cores, frequently used in digital computational Square-loop reactors replace the semiconductor switches previously used.

PREDICTION OF RADIATION DAMAGE EFFECTS IN TRANSISTORS INNOVATOR NOT GIVEN /RCA/ DEC. 1967

GSFC-10021

Quantitative relationships between radiation dosage to transistors and resultant damage are established. Calculation of these dose levels is based on high energy particle population data and analysis of the shielding effect provided by the enclosures surrounding a given transistor.

B67-10614 STUDY OF THERMAL EFFECTS ON NICKEL-CADMIUM BATTERIES FOLEY, R. T. WEBSTER, W. H. /AM. UNIV./ DEC. 1967 SEE ALSO B67-10615 GSFC-10003

Isothermal continuous flow calorimeter is designed to test a nickel-cadmium battery under numerous orbital conditions. This sensitive calorimeter collects cell data such as oxygen pressure and rate of heat generation, and calculates changes in enthalpy.

IMPROVED CALORIMETER PROVIDES ACCURATE THERMAL MEASUREMENTS OF SPACE BATTERIES FOLEY, R. T. WEBSTER, W. H. /AM. UNIV./ DEC. 1967

GSEC-10003A

Isothermal continuous flow calorimeter measures the thermal characteristics of space batteries undergoing typical orbital cycling. This is 28 times as sensitive as calorimeters previously used.

B67-10616

VAPOR DEPOSITION PROCESS PROVIDES NEW METHOD FOR FABRICATING HIGH TEMPERATURE THERMOCOUPLES REMLEY, G. A. ZELLNER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./ DEC. 1967 NUC-10152

Fabrication techniques for high temperature thermocouples bind all components so that differential thermal expansion and contraction do not result in mechanical slippage and localized stress concentrations. Installation space is reduced or larger thermoelements and thicker insulation can be used to improve temperature measurement accuracy.

B67-10620

BALLPOINT PROBE GIVES OPTIMUM RESULTS IN ULTRASONIC TESTING MELTON, R. E. /SPACO/ DEC. 1967 M-FS-13590

Ballpoint-type ultrasonic probe assembly focuses its beam precisely on the bond lines of a composite thin face sheet structure when testing for bond integrity. It can scan in any direction, and eliminate external couplant spray.

B67-10624

TEMPERATURE-STABILIZED, TRIGGERABLE

MICROELECTRONIC ASTABLE MULTIVIBRATOR STARTS RELIABLY

STEBBINS, W. J. /WESTINGHOUSE ELEC. CORP./ DEC.

MSC-1173

Multiple chip custom block, MIC construction is used to fabricate an ultracompact, low-power astable multivibrator. The design provides a multivibrator that free runs, eliminating **lockup**, is triggerable, pulling into synchronization with an external signal source, and permits design flexibility for controlling the frequency variations with temperature.

ELECTRONIC SKEWING CIRCUIT MONITORS EXACT
POSITION OF OBJECT UNDERWATER
ROLLER, R. YAROSHUK, N. /WESTINGHOUSE ASTRONUCL.
LAB./ DEC. 1967 LAB./ DEC NUC-10146

Linear Variable Differential Transformer thear variable Differential Transformer /LVDT/ electronic skewing circuit guides a long cylindrical capsule underwater into a larger tube so that it does not contact the tube wall. This device detects movement of the capsule from a reference point and provides a continuous signal that is monitored on an oscilloscope.

B67-10635

CONNECTOR SHORTING CAP PROVIDES PIN ALIGNMENT, INSPECTION, AND STRAY VOLTAGE PROTECTION PETERS, G. A. WARMING, K. /N. AM. AVIATION/ DEC. 1967 M-FS-13111

Electrical shorting cap provides pin alignment, protection from stray voltages, and inspection capabilities. A teflon straightener insert is built in to overcome any problems with bent or misaligned pins. A clear plastic bottom allows for inspection of the presence and condition of the pins.

B67-10637

HYDRAULIC SERVO SYSTEM INCREASES ACCURACY IN FATIGUE TESTING DIXON, G. V. KIBLER, K. S. DEC. 1967 LANGLEY-217

Hydraulic servo system increases accuracy in applying fatigue loading to a specimen under test.
An error sensing electronic control loop, coupled
to the hydraulic proportional closed loop cyclic. force generator, provides an accurately controlled peak force to the specimen.

B67-10642

HIGHLY STABLE MICROWAVE DELAY LINE HIGA, W. H. DEC. 1967 NPO-09828

TWM /traveling wave maser/ comb structure serves as a highly stable microwave delay line for determining the short-term stability of the hydrogen maser frequency standards used in the deep space network. Cryogenic cooling is used to minimize signal attenuation and thermal noise.

B67-10643

CONCEPT FOR AUTOMATIC DOPPLER COMPENSATION IN TWO-WAY COMMUNICATION SYSTEMS MULLER. R. M. JAN. 1968

GSFC-10213

C-10213
Automatic Frequency Control system compensates
for Doppler shift in two-way communication
systems where one or both stations are moving.
This automatic correction can be applied to the
reply link to eliminate frequency search for the reply or an excessive bandwidth to accommodate the Doppler.

B67-10646

AN IMPROVED MAGNETIC TAPE RECORDER UBER, P. W. GSFC-08259 JAN. 1968

Magnetic tape recorder employs a single capstan for simultaneously driving the supply and take- up reels in such a manner that the tape passing between the reels is kept under a predetermined constant tension. This recorder operates with little power and is sufficiently rugged to

withstand the severe stresses encountered in high-altitude balloon flight tests.

B67-10649
ELECTRON BEAM DEFLECTED TO DETERMINE FOCAL POINT LOCATION
DOWNING, R. D. /GE/ JAN. 1968 SEE ALSO B67-10650
M-FS-14107

System locates the focal point of an extremely high intensity electron beam. The electron beam is swept and scanned cyclically with deflection coils under a focusing lens, causing the beam focal point to move so the locus of its positions is a spherical surface symmetrical to the beam

B67-10650
ELECTRON BEAM STANDBY ABSORBER SYSTEM
DOWNING, R. D. /GE/ JAN. 1968 SEE ALSO
B67-10649
M-FS-14108

Electron beam energy is absorbed by deflectors which allow beam distribution over an absorber located between the deflectors and workpiece. The undeflected beam passes through a hole in the absorber when the deflection is de-energized, when energized, the beam is kept to a minimum power level by deflection rate change.

B67-10652
DEVELOPMENT OF DETONATION REACTION ENGINE
LANGE, O. H. STEIN, R. J. TUBBS, H. E. JAN.
1968
M-FS-14020

Reaction engine operates on the principle of a controlled condensed detonation. In this engine the gas products that are expelled from the engine to produce thrust are generated by the condensed detonation reaction. The engine is constructed of two basic sections consisting of a detonation wave generator section and a condensed detonation reaction section.

B67-10656 LOW COST SCR LAMP DRIVER INDICATES CONTENTS OF DIGITAL COMPUTER REGISTERS CLIFF, R. A. DEC. 1967 GSFC-10221

Silicon controlled rectifier /SCR/ lamp driver is adapted for use in integrated circuit digital computers where it indicates the contents of the various registers. The threshold voltage at which visual indication begins is very sharply defined and can be adjusted to suit particular system requirements.

B67-10657 REFLECTOMETER FOR RECEIVER INPUT SYSTEM STELZRIED, C. T. JAN. 1968 NPO-10843

Reflectometer, built into a microwave input system, measures the match of devices in the waveguide system of tracking receivers. Match measurements can be made on a routine calibration basis. It was installed in the S-band receiving system in the feed cone of the 210-ft antenna.

B67-10658
DAMAGES IN ROLLING ELEMENT BEARINGS MAY BE
DETECTED EARLY
WEICHBRODT, B. /GE/ DEC. 1967

Early detection method locates damage or small defects in rolling element bearings of critical machine components. This detection method operates on the principle that an impact is generated each time a defect in an otherwise smooth surface is in intimate moving contact with another smooth surface.

B67-10661 AIR SAMPLER COLLECTS AND PROTECTS MINUTE PARTICLES WOOD, R. C. /LITTON SYSTEMS/ DEC. 1967 HQ-10037

Air ejector impactor sampler collects and protects samples of particles greater tha 0.1 micron in diameter. In operation, it causes impaction of

particle-laden air onto several collection surfaces within a collection cylinder. When not operating, the collector cylinder is maintained in a retracted state within a protective envelope.

B67-10662
PHASE PLANE DISPLAYS DETECT INCIPIENT FAILURE IN SERVO SYSTEM TESTING AFFENITO, F. J. WOHL, J. G. /DUNLAP AND ASSOCIATES/ DEC. 1967
HQ-10018

Computer based, data conditioning and display technique detects incipient failure in servo system testing, for use in prelaunch checkout of complex nonlinear servomechanisms. These phase plane displays enables identification of on line, unusual or abnormal servo responses which can be displayed compactly in the time domain on a cathode ray tube.

B67-10668
UNIQUE FREQUENCY-SHIFT-KEYED DEMODULATION
SYSTEM
STALOFF, C. TELTELBAUM, S. /RCA/ JAN. 1968
GSFC-217

Frequency-shift-keyed /FSK/ demodulator provides a frequency discriminator whose outputs are separate and applied to two identical decoding channels, one decoding binary ones and the other decoding binary zeros. This demodulator rejects data applied to it at any frequency higher than design.

B67-10669
ULTRAMINIATURE MANOMETER-TIPPED CARDIAC
CATHETER
COON, G. W. DEC. 1967 SEE ALSO NASA-TN-D-3319
AND B63-10429
ARC-10054

Miniature diaphragm-type capacitance transducer capable of being mounted on the end of a cardiac catheter has been developed for measurement of intravascular pressures. The transducer can be inserted in small ducts /arteries and veins/ without disturbing the flow characteristics. It is very useful for making measurements in babies.

B67-10672
THERMIONIC DIODE SWITCHING HAS HIGH
TEMPERATURE APPLICATION
LUEBBERS, S. S. SHIMADA, K. JAN. 1968
NPO-10404

17-14-44-7
Thermionic converter switch permits chopping in the immediate vicinity of a low-voltage, high-current power source, eliminating line losses due to temperature limitations of semiconductor devices.

B67-10674
AREAS OF IRREGULAR, DISCONTINUOUS PATTERNS
RAPIDLY AND ACCURATELY MEASURED
MUNFORD, J. A. WHITFIELD, C. E. JAN. 1968
GSFC-10184

Simple, rapid method measures the surface area of a pattern such as comprised by the conductors on a printed circuit board. A negative or positive film of the circuit layout is placed over a uniformly illuminated translucent surface and the proportion of light transmitted to silicon solar cells is determined.

B67-10675
BROADBAND CHOKE SUPPRESSES SPURIOUS CURRENTS
IN ANTENNA STRUCTURE
BISHOP, O. L. BOLT, C. A., JR.
/MCDONNELL-DOUGLAS CORP./ JAN. 1968
MSC-10013

Quarter-wavelength chokes are mounted on the coaxial line of an antenna structure to prevent induced spurious currents from affecting the antenna radiation frequency pattern. The choke-absorbent combination approximately doubled the usable frequency range for the antenna system studied.

B67-10676 SCAN RATE CONVERTER FOR TAPE RECORDING AND PLAYBACK OF TV PICTURES HOLT, N. I. JAN. 1968 NPO-10166

LEWIS-43

•

Magnetic tape recording and playback equipment converts television pictures, both black and white and color, from one scan rate to another. The equipment indexes color picture frames for retrieval electronically and can be used as a document storage and retrieval medium that is compatible with hard-copy printout machines.

02 PHYSICAL SCIENCES (ENERGY SOURCES)

B63-10260
SOLAR-ANGLE SENSOR HAS NO MOVING PARTS
EXNER, D. W., JR. MEISENHOLDER, G. W. SCHMIDT,
L. F. MAY 1964
JPL-418

To measure the direction of the sun over a spherical field of view, a cube-shaped solar sensor with a photocell on each side is used. The outputs from the six cells are fed into a computer for determining the position of the sun relative to an orthogonal coordinate system.

B63-10344 COOLING METHOD PROLONGS LIFE OF HOT-WIRE TRANSDUCER BALDWIN, L. V. SANDBORN, V. A. JUN. 1964

LEWIS-41

To cool a hot-wire transducer, the two ends of the wire are supported on thermally and electrically

conductive rods, surrounded by a fluid cooling medium. By keeping the supporting rods at a substantially constant temperature, the probe is prevented from overheating.

B63-10346 NEW METHOD USED TO FABRICATE LIGHT-WEIGHT HEAT EXCHANGER FOR ROCKET MOTOR BAEHR, E. F. MAR. 1964

A grooved capstrip, to straddle the metal edges of regenerative cooling channels, increases the strength and heat transfer characteristics of lightweight motor cases. This capstrip is so designed as to form a firm joint between the channels that form the rocket casing wall.

B63-10421 MIRROR DEVICE ALIGNS MACHINE SURFACE PERPENDICULAR TO SIGHT LINES KISSLER, H. R. /RCA/ MAY 1964 WOO-5

A sight alignment device is used to align two machines so that an axis of the first machine is parallel to a flat surface on the second. This sighting device depends on the reflection of a light beam from the surface to be aligned.

B65-10036
IONIZATION VACUUM GAGE STARTS QUICKLY, IS
UNAFFECTED BY SPURIOUS CURRENTS
GARWOOD, D. C. FEB. 1965
JPL-316

Ionization vacuum gauge with a switch-operated starting device and a microammeter begins functioning quickly in a high vacuum. The microammeter is also protected by its circuit design from spurious currents.

B65-10046
WIDE-APERTURE SOLAR ENERGY COLLECTOR IS LIGHT
IN WEIGHT
INNOVATOR NOT GIVEN /BECKMAN INSTRUMENTS/ FEB.
1965
JPL-SC-055
By mounting the Fresnel lens in eight steps

By mounting the Fresnel lens in eight steps above three paraboloidal reflector rings of epoxy resin with aluminized surfaces, a light weight, wide-aperture solar energy collector is devised.

B65-10071 SIMPLE OPTICAL SYSTEM USED TO ALIGN SPECTROGRAPH EXTON, R. J. MAR. 1965 LANGLEY-92

Optically fast, portable spectrograph incorporates

auxiliary optics in a boresight technique to use the zero order of the grating for visual alignment. This device obtains moderately resolved spectra of a multitude of light sources.

B65-10081
MAGNETIC FIELD TEST COILS ARE TEMPERATURE
COMPENSATED
INNOVATOR NOT GIVEN /SPECTRA PHYS./ APR. 1965
GSFC-294

Magnetic field test coils with auxiliary winding wound opposite to main coil winding eliminates changes in field configurations due to temperature changes. The auxiliary coil is made with aluminum wire.

B65-10082
MULTIPLE ELEMENT SOFT X-RAY SOURCE PRODUCES
WIDE RANGE OF RADIATION
CARUSO, A. J. NEUPERT, W. M. MAR. 1965
GSFC-286

A rotating mount with target elements positioned independently for direct electron bombardment produces soft X-ray radiation with a wide range of characteristics. The device may be used to study solar radiation from a satellite.

B65-10084
MODIFIED CONTOUR PROJECTOR MAKES EXCELLENT
CONTOUR DENSITOMETER
EXTON, R. J. MAR. 1965
LANGLEY-93

Thin glass beam splitter, densitometer head, and densitometer electronics are incorporated in a standard contour projector. The density contour of small areas of photographic film can be read. This instrument can be used as a research tool in process engineering.

B65-10100
ROTATING FILTERS PERMIT WIDE RANGE OF OPTICAL PYROMETRY
EXTON, R. J. SIVITER, J. H., JR. STRASS, H. K. APR. 1965
LANGLEY-33

Gear-driven dual filter disks of graduated density vary linearly with respect to rotation, allowing a wide range of photographic pyrometry. This technique is applicable in metallurgy, glass, plastics and refractory research, and crystallography.

B65-10122 MICROWAVE TECHNIQUE MEASURES PLASMA CHARACTERISTICS LEONARD, W. F. APR. 1965 LANGLEY-134

Plasma electron density and temperature distribution is measured by passing a high frequency millimeter wave through plasma. Variations in density and temperature are determined by measuring insertion loss as the plasma travels between the microwave transmitting and receiving antennas.

B65-10129
APPARATUS PERMITS FLEXURE TESTING OF SPECIMENS AT CRYOGENIC TEMPERATURES
DENABURG, C. R. REECE, O. Y. MAY 1965
M-FS-257

Cryostat with support structure for test specimen allows flexure fatigue testing of honeycomb composite sandwich structures at cryogenic temperatures. The cryostat consists of a cryogen container enclosing two pairs of yokes which support two rotating end clamps.

B65-10132 SIMPLE CIRCUIT POSITIONS FILM FRAMES IN PROJECTOR SILVER, R. H. MAY 1965 JPL-508

Individual frames on a photographic film strip in a projector are automatically positioned by a simple circuit. The circuit uses a photodiode that senses frame registry position and a relay that stops the film-advance motor to suspend the film at point of registry. B65-10133 PROBE MEASURES CHARACTERISTICS OF HOT GAS INNOVATOR NOT GIVEN /PLASMADYNE CORP./ MAY 1965 M-FS-240 Shielded, tubular flow calorimeter operated by valve position measures characteristics of a hot gas stream of unknown composition. Measurements of mass flow density and total heat content per unit mass, total heat content per unit mass only, and pitot pressure are made. INTERNAL COOLING INCREASES RANGE OF IMMERSION-TYPE TEMPERATURE PROBE LANZO, C. D. JUN. 1965 LEWIS-171 Temperature probe used in a high temperature, high velocity gas stream consists of cooled outer shell and a cooled platinum sensing tube with iron constantan thermocouples. B65-10171 FRESNEL ZONE PLATE FORMS IMAGES AT WAVELENGTHS BELOW 1000 ANGSTROMS INNOVATOR NOT GIVEN /SMITHSONIAN INST./ JUN. 1965 Fresnal zone plate with openings replacing the usual transparent rings produces images in a vacuum ultraviolet. The plate is made by etching and electrodeposition. B65-10186 ELECTRONIC MODULES EASILY SEPARATED FROM HEAT INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ JUN. 1965 SEE ALSO B63-10033 MSC-142 Metal heat sink and electronic modules bonded to a thermal bridge can be easily cleaved for removal of the modules for replacement or repair. A thin film of grease between a fluorocarbon polymer film the metal heat sink and an adhesive film on the modules acts as the cleavage plane. B65-10188 REFRACTORY METAL SHIELDING /INSULATION/ INCREASES OPERATING RANGE OF INDUCTION FURNACE EBIHARA, B. T. JUN. 1965 LEWIS-202 Thermal radiation shield contains escaping heat from an induction furnace. The shield consists of a sheet of refractory metal foil and a loosely packed mat of refractory metal fibers in a concentric pattern. This shielding technique can be used for high temperature ovens, high temperature fluid lines, and chemical reaction B65-10211 LIGHT RAY MODULATION CONTROLS OPTICAL SYSTEM ALIGNMENT INNOVATOR NOT GIVEN /KOLLSMAN INSTR. CORP./ JUL. 1965 GSFC-171 Light ray modulator maintains focus in optical system subject to severe thermal gradients, vibration and shock. The modulated signals drive a servo system that aligns the system optics. HEATER DECOMPOSES OIL BACKSTREAMING FROM HIGH-VACUUM PUMPS SHAPIRO, H. AUG. 1965 GSFC-356 Heater placed between an oil diffusion pump and a vacuum chamber prevents backstreaming of oil molecules into the work area of the chamber. It breaks the oil molecules into basic constituents that can be pumped away. ION PUMP PROVIDES INCREASED VACUUM PUMPING SPEED INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ AUG. 1965

Multiple-cell ion pumps with increased vacuum pumping speed are used for producing ultrahigh

NEO-13

vacuums in vacuum tubes and mass spectrometers. The pump has eight cathode-anode magnetron cells arranged in a cylinder which increase the surface area of the cathode.

B65-10240
INSULATION ACCELERATES RATE OF COOLING WITH CRYOGENIC FLUID
ALLEN, L. D. AUG. 1965
MSC-161

Thermal insulating material increases the rate of heat transfer from the interior of a chamber to a liquid nitrogen-filled metal jacket. A thin film of the material is bonded to the surface of the metal wall facing the liquid nitrogen.

B65-10252 DISTANT OBJECTS DETECTED VISUALLY WITH OPTICAL FILTERS AUG. 1965 LANGLEY-166

Fluorescent coating aids visual daylight detection and identification of distant objects. An object appears as a blinking light when the area is alternately scanned with transmitting and obscuring filters. This method can be effective in search and rescue operations.

B65-10253
OIL-DAMPED MERCURY POOL MAKES PRECISE
OPTICAL ALIGNMENT TOOL
THEKAEKARA, M. P. AUG. 1965
GSFC-353

Mercury pool with a cover layer of high viscosity oil provides a reference reflector for precise alignment of optical instruments. The cover layer effectively damps any ripples in the mercury from support structure vibrations.

B65-10272
INFRARED SHIELD FACILITATES OPTICAL PYROMETER
MEASUREMENTS
EICHENBRENNER, F. F. ILLG, W. SEP. 1965
LANGLEY-133

Water-cooled shield facilitates optical pyrometer high temperature measurements of small sheet metal specimens subjected to tensile stress in fatigue tests. The shield excludes direct or reflected radiation from one face of the specimen and permits viewing of the infrared radiation only.

B65-10280
ELECTRON BOMBARDMENT IMPROVES VACUUM CHAMBER
EFFICIENCY
PRZYBYSZEWSKI, J. SWIKER, M. A. WATSON, J. SEP.
1965
LEWIS-160

Bombardment of vacuum chamber walls by an electron gun within the chamber achieves greater efficiency with less cost. The ultimate vacuum reached using the gun is greater than the system design level.

B65-10283 ELECTRON-BEAM DEFLECTION CONTROLLED BY DIGITAL SIGNALS CRESSEY, J. R. SEP. 1965 GSFC-385

Electron-beam deflection in electronic image converters is controlled by a tapped magnetic deflection yoke and a series of current generators. The generators supply equal current to each tap through digitally controlled switches, thereby increasing the inherent accuracy of the system.

B65-10291 SPIRALED CHANNELS IMPROVE HEAT TRANSFER BETWEEN FLUIDS HIGA, W. WIEBE, E. R. OCT. 1965 JPL-694

Spiral flow channels increase heat transfer between two fluids in a countercurrent heat exchanger of given volume. The heat exchanger is constructed by connecting a spiraled bellows—shaped ducting between two concentric cylindrical tubes.

B65-10292
INTERFEROMETER CONSTRUCTION ASSURES
PARALLELISM OF CRITICAL COMPONENTS
CONNES, P. DCT. 1965
JPL-704

Interferometer with rigidly mounted components assures parallelism of critical components. The interferometer is constructed for effective operation even if the total instrument is subjected to mechanical stress.

B65-10295
UNIQUE CONSTRUCTION MAKES INTERFEROMETER
INSENSITIVE TO MECHANICAL STRESSES
BEER, R. OCT. 1965
JPL-725

Michelson-type interferometer with a cat-eye reflector operates effectively even in the presence of random mechanical stresses. A cubical beansplitter with dichroic surfaces permits operation in infrared or visible light.

B65-10296
COAXIAL CAPACITOR USED TO DETERMINE FLUID
DENSITY
ATKISSON, E. A. OCT. 1965
LEWIS-232

Sensing device measures directly the density of compressible fluid existing simultaneously in both liquid and gaseous phases. The device is comprised of a capacitor connected as one leg of a bridge circuit, a power source, and an indicator calibrated to indicate density as a direct measurement.

B65-10297
SUPERCONDUCTOR SHIELDS TEST CHAMBER FROM AMBIENT MAGNETIC FIELDS
HILDEBRANDT, A. F. OCT. 1965
JPL-627

B65-10330
WEDGE IMMERSED THERMISTOR BOLOMETER MEASURES
INFRARED RADIATION
DREYFUS, M. G. /BARNES ENG. CO./ NOV. 1965
GSFC-443

Wedge immersed-thermistor bolometer measures infrared radiation in the atmosphere. The thermistor flakes are immersed by optical contact on a wedge-shaped germanium lens whose narrow dimension is clamped between two complementary wedge-shaped germanium blocks bonded with a suitable adhesive.

B65-10331 CLOSED FLUID SYSTEM WITHOUT MOVING PARTS CONTROLS TEMPERATURE STENGER, F. J. NOV. 1965 LEWIS-222

VIS-222
Closed fluid system maintains a constant temperature in an insulated region without the use of any moving parts. Within the system, the energy for thermodynamic cycling of two phase heat transfer fluid and a hydraulic fluid is entirely supplied by the heat generated in the thermally insulated region.

B65-10356 SEGMENTED ELECTRODE INCREASES OPERATING PRESSURE OF MHD ACCELERATOR INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ NOV. 1965 LANGLEY-95

Circumferentially segmented-ring electrode replaces the solid-ring electrode in a basic magnetohydrodynamic /MHD/ accelerator. This produces diffuse discharges at pressures as high as 100 atmospheres.

B65-10368
VACUUM CHAMBER PROVIDES IMPROVED INSULATION
AND SUPPORT FOR CRYOSTAT
INNOVATOR NOT GIVEN /GE/ DEC. 1965
M-FS-415

Taut wires in an evacuated cylinder minimize heat transfer through the walls and junctions of a liquid-helium-filled cryostat by suspending the cryostat.

B65-10373 MODIFIED PROCEDURE SPEEDS CAMERA COPY LAYOUT FOR OFFSET PRINTING SMITH, L. F. DEC. 1965 GSFC-424

Projecting a grid pattern on a steel layout board facilitates the alignment of camera copy for photo-offset reproduction. Small flat bar magnets fasten the copy to the board.

B65-10395
OPTICAL OUTPUT ENHANCES FLOWMETER ACCURACY
WOLPIN, E. G. /N. AM. AVIATION/ DEC. 1965
M-FS-482

Magnetic flowmeter with a direct-coupled optical output increases accuracy and operates independently of other system inputs. The design includes simple external adjustment and signal amplitude control.

B66-10004
COPPER FOIL PROVIDES UNIFORM HEAT SINK PATH
PHILLIPS, I. E., JR. SCHREIHANS, F. A. /N. AM.
AVIATION/ JAN. 1966
MSC-262

Thermal path prevents voids and discontinuities which make heat sinks in electronic equipment inefficient. The thermal path combines the high thermal conductivity of copper with the resiliency of silicone rubber.

B66-10008 AUTOMATIC FLUID SEPARATOR SUPPLIES OWN DRIVING POWER DECKER, M. S. MAJNERI, L. A. SPULGIS, I. S. /MIDLAND-ROSS CORP./ JAN. 1966

WOO-085

Centrifugal separator suspended in the fuel tank
of a space vehicle selects and vents gas vapor at
zero gravity. Escaping vapor is used to drive an
expander turbine that is magnetically coupled to
the separator.

B66-10010
OPTICAL PROJECTORS SIMULATE HUMAN EYES TO ESTABLISH OPERATOR*S FIELD OF VIEW BEAM, R. A. /N. AM. AVIATION/ JAN. 1966

Device projects visual pattern limits of the field of view of an operator as his eyes are directed at a given point on a control panel. The device, which consists of two projectors, provides instant evaluation of visual ability at any point on a panel.

B66-10016 SINGLE PROJECTOR ACCOMMODATES SLIDES OF DIFFERENT SIZE AND FORMAT GATES, G. M. JAN. 1966 GSFC-439

Projector with two adjustable external units accommodates slides of different size and format. One external unit is the holder for different size slides and includes mounting means for appropriate condensing lens and heat filters. The other unit is a turret lens assembly. The machine is easily adaptable to rear-screen and front-screen projection over various distances.

B66-10017
PTFE-ALUMINUM FILMS SERVE AS NEUTRAL DENSITY
FILTERS
BURKS, H. D. JAN. 1966
LANGLEY-189

Polytetrafluoroethylene /PTFE/ films coated with aluminum films act as neutral density filters in the wavelength range 0.3 to 2.1 microns. These filters are effective in the calibration of photometric systems.

B66-10045
COMPLEMENTARY SYSTEM VAPORIZES SUBCOOLED
LIQUID, TMPROVES TRANSFORMER EFFICIENCY
KETAILY, E. C. /N. AM. AVIATION/ FEB. 1966

M-FS-550

Complementary system converts subcooled liquid hydrogen or nitrogen to gas. The inherent induction heat losses of an electrical transformer are used in the vaporizing process. Transformer efficiency is improved in the process.

CALORIMETER ACCURATELY MEASURES THERMAL RADIATION ENERGY ANDERSON, W. W., JR. MILLER, H. B. SWEET, G. E.

FEB. 1966 LANGLEY-173

Calorimeter accurately measures steady-state and transient, low-level thermal radiation energy. The calorimeter uses a compensating shield between the sensor and the calorimeter mount to intercept sensor heat losses and to provide a reference for determining a correction factor.

B66-10060

THIN CARBON FILM SERVES AS UV BANDPASS FILTER INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ FEB. 1966 ERC-8

Thin carbon film deposited on a 70 percent transparent screen provides a filter for narrowband detectors in the extreme ultraviolet. filter also suppresses scattered light and light of unwanted orders in vacuum spectrographs.

B66-10072

BEAM SPLITTER USED IN DUAL FILMING TECHNIQUE ZELDIN, S. /N. AM. AVIATION/ FEB. 1966 M-FS-501

Tubular tee is intersected at its junction by a reflecting/transmitting mirror angled to provide two images of an object for simultaneous photographing from two positions. This method is used when space and focal conditions are limited.

B66-10075

SPECIMEN HOLDER DESIGN IMPROVES ACCURACY OF X-RAY POWDER ANALYSIS /N. AM. PHILLIPS CORP./ FEB. 1966 MACK, M. JPL-SC-165

Specimen holder for X-ray diffraction analysis presents the specimen to the incident X-rays in a curvature. This permits the use of an X-ray beam having a larger divergence angle, the beam intensity is increased, and the statistical accuracy of analysis is improved.

B66-10079

HIGH-PRESSURE, LOW TEMPERATURE ELECTRICAL CONNECTOR MAKES NO-LEAK SEAL WEAKLEY, J. F. /N. AM. AVIATION/ MAR. 1966 MSC-276

Flow control of cryogenic liquids is achieved through use of an electrical feed-through connector with a solenoid-type valve. To prevent gas leakage, the connector is designed and structured so that extremely high pressure and low temperatures contribute to its sealing properties.

B66-10086

SCREEN OF CYLINDRICAL LENSES PRODUCES STEREOSCOPIC TELEVISION PICTURES NORK, C. L. /SPACO, INC./ MAR. 1966 M-FS-273

Stereoscopic television pictures are produced by placing a colorless, transparent screen of adjacent parallel cylindrical lenses before a raster from two synchronized TV cameras. Alternate frames from alternate cameras are displayed. The viewer*s sensory perception fuses the two images into one three-dimensional picture.

R66-10095

ULTRAVIOLET PHOTOGRAPHIC PYROMETER USED IN ROCKET EXHAUST ANALYSIS LEVIN, B. P. /N. AM. AVIATION/ MAR. 1966 M-FS-499

Ultraviolet photographic pyrometer investigates the role of carbon as a thermal radiator and determines the geometry, location, and progress of afterburning phenomena in the exhaust plume of rocket engines using liquid oxygen/RP-1 as propellant.

B66-10096 INEXPENSIVE INFRARED SOURCE IMPROVISED FROM FLASHLIGHT INNOVATOR NOT GIVEN /FAIRCHILD HILLER CORP./ MAR. 1966 M-FS-494

Inexpensive hand-held source of infrared energy is provided by a flashlight bulb coated with a paint which filters out the visible light emitted by the bulb and transmitts only infrared radiation.
This device can be used for checking infrared sensors and for experimental purposes.

B66-10098

NEW ENERGY STORAGE CONCEPT USES TAPES GRUBER, A. KAFESJIAN, R. R. /MONSANTO RES. CORP./ MAR. 1966

CORP./ MALEWIS-239

Energy storage system uses movable permeable tapes with cathode and electrolyte material that is drawn across an anode to produce electric power. The system features long shelf life, high efficiency, and flexible operation.

B66-10108

PLASTIC SCINTILLATOR CONVERTS STANDARD PHOTOMULTIPLIER TO ULTRAVIOLET RANGE INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ MAR. 1966 ERC-9

Commercially available plastic scintillators are attached to the glass windows of standard photomultiplier tubes for detection of ultraviolet radiation.

B66-10114

HIGHLY SENSITIVE SOLIDS MASS SPECTROMETER USES INERT-GAS ION SOURCE INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ MAR. 1966 ERC-11

Mass spectrometer provides a recorded analysis of solid material surfaces and bulk. A beam of high-energy inert-gas ions bombards the surface atoms of a sample and converts a percentage into an ionized vapor. The mass spectrum analyzer separates the vapor ionic constituents by massto-charge ratio.

B66-10121 COMPOUND IMPROVES THERMAL INTERFACE BETWEEN THERMOCOUPLE AND SENSED SURFACE KALLIN, I. N. /WESTINGHOUSE ASTRONUCL. LAB./ MAR. 1966

NU-0028

Thermocouples and brittle materials are joined without welding by an epoxy resin cement mixer with a conducting material. This mixture does not form thermal barriers at cryogenic temperatures.

B66-10122

NIOBIUM THIN FILMS ARE SUPERCONDUCTIVE IN STRONG MAGNETIC FIELDS AT LOW TEMPERATURES CLOUGH, P. J. /NATL. RES. CORP./ FOWLER, P. MAR. 1966 JPL-SC-174

Niobium film superconductor carries high currents in strong magnetic fields. The thin niobium film is formed on an inert substrate through evaporation in a vacuum environment. Control of temperature and vacuum results in rejection of gaseous impurities so that the film is of a very high purity.

B66-10143 SEXTANT MEASURES SPACECRAFT ALTITUDE WITHOUT

GRAVITATIONAL REFERENCE INNOVATOR NOT GIVEN /GEONAUTICS, INC./ APR. 1966 MSC-200

Horizon-sensing sextant measures the altitude of an orbiting spacecraft without gravitational reference by optically measuring the dip angle to the horizon along a line of sight in each of two planes. The sextant scans over a relatively limited field of view.

B66-10153 ARGON PURGE GAS COOLED BY CHILL BOX SPIRO, L. W. /N. AM. AVIATION/ APR. 1966 M-FS-560

Cooling argon purge gas by routing it through a shop-fabricated chill box reduces charring of tungsten inert gas torch head components. The argon gas is in a cooled state as it enters the torch and prevents buildup of char caused by the high concentrations of heat in the weld area during welding operations.

B66-10156
CIRCULAR, EXPLOSION-PROOF LAMP PROVIDES
UNIFORM ILLUMINATION
INNOVATOR NOT GIVEN /N. AM. AVIATION/ APR. 1966
MSC-382

Circular explosion-proof fluorescent lamp is fitted around a TV camera lens to provide shadowless illumination with a low radiant heat flux. The lamp is mounted in a transparent acrylic housing sealed with clear silicone rubber.

B66-10157 CRYOGENIC LIQUID TRANSFER SYSTEM REDUCES RESIDUAL BOILOFF HEGLAND, D. E. APR. 1966 LEWIS-274

System for transferring cryogenic liquids to a dewar prevents boiloff of residual liquid by venting the boiloff to the atmosphere during the transfer tube cooling period. The system is most useful with liquids having very small heat vaporization.

B66-10173
OFFSET LENSES AND VERSATILITY TO
PHOTOTYPESETTING MACHINE
JAMES, A. M. /DOCUMENTATION, INC./ APR. 1966
HQ-9

Offset lenses facilitate the composition of inputs of other than straight baseline characters on the Photon phototypesetting machine. A number of lenses in the turret are mounted in an offset pattern that causes characters projected through them to fall on the photographic paper in the magazine above and below the baseline.

B66-10178
FATIGUE CRACKS DETECTED AND MEASURED WITHOUT
TEST INTERRUPTION
FRECHE, J. C. KLIMA, S. J. LESCO, D. J. MAY
1966
LEWIS-266

Ultrasonic flaw detector records cracks in materials undergoing fatigue tests, without interfering with test progress. The detector contains modified transducers clamped to the specimens, and an oscillograph readout.

B66-10181 ALUMINUM DOPING IMPROVES SILICON SOLAR CELLS MAY 1966 SEE ALSO NASA-TN-D-2711 LEWIS-206

Aluminum doped silicon solar cells with resistivities in the 10- to 20-ohm centimeter range have broad spectral response, high efficiency and long lifetimes in nuclear radiation environments. Production advantages include low material rejection and increased production yields, and close tolerance control.

B66-10183
INSULATION FOR CRYOGENIC TANKS HAS REDUCED
THICKNESS AND WEIGHT
DUMIRE, P. E. MIDDLETON, R. L. SCHELL, J. T.
STUCKEY, J. M. MAY 1966 SEE ALSO NASA-SP-5030
M-FS-326

Dual seal insulation, consisting of an inner layer of sealed-cell Kylar honeycomb core and an outer helium purge channel of fiberglass reinforced phenolic honeycomb core, is used as a thin, lightweight insulation for external surfaces of cryogenic-propellant tanks.

B66-10186
RADIATION USED TO TEMPERATURE COMPENSATE
SEMICONDUCTOR STRAIN GAGES
GROSS, C. MAY. 1966
LANGLEY-207

Exposure to high energy electron radiation reduces

the temperature coefficients of resistance and gauge factor of a range of resistivities of n- and p-type semiconductor silicon strain gauges. After irradiation, the gauges are heated to a high temperature for a 24-hour period to stabilize their temperature coefficients.

B66-10187
RUBBER-COATED BELLOWS IMPROVES VIBRATION
DAMPING IN VACUUM LINES
HEGLAND, D. E. SMITH, R. J. MAY 1966
LEWIS-273

Compact vibration damping systems, consisting of rubber-coated metal bellows with a sliding D-ring connector, are used in vacuum lines. The device presents a metallic surface to the vacuum system and combines flexibility with the necessary stiffness. It protects against physical damage, reduces fatigue failure, and provides easy mating of nonparallel lines.

B66-10199
MOUNT ENABLES PRECISION ADJUSTMENT OF
OPTICAL-INSTRUMENTATION MIRROR
INNOVATOR NOT GIVEN /MIT./ MAY 1966
MSC-184

Mirror mount assembly allows the plane of a mirror to be adjusted through small angles about two orthogonal axes. The assembly, which has a mirror mount with two independently adjustable flexure joints, allows independent precise adjustment of the mirror mount with respect to each axis.

B66-10231 SOLAR CELL SUBMODULE DESIGN FACILITATES ASSEMBLY OF LIGHTWEIGHT ARRAYS YASUI, R. K. MAY 1966 JPL-728

Solar cell submodules with bus bars that leave tabs along one end of the submodule and wires with raised portions along the other end are assembled by interlocking the tabs and wires of adjacent submodules. This structural design is lightweight and reliable and requires no metallic substructure.

B66-10257
FREON PROVIDES HEAT TRANSFER FOR SOLID CO2
CALIBRATION STANDARD
INNOVATOR NOT GIVEN /LEEDS AND NORTHRUP CO./ JUN.
1966
M-FS-644

Acetone and Freon as liquid heat transfer mediums bring a dry ice bath to, and keep it at, the temperature required when using solid carbon dioxide as a calibration standard. Although acetone gives better results, Freon TF is preferred since acetone reacts violently in the presence of liquid oxygen.

B66-10263
OPTICAL DEVICE ENABLES SMALL DETECTOR TO SEE LARGE FIELD OF VIEW
ARNDT, J. H. /TRW SPACE TECHNOL. LABS./ JUN. 1966
W00-253

Optical device images the sun on a mask that transmits it or prevents its transmission to a photodetector behind the mask depending on image position on the mask. The device uses a pinhole as the image former to provide a large field of view and diffraction-limited resolution.

B66-10268
HIGH-SPEED FURNACE USES INFRARED RADIATION
FOR CONTROLLED BRAZING
ECKLES, P. N. /AEROJET-GEN. CORP./ JUN. 1966
NU-0047

Furnace produces controlled heat for brazing and heat treating metals over a wide range of temperatures by using a near-infrared heat source positioned at one focus of an ellipsoidal reflector mounted below a cylindrical quartz chamber. This furnace maintains a pure atmosphere, has rapid heatup and cooldown, and permits visual observation.

B66-10289
ULTRASONIC HAND TOOL ALLOWS CONVENIENT
SCANNING OF SPOT WELDS
MITCHELL, D. K. /BOEING CO./ JUL. 1966
M-FS-539

Small, portable, electrically powered hand tool, coupled with auxiliary ultrasonic equipment, allows convenient scanning of spot welds for discontinuities.

866-10290
MODIFIED MCLEOD GAGE RECORDS AUTOMATICALLY
FAETH, P. A. JUL. 1966
LEWIS-290

Modified McLeod gauge records pressure measurements automatically. The measurements can be programmed in advance by means of an automatic timer.

B66-10307
COMMERCIAL FILM PRODUCES POSITIVE X-RAY PHOTO
IN TEN SECONDS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUL. 1966
M-FS-521

Type 52 Polaroid Land Film Packet provides a rapid, inexpensive method of producing positive X-ray photographs of various objects.

B66-10316
LEGIBILITY OF ELECTROLUMINESCENT INSTRUMENT
PANELS INVESTIGATED
MC LEAN, M. V. MILLER, G. E. /N. AM. AVIATION/
AUG. 1966
MSC-494 MSC-496 MSC-501 MSC-505

Legibility studies of several EL /electroluminescent/ displays correlate reading time and accuracy with number size, stroke/width ratio, indicia size, pointer width, contrast, ambient illumination, and color background and contrast. Human factor criteria established on non-EL displays may not apply to EL displays.

B66-10325 BIMETALLIC DEVICES HELP MAINTAIN CONSTANT SEALING FORCES DOWN TO CRYOGENIC TEMPERATURES DE BOSKEY, W. R. /MELPAR/ JUL. 1966 M-FS-800

Tantalum washers compensate for different thermal coefficients of expansion between stainless steel and an aluminum O-ring. The washers have sufficient thickness to maintain a vacuum seal from room to cryogenic temperatures.

B66-10348
INEXPENSIVE INSULATION IS EFFECTIVE FOR
CRYOGENIC TRANSFER LINES
LINDGREN, A. R. /N. AM. AVIATION/ AUG. 1966
MSC-618

Matting cover thermally insulates cryogenic-liquid transfer pipelines. The matting consists of layers of commercially available fiberglass tape in which the fibers are randomly oriented in parallel planes.

B66-10372
SPECIAL TREATMENT REDUCES HELIUM PERMEATION OF GLASS IN VACUUM SYSTEMS
BRYANT, P. J. GOSSELIN, C. M. /MIDWEST RES. INST./ AUG. 1966
H0-25

Internal surfaces of the glass component of a vacuum system are exposed to cesium in gaseous form to reduce helium permeation. The cesium gas is derived from decomposition of cesium nitrate through heating. Several minutes of exposure of the internal surfaces of the glass vessel are sufficient to complete the treatment.

B66-10388
AUXILIARY TITANIUM SUBLIMATION PUMP PRODUCES
ULTRAHIGH /10 TO THE MINUS 11 TORR/ VACUUM
OUTLAM, R. A. SEP. 1966
LANGLEY-212

Sublimated titanium as a gettering agent in conjunction with a turbine-type pump provides a two-step procedure for obtaining an uitrahigh vacuum of 10 to the minus 11 torr. The pump alone evacuates the chamber to a pressure of 10 to the minus 9 torr. The residual gas is removed by

the gettering agent at a pumping speed of 15 liters per second per square inch.

B66-10435 CHEMICAL REGENERATION OF EMITTER SURFACE INCREASES THERMIONIC DIODE LIFE BREITWIESER, R. OCT. 1966 SEE NASA-TN-D-1877 LEWIS-17

Chemical regeneration of sublimated emitter electrode increases the operating efficiency and life of thermionic diodes. A gas which forms chemical compounds with the sublimated emitter material is introduced into the space between the emitter and the collector. The compounds migrate to the emitter where they decompose and redeposit the emitter material.

B66-10474 GAS PRESSURE FEEDS FILM INTO CAMERA AT HIGH SPEED KEIGHER, P. J. NOV. 1966 ARG-97

Blast of gas blows a loop of unexposed film as a wave across a vacuum platen to feed film smoothly into a camera so that 2 successive lengths can be exposed within 50 milliseconds. This technique can be readily applied to multiple aperture cameras as well as to various types of films.

B66-10483
UNIFORM REFLECTIVE FILMS DEPOSITED ON LARGE SURFACES
NOV. 1966 SEE ALSO NASA-TN-D-3357
GSFC-507

Specially designed baffle which intercepts varying amounts of the vapor stream from an evaporant source, vacuum deposits films of uniform thickness on large substrates, using a single small area evaporation source. A mirror coated by this method will have a reflectance as high as 82 percent at 1216 angstroms with a variation of only plus/minus 2 percent over the surface.

B66-10499
CRYOGENIC COOLING REDUCES HIGH VOLTAGE ARCING
BETWEEN ELECTRODES OPERATING IN A VACUUM
DE GEETER, D. J. NOV. 1966
ARG-109

Cooling to a temperature of approximately liquid nitrogen or lower, reduces arcing, or high voltage breakdown, between two closely spaced electrodes operating in a vacuum. This cooling technique can be applied to electrodes having other than hemispherical shapes.

B66-10507
PANELS ILLUMINATED BY EDGE-LIGHTED LENS
TECHNIQUE
HAAG, G. E. HORSFALL, R. B. /N. AM. AVIATION/
NOV. 1966
MSC-871

Electroluminescent lamps used to edge-light a specially ground lens provide nonglare, reduced eye strain panel illumination. There is no noticeable falloff in brightness along the lens edge. Light intensity diminishes toward the lens center. A slight halo, observed along the lens edge, has no detrimental effect.

B66-10508
EXPERIMENTAL INVESTIGATION OF MEGAWATT DC
ARC HEATING OF NITROGEN
BOLDMAN, D. R. CAMPBELL, J. P. DEC. 1966
LEVIS-313

four types of arc heaters, each with the capability of providing arc power levels in excess of 1 megawatt in nitrogen, were tested over a range of power levels and nitrogen flow rates to determine their value as heaters for hypersonic tunnels. The data derived should be useful in the design of high energy heaters for various industrial processes.

B66-10532 LIGHT-INTENSITY MODULATOR WITHSTANDS HIGH HEAT FLUXES MAPLES, H. G. STRASS, H. K. NOV. 1966 MSC-246

,-240 Mechanism modulates and controls the intensity of luminous radiation in light beams associated with high-intensity heat flux. This modulator incorporating two fluid-cooled, externally grooved, contracting metal cylinders which when rotated about their longitudinal axes present a circular aperture of varying size depending on the degree of rotation.

B66-10547
HIGH INTENSITY RADIATION HEAT SOURCE IS
CAPABLE OF SUSTAINED OPERATION
GEIDEMAN, W. A. MULLER, K. /TEXRON ELECTRONICS/
NOV. 1966
ARC-61

Water cooled, high intensity radiation source rated at 125 km, with an efficiency of 31 to 34 percent is used in the evaluation of ablative materials under simulated conditions of high velocity entry into planetary atmospheres. The source operates repeatedly at maximum power for periods of 10 to 20 minutes.

B66-10554
CALCULATION OF INFRARED SPECTRAL
TRANSMITTANCES OF INHOMOGENEOUS GASES
HUFFAKER, R. M. DEC. 1966
M-FS-1563

Calculation of spectral transmittance for a particular inhomogeneous gas path is made by combining known data on gases at constant temperature, pressure, and concentration. The spectral transmittances of the inhomogeneous plume gases is needed to calculate the heat radiated from the exhaust plume to the rocket base of a multiple engine rocket.

B66-10560
LASER MEASURING SYSTEM ACCURATELY LOCATES
POINT COORDINATES ON PHOTOGRAPH
DOEDE, J. H. LINDENMEYER, C. W. VONDEROHE, R. H.
DEC. 1966
ARG-74

Laser activated ultraprecision ranging apparatus interfaced with a computer determines point coordinates on a photograph. A helium-neon gas CW laser provides collimated light for a null balancing optical system. This system has no mechanical connection between the ranging apparatus and the photograph.

B66-10565
MIXER CONDITIONS TEMPERATURE OF LIQUIFIED
GAS STREAMS
TALMOR, E. /N. AM. AVIATION/ DEC. 1966
M-FS-1784

Room temperature gaseous hydrogen mixed with liquified hydrogen in a venturi produces a two-phased liquid hydrogen stream at a stable temperature. This technique is useful in a laboratory testing where presently, temperature control is maintained by a calibrated heat leak that results in considerable expenditure of cryogenic refrigerants.

B66-10583
NEON ISOTOPES CANCEL ERRORS IN GAS LASER
MACEK, W. M. OLTHUIS, R. W. SCHENEIDER, J. R.
/SPERRY GYROSCOPE CO./ DEC. 1966
M-FS-1476

Neon isotopes cancel frequency pushing errors arising from unequal gain in the two contracirculating beams of a helium-neon filled discharge tube used in a ring laser.

B66-10596
OPTICAL AUTOMATIC GAIN CHANNEL
MRUS, G. ZUKOWSKY, W. /PERKIN-ELMER CORP./ DEC.
1966
M-FS-1550

35-1550 Automatic Gain Control /AGC/ channel automatically compensates for gain changes in the azimuth error channel due to time varying optical sight degrading effects. This system is useful in remote television monitors, automatic navigation systems, and surveying and mapping instrumentation.

B66-10602 EXPOSURE VALUE /EV/ SYSTEM EXPANDED TO INCLUDE FILTER FACTORS AND TRANSMITTANCE LINDSEY, W. F. DEC. 1966 LANGLEY-190

Application of the exposure value system requires that the system be extended to high brightness level, and expanded to include filter factors. A minimum of four photographic factors are involved in the evaluation of an exposure which when determined from tables of 1-stop interval could introduce noticeable error.

B66-10615 FEED-THRU FLANGE IS USEFUL IN VACUUM APPLICATIONS TO CRYOGENIC TEMPERATURES YAGER, S. P. DEC. 1966 JPL-846

Feed-thru flange seals inner and outer walls of high vacuum test chambers. It is used in vacuum applications at both cryogenic and higher than cryogenic temperatures. A damaged flange can still be used for partial vacuum, noncryogenic applications in conjunction with an appropriate rubber seal.

B66-10630
TECHNIQUE FOR MEASURING ABSORPTANCE AND
EMITTANCE BY USING CYCLIC INCIDENT RADIATION
JACK, J. R. DEC. 1966 SEE ALSO NASA-TM-X-52193
LEWIS-321

Cyclic radiation technique has been developed for determining absorptance and emittance of metal surfaces. Using this technique both absorptance and emittance can be determined from one set of data, and variable and controlled temperature levels are possible.

B66-10638
TWIN HELIX SYSTEM PRODUCES FAST SCAN IN
INFRARED DETECTOR
VANZETTI, R. /N. AM. AVIATION/ DEC. 1966
M-FS-1598

Two rotating wheels in orthogonal relationship with helicoidal reflecting surfaces mounted on their outer rims achieve a linear speed without normal time loss in their return motion. The pitch of the helicoidal surfaces equals the displacement that the mirrors must traverse.

B66-10652
ROCKET ENGINE VIBRATION ACCURATELY MEASURED BY PHOTOGRAPHY
CRAIG, K. A. /N. AM. AVIATION/ DEC. 1966
M-FS-1916

High speed instrumentation camera focused on a partially masked light bulb which is securely mounted to the test fixture permits measurement of engine performance parameters when usual electronic vibration instrumentation is unavailable. Vibration is recorded as a light trace deviating from the light rays photographed in the static hardware condition.

B66-10654
CRYOGENIC FLUID SAMPLING DEVICE PERMITS
TESTING UNDER HAZARDOUS CONDITIONS
MITCHELL, J. A. /N. AM. AVIATION/ DEC. 1966
M-FS-1927

Remotely controlled sampling device obtains timed sample of flowing cryogenic liquid propellants in remote or hazardous testing conditions. The device consists of a calibrated container, a dewar, a solenoid valve, a pressure gauge, and a manual bleed valve.

B66-10657 SIMPLE TECHNIQUE DETERMINES AC PROPERTIES OF HARD SUPERCONDUCTIVE MATERIALS HARPER, C. M. HECHT, R. /RCA/ DEC. 1966 M-FS-1818

Critical current density of a neodymium— titanium alloy samples is analyzed from manentization curves to determine the ac properties of hard semiconductive materials. A complete family of magnetization curves is obtained, each curve representing performance at a different temperature.

BSS-10660 PROCESS PRODUCES ACCURATE REGISTRY BETWEEN CIRCUIT BOARD PRINTS
INNOVATOR NOT GIVEN /BENDIX CORP./ DEC. 1966
LANGLEY-288

Tapes and quick-mount circles of contrasting colors aid in obtaining precise registry between the two circuits of two-sided printed circuit boards. The tapes and circles are mounted on opposite sides of transparent plastic film to define the conductive path and feed-through hole locations.

B66-10682
PRIMARY CELLS UTILIZE HALOGEN-ORGANIC
CHARGE TRANSFER COMPLEX
GUTMANN, F. HERMANN, A. M. REMBAUM, A. DEC.
1966
JPL-926

Electrochemical cells with solid state components, employ charge transfer complexes or donoracceptor complexes in which the donor component is an organic compound and the acceptor component is a halogen. A minor proportion of graphite added to these compositions helps reduce the resistivity.

B66-10693
LASER DOPPLER FLOWMETER MEASURES GAS
VELOCITY
FOREMAN, W. /BROWN ENG. CORP./ HUFFAKER, R. M.
DEC. 1966
M-FS-1747

Utilizing the large magnitudes of Doppler shifts obtainable from a CW gas laser local velocity vectors are measured by using the visible light from the laser. This technique is applicable for the measurement of velocity of any moving surface.

B66-10700
PROBLEM OF OSCILLATING CONE IN SUPERSONIC FLOW IS SOLVED BY SMALL PERTURBATION TECHNIQUES
PAO, T.-H. /MIT/ DEC. 1966
M-FS-869

Small perturbation technique solves the problem of an oscillating cone in supersonic flow. The logic of the program is straightforward, as reflected in the actual instructions for solving the problem.

B67-10008
POLAROID FILM HELPS LOCATE OBJECTS IN
INACCESSIBLE AREAS QUICKLY
GRIFFIN, H. G. MC CLELLAND, G. W. /N. AM.
AVIATION/ JAN. 1967
MSC-960

Polaroid film is used with conventional portable X-ray equipment to locate and shoot items or objects in difficult areas. Polaroid film development time is about 20 seconds.

B67-10021
POLARIMETER PROVIDES TRANSIENT RESPONSE
IN NANOSECOND RANGE
JOHNSTON, A. R. FEB. 1967
JPL-890

Conventional polarimeter with a Senarmont compensator improves transient response and eliminates manual manipulation. A sampled photomultiplier output is fed to a low pass filter, resulting in a signal representing the optical state existing at the instant of sampling. With this technique, an unknown transient-induced retardation can be measured.

B67-10024
PLASMA JET ELECTRODE HAS LONGER OPERATING
LIFE
GRACEY, C. M. /AEROJET GEN. CORP./ FEB. 1967
NU-0098

water-cooled, silver-infiltrated tungsten electrode has twice the operating lifetime of the pure tungsten electrode used in plasma jet generators. This electrode reduces the erosion rate, ensures excellent heat transfer, and reduces thermal stresses.

B67-10036 NEUTRON ACTIVATION ANALYSIS TRACES COPPER ARTIFACTS TO GEOGRAPHICAL POINT OF ORIGIN CONWAY, M. FIELDS, P. FRIEDMAN, A. KASTNER, M. METTA, D. MILSTED, J. OLSEN, E. MAR. 1967 ARG-119

Impurities remaining in the metallic copper are identified and quantified by spectrographic and neutron activation analysis. Determination of the type of ore used for the copper artifact places the geographic point of origin of the artifact.

B67-10037 CORRELATION ESTABLISHED BETWEEN HEAT TRANSFER AND ULTRASONIC TRANSMISSION PROPERTIES OF COPPER BRAZE BONDS DINOVI, R. A. MAR. 1967 SEE ALSO ANL-7074 ARG-247

Measuring and correlating the thermal conductivity and ultrasonic transmission of seven hot-brazed-bonded copper plates established a relationship between heat transfer and ultrasonic transmission properties of the bonds. This relationship permits the prediction of heat transfer characteristics from ultrasonic transmission tests.

B67-10054
METHOD ACCURATELY MEASURES MEAN PARTICLE
DIAMETERS OF MONODISPERSE POLYSTYRENE
LATEXES
KUBLISCHEK, H. E. MAR. 1967
ARG-207

Photomicrographic method determines mean particle diameters of monodisperse polystyrene latexes. Many diameters are measured simultaneously by measuring row lengths of particles in a triangular array at a glass-oil interface. The method provides size standards for electronic particle counters and prevents distortions, softening, and flattening.

B67-10057
MECHANISMS OF SUPERCONDUCTIVITY
INVESTIGATED BY NUCLEAR RADIATION
AUTLER, S. H. COFFEY, H. T. KELLER, E. L.
PATTERSON, A. MAR. 1967
M-FS-1944

Investigation focused on the behavior of superconducting magnet and its constituent materials during and after exposure to nuclear radiation. The results will indicate the feasibility of their use in diverse applications and various environments.

B67-10068
STUDY MADE OF INTERACTION BETWEEN SOUND
FIELDS AND STRUCTURAL VIBRATIONS
LYON, R. H. SMITH, P. W., JR. /BOLT, BERANEK,
AND NEWMAN/ APR. 1967
HQ-26

Study analyzes structral vibrations and the interactions between them and sound fields. It outlines a conceptual framework to analyze the vibrations of systems and their interactions, incorporating the results of earlier studies and establishing a unified basis for continuing research.

B67-10071 ELECTRONIC FILTER DISCRIMINATES BETWEEN TRUE AND FALSE REFLECTIONS MERCHANT, J. /HONEYWELL INC./ APR. 1967 HQ-55

Electronic filtering system discriminates between true corneal and false reflections, solving the problem of spurious reflections of the CRT light in newly designed oculometer.

B67-10072
AN IMPROVED SOFT X-RAY PHOTOIONIZATION DETECTOR
STOBER, A. K. YOUNG, R. M. APR. 1967
GSFC-540

Photoionization detector with an alumina shell, a beryllium foil window, and a xenon gas fill measures small incident photon fluxes from soft X-rays. It has high spectral selectivity and quantum efficiencies, and a long shelf life. It minimizes electrical leakage and recontamination, and will hold a high vacuum.

B67-10075 STUDY MADE OF FAR INFRARED SPECTRA OF SILICATE MINERALS INNOVATOR NOT GIVEN, /ARTHUR D. LITTLE, INC./ APR. 1967 M-FS-1811

Study of mineral in the far infrared region of the spectrum examines the problems and feasibility of remote sensing of the composition of the moon or tenuous atmosphere planets. Most of the work described utilized reflection techniques.

B67-10082 FATIGUE ZONES IN METALS IDENTIFIED BY POLARIZED LIGHT PHOTOGRAPHY WALSH, F. D. /BOEING CO./ APR. 1967 W00-286

J-200
Polarized light technique clearly defines the fatigue zones in metal for measuring and photographing. White light is passed through a vertical polarizing filter and then is reflected onto the surface of the fracture speciman.

B67-10088 EXPERIMENTAL SCALING STUDY OF FLUID

AMPLIFIER ELEMENTS
ABLER, J. GREBER, I. TAFT, C. /CASE INST. OF ABLER, J. GREBER TECH./ APR. 1967 M-FS-1882

Study examines scaling parameters of three fluid amplifier elements — a bistable device, a boundary layer control device, and a vortex device. Variations in performance due to size, fluid, and other conditions are studied. Even with restricted examples the large number of variables impedes the establishment of these scaling laws.

SPECIAL PURPOSE REFLECTOMETER USES MODIFIED ULBRICHT SPHERE GORSTEIN, M. /MIT/ MAY 1967 MSC-1135

Modified Ulbricht sphere measures stray radiation Modified Ulbricht sphere measures stray radiation caused by irregularities in the reflective surface of an optical test specimen. The test specimen is positioned between a light source and exit port and all diffusely scattered radiation is measured by a photomultiplier tube in the sphere.

B67-10110 STAR/HORIZON SIMULATOR USED TO TEST SPACE GUIDANCE SYSTEM SCHMIDT, W. C. /MIT/ MAY 1967 MSC-407

Star/horizon simulator is used for alignment and optical plus photoelectric tests of the sextant for the Apollo guidance and navigation system optical unit assembly. The unit is basically a refractive collimator with a two inch objective lens system and a twenty-four inch focal length.

B67-10120 VISUAL ATTITUDE ORIENTATION AND ALIGNMENT SYSTEM BEAM, R. A. MORRIS, D. B. /N. AM. AVIATION/ MAY 1967 MSC-647

Active vehicle optical alignment aid and a passive vehicle three-dimensional alignment target ensure proper orientation and alignment plus control of the closure range and rate between two bodies, one in controlled motion and one at rest.

B67-10126 HIGH-ENERGY-RATE MAGNETOHYDRAULIC METAL FORMING SYSTEM INNOVATOR NOT GIVEN /ADVAN. KINET./ MAY 1967 M-FS-2142

In the magnetohydraulic metal forming system, a sonic shock wave is generated in a liquid medium by a coil energized by an electrical discharge. These waves transfer energy from a metal diaphragm, actuated by a pulsed magnetic field, to a metal workpiece. In this development a study was made of the pressure pulse phenomenon in a liquid medium.

B67-10128 IMPROVED CRYUGENIC REFRIGERATION SYSTEM HIGA, W. H. MAY 1967 JPL-731

Two-position shuttle valve simplifies valving arrangement and crank-shaft configuration in gas-balancing and Stirling-cycle refrigeration systems used to produce temperatures below 173 degrees K. It connects the displacer and regenerator alternately to the supply line or the return line of the compressor, and establishes constant pressure on the drive piston.

B67-10131 NEUTRON DIFFRACTOMETER ALLOWS BOTH MAGNETIC AND CRYSTALLOGRAPHIC ANALYSES ATOJI, M. JUN. 1967 SEE ALSO ANL-6920 ARG-191

Automatic double-crystal neutron diffractometer performs both crystal and magnetic structural analyses. This shielded installation has a goniometric turntable and electronic controls, and auxiliary equipment including a goniometer, diffraction electromagnet, two cryogenic dewars, and two diffraction furnaces.

B67-10134 CRYOGENIC SEAL REMAINS LEAKTIGHT DURING THERMAL DISPLACEMENT FIELDS, T. H. MARTIN, K. B. PEWITT, E. G. MAY 1967 ARG-96

Cryogenic seals protect the surfaces of a plastic member in a low-pressure system subjected to extreme temperature changes. The outer seal is an aluminum expansion ring bonded to the lens outer surface and the inner seal consists of a resin-filled aluminum U-ring bonded to the inner surface.

B67-10164 SOLAR X-RAY SPECTRUM REPRODUCED IN VACUUM ERDMAN, C. A. KIRCHNER, L. P. /IIT RES. INST./ JUN. 1967 MSC-228 MSC-1168

Desired low energy X-rays are produced by modifying commercial ion tubes and combining them with standard power supplies and control circuitry. These X-rays have less deviation from the solar X-ray spectrum in energy and intensity.

B67-10216 ELECTRON BEAM WELDER X-RAYS ITS OWN WELDS RODEN, W. A. /GEN. DYN./CONVAIR DIV./ JUN. 1967 LEWIS-10111

Beam of an electron beam welder X-rays its own welds, enabling rapid weld quality checks to be made without removing the work from the vacuum chamber. A tungsten target produces X-rays when hit by the beam. They are directed at the weld specimen and recorded on polaroid film.

X-RAY SOURCE USES INTERCHANGEABLE TARGET ANODES TO VARY X-RAY WAVELENGTH SHIELDS, R. A. JUL. 1967 NPO-10036

Compact laboratory X-ray tube generates X-rays of various wavelengths by using interchangeable target anodes. The wavelength of the X-rays depends on the metal from which the anode is made.

B67-10247 WATER COOLED ANODE INCREASES LIFE OF HIGH TEMPERATURE ARC LAMP RIISE, H. N. NOV. 1967 NPO-10180

Water cooling system increases the life of the anode of a high temperature compact arc lamp. A shaped water passage is provided through the tip or hottest point of the anode so that water will flow through it at a relatively high velocity.

B67-10264 INEXPENSIVE CRYOGENIC INSULATION REPLACES VACUUM JACKETED LINE FUCHS, C. E. /WESTINGHOUSE ASTRONUCL. LAB./ JUL. 1967 NUC-10061

Commercially available aluminized Mylar, cork and fiberglass form a multilayered sealed system and provide rugged and economical field installed insulation for cryogenic /liquid nitrogen or oxygen/ pipe lines in an exposed environment.

B67-10288
LASER SYSTEM GENERATES SINGLE-FREQUENCY
LIGHT

TARG, R. /SYLVANIA ELECTRON. SYSTEMS/ AUG. 1967 M-FS-2556 Program eliminates major sources of noise in th laser output. with minimum sacrifice of total

Program eliminates major sources of noise in the laser output, with minimum sacrifice of total laser output power. Results include the design and development of a CW laser system which features high power single-frequency output in the S-20 photocathode response region.

B67-10295
IMPROVED ULTRASONIC TV IMAGES ACHIEVED BY
USE OF LAMB-WAVE ORIENTATION TECHNIQUE
BERGER, H. AUG. 1967 SEE ALSO ANL-7042
ARG-203

Lamb-wave sample orientation technique minimizes the interference from standing waves in continuous wave ultrasonic television imaging techniques used with thin metallic samples. The sample under investigation is oriented such that the wave incident upon it is not normal, but slightly angled.

B67-10296 THERMAL NEUTRON IMAGE INTENSIFIER TUBE PROVIDES BRIGHTLY VISIBLE RADIOGRAPHIC PATTERN

BERGER, H. KRASKA, I. /ARGONNE/ NIKLAS, W. SCHMIDT, A. /THE RAULAND CORP./ AUG. 1967 ARG-120

Vacuum-type neutron image intensifier tube improves image detection in thermal neutron radiographic inspection. This system converts images to an electron image, and with electron acceleration and demagnification between the input target and output screen, produces a bright image viewed through a closed circuit television system.

B67-10297
FRESHEL DIFFRACTION PLATES ARE SIMPLE
AND INEXPENSIVE
HOOVER, R. B. AUG. 1967
M-FS-12731

Fresnel plate demonstrates diffraction phenomena simply and inexpensively. A large number of identical diffracting apertures are made in random orientation on photographic film. When a small source of light is viewed through the plate, the diffraction pattern typical of the diffracting aperture is readily seen.

B67-10316
RADIATION COUNTING TECHNIQUE ALLOWS DENSITY
MEASUREMENT OF METALS IN HIGH-PRESSURE HIGH-TEMPERATURE ENVIRONMENT
DILLION, I. G. NELSON, P. A. SWANSON, B. S.
SEP. 1967
ARG-124

Radioactive tracers induced by neutron irradiation provide a gamma ray flux proportional to the density of a metal, allowing density measurement of these metals in extreme high-temperature and high-pressure environments. This concept is applicable to most metals, as well as other substances.

B67-10326
PORTABLE SPECTROMETER MONITORS INERT GAS SHIELD IN WELDING PROCESS
GROVE, E. L. /IIT RES. INST./ SEP. 1967
M-FS-12144

Portable spectrometer using photosensitive readouts monitors the amount of oxygen and hydrogen in the inert gas shield of a tungsteninert gas welding process. A fiber optic bundle transmits the light from the welding arc to the spectrometer.

B67-10337 LOW-ENERGY GAMMA RAY INSPECTION OF BRAZED ALUMINUM JOINTS BROWN, J. A. /N. AM. AVIATION/ SEP. 1967 MSC-1189

Americium 241 serves as a suitable radioisotope /gamma ray source/ and exposure probe for radiographic inspection of brazed aluminum joints in areas of limited accessibility. The powdered isotope is contained in a sealed capsule mounted at the end of a spring-loaded pushrod in the probe assembly.

B67-10342 SIMPLIFIED TECHNIQUE DEMONSTRATES MAGNETIC DOMAIN SWITCHING INNOVATOR NOT GIVEN /SPERRY RAND CORP./ OCT. 1967 M-FS-13153

Light from a conventional photographic light source is polarized and projected through thin samples of gadolinium iron garnet and then observed with a conventional polarizing microscope. A distinctive change in color from red to yellow is observed as the magnetic domains are switched.

B67-10352
PRACTICAL NEW METHOD OF MEASURING THERMALNEUTRON FLUENCE
SIEBOLD, J. R. WARMAN, E. A. /AEROJET-GEN.
CORP./ OCT. 1967
NUC-10086

Thermoluminescence dosimeter technique measures thermal-neutron fluence by encapsulating lithium flouride phosphor powder and exposing it to a neutron environment. The capsule is heated in a dosimeter reader, which results in light emission proportional to the neutron fluence.

B67-10371 MEASURING COPLANARITY OF SURFACES WERNER, M. M. /KOLLSMAN INSTR. CORP./ OCT. 1967 MSC-12044

Interferometric technique is used to measure the coplanarity and flatness of lapped surfaces on which a high-precision mirror is to be mounted. The measurement of minute height variations of several small discrete surfaces is accomplished simultaneously.

B67-10372 ELECTRON BEAM PARALLEL X-RAY GENERATOR PAYNE, P. /AM. SCI. AND ENG./ OCT. 1967 MSC-11022

Broad X-ray source produces a highly collimated beam of low energy X-rays - A beam with 2 to 5 arc minutes of divergence at energies between 1 and 6 keV in less than 5 feet. The X-ray beam is generated by electron bombardment of a target from a large area electron beam gun.

B67-10388
MODIFIED BLACKBODY DEVICE EMITS HIGH-DENSITY
RADIATION
SCHUMACHER, P. E. /N. AM. AVIATION/ OCT. 1967
M-FS-12744

Modified device provides a versatile, precisely controllable source of blackbody radiation to calibrate radiometers used for spectrometric analysis of large rocket engine plumes.

B67-10391
METHOD PREVENTS SECONDARY RADIATION IN
RADIOGRAPHIC INSPECTION
STRUCKUS, A. A. /N. AM. AVIATION/ OCT. 1967
M-FS-13383

Thin-walled neoprene containers prevent secondary radiation, scatter, and undercut during radiographic inspection. The containers are filled with a mixture of barium sulfate, red lead, and petroleum jelly that achieves the required absorption rate.

B67-10394
EXPERIMENTS TO INVESTIGATE PARTICULATE
MATERIALS IN REDUCED GRAVITY FIELDS
BOWDEN, M. EDEN, H. F. FELSENTHAL, P. GLASER,
P. E. WECHSLER, A. E. /ARTHUR D. LITTLE/ OCT.
1967
M-FS-1330A

Study investigates agglomeration and the macroscopic behavior in reduced gravity fields of

particles of known properties by measuring and correlating thermal and acoustical properties of particulate materials. Experiment evaluations provide a basis for a particle behavior theory and measure bulk properties of particulate materials in reduced gravity.

AERIAL-IMAGE ENABLES DIAGRAMS AND ANIMATION TO BE INSERTED IN MOTION PICTURES ANDREWS, S. J., JR. TRESSEL, G. W. OCT. 1967 ARG-165

Aerial-image unit makes it possible to insert diagrams and animation into live motion pictures, and also lift an element from a confusing background by suppressing general details. The unit includes a combination of two separate lens systems, the camera-projector system and the field lens system.

B67-10413

STUDY OF HYDROGEN SLUSH-HYDROGEN GEL UTILIZATION KELLER, C. W. /LOCKHEED MISSILES AND SPACE CO./ OCT. 1967 M-FS-13068

Study of hydrogen slush-hydrogen gel utilization is presented in two volume publication. The first volume contains the physical and thermal property data for hydrogen used in the study. In the second volume, details of the technical effort are presented including parametric analysis of effects on vehicle systems.

B67-10420 CONCEPT FOR CRYOGENIC LIQUID RECLAMATION SYSTEM DADERIAN, S. M. NOV. 1967 NPO-10322

Cryogenic liquid reclamation system is used as an add-on unit to the nitrogen system of environmental test laboratories to salvage liquid nitrogen presently being treated as waste. The system may be installed indoors or outdoors provided the gas boiled off from the cryogenic liquid is vented to the outside.

B67-10428

ULTRASONICS USED TO MEASURE RESIDUAL STRESS INNOVATOR NOT GIVEN /R. W. BENSON AND ASSOCIATES/ NOV. 1967 M-FS-12449

Ultrasonic method is used to measure residual stress in metal structures. By using this method, various forms of wave propagation in metals are possible, and more thorough analysis of complex geometric structures may be had.

B67-10430 STUDY MADE OF ACOUSTICAL MONITORING FOR MECHANICAL CHECKOUT SAVELLE, C. NOV. 1967 M-FS-13372

Study demonstrates that sonic signal analysis technique provides a powerful tool for mechanical component checkout. The technique also provides the unique capability of predicting component failures by detecting incipient malfunctions.

B67-10431

CAMERA LENS ADAPTER MAGNIFIES IMAGE MOFFITT, F. L. NOV. 1967 M-FS-11955

Polaroid Land camera with an illuminated 7-power magnifier adapted to the lens, photographs weld flaws. The flaws are located by inspection with a 10-power magnifying glass and then photographed with this device, thus providing immediate pictorial data for use in remedial procedures.

CODED PHOTOGRAPHIC PROOF PAPER COULD SERVE AS CONVENIENT DENSITOMETER WINSLOW, D. J. NOV. 1967 M-FS-13374

Standard print-out proofing paper, preprinted with an identifying code, serves as convenient densitometer. Exposure to light darkens the paper and gives a measure of the density of the

resultant photographic image or the total amount of exposure sustained by the paper.

B67-10452 PROPOSED METHOD OF ROTARY DYNAMIC BALANCING

BY LASER PERKINS, W. E. /N. AM. AVIATION/ NOV. 1967 M-FS-12422

Laser method, where high energies of monochromatic light can be precisely collimated to perform welding and machining processes, is proposed for rotary dynamic balancing. The unbalance, as detected with the velocity pickup, would trigger the laser system which would emit high energy pulses directed at the component*s heavy side.

B67-10462

FLUID BEHAVIORAL PATTERNS FOUND IN SUBSCALE GEYSERING STUDY
BURKHALTER, J. E. GLASGOW, V. L. /BOEING CO./ NOV. 1967 M-FS-13582

Study provides a fundamental understanding of geysering mechanisms necessary for formulating theoretical analyses. An algebraic relationship between average heating rate, reservoir temperature, and geysering period was established and areas for future studies were identified.

B67-10465

STUDY MADE OF TRANSFER OF HEAT ENERGY THROUGH METAL JOINTS IN VACUUM ENVIRONMENT ELLIOT, D. H. /DOUGLAS AIRCRAFT CO./ M-FS-12534

Heat energy transfer is concentrated closely around a melted joint and the temperature drop across it decreases rapidly as the bolt and nut are tightened to a minimum torgue level. Flat metal surfaces pressed together display a cyclical improvement in heat energy transfer as the interface pressure is increased.

METHOD FOR X-RAY STUDY UNDER EXTREME TEMPERATURE AND PRESSURE CONDITIONS PAUS, L. L. /BENDIX CORP./ DEC. 1967 MSC-11232

Vacuum chamber environmental simulator and X-ray camera are used to study the stability of various minerals in extreme environmental conditions. An ion pump creates the desired vacuum. Exact sample positioning is obtained with a bellows sealed linear motion feed-through. Temperature control is by means of fluid conductive heat transfer.

B67-10477

TRAINING COURSE FOR RADIATION SAFETY TECHNICIANS LASUK, S. R. MOE, H. J. DEC. 1967 SEE ALSO ANL-6991 ARG-216

Course of instruction includes sections on basic information, natural radioactivity, properties of alpha, beta, gamma, X-rays, and, neutrons, concepts of radiation units and dose determinations, shielding, biological effects, background radiation, radiation protection standards, and internal dose calculation.

B67-10485

DUAL PHOTOCHEMICAL REPLENISHER SYSTEM REDUCES CHEMICAL LOSSES KOLBER, J. M. DEC. 1967 KSC-67-111

Dual replenisher system reduces chemical losses and maintain optimum solution concentration during long nonprocessing cycles of photo processing machines. Using a single 3-position switch and solenoid control valves the system provides instantaneous flow control to each processing tank.

B67-10486 ULTRASONIC HAND TOOL ALLOWS CONVENIENT DIAGNOSTIC SCANNING OF BONE INTEGRITY BEAL, J. B. DEC. 1967 SEE ALSO B66-10289 M-FS-14102

Electrically powered ultrasonic hand tool rapidly

scans bone integrity and determines density without the need for surgery or X-rays. This portable tool eliminates bulky equipment, although it is limited to bone surfaces not hidden by other bones.

B67-10508
GLANCING INCIDENCE TELESCOPE FOR FAR
ULTRAVIOLET AND SOFT X-RAYS
NEUPERT, W. M. UNDERWOOD, J. H. DEC. 1967
GSFC-10052

Glancing-incidence telescope makes observations of distant celestial radiant bodies at wavelengths in the spectral region between 3 and 500 angstroms. The device can be used as a fore-optics system for a laboratory extreme ultraviolet spectrometer, or for the collection or **imaging** of thermal neutrons.

B67-10516
NOISE STUDY OF SINGLE STAGE COMPRESSOR
ROTOR-STATOR INTERACTION
COPELAND, W. L. CRIGLER, J. L. DEC. 1967
LANGLEY-137

Study made of noise radiation from rotor-stator interaction in axial-flow compressors. The collected data were reduced to the form of radiation patterns and frequency spectra. These data show how the radiation patterns are affected by the relative number of rotor blades and stator vanes.

B67-10542
PLASTIC SHOE FACILITATES ULTRASONIC
INSPECTION OF THIN WALL METAL TUBING
LAMBERMEYER, D. J. PETERSON, R. M. /AEROJET GEN.
CORP./ DEC. 1967
NUC-10010

B67-10564

radiography.

Plastic shoe aids inspection of thin walled stainless steel welded tubing to locate voids or other material defects in critical component equipment. Incorporated in available ultrasonic inspection equipment, it couples the transducer to the tube at desired incident angles.

MECHANIZES X-RAY INSPECTION SYSTEM
FOR LARGE TANKS
OCCHIPINTI, G. C. /BOEING CO./ DEC. 1967
M-FS-12867 M-FS-12868 M-FS-13065 M-FS-13815
Mechanized X-ray equipment provides
nondestructive inspection of structural weldments
at various positions on very large tanks. It
mechanizes the placement of the film, automates
the identification process, adheres to safety
requirements, and eliminates all the usual
time-consuming manual operations in industrial

B67-10597
NEUTRON DETECTOR SIMULTANEOUSLY MEASURES
FLUENCE AND DOSE EQUIVALENT
DVORAK, R. F. DYER, N. C. DEC. 1967 SEE ALSO
ANL-7085
ARG-10071

Neutron detector acts as both an area monitoring instrument and a criticality dosimeter by simultaneously measuring dose equivalent and fluence. The fluence is determined by activation of six foils one inch below the surface of the moderator. The dose equivalent is determined from activation of three inter locked foils at the center of the moderator.

B67-10601
ANALYTICAL DRAFTING CURVES PROVIDE EXACT
EQUATIONS FOR PLOTTED DATA
STEWART, R. B. DEC. 1967
LANGLEY-285

Analytical drafting curves provide explicit
mathematical expressions for any numerical data
that appears in the form of graphical plots. The
curves each have a reference coordinate axis
system indicated on the curve as well as the
mathematical equation from which the curve was
generated.

B67-10602 NEW TECHNIQUE FOR DETERMINATION OF CROSS- POWER SPECTRAL DENSITY WITH DAMPED OSCILLATORS SIMON, W. E. WALKER, L. A. /MARTIN CO./ DEC. 1967 M-FS-14022

New cross-power spectral density computation technique has been developed, as well as a technique for discrimination between periodic and random signals. This development is applicable to analysis of any stationary random process, and can be used in the aerospace and transportation fields.

B67-10605 LAMB WAVES INCREASE SENSITIVITY IN NONDESTRUCTIVE TESTING DINOVI, R. DEC. 1967 SEE ALSO ANL-6630, ANL-6329 ARG-10009

Lamb waves improve sensitivity and resolution in the detection of small defects in thin plates and small diameter, thin-walled tubing. This improvement over shear waves applies to both longitudinal and transverse flaws in the specimens.

B67-10609
GIMBALED-HIRROR SCANNING SYSTEM CAPABLE
OF SPIRAL PATTERN
HAERTSCH, O. C. WILSON, M. W. DEC. 1967
GSFC-10170

Gimbaled-mirror infrared radiation scanner, with a lightweight torque motor direct coupled to each axis, is capable of scanning in a highly efficient spiral pattern. The scanner is lightweight and can be remotely positioned in previously inaccessible areas because the radiometer head and the gimbaled-mirror scanner can be separated.

B67-10610
HANDBOOK OF CRYOGENIC DATA IN GRAPHIC FORM
LOEB, M. B. /BOEING CO./ DEC. 1967
KSC-10009

Handbook of Cryogenic Data is written in graphic form and concentrates extensive data on common materials of construction and properties of fluids frequently encountered in designing cryogenic systems. All data are presented in the British system of units.

B67-10613
POLYSTYRENE CRYOSTAT FACILITATES TESTING
TENSILE SPECIMENS UNDER LIQUID NITROGEN
SHOGAN, R. P. SKALKA, R. J. /WESTINGHOUSE
ASTRONUCL. LAB./ DEC. 1967
NUC-10522

Lightweight cryostat made of expanded polystyrene reduces eccentricity in a tensile system being tested under liquid nitrogen. The cryostat is attached directly to the tensile system by a special seal, reducing misalignment effects due to cryostat weight, and facilitates viewing and loading of the specimens.

B67-10617
TEST SYSTEM ACCURATELY DETERMINES TENSILE
PROPERTIES OF IRRADIATED METALS AT CRYOGENIC
TEMPERATURES
LEVINE, P. J. SKALKA, R. J. VANDERGRIFT, E. F.
VWESTINGHOUSE ASTRONUCL. LAB./ DEC. 1967
NUC-10521

Modified testing system determines tensile properties of irradiated brittle-type metals at cryogenic temperatures. The system includes a lightweight cryostat, split-screw grips, a universal joint, and a special temperature control system.

B67-10618
ENVIRONMENTAL CONTROL SYSTEM FOR CRYOGENIC
TESTING OF TENSILE SPECIMENS
VANDERGRIFT, E. F. YATSKO, G. O. /WESTINGHOUSE
ASTRONUCL. LAB./ DEC. 1967
NUC-10523

Environmental control system uses a special coil to permit the tensile testing of specimens which may be subjected to temperatures anywhere between liquid nitrogen and room temperature. The test specimen zone is surrounded by the coil which permits the selective flooding of the specimen

with warm or cold gas.

B67-10621
JET ENGINE POWERS LARGE, HIGH-TEMPERATURE
WIND TUNNEL
BENHAM, T. F. MULLIKEN, S. R. /N. AM. AVIATION/
DEC. 1967
M-FS-13544

Wind tunnel for large component testing uses a jet engine with afterburner to provide high temperatures /1200 degrees to 2000 degrees F/ and controlled high velocity gas. This economical wind tunnel can accommodate parts ten feet by ten feet or larger, and is a useful technique for qualitative information.

B67-10633
DEVELOPMENT OF CURIE POINT SWITCHING FOR THIN FILM, RANDOM ACCESS, MEMORY DEVICE LEWICKI, G. W. TCHERNEV, D. I. DEC. 1967
NPO-10402

Managanese bismuthide films are used in the development of a random access memory device of high packing density and nondestructive readout capability. Memory entry is by Curie point switching using a laser beam. Readout is accomplished by microoptical or micromagnetic scanning.

B67-10636
RONCHI TEST APPLIED TO MEASUREMENT OF
SURFACE ROUGHNESS
GALLAY, H. M. VIZENOR, R. /SCHJELDAHL /G.T./
CO./ DEC. 1967
M-FS-12583

Ronchi test is applied to measure microscopic variations in surface roughness or flatness of metalized test specimens. Light is projected through a diffraction grating onto the test specimen, and the light reflected from the specimen is viewed or photographed through the grating.

B67-10640
REVIEW OF PHYSICS, INSTRUMENTATION AND
DOSIMETRY OF RADIOACTIVE ISOTOPES
SINCLAIR, W. K. DEC. 1967
ARG-10037

General radioactive isotope information, stressing radioactivity, methods of measurement, and dosimetry of radioactive nuclides has been reviewed to serve as a reference for the medical profession. Instability of radionuclides, principal types of emission, and measurement of ionizing radiation are among the topics discussed.

B67-10644
DEVELOPMENT OF DUAL SOLID CRYOGENS FOR HIGH RELIABILITY REFRIGERATION SYSTEM CAREN, R. P. COSTON, R. M. /LOCKHEED MISSILES AND SPACE CO./ DEC. 1967
GSFC-10188

High reliability solid cryogen refrigeration system consists of a container initially filled with a solid cryogen which is coupled thermally to an infrared detector by means of a link of high thermal conductivity extending from a heat exchanger within the cryogen container.

B67-10648
ADAPTIVE CONTROL CIRCUIT PREVENTS AMPLIFIER
SATURATION
NONDSIECK, A. J. /GEN. MOTORS CORP./ JAN. 1968
ERC-10026

Adaptive control circuit prevents saturation of push-pull output amplifiers used in low-power, low-torque suspension system. The adaptive control circuit senses how near the output amplifiers are to saturation and sets the B voltage in such a way as to keep them just clear of saturation.

B67-10653 NONRECIPROCAL GAIN CONTROL FOR RING LASER DUEKER, G. LEE, P. /PERKIN-ELMER CORP./ DEC. 1967 M-FS-14041

Nonreciprocal gain control is used in a ring laser where the two contracirculating beams may have

differing intensities because of the residual Faraday rotation and other secondary nonreciprocal effects.

B67-10671 TELESCOPE MOUNT WITH AZIMUTH-ONLY PRIMARY WELLS, W. H. JAN. 1968 NPO-10468

In large aperture telescope primary reflectors, the primary mirror is fixed with respect to the gravity vector to avoid varying gravity deflection problems. The primary reflector does not become distorted in various positions nor in changing positions.

03 MATERIALS (CHEMISTRY)

B63-10004
REFERENCE BLACK BODY IS COMPACT, CONVENIENT TO USE
DIMEFF, J. NEEL, C. B. APR. 1964

To replace the classical hollow sphere, a compact reference black body has been constructed from stacked razor blades. Treated with a deposit of black oxide on the surfaces or notches between the upper edges of the blades, the device is useful over a wide range of incident angles.

B63-10207
THERMALLY CONDUCTIVE METAL WOOL-SILICONE
RUBBER MATERIAL CAN BE USED AS SHOCK AND
VIBRATION DAMPER
HOUGH, W. W. APR. 1964
JPL-321

Bronze wool pads, impregnated with silicon rubber, meet the requirement for a thermally conductive, shock and vibration absorbing material. They serve as spacers in equipment mounting and are resistant to high temperatures.

B63-10234 FILTER FOR HIGH-PRESSURE GASES HAS EASY TAKE-DOWN, ASSEMBLY MAC GLASHAN, W. F. FEB. 1964 JPL-373

A small metal filter body, for use in tubing supplying sterilization gases, has an inlet end that can be unscrewed. Inside, the high pressure filter is supported on both sides and sealed by an D-ring. Design facilitates assembly and disassembly of parts.

B63-10235 CRYOGENIC FILTER METHOD PRODUCES SUPER-PURE HELIUM AND HELIUM ISOTOPES HILDEBRANDT, A. F. MAR. 1964 JPL-374

To purify helium, it is cooled in a low pressure environment until it becomes superfluid. The liquid helium is then filtered through iron oxide particles. Heating, cooling and filtering processes continue until the purified liquid helium is heated to a gas.

B63-10263 FRESMEL CUP REFLECTOR DIRECTS MAXIMUM ENERGY FROM LIGHT SOURCE LAUE, E. G. YOUNGBERG, C. L. MAY 1964 JPL-424

To minimize shielding and overheating, a composite Fresnel cup reflector design directs the maximum energy from a light source. It consists of a uniformly ellipsoidal end surface and an extension comprising a series of confocal ellipsoidal and concentric spherical surfaces.

B63-10311
OIL-SMEARED MODELS AID WIND TUNNEL
MEASUREMENTS
KATZOFF, S. LOVING, D. K. 1 APR. 1964 /SEE
NASA-MEMO-3-17-59L/
LANGLEY-4

For visualizing flow characteristics in wind tunnel tests, model surfaces are smeared with any common petroleum-base oils. These fluoresce under ultraviolet light and the flow patterns are readily visualized.

B63-10318
QUICK-HARDENING PROBLEMS ARE ELIMINATED WITH
SPRAY GUN HODIFICATION WHICH MIXES RESIN AND
ACCELERATOR LIQUIDS DURING APPLICATION
JOHNSON, O. W. MAR. 1964 /SEE U.S. PATENT NO.
2,930,532/
LANGLEY-6A

A modified spray gun, with separate containers for resin and additive components, solves the problems of quick hardening and nozzle clogging. At application, separate atomizers spray the liquids in front of the nozzle face where they blend.

B63-10337
GALLIUM USEFUL BEARING LUBRICANT IN HIGHVACUUM ENVIRONMENT
BUCKLEY, D. H. MAY 1964 /SEE U.S. PATENT NO.
3,072,574/
LEWIS-12

Solid gallium is used as a lubricant on bearings made of compatible materials. Such lubricants perform well in a high vacuum and under low temperature.

B63-10345
APPARATUS FACILITATES HIGH-TEMPERATURE TENSILE
TESTING IN VACUUM
SIKORA, P. F. JUN. 1964

An apparatus for heating refractory materials to high temperatures during tensile testing includes a water-cooled stainless steel vacuum chamber. This contains a resistance heater consisting of a slit tube of tantalum or tungsten to enclose the tensile test rod.

B63-10351
NEW COBALT ALLOYS HAVE HIGH-TEMPERATURE
STREMGTH AND LONG LIFE IN VACUUM ENVIRONMENTS
ASHBROOK, R. L. FRECHE, J. C. KLIMA, S. J. MAR.
1964
LEWIS-47

Cobalt refractory metal alloys combine sheet formability with high temperature strength and low material loss in vacuum.

B63-10365
LOW-COST INSULATION SYSTEM FOR CRYOSTATS
ELIMINATES NEED FOR A VACUUM
CALVERT, H. F. MAY 1964
LEWIS-64

In order to eliminate the hazard caused by residual air trapped between the concentric shells of a cryostat, these annular spaces are pressurized with helium gas. This system is more economical than the use of powdered insulation maintained at low vacuums.

B63-10378
LIQUID-LEVEL METER HAS NO MOVING PARTS
ESCUE, W. T. /BENDIX CORP./ JUN. 1964
M-FS-3

An electro-optical system, without moving parts, reliably indicates liquid levels at cryogenic temperatures. Glass prisms, which act as liquid level probes inside the tank, extend from optically aligned photoelectric assemblies mounted on the outside.

B63-10389 LIGHTWEIGHT MAGNESIUM-LITHIUM ALLOYS SHOW PROMISE ADAMS, W. T. CATALDO, C. E. JUN. 1964 M-FS-17

Evaluation tests show that magnesium-lithium alloys are lighter and more ductile than other magnesium alloys. They are being used for packaging, housings, containers, etc., where light weight is more important than strength.

B63-10424
VARIABLE LIGHT SOURCE WITH A MILLION-TO-ONE
INTERSITY RATIO
SNOW, W. B. /SPACE TECHNOL. LAB./ MAY 1964
JPL-WOO-008
A wide range, variable intensity light source of

constant color characteristics has been developed for testing and calibrating photomultiplier tubes. A light attenuator first diffuses light from a constant source, then permits variable attenuation through a series of chambers and adjustable apertures.

B63-10429
WELDED PRESSURE TRANSDUCER MADE AS SMALL AS 1/8TH-INCH IN DIAMETER
COON, G. W. MAR. 1964 /SEE U.S. PATENT NO. 3,027,769/
ARC-11

A special spot welding technique is used to make miniature capacitance transducers for placing in a wind tunnel model. Rugged and relatively low in cost, they have a flat response up to one-third of the resonant frequency.

B63-10453
MOLYBDENUM DISULFIDE MIXTURES MAKE EFFECTIVE
HIGH-VACUUM LUBRICANTS
INNOVATOR NOT GIVEN /MIDWEST RES. INST./ NOV.
1964
M-FS-54

Five different mixtures of molybdenum disulfide are found to be effective bearing lubricants when tested at very low pressures and high temperatures.

B63-10476
CESIUM IODIDE CRYSTALS FUSED TO VACUUM TUBE
FACEPLATES
FLECK, H. G. /ELECTRO-MECHANICAL RES. INC./ MAY
1964
GSFC-67

A cesium iodide crystal is fused to the lithium fluoride faceplate of a photon scintillator image tube. The conventional silver chloride solder is then used to attach the faceplate to the metal support.

B63-10479
IMPROVED MOLYBDENUM DISULFIDE-SILVER MOTOR
BRUSHES HAVE EXTENDED LIFE
HORTON, J. C. KING, H. M. MAY 1964
M-FS-64

Motor brushes of proper quantities of molybdenum disulfide and copper or silver are manufactured by sintering techniques. Graphite molds are used. These brushes operate satisfactorily for long periods in normal atmosphere or in a high-vacuum environment.

B63-10481
REFRACTORY CERAMIC HAS WIDE USAGE, LOW
FABRICATION COST
INNOVATOR NOT GIVEN /GEORGIA INST. OF TECH./ APR.
1964
M-FS-62

Particulate, fused amorphous silica is formed into complex shapes by casting in plaster molds. High temperature firing is not required. This ceramic is resistant to thermal shock and exhibits good strength properties.

B63-10528 VARIABLE-TRANSPARENCY WALL REGULATES TEMPERATURES OF STRUCTURES OSULLIVAN, W. J., JR. JUN. 1964 LANGLEY-25

An effective temperature regulating wall consists of one layer /e.g., one of the paraffins/ relatively opaque to thermal radiation in the solid state and transparent to it in the molten state and placed between two transparent layers. A mirror coating is applied to back layer.

B63-10546
TEST DEVICE PREVENTS MOLECULAR BOUNCE-BACK
HARDGROVE, W. F. SHAPIRO, H. JUL. 1964
GSFC-82

A test device, which consists of six pyramidal reflectors joined together, acts as a baffle to impede the free path of the molecule to the test item by interposing a slanted surface which imparts an angular vector to the molecule and bounces it back to the chamber wall.

B63-10557
RAPID HELIUM-AIR ANALYZER CAN MEASURE OTHER
BINARY GAS MIXTURES
MELFI, L. T. WOOD, G. M. YEAGER, P. R. FEB.
1964
LANGLEY-16

An instrument comprised of an ionization pressure gauge and a diaphragm pressure gauge consisting of strain gauges to make a four-arm bridge, and a ratio meter is constructed for analyzing gas mixtures. The ratio of the outputs of the two gauges is proportional to the mixture composition.

B63-10562 GATE VALVE WITH CERAMIC-COATED BASE OPERATES AT HIGH TEMPERATURES BRASS, A. JUL. 1964 ARC-23

A copper base insert coated with a layer of aluminum oxide ceramic prevents frictional binding between the gate and base surfaces of a gate valve which are subject to rapid sliding action and high temperatures.

B63-10612
METALS PLATED ON FLUOROCARBON POLYMERS
FORD, H. KRASINSKY, J. B. VANGO, S. P. OCT.
1964
JPL-544

Electroplating lead on fluorocarbon polymer parts is accomplished by etching the parts to be plated with sodium, followed by successive depositions of silver and lead from ultrasonically agitated plating solutions. Metals other than lead may be electroplated on the silvered parts.

B64-10068
MECHANICAL PROPERTIES OF PLASTICS PREDETERMINED
BY EMPIRICAL METHOD
LOHR, J. J. PARKER, J. A. JUL. 1964
ARC-28

To predetermine the mechanical properties of rigid plastics as a function of plasticizer content and composition, a set of equations has been empirically derived. These relate strain rate, yield stress, temperature, and weight fraction of the plasticizer.

B64-10099
REFRACTORY THERMAL INSULATION FOR SMOOTH
METAL SURFACES
INNOVATOR NOT GIVEN /GOODYEAR AEROSPACE CORP./
OCT. 1964
M-FS-160

To protect rocket metal surfaces from engineexhaust heat, a refractory thermal insulation mixture, which adheres to smooth metals, has been developed. Insulation protection over a wide temperature range can be controlled by thickness of the applied mixture.

B64-10113 ELASTOMERS BONDED TO METAL SURFACES SEAL ELECTROCHEMICAL CELLS SHERFEY, J. M. AUG. 1964 GSFC-168

A leakproof seal secondary cell containing alkaline electrolytes was developed by bonding an alkali-resistant elastomer, such as neoprene, to metal contact surfaces. Test results of several different elastomers strongly indicate the feasibility of this sealing method.

B64-10116
LEAD OXIDE CERAMIC MAKES EXCELLENT HIGHTEMPERATURE LUBRICANT
JOHNSON, R. L. SLINEY, H. E. AUG. 1964
LEWIS-144

A dry lubricant coating in ceramic form consisting of 95 percent lead monoxide and 5 percent silicon dioxide withstood a temperature of 1200 deg F, with a bearing operating at various atmospheric pressures. From this testing, there was no galling or metal transfer of the bearing.

B64-10138 NOVEL SHOCK ABSORBER FEATURES VARYING YIELD STRENGTHS GEIER, D. J. JUL. 1964 MSC-63A

A shock absorbent webbing of partially drawn synthetic strands is arranged in sections of varying density related to the varying mass of the human body. This is contoured to protect the body at points of contact, when subjected to large acceleration or deceleration forces:

B64-10142 STRINGENT CLEANING TECHNIQUE ASSURES RELIABLE EPOXY BOND INNOVATOR NOT GIVEN /RCA/ JUN. 1964 GSFC-161

For reliable aluminum bonding to withstand stress, the mating surfaces are carefully cleaned, etched, rinsed and dried. An epoxy and hardener designed for metal-to-metal bonding is then used for a rigid assembly.

B64-10151
PLASTIC FILMS FOR REFLECTIVE SURFACES
REPRODUCED FROM MASTERS
INNOVATOR NOT GIVEN /MINNEAPOLIS HONEYWELL/ OCT.
1964
GSFC-188

Accurate reproduction in plastic of the surface of the optical master to which a reflective finish may be applied is done by using backing from any suitable material to which cured plastic will adhere tightly. Plastics used for reflectors should be of the thermosetting or catalytically hardened type.

B64-10166
FILLER DEVICE FOR HANDLING HOT CORROSIVE
MATERIALS
INNOVATOR NOT GIVEN /PRATT AND WHITNEY AIRCRAFT/
OCT. 1964
MSC-85

A bellows-type bag with its own heating element is developed for safe handling and injection of hot corrosive liquids into modules.

B64-10206 SOLDER FLUX LEAVES CORROSION-RESISTANT COATING ON METAL BAUMAN, A. J. OCT. 1964 JPL-611

A soldering flux consisting of perfluoro-octancic acid hydrazine provides a corrosion resistant film on metal surface, particularly copper. It is ineffective for soldering aluminum.

B64-10270
PRESSURE MOLDING OF POWDERED MATERIALS
IMPROVED BY RUBBER MOLD INSERT
INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS
CORP./ NOV. 1964
WOO-100

Pressure molding tungsten microspheres is accomplished by applying hydraulic pressure to a silicone rubber mold insert with several barrel shaped chambers which is placed in a steel die cavity. This technique eliminates castings containing shear fractures.

B64-10282 FINE-MESH SCREEN HADE BY SIMPLIFIED METHOD INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DEC. 1964 W00-104

Strong fine-mesh screens are fabricated by a method involving uniform distribution of fine ferromagnetic particles on a nonmagnetic plate. Such screens are commonly used for grids in electron tubes and ion devices.

B64-10319
GAS DIFFUSION CELL REMOVES CARBON DIOXIDE FROM OCCUPIED AIRTIGHT ENCLOSURES
INNOVATOR NOT GIVEN /IOWA U./ DEC. 1964
MSC-118

A small, lightweight permeable cell package separates and removes carbon dioxide from respiratory regenerative while chemically inert in the presence of carbon dioxide so that only adsorption takes place.

B65-10004
SCREENING TECHNIQUE MAKES RELIABLE BOND AT ROOM TEMPERATURE
INNOVATOR NOT GIVEN /IBM/ JAN. 1965
M-FS-227

Stainless-steel screen used to lay room temperature curing epoxy adhesive permits reliable bonding of electronic circuits boards. This technique would be useful with thin-walled structures that warp during conventional bonding operations.

B65-10015
IMPROVED CONDUCTIVE PASTE SECURES BIOMEDICAL
ELECTRODES
INNOVATOR NOT GIVEN /BAYLOR UNIV./ JAN. 1965 SEE
ALSO B64-10025
MSC-107

Nontoxic paste consisting of a dispersion of graphite or silver granules in a mixture of polyvinylpyrrolidone and diluted glycerol secures biomedical electrodes to human skin. Silver paste has a high electrical conductivity and forms a bond between metal and moist or dry skin.

B65-10016
ADHESIVE FOR VACUUM ENVIRONMENTS RESISTS SHOCK
AND VIBRATION
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
FEB. 1965
MSC-56

A mixture of a polyamide, an epoxy resin, and fine silica or glass microballoons provides an adhesive which is flexible, resistant to shock and vibration, and has improved heat-transfer characteristics.

B65-10024
FLUID PRESSURE USED TO TEST TURBOPUMP BEARINGS
INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ FEB.
1965
NU-0001

Testing of turbopump bearings operating in an intense radiation field is accomplished by the use of a fluid bearing tester providing radial and axial loading.

B65-10032
WIRE WINDING INCREASES LIFETIME OF OXIDECOATED CATHODES
KERSLAKE, W. VARGO, D. FEB. 1965 SEE ALSO AIAA
PAPER-64-683
LEWIS-154

Refractory-metal heater base wound with a thin refractory metal wire increases the longevity of oxide-coated cathodes. The wire-wound unit is impregnated with the required thickness of metal oxide. This cathode is useful in magneto-hydrodynamic systems and in electron tubes.

B65-10034
GAGE MEASURES ELECTRICAL CONNECTOR PIN
RETENTION FORCE
INNOVATOR NOT GIVEN /RCA/ FEB. 1965
JPL-SC-071

The retention force of a female connector pin is measured by observing the action of a calibrated spring in a gauge consisting of housing, a plunger terminating in a male subminiature connector pin and the tension spring.

B65-10043
MOUTHPIECE ADAPTER FOR PIPETTES PROTECTS MOUTH
FROM HARMFUL LIQUIDS
MC SMITH, D. G. FEB. 1965
LANGLEY-47

To prevent the laboratory technicians mouth from contacting harmful liquids, a device with a hermetically sealed elastic bellows is attached to a standard pipette.

B65-10044 FLEXIBLE CURTAIN SHIELDS EQUIPMENT FROM INTENSE HEAT FLUXES INNOVATOR NOT GIVEN /ARROWHEAD PROD./ MAR. 1965 M-FS-48

Flexible, high strength curtain made of fiberglass-silicone elastomer laminate provides thermal shielding for equipment.

B65-10065
SPHERICAL MODEL PROVIDES VISUAL AID FOR
CUBIC CRYSTAL STUDY
BACIGALUPI, R. J. SPAKOWSKI, A. E. MAR. 1965
LEWIS-108

Transparent sphere of polymethylmethacrylate with major zones and poles of cubic crystals is used to make crystallographic visualizations and to interpret Laue X-ray diffraction of single cubic crystals.

B65-10083 DIDWHIUM COMPOUND IMPROVES NICKEL-CADMIUM CELL INNOVATOR NOT GIVEN /GE/ MAR. 1965

Nickel electrodes impregnated with an additive solution of didymium hydrate and nitric acid mixed with nickel nitrate increases ampere-hour capacity of cells and does not affect the voltage characteristics.

B65-10088
FIBERGLASS PARTS CURED DURING FILAMENT WINDING ELIMINATES OVEN, SAVES TIME CARMODY, R. J. APR. 1965
M-FS-14

Resistance wire layer is introduced during winding of the fiberglass filaments with simultaneous heating. Emission of heat from the wire layer cures second fiberglass layer.

B65-10092 LIGHTWEIGHT ALUMINUM CASTING ALLOY IS USEFUL AT CRYOGENIC TEMPERATURES APR. 1965 M-FS-267

M-45, a lightweight, high purity aluminum casting alloy has superior tensile properties for use at cryogenic temperatures.

B65-10095 CARBON-ARC ROD HOLDER HAS LONG LIFE, REDUCES ARC SPLATTER INNOVATOR NOT GIVEN /RCA/ APR. 1965 1965 MSC-144

Carbon-arc rod holder with front end of beryllium oxide, a high electrical resistor and good thermal conductor, prevents nonuniform burning of the positive carbon rod and corrosion of the rod holder. Useful in optical instrument light sources.

B65-10106
MINIATURE BEARINGS LUBRICATED BY SONIC
DISPERSION METHOD
INNOVATOR NOT GIVEN /LITTON IND./ APR. 1965
M-FS-202

Evenly distributing a monomolecular film over the balls and tracks of miniature precision ball bearings by sonic dispersion results in precise lubrication which prevents lubricant bleed out to adjacent components. Varying the lubricantto-solvent ratio of the mixture causes varying lubricant coating thicknesses.

B65-10107
CRACK DETECTION METHOD IS SAFE IN PRESENCE OF LIQUID OXYGEN
INNOVATION NOT GIVEN /BUEING CO./ APR. 1965
M-FS-236

Visual flaw detection method for metals utilizes color precipitate. This method can be used safely in the presence of liquid oxygen.

B65-10117
DOUBLE GLOVES REDUCE CONTAMINATION OF DRY BOX
ATMOSPHERE
HERBELL, T. P. QUANTINETZ, M. REINHARDT, G.
APR. 1965
LEWIS-211

Pair of encased low permeability hand gloves between which an inert gas circulates reduces dry box contamination. This innovation is applicable to dry boxes using radioactive and alkali metal compounds, submicron powders, and liquid metals.

B65-10136 VAPOR PRESSURE MEASURED WITH INFLATABLE PLASTIC BAG INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ MAY 1965 GSFC-281

Deflated plastic bag in a vacuum chamber measures initial low vapor pressures of materials. The bag captures the test sample vapors and visual observation of the vapor-inflated bag under increasing external pressures yields pertinent data.

B65-10140
GALVANIC CORROSION REDUCED IN ALUMINUM
FABRICATIONS
INNOVATOR NOT GIVEN MAY 1965
M-FS-272

Titanium alloy fasteners dipped in zinc chromate primer are installed while wet in protective coated aluminum panels to reduce galvanic corrosion. Moisture tight seals at fastener points are also provided.

B65-10156
INORGANIC PAINT IS DURABLE, FIREPROOF, EASY
TO APPLY
SCHUTT, J. B. JUN. 1965
GSFC-366

Inorganic paint with a water-potassium silicate base is impervious to water. It is also fireproof and adheres to various surfaces exposed to wide temperature fluctuations.

B65-10162
ELECTROLESS NICKEL RESIST USED IN ALKALIETCHING OF ALUMINUM
INNOVATOR NOT GIVEN /SCHJELDAHL /G.T./ CO./ JUN.
1965
GSFC--884

Electroless nickel resist is unaffected by caustic soda applied as a milling or etching agent on aluminum.

B65-10164 IRRADIATION IMPROVES PROPERTIES OF AN AROMATIC POLYESTER BELL, V. L., JR. JUN. 1965 LANGLEY-115

Aromatic polyester, PEN-2,6, is improved through cross-linking effected by radiation. Polymer retains properties of high tensile strength and toughness and stability at high temperatures.

B65-10167
REFRACTORY OXIDES EVALUATED FOR HIGH-TEMPERATURE USE JUN. 1965
LANGLEY-121

Partially calcia-stablized zirconia used for insulation and heat-storage in high temperature /3000 deg to 4000 deg F/ cyclically operated pebble bed air heater.

B65-10172
ALUMINUM ALLOYS PROTECTED AGAINST STRESSCORROSION CRACKING
INNOVATOR NOT GIVEN /ALCOA RES. LABS./ JUN. 1965
M-FS-235

Topcoat of epoxy-polyamide paint is effective protection for aluminum alloys against stress corrosion cracking. The paint can be used on unprimed surfaces.

B65-10173
PEEL RESISTANCE OF ADHESIVE BONDS ACCURATELY
MEASURED
INNOVATOR NOT GIVEN /RCA/ JUN. 1965
GSFC-320

Strength of adhesive bond between layers of laminated material is tested by peel force to the facing with a tensile testing machine. Testing jig has stainless steel rollers which constrain material to move horizontally while maintaining free end of facing at constant 90 deg angle.

B65-10175
TANTALUM CATHODE IMPROVES ELECTRON-BEAM EVAPORATION OF TANTALUM INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/JUN. 1965

JPL-W00-021

Tantalum cathode is used in assembly for electron beam evaporation of tantalum onto a substrate. The cathode and anode are made of pure tantalum rather than tungsten to prevent contamination of the tantalum film deposited on the substrate.

B65-10179
REUSABLE NEOPRENE JACKET PROTECTS PARTS FOR
CHEMICAL MILLING
INNOVATOR NOT GIVEN /RYAN AERONAUTICAL CO./ JUN.
1965
WOO-071

Reusable neoprene jacket is used to prepare metal part or panel for chemical milling. Jacket covers back and upper rim of part and is sealed before the masking solution is applied to surface to be milled. This reduces amount of masking material required for milling identical parts and increases production.

B65-10189
TESTING DEVICE SUBJECTS ELASTIC MATERIALS TO BIAXIAL DEFORMATIONS
BECKER, G. W. JUN. 1965
JPL-616

Testing device stretches elastic materials biaxially over large deformation ranges and varies strain ratios in two perpendicular directions. The device is used in conjunction with a tensile testing machine, which holds the the specimen and permits control over the direction and magnitude of the stresses applied.

B65-10190
IR-TRANSMISSION GLASSES FORMED FROM OXIDES OF BISNUTH AND TELLURIUM ULRICH, D. R. JUN. 1965
M-FS-279

Bismuth trioxide-tellurium dioxide glasses have improved infrared transmission characteristics.

B65-10214
EMERGENCY SOLAR STILL DESALTS SEAWATER
INNOVATOR NOT GIVEN /MELPAR/ JUL. 1965
MSC-135

Solar energy apparatus distills seawater into fresh water. The inflatable buoyant still produces two pints of drinking water a day.

B65-10217
THIN TRANSPARENT FILMS FORMED FROM POWDERED GLASS
INNOVATOR NOT GIVEN /HOFFMAN ELECTRON./ JUL. 1965
GSFC-352

Glass film less than five mils thick is formed from powdered glass dispersed in an organic liquid, deposited on a substrate, and fused into place. The thin films can be cut and shaped for contact lenses, optical filters and insulating layers.

B65-10220
THORIATED NICKEL BONDED BY SOLID-STATE
DIFFUSION METHOD
BALES, T. T. MANNING, R. C., JR. AUG. 1965
LANGLEY-116

Solid-state diffusion bonding in an inert-gas atmosphere forms high-strength joints between butting or overlapping surfaces of thoriated nickel. This method eliminates inert-phase agglomeration.

B65-10250
COATING METHOD ENABLES LOW-TEMPERATURE
BRAZING OF STAINLESS STEEL
SEAMAN, F. D. /WESTINGHOUSE ELEC. CO./ AUG. 1965
NU-0030

Gold coated stainless steel tubes containing insulated electrical conductors are brazed at a low temperature to a copper coated stainless steel sealing block with a gold-copper eutectic. This produces an effective seal without using flux or damaging the electrical conductors.

B65-10261 BORON CARBIDE WHISKERS PRODUCED BY VAPOR DEPUSITION INNOVATOR NOT GIVEN /GE/ SEP. 1965 HO-24

Boron carbide whiskers have an excellent combination of properties for use as a reinforcement material. They are produced by vaporizing boron carbide powder and condensing the vapors on a substrate. Certain catalysts promote the growth rate and size of the whiskers.

B65-10270

CERAMIC MATERIALS PURIFIED BY EXPERIMENTAL METHOD

INNOVATOR NOT GIVEN /IIT RES. INST./ SEP. 1965 LEWIS-225

Crystalline ceramic materials are purified for use as high-temperature electrical insulators. Any impurities migrate to the cathode when a dc voltage is applied across the material while it is heated in an inert gas atmosphere.

ORGANIC REACTANTS RAPIDLY PRODUCE PLASTIC FOAM LOOK, G. F. SEP. 1965 SEE ALSO B65-10090 LANGLEY-37

Adding trichlorofluoromethane to polyether resin accelerates the reaction between the resin and toluene diisocyanate. This accelerated reaction instantaneously produces a plastic foam of low density and uniform porosity needed to provide buoyancy for flotation recovery of instrument packages dropped into the sea from spacecraft.

ADHERENT PROTECTIVE COATINGS PLATED ON

MAGNESIUM-LITHIUM ALLOY INNOVATOR NOT GIVEN /IBM/ OCT. 1965 SEE ALSO B63-10389

M-FS-365

Zinc is plated on a magnesium-lithium alloy by using a modification of the standard zinc-plate immersion bath. Further protection is given the alloy by applying a light plating of copper on the zinc plating. Other metals are plated on the copper by using conventional plating baths.

BURNISHING TECHNIQUE IMPROVES LUBRICATION OF THREADED FASTENERS

GRUPER, J. L. /LOCKHEED MISSILES AND SPACE CO./ LEWIS-217

Burnishing a molydisulfide coating into the thread surfaces of fasteners eliminates the need for binders and vehicles which ensure coverage and retention of the lubricant during fastening. The coating may be applied by any convenient method.

NICKEL SOLUTION PREPARED FOR PRECISION

ELECTROFORMING

INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/

OCT. 1965 WOO-070

Lightweight, precision optical reflectors are made by electroforming nickel onto masters. Steps for the plating bath preparation, process control testing, and bath composition adjustments are prescribed to avoid internal stresses and maintain dimensional accuracy of the electrodeposited metal.

R65-10316

REMOVABLE WELL IN REACTION FLASK FACILITATES

CARBON DIOXIDE COLLECTION

ARC-47

Removable plastic well with a flange that seats on the rim of an Erlenmeyer screwcap flask aids quantitative collection of carbon dioxide liberated in the flask. The well can be removed without danger of cross-contamination. It can collect other gases using appropriate absorbents.

B65-10321

PLATED NICKEL WIRE MESH MAKES SUPERIOR

CATALYST BED

SILL, M. /BELL AEROSYSTEMS CO./ OCT. 1965 MSC-216

Porous nickel mesh screen catalyst bed produces gas evolution in hydrogen peroxide thrust chambers used for attitude control of space vehicles. nickel wire mesh disks in the catalyst bed are plated in rugose form with a silver-gold coating.

B65-10335

MAGNETIC FLUID READILY CONTROLLED IN ZERO GRAVITY ENVIRONMENT

PAPELL, S. S. NOV. 1965 LEWIS-126

Colloid composed of finely ground iron oxide in a fluid such as heptane, is controlled and directed magnetically in a zero gravity environment. It will not separate on standing for long periods or after exposure to magnetic or centrifugal forces. Because of its low density and low viscosity, it is easily pumped.

B65-10336

ANODIZATION PROCESS PRODUCES OPAQUE,

REFLECTIVE COATINGS ON ALUMINUM INNOVATOR NOT GIVEN /LOCKHEED MISSILES AND SPACE NOV. 1965 CO./ NO

Opaque, reflective coatings are produced on aluminum articles by an anodizing process wherein the anodizing bath contains an aqueous dispersion of finely divided insoluble inorganic compounds. These particles appear as uniformly distributed occlusions in the anodic deposit on the aluminum.

SPECIAL COATINGS CONTROL TEMPERATURE OF

STRUCTURES

FULK, M. M. MAYER CORP./ NOV. 1965 GSFC-444 MAYER, R. W. /BALL BROTHERS RES.

Special coatings in the form of paints that exhibit controlled ratios of sunlight absorptivity to grey-body emissivity control the temperature of structures in space flight. These finishes exhibit good resistance to ultraviolet radiation and do not discolor.

B65-10341

LIGHTWEIGHT HINGED BELLOWS RESTRAINT HAS

HIGH LOAD CAPACITY

IMUS, E. E. /N. AM. AVIATION/ NOV. 1965 WOO-151

High angular stresses in fluid-handling ducts are accommodated by a lightweight hinged bellows restraint. This device transmits angular stress to points close to the axis center and spreads it over a rigid configuration.

B65-10344

SOLUBLE UNDERCOATING FACILITATES REMOVAL OF

FOAMED-IN-PLACE INSULATION
DUNCAN, A. C. HILL, C. L., JR. NOV. 1965
LEWIS-193

Foamed-in-place insulation can be removed and reused by coating the surface with a soluble peel coat before applying the foam mixture. Removal of the insulation is effected by slitting it and pouring a solvent in the slit to dissolve the peel coat. The insulation can then be stripped off intact.

B65-10354

PIGMENTED COATING RESISTS THERMAL SHOCK HARADA, Y. /IIT RES. INST./ RECHTER, H. L. NOV.

1965 JPL-SC-083

Coating pigment composed of zinc oxide and potassium silicate resists the effects of thermal shock and long exposure to direct sunlight.

AIR-CURED CERAMIC COATING INSULATES AGAINST HIGH HEAT FLUXES

SEITZINGER, V. F. NOV. 1965

Reflective insulating ceramic coating protects supporting structures in area adjacent to rocket engines from the intense heat fluxes in the rocket exhaust plumes.

B65-10364

POROUS GLASS MAKES EFFECTIVE SUBSTRATE FOR OZONE-SENSING REAGENT

INNOVATOR NOT GIVEN /PARAMETRICS/ DEC. 1965

Porous-glass substrate is used for absorption of a dye used in measuring the concentration of atmospheric ozone at high altitudes. This measurement is based on the chemiluminescence produced in the reaction between ozone and the dye, rhodamine B. The porous glass provides a large interstitial surface area which promotes this reaction.

B65-10366
UNIQUE GEAR DESIGN PROVIDES SELF-LUBRICATION
WINIARSKI, F. J. /SPACE TECHNOL. LAB./ DEC. 1965
JPL-SC-079

Composite gear configuration provides a reliable automatic means for replenishing gear mechanism lubricants that dissipate in the harsh environment of space. The center or hub section of the gear consists of a porous, oil-impregnated material, and the outer or toothed section has radially drilled passages to cause the oil to gradually flow to the gear teeth surfaces.

B65-10372 WIRE BUNDLE FORMED INTO GRIDS WITH MINUTE INTERSTICES

TODD, H. H. /ELECTRO-OPTICAL SYSTEMS/ DEC. 1965 WOO-089

Deforming the ends of a bundle of closely packed parallel wires to restrict the interstices to substantially uniform and minute dimensions produces grids or filters for ion engines. Porous metal structures made by this process are also used as fuel cell electrodes, diffusion membranes, and catalysts.

B65-10374
PLASTIC PLUS STAINLESS-STEEL FIBERS MAKE
RESILIENT, IMPERMEABLE MATERIAL
SMIRRA, J. R. /THOMPSON RAMO WOOLDRIDGE/ DEC.
1965
WOO-246

Plastic material combined with stainless-steel fibers and molded under heat and pressure into a desired configuration is both soft enough to deform under a load and resilient enough to return to its original shape when the load is removed.

B65-10384
PROBE SAMPLES COMPONENTS OF ROCKET ENGINE EXHAUST

SCHUMACHER, P. E. /N. AM. AVIATION/ DEC. 1965 M-FS-485

Water-cooled, cantilevered probe samples the exhaust plume of rocket engines to recover particles for examination. The probe withstands the stresses of a rocket exhaust plume environment for a sufficient period to obtain a useful sample of the exhaust components.

B65-10390
TEST STRIPS DETECT DIFFERENT CO2
CONCENTRATIONS IN CLOSED COMPARTMENTS
INNOVATOR NOT GIVEN /MELPAR/ DEC. 1965
MSC-210

Four different test strips, using crystal violet for one pair of strips and basic fuchsin as a dye for the second pair, give unambiguous colorimetric indications of four different concentrations of carbon dioxide in the atmosphere of a closed compartment. Tetraethylene pentamine is used as a dye decoloring agent.

B65-10397
NEW BRAZING ALLOY ELIMINATES METAL-STRESS
CRACKING
HUSCHLER, E., JR. R. /N. AM. AVIATION/ ROEDER,
E. R. DEC. 1965

Silver 15 zinc brazing alloy avoids the liquidmetal stress cracking of base metals when applied to 347, 316, and 410 stainless steels and certain other alloys.

B65-10398
NICKEL/TIN COATING PROTECTS THREADED
FASTENERS IN CORROSIVE ENVIRONMENT
CHARLES, J. VEFDER, L. /N. AM. AVIATION/ DEC.

1965 MSC-253

Threaded fasteners used in corrosive environments are plated with electroless nickel and electroplated, over the nickel, with tin. This provides a corrosion-resistant coating for the fasteners.

B66-10005
FLUORIDE COATINGS MAKE EFFECTIVE LUBRICANTS IN
MOLTEN SODIUM ENVIRONMENT
JAN. 1966 SEE ALSO NASA-TN-D-2348
LEVIS-229

Coating bearing surfaces with calcium fluoridebarium fluoride film provides effective lubrication against sliding friction in molten sodium and other severe environments at high and low temperatures.

B66-10009

COILED SHEET METAL STRIP OPENS INTO TUBULAR CONFIGURATION PARK, J. J. JAN. 1966 SEE ALSO B64-10011 GSFC-425

Copper alloy is converted into a spring material that can be rolled into a compact coil which will spontaneously open to form a tube in the long direction of the strip. The copper alloy is passed through a furnace at a prescribed temperature while restraining the strip in the desired tubular configuration.

66-10024

ALUMINIZED FIBER GLASS INSULATION CONFORMS TO CURVED SURFACES INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966 M-FS-477

Layers of fiber glass with outer reflective films of vacuum-deposited aluminum or other reflective metal, provide thermal insulation which conforms to curved surfaces. This insulation has good potential for cryogenic systems.

BOS-1002/ FLEXIBLE PROTECTIVE COATINGS MADE FROM SILICON-NITROGEN MATERIALS INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ JAN. 1966 M-FS-528

Thexible protective coatings formed from either of two polymers endure high temperatures for long periods. One polymer is a byproduct in hexaphenylcyclotrisilazane preparation, the other is obtained by heating bis/methylamino/-diphenylsilane.

B66-10029

EPOXY BLANKET PROTECTS MILLED PART DURING

EXPLOSIVE FORMING

INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966

M-FS-307

Epoxy blanket protects chemically milled or machined sections of large, complex structural parts during explosive forming. The blanket uniformly covers all exposed surfaces and fills any voids to support and protect the entire part.

B66-10033 ELECTRON BEAM SEALS OUTER SURFACES OF POROUS BODIES HERZ, W. H. /KULITE TUNGSTEN CO./ KURTZ, A. D. KURTZ, R. A. FEB. 1966

their exit ends.

-FS-562 Porous tungsten plugs provide even airflow for frictionless bearings used in air bearing supported gyros. The plugs have their outer cylindrical surface sealed by an electron beam process to ensure unidirectional airflow through

B66-10037
PROCESS REDUCES PORE DIAMETERS TO PRODUCE
SUPERIOR FILTERS
TODD, H. H. /ELECTRO-OPTICAL SYSTEMS/ FEB. 1966
WOO-093

Porous metal structure with very small pore diameters is produced by heating the structure in oxygen for an oxidized surface layer, cooling it, and heating it in hydrogen to deoxidize the oxidized portion. Such structures are superior catalyst beds and filters.

B66-10043
POLYMER FILM EXHIBITS THERMAL AND RADIATION STABILITY
BELL, V. L., JR. FEB. 1966
LANGLEY-100

Aromatic/heterocyclic polymers /Pyrrones/ have the ability to absorb large quantities of photolytic, thermal and radiolytic energies while retaining their useful properties. They are prepared from the room temperature reaction of tetraamines and tetraacids.

B66-10044
PROTECTIVE COATING WITHSTANDS HIGH TEMPERATURE
IN OXIDIZING ATMOSPHERE
MELLOR, C. H. /FENWAL, INC./ FEB. 1966
M-FS-529

Protective coating containing a plasma arc sprayed mixture of hafnium oxide and zirconium diboride will withstand high temperatures in an oxygen rich atmosphere. Used on a homogeneous tungsten thermocouple, it does not flake or crack on subsequent cooling and reheating, and does not degrade the thermocouple response time.

B66-10053 SPRAY-ON TECHNIQUE SIMPLIFIES FABRICATION OF COMPLEX THERMAL INSULATION BLANKET BOND, W. E. G. RAYMOND, R. /N. AM. AVIATION/ FEB. 1966 M-FS-497

Spray-on process constructs molds used in forming sections of thermal insulation blankets. The process simplifies the fabrication of blankets by eliminating much of the equipment formerly required and decreasing the time involved.

B66-10070 REFLECTIVE INSULATOR LAYERS SEPARATED BY BONDED SILICA BEADS ZUVER, N. T., JR. /GRUMMAN AIRCRAFT CORP./ FEB. 1966 MSC-215

Nonconductive silica beads are bonded to metallic reflecting insulation sheets prior to fabrication of multilayer reflectors. This eliminates the need for separate nonconductive sheets and simplifies the fabrication process.

B66-10081
POLYTETRAFLUOROETHYLENE LUBRICATES BALL
BEARINGS IN VACUUM ENVIRONMENT
INNOVATOR NOT GIVEN /BENDIX CORP./ MAR. 1966
SEE ALSO NASA-SP-5014
M-FS-379

Polytetrafluoroethylene /PTFE/ balls are interspersed among steel ball bearings to provide a dry lubricant in a high vacuum environment. The steel balls are lubricated by the film worn off the PTFE balls.

B66-10083 CRYOSTAT MODIFIED TO AID ROTATING BEAM FATIGUE TEST DURHAM, T. F. /N. AM. AVIATION/ MAR. 1966 M-FS-435

Modified stainless steel dewar aids rotating beam fatigue test in a cryogenic environment. The dewar is modified to receive extended specimen supporting members through specially designed rotary seals. The test set can be fully enclosed and pressurized with an inert gas to make the system explosion proof.

B66-10087
SOLID-FILM LUBRICANT IS EFFECTIVE AT HIGH
TEMPERATURES IN VACUUM
SLINEY, H. E. MAR. 1966 SEE ALSO B63-10453 AND
B63-10562
LEWIS-228

Calcium fluoride with a suitable inorganic binder forms a stable solid-film lubricant when fused to the surface to be lubricated. It is effective in environments at elevated temperatures and gas pressures ranging from atmospheric to high vacuum. It is not stable in reducing atmospheres.

B66-10090
RADIOACTIVE TRACER SYSTEM DETECTS OIL CONTAMINANTS IN FLUID LINES ROTH, B. /N. AM. AVIATION/ MAR. 1966
M-FS-512

Radioactive tracer system continuously detects and monitors lubricating oil contamination in high pressure fluid lines.

B66-10104
VAPOR CONDENSATION PROCESS PRODUCES SLURRY OF MAGNESIUM PARTICLES IN LIQUID HYDROCARBONS PROK, G. M. WALSH, T. J. WITZKE, W. R. MAR. 1966
LEWIS-263

MIS-253
Vapor condensation apparatus produces a physically stable, homogeneous slurry of finely divided magnesium and liquid hydrocarbons. The magnesium is vaporized and the resultant vapor is cooled rapidly with a liquid hydrocarbon spray, which also serves as the dispersing medium for the condensed magnesium particles.

B66-10110
ETCHING PROCESS MILLS PH 14-8 MO ALLOY STEEL
TO PRECISE TOLERANCES
CHIPMAN, B. L. /N. AM. AVIATION/ MULLAND, P. W.
MAY 1966
MSC-270

C-270
Chemical milling process, which combines an aqua regia etchant with a sulfonate wetting agent, produces finishes on PH 14-8 molybdenum alloy steel to precise tolerances. This process permits precision removal of excess metal from the steel in annealed and/or aged conditions.

B66-10111 STORAGE-STABLE FOAMABLE POLYURETHANE IS ACTIVATED BY HEAT INNOVATOR NOT GIVEN /GOODYEAR AEROSPACE CORP./ MAY 1966 LANGLEY-187

Polyurethane foamable mixture remains inert in storage unit activated to produce a rapid foaming reaction. The storage-stable foamable composition is spread as a paste on the surface of an expandable structure and, when heated, yields a rigid open-cell polyurethane foam that is self-bondable to the substrate.

B66-10119
SMALL, HIGH-INTENSITY FLASHER PERMITS
CONTINUOUS CLOSE-IN PHOTOGRAPHY
PASCALE, C. /PRINCETON UNIV./ MAR. 1966
NU-0043

Compact, high-intensity spark-flash unit is used as a light source for continuous rapid photography. The spark-breakdown flash source is enclosed in polymethylmethacrylate and incorporates a parabolic reflector.

B66-10120
OXYGEN-HYDROGEN TORCH IS A SMALL-SCALE
STEAM GENERATOR
MASKELL, C. E. /AEROJET-GEN. CORP./ MAR. 1966
NU-0042

Standard oxygen-hydrogen torch generates steam for corrosion-rate analysis of various metals. The steam is generated through local combustion inside a test chamber under constant temperature and pressure control.

B66-10131
SURFACTANT FOR DYE-PENETRANT INSPECTION IS
INSENSITIVE TO LIQUID OXYGEN
INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1966
M-FS-475

LOX insensitive solvent is blended into a mixture of commercially available surfactants to clean metal surfaces which are to be investigated by the dye-penetrant method. The surfactant mixture is applied before and after application of the dye.

B66-10138
BISMUTH ALLOY POTTING SEALS ALUMINUM CONNECTOR
IN CRYOGENIC APPLICATION
FLOWER, J. F. /DOUGLAS AIRCRAFT CO./ STAFFORD,
R. L. APR. 1966
WOO-260

Bismuth alloy potting seals feedthrough electrical connector for instrumentation within a pressurized vessel filled with cryogenic liquids. The seal combines the transformation of high-bismuth content alloys with the thermal contraction of an external aluminum tube.

B66-10139
HOT-WIRE DETECTOR FOR CHEMICALLY ACTIVE
MATERIALS USED IN GAS CHROMATOGRAPHY
INNOVATOR NOT GIVEN /N. AM. AVIATION/ APR. 1966
MSC-269

Hot-filament detector analyzes chemically active materials used in gas chromatography. The detector reacts chemically with the effluent vapors in the gas chromatographic apparatus to change the electrical resistance of the filament as a function of the affluent composition. Due to the changes produced by chemical action on the filament, the system is often calibrated.

B66-10140

CORROSION OF METAL SAMPLES RAPIDLY MEASURED MASKELL, C. E. /AEROJET-GEN. CORP./ APR. 1966 NU-0041

Corrosion of a large number of metal samples that have been exposed to controlled environment is accurately and rapidly measured. Wire samples of the metal are embedded in clear plastic and sectioned for microexamination. Unexposed wire can be included in the matrix as a reference.

B66-10165 GALLIUM ALLOY FILMS INVESTIGATED FOR USE AS BOUNDARY LUBRICANTS

APR. 1966 SEE ALSO NASA-TN-D-2721 AND B63-10337 LEWIS-245

Gallium alloyed with other low melting point metals has excellent lubricant properties of fluidity and low vapor pressure for high temperature or vacuum environments. The addition of other soft metals reduces the corrosivity and formation of undesirable alloys normally found with gallium.

B66-10166
DISPENSER LEAK-TESTS AND STERILIZES RUBBER
GLOVES
INNOVATOR NOT GIVEN /N. AM. AVIATION/ APR. 1966
MSC-285

Portable vacuum-operated apparatus leak-tests and sterilizes rubber gloves. The gloves are fitted to the hands directly from the apparatus without external handling.

B66-10185
IMPROVED ADHESIVE FOR CRYOGENIC APPLICATIONS
CURES AT ROOM TEMPERATURE
KLINGER, H. J. SMITH, M. B. /TELECOMPUTING
CORP./ MAY 1966
W00-132

Adhesive cured at room temperature provides an effective adhesive bond over the range from room temperature down to the temperature of liquid hydrogen. The adhesive consists of one part of 200-mesh powdered nylon filler to two parts of an epoxy-polyamine resin.

B66-10194
SILAZANE POLYMERS SHOW PROMISE FOR HIGH-TEMPERATURE APPLICATION
JUN. 1966 SEE ALSO NASA-SP-5030
M-FS-466

Several silazane intermediate compounds and polymers have been prepared which are potentially useful as high temperature coatings and elastomers. These silazane polymers exhibit stability in a temperature range of 300 to 400 degrees C.

B66-10196 FIBERS OF NEWLY DEVELOPED REFRACTORY CERAMICS PRODUCED BY IMPROVED PROCESS INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ MAY 1966 WOO-169

Rods of refractory ceramic material and glasses having relatively high fusion temperatures and tensile strengths are converted to fiber by subjecting these rods to alternate fusion and gas-jet bursts. The refractory, high-tensile-strength fibers produced are combined with suitable binder to produce heat-resistant fabrics and rigid structures.

B66-10207
WHITE PRIMER PERMITS A CORROSION-RESISTANT
COATING OF MINIMUM WEIGHT
ALBRECHT, R. H. JENSEN, D. P. SCHNAKE, P.
/SHERWIN WILLIAMS CO./ MAY 1966
M-FS-304

White primer for coating 2219 aluminum alloy supplies a base for a top coating of enamel. A formulation of pigments and vehicle results in a primer with high corrosion resistance and minimum film thickness.

B66-10221
SUBMICRON METAL POWDERS PRODUCED BY BALL
MILLING WITH GRINDING AIDS
QUATINETZ, M. SCHAFER, R. J. MAY 1966 SEE ALSO
NASA-TN-D-879
LEWIS-188

In ball milling metal powders to submicron size, various salts are more effective as grinding aids than conventional surfactants. Absolute ethyl alcohol is used as the grinding liquid.

B66-10222

NICKEL-BASE SUPERALLOYS DEVELOPED FOR HIGHTEMPERATURE APPLICATIONS
FRECHE, J. C. MAY 1966 SEE ALSO
NASA-MEMO-4-13-59E, NASA-TN-D-260,
NASA-TN-D-1531, AND NASA-TN-D-2495
LEWIS-226

Class of nickel-base superalloys containing varying percentages of alloying elements have good workability and high strength at elevated temperatures /1500 to 2200 degrees F/.

B66-10227 CHROMIUM OXIDE COATINGS IMPROVE THERMAL EMISSIVITY OF ALUMINA UPSHAW, V. /HUGHES AIRCRAFT CO./ MAY 1966 WOO-263

Chromium oxide coatings improve thermal radiation characteristics of alumina-coated heater-cathode systems in vacuum tubes. Chromium oxide is applied either as a surface layer or as a doping material. The new coatings eliminate the high-temperature migration problems of carbon surface treatments.

B66-10230 ELECTRIC ARC HEATER IS SELF STARTING BROWN, R. D. MAY 1966 LANGLEY-208

Remote method initiates an electric arc over a large range of gaps between two water-cooled electrodes of an arc-heated wind tunnel without disassembling the arc unit. This type of starting system can be used on both three-phase ac arc heaters and dc arc heaters.

B66-10234 STANDARDS FOR ELECTRON PROBE MICROANALYSIS OF SILICATES PREPARED BY CONVENIENT METHOD WALTER, L. S. JUN. 1966 GSFC-469

Standard compositions suitable for electron probe microanalysis of various silicates are prepared by coprecipitation of specified salts with colloidal silica to form a gel which is decomposed into a powdered oxide mixture and compressed into thin pellets. These pellets of predetermined standard are compared with a silicate sample to determine its composition.

B66-10256
DRY FILM LUBRICANT IS EFFECTIVE AT EXTREME LOADS
INNOVATOR NOT GIVEN /MIDWEST RES. INST./ JUN. 1966 SEE ALSO NASA-TM-X-53331
M-FS-628

Dry film lubricant protects low speed sliding surfaces under extreme loading. The lubricant in an inorganic binder is applied to substrates with sufficient hardness to provent surface deformation

in the applicable load range.

B66-10259
SUBSTITUTED SILANE-DIOL POLYMERS HAVE
IMPROVED THERMAL STABILITY
BYRD, J. D. CURRY, J. E. JUN. 1966
M-FS-469

FS-469
Organosilicon polymers were synthesized to produce improved physical and chemical properties, including high thermal stability. Of the polymers produced, poly/4, 4 prime-bisoxybi-phenylene/diphenylsilane, formed from bis/anilino/diphenylsilane and p, p prime-biphenol, was found to have the most desirable properties.

B66-10273
BORON-DEOXIDIZED COPPER WITHSTANDS BRAZING
TEMPERATURES
SCHMIDT, E. H. /N. AM. AVIATION/ JUN. 1966
M-FS-762

Boron-deoxidized high-conductivity copper is used for fabrication of heat transfer components that are brazed in a hydrogen atmosphere. This copper has high strength and ductility at elevated temperatures and does not exhibit massive intergranular failure.

B66-10281
VAPOR DIFFUSION ELECTRODE IMPROVES FUEL CELL
OPERATION
SMITH, J. 0. /MONSANTO RES. CORP./ JUN. 1966
LEWIS-187

Vapor diffusion type fuel cell electrode presents a nonwetting barrier to the liquid feedstocks so they may contact the electrolyte only in the vapor state. Thus, it effects feedstock mixing with the electrolyte at the electrolyte/catalyst interface but prevents feedstock decomposition and catalyst poisoning from liquid mingling.

B66-10288
IMPROVED THERMAL INSULATION MATERIALS MADE OF
FOAMED REFRACTORY DXIDES
MOUNTVALA, A. J. NAKAMURA, H. H. RECHTER, H. L.
//IIT RES. INST./ JUN. 1966 SEE ALSO B65-10357
M-FS-735

Foamed refractory oxides provide lightweight, reflective thermal insulation materials. The materials have a low bulk density and high thermal shock resistance.

B66-10296
APPARATUS ENABLES ACCURATE DETERMINATION OF
ALKALI DXIDES IN ALKALI METALS
DUPRAW, W. A. GAHN, R. F. GRAAB, J. W. MAPLE,
W. E. ROSENBLUM, L. JUL. 1966
LEWIS-256

Evacuated apparatus determines the alkali oxide content of an alkali metal by separating the metal from the oxide by amalgamation with mercury. The apparatus prevents oxygen and moisture from inadvertently entering the system during the sampling and analytical procedure.

B66-10298
ULTRASONIC CLEANING RESTORES DEPTH-TYPE
FILTERS
INNOVATOR NOT GIVEN /LITTLE /ARTHUR D./ INC./
JUL. 1966
M-FS-540

Cleaning process uses a nonionic surfactant and ultrasonic agitation to restore depth-type fibrous filters to maximum effectiveness.

B66-10299
ELECTROLYTIC ETCHING PROCESS PROVIDES
EFFECTIVE BONDING SURFACE ON STAINLESS STEEL
INNOVATOR NOT GIVEN /RCA/ JUL. 1966
GSFC-484

Electrolytic etching process prepares surfaces of a stainless steel shell for reliable, high strength adhesive bonding to dielectric materials. The process uses a 25 percent aqueous solution of phosphoric acid.

B66-10305 SIMPLE, NONDESTRUCTIVE TEST IDENTIFIES METALS DODDS, D. J. /N. AM. AVIATION/ JUL. 1966 MSC-525

Rapid, nondestructive test for identifying metals measures the characteristic potential difference produced by galvanic reaction between a reference electrode and the test metal. A drop of water is used as an electrolyte.

B66-10312
CHEMICAL MILLING SOLUTION PRODUCES SMOOTH
SURFACE FINISH ON ALUMINUM
LORENZEN, H. C. /N. AM. AVIATION/ JUL. 1966
MSC-549

Elementary sulfur mixed into a solution of caustic soda and salts produces an etchant which will chemically mill end-grain surfaces on aluminum plate. This composition results in the least amount of thickness variation and pitting.

B66-10313 SEA DYE MARKER PROVIDES VISIBILITY FOR 20 HOURS DE LAAT, F. /N. AM. AVIATION/ JUL. 1966 MSC-714

Sea dye marker block releases a visible slick which lasts at least twelve hours. The dye marker uses a fluorescent dye in a heat cured binder which, when immersed in seawater, releases the dye at a controlled rate.

B66-10322 VALVE SEAT PORES SEALED WITH THERMOSETTING MONOMER OLMORE, A. B. /N. AM. AVIATION/ JUL. 1966

M-FS-900

Hard anodic coating provides a smooth wearresistant value seating surface on a cast aluminum
alloy valve body. Vacuum impregnation with a
thermosetting monomer, diallyl phthalate, seals
the pores on the coating to prevent galvanic
corresion.

B66-10327
INFLATABLE HOLDING FIXTURE PERMITS X-RAYS TO
BE TAKEN OF INNER WELD AREAS
HENDRICKSON, D. R. SPENCE, T. M. /N. AM.
AVIATION/ JUL. 1966
M-FS-856

Inflatable rubber gland positions and holds X-ray film in positive contact with inner weld areas of mainfold torus assemblies for verifying the weld quality. The gland is constructed to conform to the inside diameter of the manifold torus.

B66-10340 DEVICE REMOVES HYDROGEN GAS FROM ENCLOSED SPACES CARSON, W. N. /GE/ JUL. 1966 GSFC-495

Hydrogen-oxidant galvanic cell removes small amounts of hydrogen gas continually released from equipment, such as vented silver-zinc batteries, in enclosed compartments where air venting is not feasible. These cells are used in satellite compartments.

B66-10358
ELECTROCHEMICAL MILLING REMOVES BURRS AND SOLDER FROM TUBING ENDS HINSHAW, J. O. /N. AM. AVIATION/ AUG. 1966
M-FS-714

Electrochemical milling removes burrs and solder from the cut ends of stainless steel capillary tubing. An electrolyte consisting primarily of a solution of sulfuric and phosphoric acids is used.

B66-10373
BEARING ALLOYS WITH HEXAGONAL CRYSTAL
STRUCTURES PROVIDE IMPROVED FRICTION AND WEAR
CHARACTERISTICS
BUCKLEY, D. H. JOHNSON, R. L. AUG. 1966 SEE
ALSO NASA-TN-D-2523, NASA-TN-D- 2524,
NASA-TN-D-2671, NASA-TN-D-3235
LEWIS-320

Bearings of titanium, cobalt, and other hexagonal crystal alloys are used in vacuum and high temperature environments. These temperature—stabilized alloys have reduced friction and wear characteristics and therefore have potential use

in aircraft seals, hydraulic equipment, and artificial human joints.

B66-10380
SUBMICTON HOLES IN THIN FILMS INCREASE
SAMPLING RANGE OF MASS SPECTROMETERS
WILLENS, R. H. /CONSOLIDATED SYSTEMS/ AUG. 1966
JPL-SC-097

Gold film is vapor deposited onto a glass slide containing submicron latex spheres which are removed, leaving submicron holes in the film. These thin-film apertures allow accurate mass spectrometer sampling of gas mixtures at pressures on the order of 100 torr.

B66-10387
SELF-SUPPORTED ALUMINUM THIN FILMS PRODUCED BY VACUUM DEPOSITION PROCESS

NEFF, J. E. TIMME, R. W. SEP. 1966
ARC-58
Self-supported aluminum thin film is produced by vacuum depositing the film on a polyvinyl formal

resin film and then removing the resin by radiant heating in the vacuum. The aluminum film can be used as soon as the resin is eliminated.

E66-10395 COMPOSITE GASKETS ARE COMPATIBLE WITH LIQUID OXYGEN, RESIST COMPRESSION SET GOSNELL, R. B. /WHITTAKER CORP./ SEP. 1966 SEP. 1966 M-FS-455

Gaskets fabricated by laminating fluorocarbon polymers with fiber glass cloth have a low compression set. Their flexibility is not subject to drastic changes at the temperature of liquid oxygen with which they are used. The fabrication process is controlled so that the fibers are not impregnated with the polymer.

B66-10398
THIN-FILM FERRITES VAPOR DEPOSITED BY ONE-STEP
PROCESS IN VACUUM
HACSKAYLO, M. /MELPAR/ SEP. 1966 SEP. 1966
MSC-259

Thin-film ferrites are formed by vapor deposition of a mixture of powdered ferrites and powdered boron oxide at controlled temperatures in a vacuum chamber. These films are used in memory devices for computers and as thin-film inductors in communications and telemetry systems.

B66-10400
SYSTEM FOR ETCHING THICK ALUMINUM LAYERS
MINIMIZES BRIDGING AND UNDERCUTTING
INNOVATOR NOT GIVEN /BENDIX CORP./ SEP. 1966
M-FS-1366

Four step photoresist process for etching thick aluminum layers for semiconductor device contacts produces uniform contact surfaces, eliminates bridging, minimizes undercutting, and may be used on various materials of any thickness.

B66-10421
COPPER WIRE PLATED WITH NICKEL AND SILVER
RESISTS CORROSION
INNOVATOR NOT GIVEN /N. AM. AVIATION/ SEP. 1966
M-FS-761

Copper wire for electrical harnesses, when plated with both nickel and silver, resists galvanic corrosion and high temperatures while maintaining electrical properties and solderability.

B66-10445
WELDABLE ALUMINUM ALLOY HAS IMPROVED
MECHANICAL PROPERTIES
WESTERLUND, R. W. /ALCOA RES. LABS./ OCT. 1966
M-FS-295

Weldable aluminum alloy has good resistance to stress-corrosion cracking, shows unchanged strength and formability after storage at room temperature, and can be pre-aged, stretched, and aged. Since toxic fumes of cadmium oxide are evolved when the new alloy is welded, adequate ventilation must be provided.

866-10448 Thermal Stress-Relief Treatments für 2219 Aluminum Alloy are evaluated INNOVATOR NOT GIVEN /BOEING CO./ OCT. 1966 M-FS-1213

Evaluation of three thermal stress relief treatments for 2219 aluminum alloy in terms of their effect on residual stress, mechanical properties, and stress corrosion resistance. The treatments are post aging and stress relieving fullscale and subscale parts formed in the aged T81 condition, and aging subscale parts formed in the unaged T31 condition.

B66-10451
REUSABLE CHELATING RESINS CONCENTRATE METAL
IONS FROM HIGHLY DILUTE SOLUTIONS
BAUMAN, A. J. WEETAL, H. H. WELIKY, N. OCT.
1966
JPL-758

Column chromatographic method uses new metal chelating resins for recovering heavy-metal ions from highly dilute solutions. The absorbed heavy-metal cations may be removed from the chelating resins by acid or base washes. The resins are reusable after the washes are completed.

B66-10453
THERMOPLASTIC RUBBERLIKE MATERIAL PRODUCED AT LOW COST
HENDEL, F. J. OCT. 1966
JPL-793

Thermoplastic rubberlike material is prepared by blending a copolymer of ethylene and vinyl acetate with asphalt and a petroleum distillate. This low cost material is easily molded or extruded and is compatible with a variety of fillers.

B66-10454
GAGE OF 6.5 PER CENT SI-FE SHEET IS
CHEMICALLY REDUCED
GOLDMAN, A. PAVLOVIC, D. M. /WESTINGHOUSE ELEC.
CORP./ OCT. 1966
MSC-537

Chemical milling process aids the production of 6.5 per cent silicon-iron soft magnetic-alloy sheets to very thin gauges. Following conventional rolling to safe gauge limits, the material is chemically reduced to the desired gauge.

B66-10458
HEAT TREATMENT STABILIZES WELDED ALUMINUM
JIG AND TOOL STRUCTURES
MEHNERT, R. S. /N. AM. AVIATION/ OCT. 1966
MSC-800

Heat treatment processes, applied after welding but before machining, imparts above normal stability to welded aluminum jigs and tool structures. Weight sawing will not be realized in these tools if rigidity equal to that of a comparable steel tool is required.

B66-10467
XENON FORMS STABLE COMPOUND WITH FLUORINE
CLAASSEN, H. H. MALM, J. G. SELIG, H. H. OCT.
1966
ARG-4

Experiments show that xenon and fluorine combine readily at 400 deg C to form xenon tetrafluoride, which is colorless, crystalline, chemically stable and solid at room temperature. This process can be used for the separation of xenon from mixtures with other noble gases.

B66-10475
BORATE GLASS EFFICIENTLY TRANSMITS
ULTRAVIOLET LIGHT
BISHAY, A. NOV. 1966
ARG-91

Borate glass has high ultraviolet transmissability characteristics. Applications for the borate glass include germicidal lamps, window glass, and optical instruments.

B66-10479
ELECTROLESS NICKEL PLATING ON STAINLESS
STEELS AND ALUMINUM
INNOVATOR NOT GIVEN /GE/ NOV. 1966
GSFC-533

Procedures for applying an adherent electroless

nickel plating on 303 SE, 304, and 17-7 PH stainless steels, and 7075 aluminum alloy was developed. When heat treated, the electroless nickel plating provides a hard surface coating on a high strength, corrosion resistant substrate.

B66-10487
ADHESIVE FOR POLYESTER FILMS CURES AT ROOM TEMPERATURE, HAS HIGH INITIAL TACK CHRISTIAN, C. M. FUST, G. W. WELCHEL, C. J./THIOKOL CHEM. CORP./ NOV. 1966
M-FS-938

Quick room-temperature-cure adhesive bonds polyester-insulated flat electrical cables to metal surfaces and various other substrates. The bond strength of the adhesive may be considerably increased by first applying a commercially available polyamide primer to the polyester film.

B66-10517
COLD TRAP INCREASES SENSITIVITY OF GAS
CHROMATOGRAPH
GARRARD, G. G. WESLEY, R. D. /N. AM. AVIATION/
DEC. 1966
M-FS-1617

Cold trap concentrates oxygen and argon to determine trace amounts /as low as 0.1 ppm/ in helium by gas chromatography.

B66-10519
BRAZE ALLOY HOLDS BONDING STRENGTH OVER WIDE
TEMPERATURE RANGE
INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ NOV.
1966
LEWIS-337

Copper-based quaternary alloys of the solid solution type is used for vacuum furnace brazing of large stainless steel components at a maximum temperature of 1975 deg F. The allow has high bonding strength and good ductility over a temperature range extending from the cryogenic region to approximately 800 deg F.

B66-10527
CRUCIBLE CAST FROM BERYLLIUM OXIDE AND
REFRACTORY CEMENT IS IMPERVIOUS TO FLUX
AND MOLTEN METAL
JASTRZEBSKI, Z. D. NOV. 1966
ARG-22

Crucible from a mixture of a beryllium oxide aggregate and hydraulic refractory cement, and coated with an impervious refractory oxide will not deteriorate in the presence of fused salt-molten metal mixtures such as uranium—magnesium—zinc-halide salt systems. Vessels cast by this process are used in the flux reduction of oxides of thorium and uranium.

B66-10528
LOWER-COST TUNGSTEN-RHENIUM ALLOYS
KLOPP, W. D. RAFFO, P. L. WITZKE, W. R. DEC.
1966
LEWIS-332

Tungsten-rhenium alloys with a substantially more dilute rhenium content have ductilities and other mechanical properties which compare favorably with the tungsten-rhenium alloys having much higher concentrations of the costly rhenium.

B66-10535
PROCESS YIELDS CO-FE ALLOYS WITH SUPERIOR
HIGH TEMPERATURE MAGNETIC PROPERTIES
BARRANGER, J. P. NOV. 1966
LEWIS-333

Cobalt-iron alloys containing from 7.0 to 9.3 percent iron prepared from ultrapure cobalt and iron have the highest Curie point of all known magnetically soft materials. Their high permeability, low hysteresis loss, good saturation induction, and squareloop characteristics recommend them for use in power transformers and rotating machinery.

B66-10538
TUNGSTEN INSULATED SUSCEPTOR CUP FOR HIGH
TEMPERATURE INDUCTION FURNACE ELIMINATES
CONTAMINATION
GERINGER, H. J. NOV. 1966
LEWIS-283

METILUR /Materials Experimental Tungsten
Induction Laboratory Unit Replacement/ is an
improved, unitized design of a susceptor cup and
shielding that uses only one type of construction
material /tungsten/ which eliminates
contamination. Cycling runs can be accomplished
with METILUR.

B66-10540
SILVER-BASE TERNARY ALLOY PROVES SUPERIOR FOR SLIP RING LEAD WIRES
ERNST, R. H. WILLIAMS, D. N. NOV. 1966
M-FS-1540

Slip ring lead wires composed of ternary alloys of silver, have high electrical conductivity, a tensile strength of at least 30,000 psi, high ductility, and are solderable and weldable. An unexpected advantage of these alloys is their resistance to discoloration on heating in air.

B66-10551 NEW TUNGSTEN ALLOY HAS HIGH STRENGTH AT ELEVATED TEMPERATURES DEC. 1966 SEE ALSO NASA-TN-D-3248 LEWIS-336

IIS-336
Tungsten-hafnium-carbon alloy has tensile strengths of 88,200 psi at 3000 deg F and 62,500 psi at 3500 deg F. Possible industrial applications for this alloy would include electrical components such as switches and spark plugs, die materials for die casting steels, and heating elements.

B66-10558
TANTALUM ALLOYS RESIST CREEP DEFORMATION AT
ELEVATED TEMPERATURES
BUCKMAN, R. W., JR. /WESTINGHOUSE ELEC. CORP./
DEC. 1966
LEWIS-350

Dispersion-strengthened tantalum-base alloys
possess high strength and good resistance to creep
deformation at elevated temperatures in high
vacuum environments. They also have ease of
fabrication, good weldability, and corrosion
resistance to molten alkali metals.

B66-10572
TUNGSTEN FIBER-REINFORCED COPPER COMPOSITES
FORM HIGH STRENGTH ELECTRICAL
CONDUCTORS
MC DANELS, D. L. SIGNORELLI, R. A. DEC. 1966
SEE ALSO NASA-TN-D-3590

LEWIS-338

Tungsten fiber-reinforced copper composites have tensile strength, yield strength, and modulus of elasticity proportional to fiber content. The composites form high strength electrical conductors.

B66-10578
SPRAYABLE BIREFRINGENT COATING ENABLES
STRAIN MEASUREMENTS ON LARGE SURFACES
HUMPHREY, F. T. MC GEE, W. M. /LOCKHEED AIRCRAFT
CORP./ DEC. 1966
M-FS-1484

large surfaces contains constituents that can be premixed and sprayed as a single component with conventional paint spray equipment. Elevated temperatures are not required for spraying or curing of the coating material which has long pot life.

B66-10586
GAS CHROMATOGRAPHIC COLUMN ENABLES ANALYSIS
OF PROPELLANT HYDRAZINES
WELZ, E. A., JR. /N. AM. AVIATION/ DEC. 1966
MSC-1161

Stainless steel column is used in gas chromatographic analysis of propellant-grade hydrazine. The column has also been found effective for the separation of other amines and alcohols and nitriles.

B66-10594
USE OF STEEL AND TANTALUM APPARATUS FOR MOLTEN CD-MG-ZN ALLOYS
BENNETT, G. A. BURRIS, L., JR. KYLE, M. L. NELSON, P. A. DEC. 1966

ARG-199 ARG-200 Steel and tantalum apparatus contains various ternary alloys of cadmium, zinc, and magnesium used in pyrochemical processes for the recovery of uranium-base reactor fuels. These materials exhibit good corrosion resistance at the high temperatures necessary for fuel separation in liquid metal-molten salt solvents.

FILM COATING PERMITS LOW-FORCE SCRIBING WILLING, R. /N. AM. AVIATION/ DEC. 1966 MSC-990

Film coating requires low scribing force, is relatively unaffected by aging, and gives off a soft, fine scribe residue containing a proven lubricant.

B66-10616 HEAT-TREATMENT OF METAL PARTS FACILITATED BY SAND EMBEDMENT

BRISCOE, C. C. KELLEY, R. C. /BOEING CO./ DEC. 1966

M-FS-1543

Embedding metal parts of complex shape in sand contained in a steel box prevents strains and warping during heat treatment. The sand not only provides a simple, inexpensive support for the parts but also ensures more uniform distribution of heat to the parts.

B66-10631 SILVER-PALLADIUM BRAZE ALLOY RECOVERED FROM MASKING MATERIALS
CIERNIAK, R. COLMAN, G. DECARLO, F. /N. AM.
AVIATION/ DEC. 1966 M-FS-1845

Method for recovering powdered silver-palladium braze alloy from an acrylic spray binder and rubber masking adhesive used in spray brazing is devised. The process involves agitation and dissolution of masking materials and recovery of suspended precious metal particles on a filter.

PROCESS FOR PREPARING DISPERSIONS OF ALKALI METALS LANDEL, R. F. REMBAUM, A. /JPL/ JPL-734

Finely divided particles of alkali metals are produced by combining alkali metals are produced by combining alkali metals with certain aromatic compounds in selected solvents to form low-temperature soluble complexes from which the pure alkali metals precipitate quantitatively when the solutions are warmed. All operations must be carried out in an inert gas atmosphere.

COMBUSTION CHAMBER STRUTS CAN BE EFFECTIVELY TRANSPIRATION COOLED PALMER, G. H. /N. AM. AVIATION/ DEC. 1966 M-FS-1830

Vapor-deposited sintering technique increases the feasible temperature range of transpiration-cooled structural members in combustion chambers. This technique produces a porous mass of refractory metal wires around a combustion chamber structural member. This mass acts as a transpiration-cooled surface for a thick-walled tube.

B66-10646 PROCESS PRODUCES CHLORINATED AROMATIC ISOCYANATE IN HIGH YIELD TRISCHLER, F. /WHITTAKER CORP./ DEC. 1966 M-FS-1658

Tetrachloreterephthaloyl chloride reacts with sodium azide in an atmosphere of nitrogen to form a high yield of tetrachloro-p-phenylene diisocyanate. The chlorinated diisocyanate should have application as an intermediate in the preparation of polyurethane foams. The high halogen content would impart added flame resistance to these foams.

B66-10651 INTERGRANULAR METAL PHASE INCREASES THERMAL SHOCK RESISTANCE OF CERAMIC COATING CARPENIER, H. W. /N. AM. AVIATION/ DEC. 19 DEC. 1966 M-FS-1862 M-FS-1865

Dispersed copper phase increases the thermal shock resistance of a plasma-arc-sprayed coating of zirconia used as a heat barrier on a metal substrate. A small amount of copper is deposited on the granules of the zirconia powder before arc-spraying the resultant powder composite onto the substrate.

B66-10666 WIRE MATERIAL REDUCES COMPRESSOR BLADE UTRRATION JOHNSON, R. L. DEC. 1966 LEWIS-357

Wire material /Inconel/ having high friction and low wear characteristics, reduces vibratory stress and prevents compressor blade failure.

B66-10673 **COLD** SOLID PROPELLANT MOTOR HAS STOP-RESTART CAPABILITY HENDEL, F. J. DEC. 1966 JPL-836

Solid propellant rocket is kept and fired at low temperatures in launch vehicles or spacecraft. The motor is capable of developing a specific impulse comparable to that of liquid propellant motors, is started, stopped, and restarted, and is stored in space without solar radiation causing hot spots on the motor casing.

B66-10681 THIN PLASTIC SHEET ELIMINATES NEED FOR EXPENSIVE PLATING STREMEL, R. L. /N. AM. AVIATION/ DEC. 1966 M-FS-1896

Gasket of a commercially available plastic material is interposed between the mating surfaces in axial joints where a hard and a soft metal are in intimate contact under stress conditions.
This eliminates the fretting problem and is quicker and less expensive than the plating process.

B66-10684 IMPROVED METHOD OF EDGE COATING FLAT RIBBON WIRE

INNOVATOR NOT GIVEN /SCHJELDAHL / G.T. / CO. / DEC. M-FS-902

Method to coat the edges of flat ribbon wire is devised by using enamel with modified flow properties due to addition of 2 to 4 percent silicon. Conventional coating procedes several edge coatings to minimize oxidation and additional conventional coats are applied after edge coating to build up thickness.

TRACE LEVELS OF METALLIC CORROSION IN WATER DETERMINED BY EMISSION SPECTROGRAPHY SNELL, H. H. /N. AM. AVIATION/ DEC. 1966 MSC-1193

Emission spectrographic method determines trace amounts of inorganic impurities in potable water. The capability of this innovation should arouse considerable interest among plant biologists, chemists working in organic synthesis, and pathologists.

B66-10705 GLASS FORMULATION HAS HIGH COEFFICIENT OF THERMAL EXPANSION DAVIS, E. K. SEIDEL, J. /WESTINGHO LAB./ DEC. 1966 SEE ALSO B66-10704 /WESTINGHOUSE ASTRONUCL. NU-0084

Glass formulation has a high coefficient of thermal expansion. The glass makes a good hermetic seal for the end of a stainless steel or copper tube such as a sheath of an instrumentation cable.

B66-10710 RADIOACTIVE METHOD ENABLES DETERMINATION OF SURFACE AREAS RAPIDLY AND ACCURATELY ROESMER, J. ROLL, J. A. RYMER, G. T. SUNDAY, J. /WESTINCHOUSE ASTRONUCL. LAB./ DEC. 1966 NU-0088

Radioactive krypton adsorption technique is used

to determine the surface area of more than one sample of material simultaneously.

B67-10003 NEW ELECTROLYTE MAY INCREASE LIFE OF POLAROGRAPHIC OXYGEN SENSORS ALBRIGHT, C. F. /GARRETT CORP./ JAN. 1967 MSC-1049

Electrolyte increases life on oxygen sensors in a polarograph used for measuring the partial pressure of oxygen in a gas mixture. It consists of a solution of lithium chloride, dimethyl acetamide and water.

B67-10007
COMPOSITES OF POROUS METAL AND SOLID
LUBRICANTS INCREASE BEARING LIFE
SLINEY, H. E. JAN. 1967
LEWIS-307

Self-lubricating composites of porous nickel and nickel-chromium alloy impregnated with a barium fluoride-calcium fluoride eutectic, and a thin film of solid lubricant increase wear life of load bearing surfaces.

B67-10012
CRYSTAL MICROBALANCE MEASURES CONDENSABLE
MOLECULAR FLUXES
STEPHENS, J. B. JAN. 1967
JPL-845

Quartz crystal quantitatively measures molecular fluxes emanating from and condensing on spacecraft surfaces. Vibrating in a thickness shear mode the crystal is frequency sensitive to changes in mass on its surface and can measure a fractional monolayer of a condensate.

B67-10014
ABRADED CADMIUM-PLATED CABLE CONNECTORS
REPAIRED BY CONVERSION COATING
SIMMONS, J. R. /BOEING CO./ JAN. 1967
M-FS-1424

Conversion coating procedures repairs scratched and abraded cadmium-plated aluminum cable connectors while they are in assembly.

B67-10016
DISPERSION OF BORAX IN PLASTIC IS EXCELLENT
FIRE-RETARDANT HEAT INSULATOR
EVANS, H. HUGHES, J. SCHMITZ, F. JAN. 1967
ARG-5

A mix of borax powder and a chlorinated anhydrous polyester resin yields a plastic composition that is fire-retardant, yields a minimum of toxic gases when heated, and exhibits high thermal insulating properties. This composition can be used as a coating or can be converted into laminated or cast shapes.

B67-10026
BERYLLIUM FLUORIDE FILM PROTECTS BERYLLIUM
AGAINST CORROSION
ODONNELL, P. M. FEB. 1967
LEWIS-363

Film of beryllium fluoride protects beryllium against corrosion and stress corrosion cracking in water containing chloride ion concentrations. The film is formed by exposing the beryllium to fluorine gas at 525 degrees C or higher and makes beryllium suitable for space applications.

FLUID-BED FLUORIDE VOLATILITY PROCESS
RECOVERS URANIUM FROM SPENT URANIUM ALLOY
FUELS
BARGHUSEN, J. J. CHILENSKAS, A. A. GUNDERSON, G.
E. HOLMES, J. T. JONKE, A. A. KINCINAS, J. E.
LEVITZ, N. M. POTTS, G. L. RAMASWAMI, D.
STETHERS, H. TURNER, K. S. MAR. 1967 SEE ALSO
ANL-6979, ANL-6829, ANL-6830, ANL-6973, ANL-6992,
ANL-6994
ARG-232

Fluid-bed fluoride volatility process recovers uranium from uranium fuels containing either zirconium or aluminum. The uranium is recovered as uranium hexafluoride. The process requires few operations in simple, compact equipment, and aliminates aqueous radioactive wastes.

B67-10033 HYDRATED MULTIVALENT CATIONS ARE NEW CLASS OF MOLTEN SALT MIXTURES ANGELL, C. A. MAR. 1967 ARG-211

Electrical conductance and activation energy measurements on mixtures of calcium and potassium nitrate show the hydrated form to be a new class of molten salt. The theoretical glass transition temperature of the hydrate changed inversely to the anhydrous mixture.

B67-10034
TWO TECHNIQUES ENABLE SAMPLING OF FILTERED
AND UNFILTERED MOLTEN METALS
BURRIS, L., JR. PIERCE, R. D. TOBIAS, K. R.
WINSCH, I. O. MAR. 1967 SEE ALSO ANL-708B
ARG-150

Filtered samples of molten metals are obtained by filtering through a plug of porous material fitted in the end of a sample tube, and unfiltered samples are obtained by using a capillary-tube extension rod with a perforated bucket. With these methods there are no sampling errors or loss of liquid.

B67-10044
IRRADIATED GASES TRANSFERRED WITHOUT
CONTAMINATION OR DILUTION
BONN, J. L. KERN, W. MAR. 1967
LEWIS-278

Vacuum chamber apparatus opens sealed canisters of irradiated gases and transfers the contents without contaminating the surrounding area, diluting or polluting the contained gases. The apparatus consists of the chamber, a valved piping manifold, and a special drill and sealed drilling access.

B67-10049
CRYOGENIC FATIGUE DATA DEVELOPED FOR INCONEL
718
SCHMIDT, E. H. /N. AM. AVIATION/ MAR. 1967
M-FS-702

Data were obtained on the cryogenic fatigue properties of Inconel 718 bar using axial loading and rotating beam fatigue tests. Results also disclosed the fatigue properties of Inconel 718 sheet materials.

B67-10050 ZIRCONIUM ALLOYS WITH SMALL AMOUNTS OF IRON AND COPPER OR NICKEL SHOW IMPROVED CORROSION RESISTANCE IN SUPERHEATED STEAM GREENBERG, S. YOUNGDAHL, C. A. MAR. 1967 ARG-226

Heat treating various compositions of zirconium alloys improve their corrosion resistance to superheated steam at temperatures higher than 500 degrees C. This increases their potential as fuel cladding for superheated-steam nuclear-fueled reactors as well as in autoclaves operating at modest pressures.

B67-10051
STUDY MADE OF CORROSION RESISTANCE OF
STAINLESS STEEL AND NICKEL ALLOYS IN NUCLEAR
REACTOR SUPERHEATERS
GREENBERG, S. HART, R. K. LEE, R. H. RUTHER, W.
E. SCHLUETER, R. R. MAR. 1967
ARG-230

Experiments performed under conditions found in nuclear reactor superheaters determine the corrosion rate of stainless steel and nickel alloys used in them. Electropolishing was the primary surface treatment before the corrosion test. Corrosion is determined by weight loss of specimens after defilming.

B67-10058 ADDITION OF SOLID OXIDIZER INCREASES LIQUID FUEL SPECIFIC IMPULSE HENDEL, F. J. APR. 1967 JPL-861

Adding soluble solid oxidizers to hydrazine and similar fuels makes them useful in low temperature bipropellant systems. The oxidizers improve the low specific impulse, high freezing point, low boiling point, and low density of the fuels.

B67-10062
RECOMMENDED VALUES OF THE THERMOPHYSICAL
PROPERTIES OF EIGHT ALLOYS, THEIR MAJOR
CONSTITUENTS AND OXIDES
TOULOUKIAN, Y. S. /PURDUE UNIV./ MAR. 1967
NU-0095

Reference work provides in tabular and graphical form the thermophysical properties of basic alloys, their constituents and oxides. This is useful for personnel who deal with extreme temperature environments.

B67-10069
CONTROLLED FERRITE CONTENT IMPROVES
WELDABILITY OF CORROSION-RESISTANT STEEL
MALIN, C. O. /N. AM. AVIATION/ APR. 1967
M-FS-568

Corrosion-resistant steel that adds restrictions on chemical composition to ensure sufficient ferrite content decreases the tendency of CRES to develop cracks during welding. The equations restricting composition are based on the Schaeffler constitution diagram.

B67-10070
RADIAL FURNACE SHOWS PROMISE FOR GROWING
STRAIGHT BORON CARBIDE WHISKERS
FEINGOLD, E. /GE/ APR. 1967
HQ-50

Radial furnace, with a long graphite vaporization tube, maintains a uniform thermal gradient, favoring the growth of straight boron carbide whiskers. This concept seems to offer potential for both the quality and yield of whiskers.

B67-10078
PURIFICATION TRAIN PRODUCES ULTRAPURE
HYDROGEN GAS
WALTER, R. J. /N. AM. AVIATION/ APR. 1967
M-FS-1913

Three-stage purification train produces ultrapure hydrogen gas at 1000 psi from K-bottles of high-purity hydrogen. The continuous process incorporates deoxidation and dehydration units and a molecular sieve.

B67-10079
ARYLENESILOXANE COPOLYMERS
BREED, L. W. ELLIOTT, R. L. /MIDWEST RES. INST./
APR. 1967
M-FS-1812

Arylenesiloxane copolymers with regularly ordered structures were discovered during efforts to develop organosilicon polymers. Arylenesilane and siloxane monomers were both synthesized in these experiments.

B67-10083
EFFECTS OF HELIUM AND NITROGEN AS
PRESSURANTS IN NITROGEN TETROXIDE TRANSFER
BIZJAK, F. SIMKIN, D. J. /N. AM. AVIATION/ APR.
1967
MSC-924 MSC-925

Study investigates effects of helium and nitrogen as pressurants in nitrogen tetroxide transfer from one vessel to another at a higher elevation. Results may contribute to creation of new environmental systems and improved oxygen solubility in water to promote fish life.

B67-10089
MATERIALS DATA HANDBOOKS PREPARED FOR
ALUMINUM ALLOYS 2014, 2219, AND 5456, AND
STAINLESS STEEL ALLOY 301
INNOVATOR NOT GIVEN. /SYRACUSE UNIV. RES. INST./
APR. 1967
M-FS-1959 M-FS-1960 M-FS-1961 M-FS-1962
Materials data handbooks summarize all presently
known properties of commercially available
structural aluminum alloys 2014, 2219, and 5456
and structural stainless steel alloy 301. The
information includes physical and mechanical
property data and design data presented in tables,
illustrations, and text.

B67-10095
IMPROVED CHLORATE CANDLE PROVIDES
CONCENTRATED OXYGEN SOURCE
HAUG, R. D. MYERS, D. A. TANZAR, G. F. /GARRETT

CORP./ MAR. 1967
MSC-1137
Improved chlorate candle is used as a solid,
portable source of oxygen in emergency situations.
It contains sodium chlorate, iron, barium
peroxide, and glass, mixed in powdered form. The
oxygen evolves from the decomposition of the
sodium chlorate when an ignition pellet is
electrically initiated.

B67-10100
SYNTHESIS OF VARIOUS HIGHLY HALOGENATED
MONOMERS AND POLYMERS
HOLLANDER, J. TRISCHLER, F. D. /WHITTAKER CORP./
APR. 1967 SEE ALSO B66-10646
M-FS-2143
Halogenated polymerhane and polygarbonate are

Halogenated polyurethane and polycarbonate are synthesized and found to be LOX compatible but dependent upon the type nitrogen bonding.

B67-10102 SIMPLIFIED METHOD INTRODUCES DRIFT FIELDS INTO CELLS GOLDSTEIN, B. RAPPAPORT, P. WYSOCKI, J. J. /RCA/ APR. 1967 GSFC-572

Drift fields are simply introduced into solar cells at low temperatures in short periods. This is done after their rectifying junctions and output contacts are applied.

B67-10112
THERMODYNAMIC PROPERTIES RELATED TO EXPANSION OF TWO-COMPONENT GAS BIZJAK, F. /N. AM. AVIATION/ APR. 1967
MSC-1133

Theoretical equations were derived from basic thermodynamic equations to relate the thermodynamic properties of a two-component gas mixture to the expansion of the gas during tank ullage blowdown.

B67-10113
NONDOVEN GLASS FIBER MAT REINFORCES
POLYURETHANE ADHESIVE
ROSELAND, L. M. /DOUGLAS AIRCRAFT CO./ MAY 1967
M-F5-2309

Nonwoven glass fiber mat reinforces the adhesive properties of a polyurethane adhesive that fastens hardware to exterior surfaces of aluminum tanks. The mat is embedded in the uncured adhesive. It ensures good control of the bond line and increases the peel strength.

B67-10121
PORTABLE FIXTURE FACILITATES PRESSURE TESTING OF INSTRUMENTATION FITTINGS OLSON, G. A. /BOEING CO./ MAY 1967 M-F5-2032

Portable fixture facilitates pressure testing to detect possible leaks in instrumentation fittings mounted on tank bulkheads. It uses a vacuum cup which seals a pressure regulator adapter around one side of the fitting to be pressure tested. Leakage is detected with a gas sniffer.

B67-10122
EVALUATION OF HIGH TEMPERATURE STRANDED
HOOKUP WIRE
DONNELLY, J. H. MOORE, H. J., JR. MAY 1967 SEE
ALSO NASA-TM-X-53522
M-FS-2478

Tests are performed on wire and insulation materials to determine selection for electronic space assemblies. Wire characteristics of tensile strength, flexibility, conductivity, and general workability are tested. Knowledge of the advantages and limitations of these materials should prevent overspecification.

B67-10124
SILVER PLATING ENSURES RELIABLE DIFFUSION
BONDING OF DISSIMILAR METALS
INNOVATOR NOT GIVEN /BOEING CO./ MAY 1967
M-FS-1975

Dissimilar metals are reliably joined by diffusion bonding when the surfaces are electroplated with silver. The process involves cleaning and etching, anodization, silver striking, and silver

plating with a conventional plating bath. It minimizes the formation of detrimental intermetallic phases and provides greater tolerance of processing parameters.

B67-10132 STATIC ELECTRICITY OF POLYMERS REDUCED BY TREATMENT WITH IODINE HERMANN, A. M. LANDEL, R. F. REMBAUM, A. MAY 1967 PPO-10062

Treating organic polymers with iodine improves the electrical conductivity. Diffusion enables products of desired properties to be custom formulated. This eliminates a buildup of static electricity and the need for fillers or bound metal salts.

B67-10133
XENON FLUORIDE SOLUTIONS EFFECTIVE AS
FLUORINATING AGENTS
HYMAN, H. H. QUARTERMAN, L. A. SHEFT, I. MAY
1967
ARG-217

Solutions of xenon fluorides in anhydrous hydrogen fluoride have few disruptive effects and leave a residue consisting of gaseous xenon, which can be recovered and refluorinated. This mild agent can be used with materials which normally must be fluorinated with fluorine alone at high temperatures.

B67-10138
STATUS OF ULTRACHEMICAL ANALYSIS FOR
SEMICONDUCTORS
DILTS, R. V. HALL, L. C. /VANDERBILT UNIV./ MAY
1967
M-FS-2254

Status of ultratrace chemical analyses of materials for semiconductors was studied. This study covered atomic absorption spectroscopy, emission spectroscopy, and activation analyses. It makes recommendations to improve sensitivity, reliability and versatility for ultratrace chemical analysis.

B67-10141 STUDY TO MINIMIZE HYDROGEN EMBRITTLEMENT OF ULTRAHIGH-STRENGTH STEELS ELSEA, S. T. FLETCHER, E. E. GROENEVELD, T. P. /BATTELLE MEM. INST./ MAY 1967 M-FS-2455

Hydrogen-stress cracking in high-strength steels is influenced by hydrogen content of the material and its hydrogen absorption tendency.

Non-embrittling cleaning, pickling, and electroplating processes are being studied.

Protection from this hydrogen embrittlement is important to the aerospace and aircraft industries.

B67-10147
DEGREASING OF TITANIUM TO MINIMIZE STRESS
CORROSION
CARPENTER, S. R. /GEN. DYN./CONVAIR DIV./
MAY 1967
LEWIS-382

Stress corrosion of titanium and its alloys at elevated temperatures is minimized by replacing trichloroethylene with methanol or methyl ethyl ketone as a degreasing agent. Wearing cotton gloves reduces stress corrosion from perspiration before the metal components are processed.

B67-10148
CRACKS IN GLASS ELECTRICAL CONNECTOR
HEADERS REMOVED BY DRY BLASTING WITH FINE
ABRASIVE
ECKERT, R. W. /GEN. DYN./CONVAIR DIV./ MAY
1967
LEWIS-381

Cracking that causes pressure leakage in glass connector headers can be alleviated by manipulating the pin bridgewire connectors. This initiates the surface and meniscus cracks. Dry blasting the header surface with a fine abrasive then removes the cracks.

B67-10149
COATING PROTECTS MAGNESIUM-LITHIUM ALLOYS
AGAINST CORROSION
INNOVATOR NOT GIVEN /AM. MACHINE AND FOUNDRY CO./
MAY 1967 SEE ALSO NASA-SP-50-68
M-FS-2446

Coating protects newly developed magnesium-lithium alloys against corrosion. The procedure includes heating the ingots in a salt bath and rolling them to the desired sheet thickness. The black coating, which is tough though thin and ductile, is derived mainly from chromium.

B67-10159
HEAT TREATMENT STUDY OF ALUMINUM CASTING ALLOY M45
LOVOY, C. V. JUN. 1967 SEE ALSO B65-10092
M-FS-2397

Study determines the heat treatment cycle of aluminum casting alloy M45 which will increase the strength levels of the alloy while maintaining optimum stress corrosion resistance. Evidence indicates that present production castings are overaged too severely to take full advantage of the strength of the alloy.

B67-10163
EFFECTS OF HEAT INPUT RATES ON T-1 AND T-1A
STEEL WELDS
DAVIS, R. A. OLSEN, M. G. WORDEN, S. W. JUN.
1967 SEE ALSO NASA TM-X-53537
M-FS-2475

Technology of T-1 and T-1A steels is emphasized in investigation of their weld-fabrication. Welding heat input rate, production weldment circumstances, and standards of welding control are considered.

B67-10168
ISOSTATIC COMPRESSION PROCESS CONVERTS
POLVAROMATICS INTO STRUCTURAL MATERIAL
INGHAM, J. D. LAWSON, D. D. OSTRUM, G. K. JUN.
1967
JPL-892

Isostatic compression process compacts certain powdered aromatic polymers into homogeneous materials that can be machined to form useful components, such as bearings. It provides for complete removal of air in the interstitial spaces surrounding the granules of the powdered polymer before the powder is subjected to isostatic compression.

B67-10182 STRESS CALCULATOR SPEEDILY CONVERTS STRAIN DATA CORNETT, D. W. /BOEING CO./ JUN. 1967 M-FS-2021

Stress calculator permits speedy conversion of strain data directly into maximum and minimum stresses and also determines stress direction. The calculator has a movable slide with logarithmic and linear scales, and an information and grid board. Its size is flexible for easy manipulation.

B67-10184 NEW CLASS OF COMPOUNDS HAVE VERY LOW VAPOR PRESSURES ANGELL, C. A. GRUEN, D. M. JUN. 1967 ARG-115

Magnesium hexahydrate tetrachlorometaliates are 50-volume-percent water, have a high melting point and possess a low vapor pressure. These new compounds are relatively noncorrosive, thermally stable, and water soluble but not hygroscopic. They may have potential applications as cooling fluids.

B67-10185
XENON FLUORIDES SHOW POTENTIAL AS
FLUORINATING AGENTS
CHERNICK, C. L. SHIEH, T. C. YANG, N. C. JUN.
1967
ARG-113

Xenon fluorides permit the controlled addition of fluorine across an olefinic double bond. They provide a series of fluorinating agents that permit ready separation from the product at a high purity. The reactions may be carried out in the vapor phase.

B67-10186 ALPHA PARTICLE BACKSCATTERING MEASUREMENTS USED FOR CHEMICAL ANALYSIS OF SURFACES PATTERSON, J. H. JUN. 1967 ARG-116

Alpha particle backscattering performs a chemical analysis of surfaces. The apparatus uses a curium source and a semiconductor detector to determine the energy spectrum of the particles. This in turn determines the chemical composition of the surface after calibration to known samples.

B67-10187
OXIDE FILM ON METAL SUBSTRATE REDUCED TO FORM METAL-OXIDE-METAL LAYER STRUCTURE YOUNGDAHL, C. A. JUN. 1967
ARG-48

Electrically conductive layer of zirconium on a zirconium-oxide film residing on a zirconium substrate is formed by reducing the oxide in a sodium-calcium solution. The reduced metal remains on the oxide surface as an adherent layer and seems to form a barrier that inhibits further reaction.

B67-10189
IRON SERVES AS DIFFUSION BARRIER IN
THERMALLY REGENERATIVE GALVANIC CELL
CROUTHAMEL, C. E. JUN. 1967
ARG-29

Pure iron or iron-coated diaphragm provides a hydrogen diffusion electrode for a thermally regenerative galvanic cell. It allows the gas to diffuse through its interatomic spaces and resists the corrosive action of the cell environment.

B67-10191
SOLUBILITY DATA ARE COMPILED FOR METALS IN LIQUID ZINC
DILLON, I. G. JOHNSON, I. JUN. 1967 SEE ALSO ANL-7083
ARG-149

Available data is compiled on the solubilities of various metals in liquid zinc. The temperature dependence of the solubility data is expressed using the empirical straight line relationship existing between the logarithm of the solubility and the reciprocal of the absolute temperature.

B67-10194
SEPARATION TECHNIQUE PROVIDES RAPID
QUANTITATIVE DETERMINATION OF CESIUM-137
IN IRRADIATED NUCLEAR FUEL
ELLEMBURG, E. J. MC COWN, J. J. /WESTINGHOUSE
ASTRONUCL. LAB./ JUN. 1967
NUC-10047

Potassium cobalt ferrocyanide is used to determine cesium-137 activity in irradiated fuel samples. It preferentially removes cesium from an acid solution of the fuel material. The residue is filtered and analyzed with a gamma spectrometer.

B67-10197
NEW CLASS OF THERMOSETTING PLASTICS HAS
IMPROVED STRENGTH, THERMAL AND CHEMICAL
STABILITY
BURNS, E. A. DUBROW, B. LUBOWITZ, H. R. /TRW
SYSTEMS/ JUN. 1967
LEWIS-10108

New class of thermosetting plastics has high hydrocarbon content, high stiffness, thermal stability, humidity resistance, and workability in the precured state. It is designated cyclized polydiene urethane, and is applicable as matrices to prepare chemically stable ablative materials for rocket nose cones of nozzles.

B67-10208 STUDY MADE OF RANEY NICKEL TECHNOLOGY LEE, W. B. /MARQUADT CORP./ JUN. 1967 M-FS-2054

S-2004
Raney nickel study indicates that its improved storage life is due to gaseous hydrogen and that the mechanism of its ignitions is catalytic and due to chemisorbed hydrogen atoms. It shows that reacted hancy nickel powder can be reactivated

and can introduce multiple ignitions in a hydrogen gas stream.

B67-10209
POROUS MANDRELS PROVIDE UNIFORM
DEFORMATION IN HYDROSTATIC POWDER
METALLURGY
GRIPSHOVER, P. J. HANES, H. D. /BATTELLE MEM.
INST./ JUN. 1967
M-FS-1972

Porous copper mandrels prevent uneven deformation of beryllium machining blanks. The beryllium powder is arranged around these mandrels and hot isostatically pressed to form the blanks. The mandrels are then removed by leaching.

B67-10227
PHOTOSENSITIVE FILLER MINIMIZES INTERNAL STRESSES IN EPOXY RESINS
DILLON, J. N. /IBM/ JUL. 1967
M-FS-1880

Photosensitive filler is added to curable epoxy resins to minimize stress from internal shrinkage during curing or polymerization. Cinnamic acid resins and cinnamal ketones may be added in the amount of 1 to 3 per cent by weight of the resin mixture.

B67-10228
SUBSTITUTING GOLD FOR SILVER IMPROVES
ELECTRICAL CONNECTIONS
LOYD, J. R. PICKARD, R. F. /ASTRO-SPACE LABS./
JUL. 1967
M-FS-2390

In attaching external leads to thin film sensors of platinum ribbon, liquid gold is applied to each end of the ribbon and the leads are soldered to the cured gold. The cured and soldered liquid gold shows no tendency to migrate and retains initial resistance characteristics when exposed to elevated temperatures.

B67-10232
WELDING, BONDING, AND SEALING OF REFRACTORY
METALS BY VAPOR DEPOSITION
INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/
JUL. 1967
LEWIS-123

Plating process welds, bonds, and seals refractory metals without weakening or changing the structure of the base metals. A metal halide compound in the vapor phase is decomposed to deposit filler metal on the base metal. The resulting bond is a true metal-to-metal bond.

B67-10236
URANIUM ISOTOPES QUANTITATIVELY DETERMINED BY MODIFIED METHOD OF ATOMIC ABSORPTION SPECTROPHOTOMETRY
LEE, G. H. JUL. 1967
ARG-210

Hollow-cathode discharge tubes determine the quantities of uranium isotopes in a sample by using atomic absorption spectrophotometry. Dissociation of the uranium atoms allows a large number of ground state atoms to be produced, absorbing the incident radiation that is different for the two major isotopes.

B67-10243

ANALYTICAL TECHNIQUE CHARACTERIZES ALL

TRACE CONTANINANTS IN WATER

FOSTER, J. N. LYSYJ, I. NELSON, K. H. /N. AM.

AVIATION/ JUL. 1967

MSC-11032

Properly programmed combination of advanced chemical and physical analytical techniques characterize critically all trace contaminants in both the potable and waste water from the Apollo Command Module. This methodology can also be applied to the investigation of the source of water pollution.

B67-10265
ALUMINUM-TITANIUM HYDRIDE-BORON CARBIDE
COMPOSITE PROVIDES LIGHTWEIGHT NEUTRON
SHIELD MATERIAL
POINDEXTER, A. M. /WESTINGHOUSE ASTRONUCL. LAB./
AUG. 1967

NUC-10069

-10059
Inexpensive lightweight neutron shield material has high strength and ductility and withstands high internal heat generation rates without excessive thermal stress. This composite material combines structural and thermal properties of aluminum, neutron moderating properties of titanium hydride, and neutron absorbing characteristics of boron carbide.

B67-10266
SIMPLIFIED METHOD MEASURES CHANGES IN
TENSILE YIELD STRENGTH USING LEAST NUMBER
OF SPECIMENS
DIXON, C. E. /AEROJET-GEN. CORP./ AUG. 1967

DIXON, C. E. /AEROJET-GEN. CORP./ AUG. 1967
NUC-10075
Simplified method determines yield strength due to heat treat, irradiation or mechanical treatment.
Each specimen in a group of specimens is tested for yield stress point, subjected to heat treat or irradiation, and retested for new yield stress point which is a measure of change in material.

B67-10282
MATERIALS DATA HANDBOOK, INCONEL ALLOY 718
SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES.
INST./ AUG. 1967
M-FS-2348

Materials data handbook on Inconel alloy 718 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10286 LIQUID CRYSTALS DETECT VOIDS IN FIBERGLASS LAMINATES HOLLAR, W. T. /GEN. DYN./CONVAIR/ AUG. 1967

LEWIS-10104

Liquid crystal solution nondestructively detects
voids or poor bond lines in fiberglass laminates.
A thin coating of the solution is applied by
spray or brush to the test article surface, and,
when heated, indicates the exact location of
defects by differences in color.

B67-10290
TRACE HYDRAZINES IN AQUEOUS SOLUTIONS
ACCURATELY DETERMINED BY GAS CHROMATOGRAPHY
WELZ, E. A., JR. /N. AM. AVIATION/ AUG. 1967
SEE ALSO NASA B66-10586
MSC-11222

Trace amounts of hydrazines in aqueous solutions

can be determined by using polyethyleneimine

/PEI/ in conjunction with the gas chromatographic

column. The PEI specifically retains water

without altering the separability or elution order

of the hydrazine and associated constituents.

B67-10299
LIQUID OXYGEN DUCTING CLEANED BY FALLING FILM METHOD
PAUL, H. I. /BOEING CO./ AUG. 1967
M-FS-11816

Principle of a vertical falling film is used to clean contaminated large diameter and length liquid oxygen /LOX/ cylindrical ducting. The cleaning cycle is performed by flowing trichloroethylene in a falling film down a vertically mounted duct for approximately one hour.

B67-10301
MATERIALS DATA HANDBOOK, ALUMINUM ALLOY
7075
SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES.
INST./ AUG. 1967
M-FS-2349

Materials data handbook on aluminum alloy 7075 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures, and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10302 IMPROVED COMPRESSION MOLDING PROCESS HEIER, W. C. JUL. 1967 LANGLEY-10027

Modified compression molding process produces plastic molding compounds that are strong, homogeneous, free of residual stresses, and have improved ablative characteristics. The conventional method is modified by applying a vacuum to the mold during the molding cycle, using a volatile sink, and exercising precise control of the mold closure limits.

B67-10312
NEW ELECTRON MICROSCOPE EMPLOYS NEW VIDEO
DISPLAY TECHNIQUE
BROOKSHIER, W. K. GILROY, J. AUG. 1967
ARG-158

Video display system for a scanning electron microscope provides slow scanning rates, a self-generated color gradient technique, and allows leisurely viewing of several hours. It also enables the viewing of areas where selected energy regions contribute relatively few electrons, and the changing of speciman position and magnification without adjustments.

B67-10315
TRITIATED ALUMINA SERVES AS REAGENT FOR
SELF-LABELING ANALYSIS
ERENRICH, E. H. KLEIN, P. D. SEP. 1967
ARG-209

G-209
Tritiated alumina, prepared by exchange of the surface hydroxyl groups with tritiated water, is a suitable reagent for exchange-labeling of specific compounds in low concentrations prior to chromatographic analysis. In a chromatographic column, it detects and measures submicrogram quantities of material.

B67-10320 EVAPORANT FEED DEVICE FACILITATES FLASH VAPOR DEPOSITION PROCESS IN VACUUM HERMANN, W. A. STIRN, R. J. SEP. 1967 NPO-10232

Mechanism using a helix sequentially feeds prescribed amounts of metal charges into an evaporation boat used for flash vapor deposition of the evaporants onto a substrate in a vacuum chamber. The hellx is advanced by external manual controls extending through sealed feedthrough devices into the chamber wall.

B67-10322 CHEMICAL MILLING SOLUTION REVEALS STRESS CORROSION CRACKS IN TITANIUM ALLOY BRASKI, D. N. SEP. 1967 LANGLEY-10077

Solution of hydrogen flouride, hydrogen peroxide, and water reveals hot salt stress corrosion cracks in various titanium alloys. After the surfact is rinsed in water and dried, swabbed with the solution, be observed by the naked eye or at low magnification.

B67-10324
THERMODYNAMIC PROPERTIES OF SOLID PALLADIUMSILVER ALLOYS AND OTHER ALLOYS ARE
INVESTIGATED BY TORSION-EFFUSION TECHNIQUE
MYLES, K. M. SEP. 1967 SEE ALSO ANL-6657
ARG-277

Vapor pressure data obtained by the torsioneffusion method provides the thermodynamic
properties of several transition-metal alloy
systems. The vapor pressure of silver over solid
silver and over palladium-silver alloys was
measured and the results were more accurate than
those found previously by other techniques.

B67-10340
HIGH-STRENGTH TUNGSTEN ALLOY WITH IMPROVED
DUCTILITY
KLOPP, W. D. RAFFO, P. L. RUBENSTEIN, L. S.
WITZKE, W. R. AUG. 1967
LEWIS-10257

Alloy combines superior strength at elevated temperatures with improved ductility at lower temperatures relative to unalloyed tungsten. Composed of tungsten, rhenium, hafnium, and carbon, the alloy is prepared by consumable electrode vacuum arc-meiting and can be fabricated into rod, plate, and sheet.

B67-10346
THERMODYNAMIC PROPERTIES OF SATURATED LIQUID
PARAHYDROGEN CHARTED FOR IMPORTANT
TEMPERATURE RANGE
MC CARTY, R. D. RODER, H. M. /NATL. BUR. OF
STD./ SEP. 1967
NUC-10018

Six entropy diagrams for parahydrogen in or near the saturated liquid state cover the temperature range from 29.16 degrees to 42.48 degrees R with pressures to 100 psia and mixtures of the liquid and vapor phases to 0.003 quality. The diagrams are printed in color, are 19 by 30 inches in size, and are suitable for wall mounting.

B67-10349
EXCELLENT SPRING PROPERTIES DEVELOPED IN TWO NICKEL ALLOYS FOR USE AT CRYOGENIC TEMPERATURES
DESSAU, P. P. REHN, I. M. /AEROJET-GEN. CORP./ SEP. 1967
NUC-10084

Cold working and aging prepares nickel alloys for coiling into springs with properties acceptable in a cryogenic environment.

B67-10350
SOFT METAL PLATING ENABLES HARD METAL SEAL
TO OPERATE SUCCESSFULLY IN LOW TEMPERATURE,
HIGH PRESSURE ENVIRONMENT
LAMVERMEYER, D. J. /AEROJET-GEN. CORP./ SEP.
1967
NUC-10083

Soft metal plating of hard metal lip seal enables successful operation of seal in a cryogenic fluid line under high pressure. The seal is coated with a thin film of 24 carat gold on the lip area to provide antigall and seal properties.

B67-10351
METAL FLAME SPRAY COATING PROTECTS ELECTRICAL
CABLES IN EXTREME ENVIRONMENT
BRADY, R. D. /METCO, INC./FOX, H. A. /AEROJET-GEN.
CORP./ OCT. 1967
NUC-10077

Metal flame spray coating prevents emf measurement error in sheathed instrumentation cables which are externally attached to cylinders which were cooled on the inside, but exposed to gamma radiation on the outside. The coating provides a thermoconductive path for radiation induced high temperatures within the cables.

B67-10354 CUT-THROUGH TESTER ACCURATELY MEASURES INSULATION FAILURE RATES BAKER, E. U. /DOUGLAS AIRCRAFT/ DCT. 1967 M-F5-12506

Cut-through tester electronically measures the rate of failure of various wire and cable insulating materials both as to time and the amount of applied pressure. The force /weight/acting on the penetrator can be applied through a near infinite range.

B67-10365
MAGNESIUM-LITHIUM ALLOYS DEVELOPED FOR LOW
TEMPERATURE USE
DUNKERLEY, F. J. LEAVENWORTH, H. W., JR. /AM
MACHINE AND FOUNDRY CO./ OCT. 1967 SEE ALSO
NASA-SP-5068
M-FS-1541

Three new magnesium-lithium alloys have been developed for application at cryogenic temperatures. These lightweight alloys have approximately doubled the tensile and yield strengths at room temperature of previously described magnesium-lithium alloys.

B67-10366
STUDY MADE OF DIELECTRIC PROPERTIES OF
PROMISING MATERIALS FOR CRYOGENIC
CAPACITORS
MATHES, K. N. MINNICH, S. H. /GE/ OCT. 1967
M-FS-13620

Experimental investigations were conducted to determine dielectric properties of promising materials for cryogenic capacitors to be used in energy storage and pulse applications. The three

classes of materials investigated were - /1/
inorganic bonded ferroelectric materials, /2/
anodic coatings on metal foils, and /3/ polar low
temperature liquids.

B67-10374
HANDBOOKS DESCRIBE EDDY CURRENT TECHNIQUES
USED IN NONDESTRUCTIVE TESTING OF METAL
PARTS AND COMPONENTS
INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/ OCT.
1967
H-FS-13172

Handbooks describe eddy current techniques used in nondestructive testing of metal parts and components.

B67-10375
ANALYSIS OF STABILITY-CRITICAL ORTHOTROPIC
CYLINDERS SUBJECTED TO AXIAL COMPRESSION
FINLEY, R. L. LIU, L. S. YANG, P. B. /BOEING
CO./ OCT. 1967
M-FS-12869

Analytical procedure for determining critical buckling loads of orthotropic cylinders subjected to axial compression loading has been defined. Three modes of instability have been considered - local instability caused by panel and interframe buckling, and local instability caused by yielding and crippling in areas of stress concentration.

B67-10381
MACHINING HEAVY PLASTIC SECTIONS
STALKUP, O. M. /N. AM. AVIATION/ OCT. 1967
M-FS-12720

Machining technique produces consistently satisfactory plane-parailel optical surfaces for pressure windows, made of Plexiglass, required to support a photographic study of liquid rocket combustion processes. The surfaces are machined and polished to the required tolerances and show no degradation from stress relaxation over periods as long as 6 months.

B67-10383
POLARIZED LIGHT REVEALS STRESS IN MACHINED
LAMINATED PLASTICS
FRANKOWSKI, J. /GEN. DYN./CONVAIR/ OCT. 1967
LEVIS-10018

Polarized light applied to drilled laminated plastic components exposes to the human eye the locked—in stresses that will result in fractures and delaminations when the soldering procedure takes place. This technique detects stresses early in the production cycle before appreciable man-hours are invested in an item destined for rejection.

B67-10392
STUDY MADE OF DUCTILITY LIMITATIONS OF ALUMINUM-SILICON ALLOYS
BAILEY, W. A. FREDERICK, S. F. /DOUGLAS AIRCRAFT
CO./ OCT. 1967
M-FS-12524

Study of the relation between microstructure and mechanical properties of aluminum-silicon alloys determine the cause of the variations in properties resulting from differences in solidification rate. It was found that variations in strength are a consequence of variations in ductility and that ductility is inversely proportional to the dendrite cell size.

B67-10397
EXPERIMENTS SHED NEW LIGHT ON NICKELFLUORINE REACTIONS
FISCHER, J. GUNTHER, W. JARRY, R. L. OCT. 1967
SEE ALSO ANL-6684
ARG-10008

Isotopic tracer experiments and scale-impingement experiments show fluorine to be the migrating species through the nickel fluoride scale formed during the fluorination of nickel. This is in contrast to nickel oxide scales, where nickel is the migrating species.

B67-10409 SCRIBABLE COATING FOR PLASTIC FILMS CLARK, R. T. /N. AM. AVIATION/ OCT. 1967 MSC--1194 Scribable, opaque coating for transparent plastic film tape is not affected by aging, vacuum, and moderate temperature extremes. It consists of titanium dioxide, a water-compatible acrylic polymer emulsion, and a detergent. The coating mixture is readily dispersed in water before it is dried.

B67-10417
TECHNIQUE FOR MEASURING MAGNETIC TAPE
INTERLAYER ADHESION
CLEMENT, W. G. OCT. 1967
NPO-10011

Technique measures interlayer adhesion in spacecraft data storage tape to avoid blocking. An unwind force is exerted on the spool, and the displacement before breakaway of the weighted outer layer is used to calculate the peel-off force necessary. This technique also can have terrestrial applications.

B67-10421 SODIUM PERXENATE PERMITS RAPID OXIDATION OF MANGANESE FOR EASY SPECTROPHOTOMETRIC DETERMINATION BANE, R. W. OCT. 1967 ARG-262

Sodium perxenate oxidizes manganese to permanganate almost instantaneously in dilute acid solution and without a catalyst. A solution is prepared by dissolving 200 mg of sodium perxenate in distilled water and diluting to 100 ml.

B67-10429
ADHESIVES FOR LAMINATING POLYIMIDE
INSULATED FLAT CONDUCTOR CABLE
MONTERMOSO, J. C. SAXTON, T. R. TAYLOR, R. L.
/QUANTUM, INC./ NOV. 1967
M-FS-12066

Polymer adhesive laminates polyimide-film flat conductor cable. It is obtained by reacting an appropriate diamine with a dianhydride. The adhesive has also been used in the lamination of copper to copper for the preparation of multilayer circuit boards.

B67-10432 VIBRATION DAMPING COMPOSITION HAS FLUSH-AWAY FEATURE FELLIN, J. F. /N. AM. AVIATION/ NOV. 1967 M-FS-597

Vibration damping compound nullifies resonant frequencies in structures that support critical components undergoing vibration testing. The main feature of this damping composition is the ability to remove it with a flush of plain tap

B67-10436
FUEL CELL LIFE IMPROVED BY METALLIC SINTER
ACTIVATION AFTER ELECTRODE ASSEMBLY
WELDING

TAYLOR, W. A. /PRATT AND WHITNEY/ NOV. 1967 MSC-10965 Technique improves the service life of fuel cell electrodes. The welding is done before the

electrodes. The welding is done before the metallic sinter is activated by depositing finely divided metal within the sinter structure from a solution with corrosion inhibiting ions. The activator solution flows through the porous sinter while attached to the backup plate.

B67-10437 STUDY MADE OF PNEUMATIC HIGH PRESSURE PIPING MATERIALS /10,000 PSI/ LOEB, M. B. SMITH, J. C. /BOEING CO./ NOV. 1967 KSC-10133

Five types of steel were evaluated for use in high pressure pneumatic piping systems in accordance with the following criteria — impact strength, tensile and yield strengths, elongation and reduction in area, field weldability, and cost. One type, AISI 4615, was selected as most advantageous for extensive use in future flight vehicles.

B67-10439 STUDY MADE OF LARGE AMPLITUDE FUEL SLOSHING DI MAGGIO, O. D. SALZMAN, R. N. /N. AM. AVIATION/ NOV. 1967 M-FS-12381

Study of resonant oscillations of an ideal fluid in a cylindrical tank is used to obtain a better understanding of fuel sloshing in large liquid booster. More realistic structural design criteria may be formulated when the dynamic response of the liquid in a cylindrical tank can be predicted analytically.

B67-10440
FLUID PROPERTIES HANDBOOK
GERSHMAN, R. SHERMAN, A. /DOUGLAS AIRCRAFT CO./
NOV. 1967
M-FS-13462

A single source compilation handbook, has been made of the most accurate available physical property data pertaining to helium, hydrogen, oxygen, and nitrogen.

B67-10441
NEWLY DEVELOPED FOAM CERAMIC BODY SHOWS
PROMISE AS THERMAL INSULATION MATERIAL
AT 3000 DEG F
BLOCKER, E. W. PAUL, R. D. /UNITED AIRCRAFT
CORP./ NOV. 1967
M-FS-11968

Optimized zirconia foam ceramic body shows promise for use as a thermal insulation material. The insulating media displays low density and thermal conductivity, good thermal shock resistance, high melting point, and mechanical strength.

B67-10442 CORROSION OF ALUMINUM ALLOYS BY CHLORINATED HYDROCARBON/METHANOL MIXTURES DE FOREST, W. S. /N. AM. AVIATION/ NOV. 1967 MSC-11365

Laboratory investigations show that water-free mixtures of Freon MF /trichlorofluoromethane/ and methanol vigorously attack aluminum alloys whick contain significant amounts of copper. Freon MF alone did not attack the aluminum alloys at room temperature, pure methanol had only a slight corrosive effect on the alloy.

B67-10451
STUDY MADE OF PROCEDURES FOR EXTERNALLY
LOADING AND CORROSION TESTING STRESS
CORROSION SPECIMENS
HUMPHRIES, T. S. NOV. 1967 SEE ALSO
NASA-TM-X-53483
M-FS-12064

Study was initiated to determine methods or test specimens for evaluating stress corrosion cracking characteristics of common structural materials. It was found that the methods of externally loading and corrosion testing were reliable in yielding reproducible results for stress corrosion evaluation.

B67-10454
WARPAGE ELIMINATED IN COPPER-CLAD
MICROWAVE CIRCUIT LAMINATES
BOONE, W. L., JR. /IBM/ NOV. 1967
M-FS-13892

Cryogenic treatment of laminated copper-clad microwave circuit boards eliminates stresses that cause warpage when a circuit is etched on one side of the board. After etching, the stresses may be eliminated to reduce warpage.

B67-10455 A METHOD OF DETERMINING COMBUSTION GAS FLOW BONTEMPL, P. J. /N. AM. AVIATION/ JAN. 1968 M-FS-13757

Zirconium oxide coating enables the determination of hot gas flow patterns on liquid rocket injector face and baffle surfaces to indicate modifications that will increase performance and improve combustion stability. The coating withstands combustion temperatures and due to the coarse surface and coloring of the coating, shows the hot gas patterns.

B67-10463 ACID SPRAY TECHNIQUE MILLS ALUMINUM ALLOY MATERIALS WITHOUT IMMERSION DUFOUR, G. /LOCKHEED MISSILES AND SPACE CO./ MOV. 1967 M-FS-12500

Acid spray machining technique chemically mills aluminum alloy panels without immersing them in an etchant. The spray does not require artificial heating to initiate the etching process.

B67-10484 METALLOGRAPHIC SAMPLES MOUNTED WITH ROOM-TEMPERATURE, CURABLE, POLYESTER CASTING RESINS

HUGHES, J. KRUGER, O. SCHMITZ, F. DEC. 1967 SEE ALSO ANL-6712 ARG-10025

Study of epoxies and polyesters determines which type of resin would satisfy the desirable prerequisites of a metallographic mount. Investigated were Polylite 8063, Polylite 8173, PE-169, and PE-228. The results were compared to the standard thermosetting mounting material, Bakelite, and found to be favorable.

B67-10491
MATERIAL FATIGUE DATA OBTAINED BY CARDPROGRAMMED HYDRAULIC LOADING SYSTEM
DAVIS, W. T. DEC. 1967
LANGLEY-10042

Fatigue tests using load distributions from actual loading histories encountered in flight are programmed on punched electronic accounting machine cards. With this hydraulic loading system, airframe designers can apply up to 55 load levels to a test specimen.

B67-10501 NEUTRON IRRADIATION AM241 EFFECTIVELY PRODUCES CURIUM ANDERSON, R. W. MILSTEAD, J. STEWART, D. C. DEC. 1967 SEE ALSO ANL-6932 ANL-6933 ARG-10030

Computer study was made on the production of multicurie amounts of highly alpha-active curium 242 from americium 241 irradiation. The information available includes curium 242 yields, curium composition, irradiation data, and production techniques and safeguards.

B67-10502
REACTION OF STEAM WITH MOLYBDENUM IS
STUDIED

KILPATRICK, M. LOTT, S. DEC. 1967 SEE ALSO ANL-6257 ARG-295

Comprehensive report studies the reaction of flowing steam with refractory metals /in particular molybdenum/, in the temperature range of 1100 degrees C. The reaction products are hydrogen gas and molybdenum oxide vapor.

B67-10527 QUANTUM MECHANICAL CALCULATIONS OF REACTIVE SCATTERING CROSS SECTIONS IN BIMOLECULAR ENCOUNTERS

PIRKLE, J. C., JR. /GEORGIA INST. OF TECH./ DEC. 1967 M-FS-13594

Study applies the nonequilibrium collision theory of reaction rates to the estimation of rate constants for simple reactions. The complications in the quantum mechanical description of chemical reactions and the care needed in approximating the exact wave function for the collision are shown.

B67-10532
COPPER AND NICKEL ADHERENTLY ELECTROPLATED
ON TITANIUM ALLOY
BROWN, E. E. /BOEING CO./ DEC. 1967
M-FS-13952

(3) - 13952
Anodic treatment of titanium alloy enables electroplating of tightly adherent coatings of copper and nickel on the alloy. The alloy is treated in a solution of hydrofluoric and acetic acids, followed by the electroplating process.

B67-10533 STUDY OF STRESS CORROSION IN ALUMINUM ALLOYS BRUMMER, S. B. /TYCO LABS./ DEC. 1967 M-FS-13906

Mechanism of the stress corrosion cracking of high-strength aluminum alloys was investigated using electrochemical, mechanical, and electron microscopic techniques. The feasibility of detecting stress corrosion damage in fabricated aluminum alloy parts by nondestructive testing was investigated using ultrasonic surface waves and eddy currents.

B67-10551
GAS PRESSURE IN SEALED ELECTROCHEMICAL CELLS
MEASURED EXTERNALLY
SHERFEY, J. M. DEC. 1967
GSFC-10004

Piezoresistive transducer measures gas pressure inside sealed secondary electrochemical cells without breaking the seal. This method is based on the observed fact that the force exerted by the cell faces on the clamp tightening them against the transducer is a function of the gas pressure inside the cell.

B67-10570
RADIANT HEAT SOURCE, VACUUM BAG, PROVIDE
PORTABLE BONDING OVEN
NICHOLLS, A. H. /N. AM. AVIATION/ DEC. 1967
MSC-11342

Portable bonding oven is formed to any desired size or configuration to attach doublers and brackets to the surfaces of large structures. A radiant heat source is used in combination with a heat resistant transport vacuum bag and a black heat absorbing cloth.

B67-10573
SPECTROPHOTOMETRIC TECHNIQUE QUANTITATIVELY
DETERMINES NAMBT INHIBITOR IN ETHYLENE
GLYCOL-WATER SOLUTIONS
GARRARD, G. G. /N. AM. AVIATION/ DEC. 1967
MSC-11496

Spectrophotometric method, using a ratiorecording ultraviolet-absorption spectrophotometer, permits analysis of NaMBT in ethylene glycol-water solutions with high accuracy. It reduces analysis time, requires smaller samples, and is able to detect extremely small concentrations of mercaptobenzothiazole.

B67-10577
PURE XENON HEXAFLUORIDE PREPARED FOR THERMAL
PROPERTIES STUDIES
MALM, J. G. OSBORNE, D. W. SCHREINER, F. DEC.
1967
ARG-10056

Preparation of a xenon hexafluoride and sodium fluoride salt yields a sample of the highest possible purity for use in thermal measurements. The desired hexafluoride can be easily freed from the common contaminants, xenon tetrafluoride, xenon difluoride, and xenon oxide tetrafluoride, because none of these compounds react with sodium fluoride.

B67-10578 STUDY OF CORROSION OF 1100 ALUMINUM DRALEY, J. E. LOESS, R. E. MORI, S. DEC. 1967 ARG-10045

Corrosion of 1100 aluminum in oxygen-saturated water at 70 degrees C under experimental conditions was studied, emphasizing effects of exposure interruption, the number of specimens, and the refreshment rate. A logarithmic equation was derived to express the corrosion rate.

B67-10579
MAGNESIUM-ZINC REDUCTION IS EFFECTIVE IN
PREPARATION OF METALS
KNIGHTON, J. B. STEUNENBERG, R. K. DEC. 1967
ARG-10050

Uranium, thorium, and plutonium are effectively prepared by magnesium-zinc reduction, using uranium oxides, thorium dioxide, and plutonium dioxide as starting materials. This technique is also useful in performing reduction of metals such as zirconium and titanium.

B67-10580
SIMPLE COLORIMETRIC METHOD DETERMINES
URANIUM IN TISSUE
DORAN, D. /ST. PROCOPIUS COLL./ FRIGERIO, N. A.
DEC. 1967 SEE ALSO ANL-7136
ARG-10039

Simple colorimetric micromethod determines
concentrations of uranium in tissue. The method
involves dry ashing organic extraction, and
colorimetric determination of uranyl ferrocyanide.
This uranium determination technique could be
used in agricultural research, tracer studies,
testing of food products, or medical research.

B67-10582 STUDY MADE OF RESISTANCE OF STAINLESS STEELS TO ZINC-VAPOR CORROSION BENNETT, G. A. BURRIS, L., JR. NELSON, P. A. DEC. 1967 ARG-10055

Study of the corrosion resistance of several stainless steels to zinc vapor revealed that some stainless steels could be employed for use in zinc processing equipment housings or vapor lines.

B67-10583 STUDY OF CREVICE-GALVANIC CORROSION OF ALUMINUM

DRALEY, J. E. LOESS, R. E. MORI, S. DEC. 1967 SEE ALSO ANL-6236 ARG-10013

Corrosion effects of aluminum-copper and aluminum-nickel couples in oxygenated distilled water, and aluminum alloys in oxygenated copper sulfate solution were studied. One of each of the couples had a water tight seal, and showed no substantial corrosion, and of the unsealed couples, only the aluminum-copper developed corrosion.

B67-10584 FOGGING TECHNIQUE USED TO COAT MAGNESIUM WITH PLASTIC MROZ, T. S. DEC. 1967 LEWIS-10316

MIS-10316
Cleaning process and a fogging technique
facilitate the application of a plastic coating to
magnesium plates. The cleaning process removes
general organic and inorganic surface impurities,
oils and greases, and oxides and carbonates from
the magnesium surfaces. The fogging technique
produces a thin-filmlike coating in a clean room
atmosphere.

B67-10586
DEVICE MEASURES STATIC FRICTION OF MAGNETIC TAPE
DEC. 1967 SEE ALSO NASA-TN-D-3399
GSFC-10360

Device measures the coefficient of static friction of magnetic tape over a range of temperatures and relative humidities. It uses a strain gauge to measure the force of friction between a reference surface and the tape drawn at a constant velocity of approximately 0.0001 inch per second relative to the reference surface.

B67-10589
EXPLOSIVE-TRAIN INITIATED THROUGH SOLID
BULKHEAD BY PRESSURE CARTRIDGE
WILKOWSKI, J. C. /N. AM. AVIATION/ DEC. 1967
MSC-11395

Explosive-train initiated pressure cartridge transmits a shock wave igniting a main charge of explosive through a solid bulkhead without destroying or damaging the seal or the bulkhead. The main charge could be an explosive, a pyrotechnic, or a propellant.

B67-10592
MATHEMATICAL RELATION PREDICTS ACHIEVABLE
DENSITIES OF COMPACTED PARTICLES
AYER, J. E. SOPPET, F. E. DEC. 1967
ARG-10082

Series of mathematical relationships predicts /l/compact densities of spherical shapes in a cylinder as a function of particle dimension, and /2/ compact density of angular shapes as a function of particle shape and absolute size.

B67-10593
SOLVENT PERMITS SOLID CURING AGENTS TO BE
USED AT ROOM TEMPERATURES
ST. CYR, M. C. /DOUGLAS AIRCRAFT CO./ DEC. 1967
M-FS-13434
Solvent system dissolves the solid curing agents
used with polyurethane resins in adhesive systems.
The system developed yields bond strengths
comparable to 100 percent solid formulations.
The optimum solvent chosen was a 55.5 percent
solution in anhydrous tetrahydrofuran.

B67-10596
EPOXY RESINS PRODUCE IMPROVED PLASTIC
SCINTILLATORS
MARKLEY, F. W. DEC. 1967
ARG-241

J-241
Plastic scintillator produced by the substitution of epoxy resins for the commonly used polystyrene, is easy to cast, stable at room temperature, and has the desirable properties of a thermoset or cross-linked system. Such scintillators can be immersed directly in strong solvents, an advantage in many chemical and biological experiments.

B67-10599
BACTERIOSTATIC CONFORMAL COATING FOR ELECTRONIC COMPONENTS BLAND, C. LE DOUX, F. N. JAN. 1968
GSFC-10007

Coating for electronic components used in space applications has bacteriostatic qualities capable of hindering bacterial reproduction, both vegetative and sporulative viable microorganisms. It exhibits high electrical resistivity, a low outgassing rate, and is capable of restraining electronic components when subjected to mechanical vibrations.

B67-10600 DYNAMIC CAPTIVE PLASTIC SEAL DRYER, E. O. /N. AM. AVIATION/ DEC. 1967 M-FS-12988

Fluoroplastic material held captive between valve sealing surfaces of 16 to 125 rms microinches provides zero leakage to a high-pressure line at high cryogenic temperatures, when the plastic material is subjected to sufficient stress. This sealing technique makes unnecessary the use of superfinished valve sealing surfaces.

B67-10608 A CERAMIC COMPOSITE THERMAL INSULATION DEC. 1967 SEE ALSO NASA-TM-X-53646 M-FS-13991

Ceramic composite thermal insulation comprised of alumina-silica fibers, pigmentary potassium titanate, and asbestos fibers, bonded with a colloidal silica sol has improved insulating capabilities to both radiant and convective heat. Gelation of the colloidal silica sol prevents binder migration.

B67-10627
THORIATED TUNGSTEN TUBE PROVIDES IMPROVED
HIGH TEMPERATURE THERMOCOUPLE SHEATH
ZELLNER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1967
NUC-10145

Thermocouple tubing of thoriated tungsten with a very fine grain structure produces a small-diameter sheath capable of operating up to 5000 degrees R in a hydrogen and graphite environment. This tubing remains ductile and resists both grain growth and carbiding even after prolonged exposure to temperature.

B67-10634
PHOTOVOLTAIC EFFECT IN ORGANIC POLYMERIODINE COMPLEX
HERMANN, A. M. REMBAUM, A. DEC. 1967 SEE ALSO
B66-10682 AND B67-10132
NPO-10373

Certain charge transfer complexes formed from organic polymers and iodine generate appreciable voltages at relatively low impedances upon exposure to light. These films show promise in applications requiring chemically and electrically

stable films as detectors of optical radiation and as energy converters in photovoltaic cells.

B67-10641
COMPILATION OF DETECTION SENSITIVITIES IN
THERMAL-NEUTRON ACTIVATION
WAHLGREN, M. A. WING, J. DEC. 1967 SEE ALSO
ANL-6953
ARG-1006B

Detection sensitivities of the chemical elements following thermal-neutron activation have been compiled from the available experimental cross sections and nuclear properties and presented in a concise and usable form. The report also includes the equations and nuclear parameters used in the calculations.

B67-10645 EDDY CURRENT PROBE MEASURES SIZE OF CRACKS IN NONMETALLIC MATERIALS MUSSER, C. W. /BOEING CO./ JAN. 1968 M-FS-14059

Nondestructive method uses powdered iron and eddy current probe to measure the depth/width ratio of cracks in electrically nonconductive materials. The eddy current probe measures the mass of metal in the crack after it has been filled with the powdered iron.

B67-10647
SYNTHESIS OF PURE AROMATIC GLYCIDYL ESTERS
FOR USE AS ADHESIVES
INNOVATOR NOT GIVEN /BORDEN CHEM. CO./ JAN. 1968
M-FS-12705

Laboratory study was conducted to synthesize pure glycidyl esters of aromatic acids and to convert the resultant epoxy esters to polymers for use as adhesives over a range of temperatures down to minus 423 degrees F.

BEC-10550
BUCKLING STRENGTH OF FILAMENT-WOUND
CYLINDERS UNDER AXIAL COMPRESSION IS
INVESTIGATED
DEC. 1967 SEE ALSO NASA-CR-266
HQ-10032

Analytical study was made of the effects of axial compression on buckling strength of filament-wound cylinders having diameter-to-wall thickness ratios of 167 to 643. Analytical predictions for buckling loads were obtained by using linear anisotropic shell theory.

B67-10660 STUDY MADE OF MECHANICS OF DEFORMATION AND FRACTURE OF FIBROUS COMPOSITES ROSEN, B. W. /GE/ DEC. 1967 HQ-10035

Report summarizes the findings of studies made of the influence of both fiber and matrix characteristics upon the mechanics of deformation and fracture of fibrous composites. The major portion of the report is devoted to a study of the mechanics of tensile failure of a fibrous composite.

04 LIFE SCIENCES

B63-10003
NEW LOW LEVEL AC AMPLIFIER PROVIDES ADJUSTABLE
NOISE CANCELLATION AND AUTOMATIC TEMPERATURE
COMPENSATION
SMITH, J. R., JR. MAR. 1964
ARC-2

A circuit utilizing a transistorized differential amplifier is developed for biomedical use. This low voltage operating circuit provides adjustable cancellation at the input for unbalanced noise signals, and automatic temperature compensation is accomplished by a single active element across the input-output ends.

B64-10025
IMPROVED ELECTRODE GIVES HIGH-QUALITY
BIOLOGICAL RECORDINGS
DAY, J. L. LIPPITT, M. W. MAY 1964

MSC-17

To obtain high quality waveforms from a subject engaged in physical activity, an improved electrode assembly has been devised. This consists of a cup containing an electrically conductive paste and a silver electrode. The paste maintains contact between the skin and the plate.

B64-10108
DEVICE INDUCES LUNGS TO MAINTAIN KNOWN
CONSTANT PRESSURE
LIPPITT, M. W. REED, J. H. JUL. 1964
MSC-50

This device requires the use of thoracic muscles to maintain prescribed air pressure in the lungs for brief periods. It consists of a clear plastic hollow cylinder fitted with a mouthpiece, a spring-loaded piston, and a small vent for escaping air when exhalation into the mouthpiece displaces the piston.

B64-10146
TECHNIQUE SIMULATES EFFECT OF REDUCED GRAVITY
HEWES, D. E. SPADY, A. A. JR. JUN. 1964
LANGLEY-44

To simulate the effects of lunar gravity, an arrangement of near-vertical cables has been devised. These suspend the test subject perpendicular to an inclined walkway to give the effect of reduced gravitational pull.

B65-10332
TEST MONKEYS ANESTHETIZED BY ROUTINE PROCEDURE
INNOVATOR NOT GIVEN /SPACE/DEFENSE CORP./ NOV.
1965
HQ-18

Test monkeys are safely anesthetized for five minutes by confining them for less than six minutes in enclosures containing a controlled volume or erner. Inus the monkeys can be properly and safely positioned on test couches and fitted with electrodes or other devices prior to physiological tests.

B66-10049
IMPROVED ELECTRODE PASTE PROVIDES RELIABLE
MEASUREMENT OF GALVANIC SKIN RESPONSE
DAY, J. L. FEB. 1966 SEE ALSO B64-10025 AND
B65-10015
MSC-146

High-conductivity electrode paste is used in obtaining accurate skin resistance or skin potential measurements. The paste is isotonic to perspiration, is nonirritating and nonsensitizing, and has an extended shelf life.

B66-10117
MICRODRGANISMS DETECTED BY ENZYME-CATALYZED
REACTION
VANGO, S. P. WEETALL, H. H. WELIKY, N. MAR.
1966
JPL-782

Enzymes detect the presence of microorganisms in soils. The enzyme lysozyme is used to release the enzyme catalase from the microorganisms in a soil sample. The catalase catalyzes the decomposition of added hydrogen peroxide to produce oxygen which is detected manometrically. The partial pressure of the oxygen serves as an index of the sample*s bacteria content.

B66-10118
INTEGRAL SKIN ELECTRODE FOR
ELECTROCARDIOGRAPHY IS EXPENDABLE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1966
MSC-299

Inexpensive, expendable skin electrode for use in electrocardiography combines an electrical contact, conductive paste, and a skin-attachment adhesive. Application of the electrode requires only degreasing of the skin area.

B66-10154
PHONOCARDIOGRAPH SYSTEM MONITORS HEART SOUNDS
INNOVATOR NOT GIVEN /BECKMAN INSTR., INC./ APR.
1966
MSC-185

Phonocardingraph system monitors the mechanical

activity of the heart in extreme environments. It uses a piezoelectric-crystal microphone with an integral preamplifier, and a signal conditioner having special frequency characteristics. The output signals can be recorded on tape, presented aurally, or transmitted telemetrically to a remote station.

B66-10184
SELF-INFLATING LIFEVEST STORES IN SMALL PACKAGE
RADNOFSKY, H. I. MAY 1966
MSC-5A

Emergency lifevest is inflated with carbon dioxide from a self-contained cartridge in 10 seconds. When deflated, it fits into a package occupying less than 20 cubic inches and weighing less than one pound.

B66-10252 SEMICONDUCTOR FORMS BIOMEDICAL RADIATION PROBE BURNS, F. P. FRIEDERICKS, J. E. /SOLID STATE RADIATION, INC./ JUN. 1966 MSC-320

Semiconductor radiation dosimeter in the form of a slender probe is easily inserted into body tissue. The probe has a signal-to-noise ratio that is acceptable to recording equipment and provides realistic measurements of the spatial and energy distributions of radiant electrons and protons.

B66-10314
PHONDCARDIOGRAPH MICROPHONE IS RUGGED AND
MOISTUREPROOF
YOUNG, W. J. JUL. 1966
MSC-212

Microphone used as a phonocardiograph transducer monitors small amplitude audio signals in the presence of large shock loads and high humidity. It contains a lead zirconate-lead titanate piezoelectric plate encapsulated in a flexible polyurethane resin. The resin is contained in a sealed nylon case having a diameter of less than one inch.

B66-10406
PLANT RESPIROMETER ENABLES HIGH RESOLUTION
OF OXYGEN CONSUMPTION RATES
FOSTER, D. L. /SPACE DEFENSE CORP./ SEP. 1966

Plant respirometer permits high resolution of relatively small changes in the rate of oxygen consumed by plant organisms undergoing oxidative metabolism in a nonphotosynthetic state. The two stage supply and monitoring system operates by a differential pressure transducer and provides a calibrated output by digital or analog signals.

B66-10468
RADON GAS, USEFUL FOR MEDICAL PURPOSES,
SAFELY FIXED IN QUARTZ
FIELDS, P. R. MOSHE, H. Z. STEIN, L. NOV. 1966
ARG-2

Radon gas is enclosed in quartz or glass ampules by subjecting the gas sealed at a low pressure in the ampules to an ionization process. This process is useful for preparing fixed radon sources for radiological treatment of malignancies, without the danger of releasing radioactive gases.

B66-10515
APPARATUS ENABLES AUTOMATIC MICROANALYSIS OF BODY FLUIDS
SOFFEN, G. A. STUART, J. L. NOV. 1966
JPL-962

Apparatus will automatically and quantitatively determine body fluid constituents which are amenable to analysis by fluorometry or colorimetry. The results of tests are displayed as percentages of full scale deflection on a strip-chart recorder. The apparatus can also be adapted for microanalysis of various other fluids.

B66-10647
MODIFIED ALGESIMETER PROVIDES ACCURATE
DEPTH MEASUREMENTS
TURNER, D. P. /N. AM. AVIATION/ DEC. 1966
MSC-616

Algesimeter which incorporates a standard sensory needle with a sensitive micrometer, measures needle point depth penetration in pain tolerance research. This algesimeter provides an inexpensive, precise instrument with assured validity of recordings in those blomedical areas with a requirement for repeated pain detection or ascertaining pain sensitivity.

B66-10649

SPRAY-ON ELECTRODES ENABLE EKG MONITORING
OF PHYSICALLY ACTIVE SUBJECTS
DEC. 1966 SEE ALSO NASA-TN-D-3414
FRC-36

Easily applied EKG electrodes monitor the heart signals of human subjects engaged in various physical exercises. The electrodes are formed from an air drying, electrically conductive cement mixture that can be applied to the skin by means of a modified commercially available spray gun.

B67-10005 DIGITAL COMPUTER PROCESSING OF X-RAY PHOTOS NATHAN, R. SELZER, R. H. JAN. 1967 JPL-792

Digital computers correct various distortions in medical and biological photographs. One of the principal methods of computer enhancement involves the use of a two-dimensional digital filter to modify the frequency spectrum of the picture. Another computer processing method is image subtraction.

B67-10056 ADJUSTABLE HINGE PERMITS MOVEMENT OF KNEE IN PLASTER CAST MALEY, W. E. MAR. 1967 M-FS-1756

Metal knee hinge with an adjustable sleeve worn on the outside of a leg cast facilitates movement of the knee joint. This helps eliminate stiffness of the knee and eliminates bulkiness and adjustment difficulty.

B67-10114 Integrated mobility measurement and notation System

ROEBUCK, J. A., JR. /N. AM. AVIATION/ MAY 1967 MSC-726

System for description of movements and positions facilitates design of space suits with more mobility. This measurement and notation system gives concise and unequivocal descriptions, compatible with engineering analysis and applicable to specific needs.

B67-10129
ION EXCHANGE DETERMINES IODINE-131
CONCENTRATION IN AQUEOUS SAMPLES
FAIRMAN, W. D. SEDLET, J. MAY 1967
ARG-208

Inorganic radiolodide in aqueous media is analyzed by separating the radioactive iodine-131 as the iodide ion on a silver chloride column. The activity in the final precipitate may be determined by beta or gamma counting.

B67-10188
URANYL PHTHALOCYANINES SHOW PROMISE IN THE
TREATMENT OF BRAIN TUMORS
FRIGERIO, N. A. JUN. 1967 SEE ALSO ANL-6910
ARG-100

Processes synthesize sulfonated and nonsulfonated uranyl phthalocyanines for application in neutron therapy of brain tumors. Tests indicate that the compounds are advantageous over the previously used boron and lithium compounds.

B67-10207
SELF-SEALING CLOSURE ENABLES ACCESS TO SEVERAL FLUID CONTAINERS
WHEELER, S. B. JUN. 1967
NPO-10123

Self-sealing closure enables small amounts of specific biochemical solutions to be withdrawn from or added to containers in inaccessible or small spaces. It uses a self-sealing septum of a silicone elastomer through which a hypodermic needle can be inserted.

B67-10245
AUTOMATED URINALYSIS TECHNIQUE DETERMINES
CONCENTRATION OF CREATINE AND CREATININE BY
COLORIMETRY
RHO, J. H. JUL. 1967
NPO-10149

Continuous urinalysis technique is useful in the study of muscle wastage in primates. Creatinine concentration in urine is determined in an aliquot mixture by a color reaction. Creatine is determined in a second aliquot by converting it to creatinine and measuring the difference in color intensity between the two aliquots.

B67-10252
BLOOD OXYGEN SATURATION DETERMINED BY
TRANSMISSION SPECTROPHOTOMETRY OF
HEMOLYZED BLOOD SAMPLES

MALIK, W. M. /INST. UF MED. SCIENCES/ AUG. 1967 MSC-11018

Use of the Lambert-Beer Transmission Law determines blood oxygen saturation of hemolyzed blood samples. This simplified method is based on the difference in optical absorption properties of hemoglobin and oxyhemoglobin.

B67-10304
CYTOLOGY IS ADVANCED BY STUDYING EFFECTS
OF DEUTERIUM ENVIRONMENT
BOSE, S. /BOSE RES. INST./ FLAUMENHAFT, E.
/UNIV. OF AKRON/ CRESPI, H. L. KATZ, J. J.
AUG. 1967

Research of deuterium effects on biological systems shows deuteriation is not incompatible with life. With the successful cultivation of deuteriated bacteria, work is now being done on extraction of deuterio-compounds from bacteria.

B67-10305 LIQUID MICKURGY CHAMBER AND HICKOSYRINGE DESIGNS ALLOW MORE EFFICIENT MICROMANIPULATIONS DANIELS, E. W. AUG. 1967 ARG-251

More efficient micromanipulations on large amoebae achieved by liquid micrurgy chamber and microsyringe. These innovations move the system closer to the specimen, and flatten the specimen for a clear view of the nuclei, also eliminating spherical abberation and evaporation.

B67-10332 HAND-HELD INSTRUMENT SHOULD RELIEVE HEMATOMA PRESSURE RAGGIO, L. J. ROBERTSON, T. L. SEP. 1967 MSC-599

Portable instrument relieves hematomas beneath fingernails and toenails without surgery. This device simplifies the operative procedure with an instant variable heating tip, adjustable depth settings and interchangeable tip sizes for cauterizing small areas and relieving pressurized close.

B67-10395
LARGE VOLUME CONTINUOUS COUNTERFLOW
DIALYZER HAS HIGH EFFICIENCY
MANDELES, S. WOODS, E. C. /CALIF. UNIV./ OCT.
1967
1967

Dialyzer separates macromolecules from small molecules in large volumes of solution. It takes advantage of the high area/volume ratio in commercially available 1/4-inch dialysis tubing and maintains a high concentration gradient at the dialyzing surface by counterflow.

B67-10408
IMPROVED SAMPLE CAPSULE FOR DETERMINATION
OF DXYGEN IN HEMOLYZED BLOOD
MALIK, W. M. /PRESBYTERIAN ME. CENTER/ OCT. 1967
MSC-11017
Sample capsule for determination of oxygen in

hemolyzed blood consists of a measured section of polytetrafluoroethylene tubing equipped at each end with a connector and a stopcock valve. This method eliminates errors from air entrainment or from the use of mercury or syringe lubricant.

B67-10500
EFFECT OF PREPARATION PROCEDURES ON
INTENSITY OF RADIOAUTOGRAPHIC LABELING IS
STUDIED
BASERGA, R. KISIELESKI, W. E. DEC. 1967
ARG-10032

Effects of tissue preparation and extractive procedures on the intensity of radioautographic labeling are presented in terms of mean grain count per cell in cells labeled with tritiated precursors of proteins or nucleic acids. This information would be of interest to medical researchers and cytologists.

B67-10556
CONTINUOUS MICROBIAL CULTURES MAINTAINED
BY ELECTRONICALLY-CONTROLLED DEVICE
EISLER, W. J., JR. WEBB, R. B. DEC. 1967
ARG-177

Photocell-controlled instrument maintains microbial culture. It uses commercially available chemostat glassware, provides adequate aeration through bubbling of the culture, maintains the population size and density, continuously records growth rates over small increments of time, and, contains a simple, sterilizable nutrient control mechanism.

B67-10590
ULTRAVIOLET MICROSCOPY AIDS IN CYTOLOGICAL
AND BIOMEDICAL RESEARCH
SCHLENK, F. SVIHLA, B. DEC. 1967 SEE ALSO
ANL-6971
ARG-178

Ultraviolet microscopy is used by cytologists and biochemists to study the morphological and physiological changes in the living cell under varied culture conditions. The yeast cell is used because of its content of ultraviolet-absorbing materials and its lack of motility.

B67-10604 STUDY MADE OF RELATIONSHIP BETWEEN GROWTH AND METABOLISM SURREY, K. DEC. 1967 ARG-10046

Study shows that the growth of X-irradiated sunflower seeds is inversely related to the metabolism of the seeds. The actual magnitudes of the relation between the two differed for various ranges of X-ray exposure. The results of the study suggested that the X-rays affected the embryo.

B67-10663
REVIEW OF BIOLOGICAL MECHANISMS FOR
APPLICATION TO INSTRUMENT DESIGN
HEALER, J. /ALLIED RES. ASSOCIATES/ DEC. 1967

Biological sensors are the mechanisms which enable a living organism to monitor its environment. Ways in which the functional mechanism of biosensors can be applied to develop new concepts of instrumentation, enhance and extend the human senses, and improve the sensitivity of existing instrumentation are described in a review of these mechanisms.

05 MECHANICAL

B63-10007 HIGH PURITY ELECTROFORMING YIELDS SUPERIOR METAL MODELS HAEFELI, R. M. HOUSTON, J. P. JAN. 1964 ARC-6

Ultrasonic electroforming has proven successful in making high purity metal models for heat transfer studies. This process provides smooth, pit-free models.

B63-10008
VACUUM FORMING OF THERMOPLASTIC SHEET RESULTS
IN LOW-COST INVESTMENT CASTING PATTERNS
CLARKE, A. E., JR. MAR. 1964
ARC-7

Vacuum forming of a sheet of thormoplastic

material around a mandrel conforming to the shape of the finished object provides a pattern for an investment mold. The thickness of the metal part is determined by the thickness of the plastic pattern.

B63-10009 CHAIN FRICTION SYSTEM GIVES POSITIVE, REVERSIBLE DRIVE DAVIDSEN, J. S. APR. 1964 ARC-8

By cementing a strip of an elastomer to the smooth metal rim of the pulley and neoprene covered idlers providing suitable tension to the chain around the pulley, a positive reversible drive is accomplished more quietly and with less vibration.

B63-10023
V-SLOTTED SCREW HEAD AND MATCHING DRIVING TOOL FACILITATE INSERTION AND REMOVAL OF SCREW FASTENERS
HANDLEY, M. G. JAN. 1964
FRC-16

A V-slotted designed screw and a screwdriver with a V-shaped tang facilitate driving the screw into difficult locations and minimize axial forces thus avoiding damage to the screw.

B63-10123
ELASTIC ORIFICE AUTOMATICALLY REGULATES GAS BEARINGS
BATSCH, F. LAUB, J. L. JUN. 1964
JPL-135

An elastic, pressure-sensitive orifice is used to automatically regulate the rate of gas flow into bearings under varying loads. Formed of a molded elastomer, tests show these orifices increase the stability of gas bearings.

B63-10139
METHOD OF WELDING JOINT IN CLOSED VESSEL
IMPROVES QUALITY OF SEAM
FREEMAN, R. LEVOE, C. MAY 1964
JPL-170

To facilitate welding of closed vessels, a metal backup strip is used at the junction inside the vessel. After welding from the outside, this strip is dissolved by a chemically reactive solvent poured through a filler hole into the vessel.

B63-10141 VENTED PISTON SEAL PREVENTS FLUID LEAKAGE BETWEEN TWO CHAMBERS MAC GLASHAN, W. F. MORRISON, R. DEC. 1964 JPL-179

To prevent fluid leakage around piston seals separating two fluids under differential pressure, a venting system has been devised. Two methods may be used for venting seals through internal passages to an external low-pressure area, O-ring or split-ring seals.

B63-10143
COINCIDENT SWITCH CLOSING REDUCES ERROR IN MOTOR-DRIVEN TIMER
RICH, S. DEC. 1964
JPL-182

To cut the lag-lead in motor-driven timing devices, the timing circuit has been extended to include a second switch. This is actuated in time with the first but driven directly at a speed x times faster than the first.

B63-10170
HIGH-PRESSURE REGULATING SYSTEM PREVENTS
PRESSURE SURGES
KELLER, O. F. MAC GLASHAN, W. F. JUN. 1964 /SEE
U.S. PATENT NO. 3,105,515/
JPL-231

Gas flow is controlled by means of a pressure regulating system which prevents pressure surges. A high-pressure fluid source, a spring-loaded fluid-damped regulator valve, an accumulator, a conventional normally closed command valve, and a control valve are the main components.

863-10198 Device Transmits Rotary Motion Through HERMETICALLY SEALED WALL PORTER, R. N. APR. 1964 JPL-303

A wobble plate, metal beliows, and two shafts, assembled in a four-section housing, make it possible to transmit rotary motion through a hermetically sealed wall. In operation a rotational torque is developed by the wobble plate.

B63-10200
APPARATUS OF SMALL SIZE CAN BE EXTENDED INTO LONG, RIGID BOOM
MILLER, J. V. MAY 1964
JPL-305

Three metal sheets, having prenotched edges, are interlocked as they are unrolled from three feed rollers, which form a triangle. The apparatus is relatively small, and the sheets can be erected into a rigid trianglar boom of considerable length.

B63-10226
SELF SEALING DISCONNECT FOR TUBING FORMS METAL
SEAL AFTER BREAKAWAY
GERNANDT, H. H. JAN. 1964
JPL-354

Disconnect fittings form a positive metal seal when the fill tube pulls against a metal sleeve when disconnected by force. A specially designed sleeve surrounds the fill tube. O-rings in the shoulder of the sleeve and near the outer end of the fill tube seal against leakage.

B63-10228
PACKLESS VALVE WITH ALL-METAL SEAL HANDLES
WIDE TEMPERATURE, PRESSURE RANGE
MAC GLASHAN, W. F. MAR. 1964
JPL-361

A durable line valve utilizes stacked metal disks to seal off an inlet port. No packing or shaft sealing in needed, and the valve operates satisfactorily over a wide temperature and pressure range.

B63-10236 LIGHTWEIGHT UNIVERSAL JOINT TRANSMITS BOTH TORQUE AND THRUST BAMFORD, R. M. JAN. 1964 JPL-375

A lightweight universal joint uses a thin steel flexure plate to transmit torque and a steel rod to transmit thrust. Both the plate and rod are independently mounted and can act individually.

B63-10237
SUPERCOLD TECHNIQUE DUPLICATES MAGNETIC FIELD
IN SECOND SUPERCONDUCTOR
HILDEBRANDT, A. F. NOV. 1964
JPL-376

A superconductor cylinder, charged with a high magnetic field, can be used to create a similar field in a larger cylinder. The uncharged cylinder is precooled, lowered into a helium dewar system, and fitted around the cylinder with the magnetic field. Magnetic flux lines pass through the two cylinders.

B63-10240
SLEEVE AND CUTTER SIMPLIFY DISCONNECTING
WELDED JOINT IN TUBING
PERKINS, G. S. APR. 1964
JPL-384

To test equipment, welded tubing joints may have to be disconnected and rewelded. To eliminate rewelding, a nonstandard welding sleeve permits the tubing to be welded and then disconnected by a specially designed sleeve cutter. Use of this tool assures that only the sleeve is cut.

B63-10241
VEITCH DIAGRAM PLOTTER SIMPLIFIES BOOLEAN
FUNCTIONS
RUBIN, D. K. APR. 1964
JPL-385

This device for simplifying the plotting of a veitch diagram consists of several overlays for blocking out the unwanted squares. This method of plotting the various input combinations to a

computer is used in conjunction with the boolean functions.

B63-10247 NEW PACKAGE FOR BELLEVILLE SPRING PERMITS RATE CHANGE, EASY DISASSEMBLY MAC GLASHAN, W. F. MAR. 1964 JPL-392

A spring package, with grooves to hold the spring washers at the inner and outer edges, reduces hysteresis to a minimum. Three-segment retainers permit easy disassembly so that the spring rate can be changed.

B63-10251
HELICAL TUBE SEPARATES NITROGEN GAS FROM LIQUID NITROGEN STEPHENS, J. B. JUN. 1964
JPL-398

To prevent a boiloff problem, liquid nitrogen flowing from a storage tank to a container, is separated into liquid and gaseous components. This is accomplished by centrifugal and venting action, using a section of perforated helical aluminum tubing.

B63-10289
FRICTIONAL WEDGE SHOCK MOUNT IS INEXPENSIVE,
HAS GOOD DAMPING CHARACTERISTICS
TENER, W. M. MAY 1964
JPL-IT-1001

A wedge-shaped shock mount uses rubber for energy absorption, and the frictional characteristics of ordinary brake material for damping.

B63-10291
SPECIAL PLIERS CONNECT HOSE CONTAINING LIQUID UNDER PRESSURE
BLAYDES, R. A. MAR. 1964
JPL-IT-1003

For speed and safety in handling disconnect

for speed and safety in handling disconnect

fittings on a hose carrying liquid under pressure,

special pliers have been constructed. A gear and

rack mechanism is combined with two or more

wide-opening U-shaped jaws which are placed over

the quick-disconnect fittings.

B63-10292 HEAVY-DUTY STAPLE REMOVER OPERATED BY HAND MORRISON, T. RENNER, R. MAR. 1964 JPL-IT-1004

To remove staples from thick reports, a rooter, bending hook and post are incorporated into a heavy duty hand tool. This makes possible one-step extraction of long staples.

B63-10304
BREAK-UP OF METAL TUBE MAKES ONE-TIME SHOCK
ABSORBER, BARS REBOUND
HATHAWAY, M. MC GEHEE, J. R. ZAVADA, E. FEB.
1964 /SEE NASA-TN-D-1477/
LANGLEY-1A

A frangible metal tube has the capability to dissipate the energy generated when a vehicle lands with excessive velocity. The tube is so placed that, at impact, it is forced against a die and, as it fragments, energy is absorbed.

B63-10340
CRYOPUMPING OF HYDROGEN IN VACUUM CHAMBERS IS
AIDED BY CATALYTIC OXIDATION OF HYDROGEN
CHILDS, J. H. GROBMAN, J. RAYLE, W. JUN. 1964
/SEE NASA-TN-D-863/
LEWIS-15

Vacuum test facilities are required for high speed cryopumping of gaseous hydrogen at low pressures. One method involves the catalytic oxidation of hydrogen and condensation of the resulting water on a liquid nitrogen-cooled surface.

B63-10341
DESIGN OF VALVE PERMITS SEALING EVEN IF THE STEM IS MISALIGNED
SCHMIDT, H. W. JAN. 1964
LEWIS-38

A conical-walled valve plug is designed to seal against a recessed spherical valve seat. This insures proper sealing during numerous seating cycles even though the valve stem is misaligned or

forced out of its proper axis.

B63-10354
RAPID BILLET LOADER AIDS EXTRUSION OF REFRACTORY
METALS
DOLINSHEK, A. F. HERMAN, L. E. APR. 1964
LEWIS-50

A combination gravity and manually powered rapid billet loader reduces the time required for transferring hot metal billets from a heating furnace to an extrusion press. Positioned between the furnace and extrusion press, this loader is a simple slide-delivery device.

B63-10367 CONNECTOR FOR VACUUM-JACKETED LINES CUTS TUBING SYSTEM COST CALVERT, H. F. MAY 1964 LEWIS-66

A low-cost fitting, fabricated from standard connectors, is used for disconnecting flow lines in cryogenic systems. Utilizing vacuum-jacketed lines made from two sizes of tubing welded at the ends, the connectors are stronger and setup time is reduced.

B63-10368
COMPOSITE, VACUUM-JACKETED TUBING REPLACES
BELLOWS IN CRYOGENIC SYSTEMS
CALVERT, H. F. JUN. 1964
LEWIS-67

For reliability control of high pressure cryogenic systems, one or more 90 degree elbow expansion devices are substituted for the metal beliows normally used. The device consists of a conducting tube inside a support tube, with the space between the tubes evacuated for insulation.

B63-10376
MOVEL CLAMPS ALIGN LARGE ROCKET CASES,
ELIMINATE DACK-UP DAKS
FRANKLIN, W. J. MARTIN, N. C. JAN. 1964
M-FS-1

Welding clamps, placed inside and outside a rocket case, hold it in proper alignment during tungsten inert gas welding. These metal blocks, connected by a stainless steel band, eliminate the need for backup bars.

B63-10384 VACUUM-TYPE BACKUP BAR SPEEDS WELD REPAIRS CARMODY, R. J. AUG. 1964 M-FS-12

A backup bar designed to use both vacuum and air pressure provides a method of sealing the weld root of a faulty section of seam weld. With slight redesign, the bar can be made sufficiently flexible to fit any large cylindrical surface.

B63-10385
FLEXIBLE HONEYCOMB STRUCTURE CAN BEND TO FIT
COMPOUND CURVES
CARMODY, R. J. APR. 1964
M-FS-13

For flexibility in forming a curved surface, a honeycomb configuration using multiple pleats has proved superior to the usual core structures. The partial pleats formed in individual cell walls permit movements to and from the central axis without tearing.

B63-10387
PORTABLE FLOORING PROTECTS FINISHED SURFACES, IS EASILY MOVED CARMODY, R. J. MAR. 1964
M-FS-15

To protect curved, finished surface and provide support for workmen, portable flooring has been made from rigid plastic foam blocks, faced with aluminum strips. Held together by nylon webbing, the flooring can be rolled up for easy carrying.

B63-10420 SIMPLE MECHANISM COMBINES POSITIVE LOCKING AND QUICK-RELEASE FEATURES CLAYTON, L. B. /HUGHES AIRCRAFT CO./ FEB. 1964 WOO-4

for secure locking and quick release of two objects, this device uses a spring-loaded slotted

bolt, locked in position by two retainer arms. When these retainer arms are freed from contact, the bolt is ejected and the objects released.

B63-10431 HIGH-TEMPERATURE, HIGH-PRESSURE SPHERICAL SEGMENT VALVE PROVIDES QUICK OPENING GIOVANNETTI, A. HIMMELRIGHT, R. MEYER, K. NITTA, H. APR. 1964 ARC-13

A hollow spherical segment valve with an eccentric permits non-rubbing closure and provides a means for gas-cooling the seal. The design allows quick opening at high temperatures and discharge pressures.

B63-10435
PORTABLE DISPLAY PANELING HAS WIDE USE, EASY
TAKE DOWN AND ASSEMBLY
DEVOTO, H. J., JR. MAR. 1964
ARC-17

Design for a modular display panel is based on a cross-shaped corner connector and wooden lattice bars. The bars are fitted into the arms of the metal connector and a pocket slot holds a modular-size panel.

B63-10442
KINETIC-ENERGY ABSORBER EMPLOYS FRICTIONAL
FORCE BETWEEN MATING CYLINDERS
CONRAD, E. W. MAY 1964
LEWIS-75

A kinetic energy absorbing device uses a series of coaxial, mating cylindrical surfaces. These surfaces have high frictional resistance to relative motion when axial impact forces are applied. The device is designed for safe deceleration of vehicles impacting on landing surfaces.

B63-10489
FINE-PARTICLE FILTER PREVENTS DAMAGE TO VACUUM
PUMPS
HARLAMERT, P., JR. APR. 1964
LEWIS-106

A filter system for mechanical pumps is designed with a baffle assembly that rotates in a circulating oil bath which traps destructive particles. This prevents severe damage to the pump and is serviceable for long periods before it requires cleaning.

B63-10497
INTEGRAL COOLANT CHANNELS SIMPLY MADE BY MELTOUT METHOD
ESCHER, W. J. D. JUN. 1964
M-FS-91

A melt-out method of constructing strong, pressure-tight fluid coolant channels for chambers is accomplished by cementing pins to the surface and by depositing a melt-out material on the surface followed by two layers of epoxy-resin impregnated glass fibers. The structure is heated to melt out the low-melting alloy.

B63-10502 FLUID-PRESSURE METER CAN BE CALIBRATED WITHOUT REMOVAL FROM FLOW LINE MELTON, D. E. MAR. 1964 M-FS-98

The construction of a fluid pressure meter with two inlet ports, flexible diaphragms and a pressure-responsive transducer is described. One port can be connected to the line and the other to a source of standard pressures for calibration.

B63-10517 MINIATURE DXYGEN-HYDROGEN CUTTING TORCH CONSTRUCTED FROM HYPODERMIC NEEDLE SHLICHTA, P. APR. 1964 JPL-545

A miniature cutting torch consisting of a main body member, upon which the hydrogen and oxygen containers are mounted, valves for controlling gas flow, and a hypodermic needle that acts as a mixing tube and flame tip is constructed.

B63-10519 TOOL FACILITATES SEALING OF METAL FILL TUBES COOLEY, H. H., JR. /UNITED AIRCRAFT CORP./ JUL. 1964 MSC-24

A hand tool is designed for sealing metal fill tubes containing corrosive or inflammable liquids without the use of heat or open flame. The tool aligns the fill tube into which a tapered sealing pin is dropped and driven below the neck of tube.

B63-10526 BUILT-IN TEMPLATES SPEED UP PROCESS FOR MAKING ACCURATE MODELS FEB. 1964 LANGLEY-23

From accurate scale drawings of a model, photographic negatives of the cross sections are printed on thin sheets of aluminum. These cross-section images are cut out and mounted, and mahogany blocks placed between them. The wood can be worked down using the aluminum as a built-in template.

B63-10530
NEW ANEMOMETER HAS FAST RESPONSE, MEASURES
DYNAMIC PRESSURE DIRECTLY
LYNCH, J. W. REED, W. H., III OCT. 1964
LANGLEY-28

A simple anemometer having a fast response to high frequency wind fluctuations by direct measurement of two drag-force components in orthogonal planes is described. It may be used to determine wind profiles to extensive heights and would be helpful in takeoff and landing of light planes.

B63-10547
ELLIPSOIDAL OPTICAL REFLECTORS REPRODUCED BY
ELECTROFORMING
HUNGERFORD, W. J. LARMER, J. W. LEVINSOHN, M.
OCT. 1964
GSFC-92

An accurately dimensioned convex ellipsoidal surface, which will become a master after polishing, is fabricated from 316L stainless steel. When polishing of the master is completed, it is suspended in a modified watt bath for electroforming of nickel reflectors.

B63-10556
LATHE CONVERTED FOR GRINDING ASPHERIC SURFACES
LARMER, J. W. LEVINSOHN, M. MC CRAW, D.
PESSAGNO, E. H. TAUB, F. J. JUL. 1964
GSFC-115

A standard overarm tracing lathe converted by the addition of an independently driven diamond grinding wheel is used for grinding aspheric surfaces. The motion of the wheel is controlled by the lathe air tracer following the template which produces the desired aspheric profile.

B63-10558 NEW METHOD FORMS BOND LINE FREE OF VOIDS KING, C. B. OCT. 1964 LANGLEY-20

A new bonding method using vacuum, pressure and heat, which produces a bond line free of voids, is described. This method is very successful in bonding ablation shields to a magnesium structural component in simulated reentry tests involving great heat and air turbulence.

B63-10560 CAMERA SHUTTER IS ACTUATED BY ELECTRIC SIGNAL NEFF, J. E. NOV. 1964 ARC-20

A rotary solenoid energized by an electric signal opens a camera shutter and when the solenoid is de-energized a spring closes it. By the use of a microswitch, the shutter may be opened and closed in one continous, rapid operation when the solenoid is actuated.

B63-10564 A TECHNIQUE FOR MAKING ANIMAL RESTRAINTS CLARKE, A. E., JR. REITMAN, J. SEP. 1964 ARC-25

A contoured shell for restraining animals is made by thermoforming plastic over the anesthetized, frozen specimen. It may be vented, or pieces may be cut out to facilitate working in localized areas.

B63-10568
PLASTIC MOLDS REDUCE COST OF ENCAPSULATING ELECTRIC CABLE CONNECTORS KNOTT, D. NOV. 1964
M-FS-69

Resin casting of the aluminum master pattern forms a plastic mold for encapsulating a cable connector. An elastomer is injected into the mold and cured. The mold is disassembled leaving an elastomeric encapsulation around the connector.

B63-10571
SELF-BALANCING BEAM PERMITS SAFE, EASY LOAD HANDLING UNDER OVERHANG EDWARDS, O. H. MAR. 1964
M-FS-84

The use of a self-balancing I-beam with a counterweight and motor simplifies moving heavy loads that are inaccessible for cranes. The beam cannot be overloaded, as the counterweight will not balance the load, and thus acts as an automatic safety device.

B63-10590
STAINLESS-STEEL ELBOWS FORMED BY SPIN FORGING
INNOVATOR NOT GIVEN /CHANCE-VOUGHT CORP./ DEC.
1964

Large seamless austenitic stainless steel elbows are fabricated by spin forging /rotary shear forming/. A specially designed spin forging tool for mounting on a hydrospin machine has been built for this purpose.

B64-10001
NEW INFLATABLE LIFERAFT IS NONTIPPABLE
RADNOFSKY, M. I. SHEWMAKE, G. A. MAR. 1964 /SEE
NASA-TN-D-1083/
MSC-AA

A one-seamed lightweight life raft has three underwater ballast buckets as stabilizers. Nontippable, it can be compactly packaged and inflated with carbon dioxide.

B64-10006
SPEED-SENSING DEVICE AIDS CRANE OPERATORS
OCT. 1964
WS-4

So that crane operators can judge payload movements accurately, a friction-driven multilobed cam device energizes a buzzer and indicator lamp in the crane cab. The signal frequency of this speed sensor has a sensitivity to hoist movement of 1/8 inch.

B64-10011 METAL STRIP FORMS 21 FOOT BOOM, ROLLS UP FOR COMPACT STORAGE INNOVATOR NOT GIVEN /CANADIAN COMMERCIAL CORP./ MAY 1964 GSFC-151

An extensible boom, carrying three separate electric conductor tapes, can be rolled into a compact storage drum. The tape is curved in cross section so that the boom automatically forms a tube as it is extended.

B64-10014
GUIDE FOR EXTRUSION DIES ELIMINATES
STRAIGHTENING OPERATION
GYORGAK, C. A. HOOVER, R. J. NOV. 1964
LEWIS-152

To prevent distortion of extruded metal, a guidance assembly is aligned with the die. As the metal emerges from the extrusion dies, it passes directly into the receiver and straightening tube system, and the completed extrusion is withdrawn.

B64-10015
COMFORTABLE, LIGHTWEIGHT SAFETY HELMET HOLDS
RADIO TRANSMITTER, RECEIVER
ATLAS, N. D. /N. AM. AVIATION/ MAY 1964
MSC-53

For two-way radio communication where safety gear is required, a lightweight helmet with few protrusions has been designed. The electronics components and power supply are mounted between the inner and outer shells, and resilient padding is used for the lining.

B64-10021
PRESSURE TRANSDUCER 3/8-INCH IN SIZE CAN BE FAIRED INTO SURFACE
SCHAFFER, R. J. /N. AM. AVIATION/ MAY 1964
W00-065

To measure fluid pressure with minimum disturbance to fluid flow, a miniature pressure transducer can be imbedded and faired into the test surface. Incorporated in the design are piezoresistive elements, mounted on a diaphragm, which transform pressure strains into an electrical signal.

B64-10028 QUICK-ACTING CLUTCH DISENGAGES IDLE DRIVE MOTOR STARK, K. W. AUG. 1964 GSFC-143

Positive-drive, no drag, over-running clutch is developed to conserve power of idle motor in a low-power system using multiple drive motors. This device is useful where a number of shaft speeds are required with frequent shifting.

B64-10031
MULTIPLE PORT PRESSURE SCANNER VALVE FEATURES
GREATER ACCURACY, QUICKER DATA
VINCENT, E. R. SEP. 1964
JPL-555

A fast, accurate, multipressure measuring system, which employs a multiple port pressure scanning valve that connects a pressure transducer to many pressures, is described.

B64-10050
MODIFIED GAS BEARING IS ADJUSTABLE TO OPTIMUM
STIFFNESS RATIO
EVANS, J. L. AUG. 1964
M-FC-145

Inexpensive and rapid-adjustments of the radial to-axial stiffness ratio of a spherical gas bearing are achieved by a series of gas passages in the equatorial plane of the sphere which feed into orifices that can be readily changed in size.

B64-10058 INSULATED WELD TOOLING PERMITS UNIFORM, HIGH-QUALITY WELD INNOVATOR NOT GIVEN /N. AM. AVIATION/ AUG. 1964

The application of a ceramic material coating to all surfaces contacting parts to be welded permits greater weld strength than the conventional weld tooling method.

B64-10066
ENCAPSULATION PROCESS STERILIZES AND PRESERVES
SURGICAL INSTRUMENTS
MONTGOMERY, L. C. MORELLI, F. A. JUL. 1964

Ethylene oxide is blended with an organic polymer to form a sterile material for encapsulating surgical instruments. The material does not bond to metal and can be easily removed when the instruments are needed.

METAL-BENDING BRAKE FACILITATES LIGHTWEIGHT, CLOSE-TOLERANCE FABRICATION ERCOLINE, A. L. WILTON, K. B. OCT. 1964 ARC-29

A lightweight, metal bending brake ensures very accurate bends. Features of the brake that adapt it for making complex reverse bends to close tolerances are a pronounced relief or cutaway of the underside of the bodyplate combined with modification in the leaf design and its suspension.

B64-10084
MOLDED ELASTOMER PROVIDES COMPACT FERRITE-CORE
HOLDER, SIMPLIFIES ASSEMBLY
HAYDEN, R. R. NOV. 1964
JPL-584

A ferrite-core holder, fabricated by casting an elastomer in a simple mold, simplifies the assembly of modular matrix units for computers.

Use of the device permits the core leads to be multiply threaded and soldered to terminals, without requiring intermediate terminals.

B64-10119
BUCKLE JOINS WEB STRAPS QUICKLY, ADJUSTS
EASILY
WILKINSON, J. E. /CHANCE VOUGHT CORP./ JUN. 1964
LANGLEY-21

To join web straps used to hoist heavy loads, a novel buckle permits two straps to be quickly joined and held by the combined forces of strap load tension and friction.

B64-10121 ELECTRONIC ASSEMBLY RACK PANELS SNAP ON AND OFF BAILEY, J. W. JUN. 1964 GSFC-59

Snap fasteners on each side of an electronic assembly rack blank panel give quick access to the interior. Guide pins extending from the inside face easily slip into standard screw holes on the frame and provide additional support.

B64-10124
ATTACHMENT CONVERTS MICROSCOPE TO POINT SOURCE
AUTOCOLLIMATOR
SHLICHTA, P. J. JUL. 1964
JPL-499

A low-power microscope or telescope provides a simple means of autocollimation. This is done by fitting the instrument with a light source to permit alignment from a reflecting surface normal to the optic axis of the instrument.

B64-10130
BEARING TRANSMITS ROTARY AND AXIAL MOTION
DOW, N. F. PETERS, R. W. SEP. 1964
LANGLEY-27

A low friction, two-component bearing comprised of a pair of ball-bearing races for transmitting rotary motion and an inner series of ball bearing assemblies for transmitting axial motion is described and should be useful in mechanisms such as stress-strain testing machines.

B64-10141
PNEUMATIC POWER IS TRANSMITTED THROUGH AIR
BEARING
JOHNSON, H. I. WOBIG, O. A. JUL. 1964
MSC-8

A more efficient method for supplying high pressure air to an air bearing and pneumatic equipment mounted on it has been developed. The system uses a conventional air bearing and an air-supported sphere with a central passage. High pressure air is channeled through it into the pneumatic equipment on the sphere.

864-10145 FLEXIBLE FASTENER ALLOWS THERMAL EXPANSION CRUMPLER, W. B. JUN. 1964 LANGLEY-40

A flexible fastener permits thermal expansion of model skin sections which are rigidly attached to supporting structures in wind tunnel tests. The device uses a modified ball joint contact between the fastener and a skin section.

B64-10164 UPSETTING BUTT EDGE INCREASES WELD-JOINT STRENGTH VESCO, D. OCT. 1964 M-FS-175

Mechanical upsetting /a mode of cold forging/ of butt edges to be welded is accomplished by the use of hydraulic rams and pressure rollers. The mechanical upsetting increases the thickness of the material in the heat-affected zone and compensates for the lower specific strength per unit thickness common to this area.

864-10170
BALL BEARING USED IN DESIGN OF RUGGED FLOWMETER
MINKIN, H. L. JAN. 1965
LEWIS-159

A volumetric flowmeter which has a small magnet

imbedded in the outer perimeter of the turbine wheel or in the bearing permits measurement of liquid flow rates in the presence of wide ranges and violent surges.

B64-10178
MACHINE TESTS CREASE DURABILITY OF SHEET
MATERIALS
JONES, L. K. STANFORD, H. B. NOV. 1964
JPL-604

To test the crease resistance of sheet materials, the mid-section is folded over crease-control blades. One end is clamped to a motor-driven eccentric, the other to a spring, and durability is measured by the cycles required to produce failure.

B64-10185
THREADING HOOK FACILITATES SAFE RECOVERY OF HEAVY LOADS
ARTHUR, J. S. WILLIAMS, D. C. OCT. 1964
MSC-46

A C-shaped threading hook and shuttle mounted on a spring-loaded driving rod located inside the long-handled pole are developed for recovering massive loads afloat in the sea.

B64-10188 BLADE VALVE ISOLATES COMPARTMENT IN PIPE, OPENS TO ALLOW FREE FLOW IMUS, R. NOV. 1964 JPL-585

Two thin blades are incorporated into a valve which, when closed, form a sealed compartment in the shock-tube portion of a pipeline. When forced open by an actuator, gas flows through the system.

B64-10211
MICROMACHINING PRODUCES OPTICAL APERTURES TO MICRON DIMENSIONS
WALCH, A. J. OCT. 1964
GSFC-206

A micron dimensioned rectangular optical aperture is formed under a high-powered toolmaker*s microscope by laying two knife-edged blocks over the miniature knife-edged hole in the base.

B64-10223 TWO-PART VALVE ACTS AS QUICK COUPLING MAC GLASHAN, W. F., JR. NOV. 1964 JPL-478

A two-part valve simplifies the problem of filling large tanks from smaller ones. One part acts as a check valve and remains integral to the recipient system, while the other part is integral to the donor system.

B64-10249
INSTRUMENT ADJUSTMENT KNOB LOCKS TO PREVENT
ACCIDENTAL MALADJUSTMENT
INNOVATOR NOT GIVEN /LEAR SIEGLER CORP./ NOV.
1964
M-FS-190

A device, incorporating a collar with a hexagonal opening which fits snugly over a hexagonal nut used to engage instrument panel components, keeps the adjustment knob locked. A quick release mechanism frees the knob for rotational adjustment.

B64-10272 VISCOUS-PENDULUM DAMPER SUPPRESSES STRUCTURAL VIBRATIONS REED, W. H., III NOV. 1964 LANGLEY-45

IGLEY-45
The viscous pendulum damper consists of a cylinder containing round trays on which round lead slugs rest. When assembled, the container is filled with a viscous liquid and attached, with axis vertical, to the structure. The device permits varying the damping of structural vibrations.

B64-10274 VEHICLE WALKS ON VARIED TERRAIN, CAN ASSIST HANDICAPPED PERSONS NOV. 1964 WOO-005

A battery-powered motorized vehicle with three pairs of legs connected to push rods and a series

of linkages is constructed for traversing varied terrains. Two cams connected to the drive mechanism control the motion of the legs. The basic design may be adapted for use with motorized wheelchairs.

B64-10277
APPARATUS ALTERS POSITION OF OBJECTS TO FACILITATE DEMAGNETIZATION RINARD, G. WATSON, J. D. NOV. 1964
GSFC-234

An apparatus consisting of pulleys, a drive shaft and an inner compartment, in which components to be demagnetized are mounted, is constructed. Due to the speed ratio of the three frames, every point on a component in the inner compartment is cycled through an optimum locus in the demagnetization field.

B64-10278
SENSITIVE LOW-PRESSURE RELIEF VALVE HAS POSITIVE SEATING AGAINST LEAKAGE INNOVATOR NOT GIVEN /N. AM. AVIATION / NOV. 1964
W00-041

A pilot-operated relief valve which provides positive seating against leakage in cryogenic systems is described. The principal advantage is that the pilot poppet is unaffected by variations in control pressures in the pilot cavity, and results in a more accurate sensing of inlet pressure conditions.

B64-10284 APPARATUS MEASURES VERY SMALL THRUSTS INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ NOV. 1964 WDO-048

Measurement of very small thrusts of an ion engine

--- made by mounting the engine on a platform
supported by leaf springs which are loaded to nave
a zero spring constant. Measuring apparatus
includes an inductive sensor, servo amplifier, and
a counterthrust feedback system.

B64-10306 COMPRESSED GAS SYSTEM OPERATES SEMITRAILER BRAKES DURING WINCHING OPERATION TUPPER, W. E. DEC. 1964 JPL-0036

To move van-type semi-trailers into and out of confined spaces, an auxiliary braking system is mounted on a standard dolly converter. Compressed nitrogen is used to actuate the brakes which are used in conjunction with a power winch.

B64-10327
CONNECTOR SEALS FLUID LINES AT CRYOGENIC
TEMPERATURES AND HIGH VACUUMS
KITTS, W. T. PLATT, P. K. JAN. 1965
GSFC-253

A connector that will serve as a seal for fluids at cryogenic temperatures and in high vacuums was constructed by installing a metal disk between two sets of mating serrations to form two sealing surfaces. Compression on both sealing surfaces is ensured by spring action of the disk.

B64-10348
SAFETY RESTRAINER PREVENTS WHIPPING OF
RUPTURED HIGH-PRESSURE HOSE
THOMPSON, W. E. DEC. 1964
LEWIS-99

The braid at each end of a standard electric cable puller is modified to reinforce high pressure, flexible, fluid transfer hoses. This safety device acts as a restraint if the line ruptures.

B64-10406
POLYCHART CONTOUR PLOTTER ENABLES DATA
EXTRAPOLATION FROM MULTIPLE PLOTTING CHARTS
SWINDALL, P. M. WISE, T. E. JUL. 1964
M-FS-37

A polychart contour plotter is used to reduce the data from all 19 antenna pattern charts to a one-chart form.

B65-10003 Illuminated display panel is Easily Changed INNOVATOR NOT GIVEN /IBM/ JAN. 1965 MSC-108

Photographic negative placed between two plastic sheets and back-lighted in selected areas prepares illuminated multicolored display panels. The device is inexpensive, easily changed, and quickly fabricated.

B65-10007
THERMOCOMPRESSION BONDING PRODUCES EFFICIENT
SURFACE-BARRIER DIODE
INNOVATOR NOT GIVEN /IBM/ JAN. 1965
JPL-SC-066

Thermocompression bonding of a gold wire to a gallium-arsenide wafer produces a quality surface barrier diode with fast recovery times. The properties of this combination may be useful in semiconductor devices.

B65-10008 SHOCK ABSORBER PROTECTS MOTIVE COMPONENTS AGAINST OVERLOADS INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ JAN. 1965 MOD-092

Shock absorber with an output shaft, hollow gear, and a pair of springs forming a resilient driving connection between shaft and gear, operates when abnormally high torques are applied. This simple durable frictional device is valuable in rotating mechanisms subject to sudden overloads.

B65-10009 FORWING BLOCKS SPEED PRODUCTION OF STRAIN GAUGE GRIDS BONN, J. L. GARDNER, D. E. FEB. 1965 LEWIS-182

A tool is designed which facilitates the forming of wire grids used in manufacturing strain gauge grids. Flattening the grid wire by a cold working produces = ***hilized grid which can be readily handled for storage or shipment.

B65-10014
USE OF TEAR RING PERMITS REPAIR OF SEALED
MODULE CIRCUITRY
INNOVATOR NOT GIVEN /IBM/ JAN. 1965
M-FS-210

Improved packaging technique for modulator electronic circuitry utilizes a tear ring which may be removed for repair and resealed. The tear ring is put over the container and header to which the electronic circuit assembly has been attached.

B65-10017 EXPLOSIVES ACTUATE NONMAGNETIC INDEXING DEVICE BAUERNSCHUB, J. P., JR. JAN. 1965 GSFC-237

Nonmagnetic explosive-actuated indexing device creates magnetic field that can be tolerated by a sensor.

B65-10019
WIDE-ANGLE SENSOR MEASURES RADIANT HEAT ENERGY
IN CORROSIVE ATMOSPHERES
INNOVATOR NOT GIVEN /BOEING CO./ JAN. 1965 SEE
ALSO B63-10004
M-FS-228

ellipsoidal cavity device measures radiant heat energy over wide incident angles in corrosive atmospheres. The instrument consists of a cavity in copper heat sink sealed with sapphire window to protect thermocouple.

B65-10020
OPTICAL ARRANGEMENT INCREASES USEFUL LIGHT
OUTPUT OF SEMICONDUCTOR DIODES
INNOVATOR NOT GIVEN /IBM/ JAN. 1965 SEE ALSO
B64-10297
JPL-SC-064

Useful light output of semiconductor diodes increased by incorporating the diode in an integral reflector and lens assembly. This reduces normal reflection losses between the diode and the air.

BOD-10021 PICKUP DEVICE READS PRESSURES FROM PORTS IN ROTATING MECHANISMS JANAS, B. JAN. 1965 SEE ALSO B64-10031 LEWIS-158

Indexing pickup monitors fluid pressures from ports at various angles on high or low speed rotating mechanisms in operation. By a simple axial movement of a takeoff connector, angle changing takes place. This device can be adapted for electric current monitoring.

B65-10022 KNOB LINKAGE PERMITS ONE-HAND CONTROL OF SEVERAL OPERATIONS CODDING, G. C. LAVENDER, C. E. JAN. 1965 MSC-30

Electromechanical device with single knob provides one-hand control of numerous electrical or mechanical functions. The principle of this design may have application to remote-control switching devices.

B65-10027
FLUID-PRESSURE MEASUREMENT APPARATUS USES SHORT-LENGTH MANOMETER TUBES
SATHER, B. I. MAR. 1965
LEWIS-28

System of short length U-tube manometers with a proportionally divided reference pressure measures high fluid pressures.

B65-10029 SEISMIC TRANSDUCER MEASURES SMALL HORIZONTAL DISPLACEMENTS GREENWOOD, T. L. MAR. 1965

Pendular seismic transducer mounted on base plate measures small horizontal displacements of structures subjected to vibration where no fixed reference point is available. Enclosure of transducer in transparent plastic case prevents air currents from disturbing the pendulum balance.

B65-10031 SPRING LOADED BEADED CABLE MAKES EFFICIENT WIRE PULLER INNOVATOR NOT GIVEN /N. AM. AVIATION/ FEB. 1965 1965 WOO-108

An efficient wire puller consists of a steel probe with a hole in one end fastened to a steel cable which is strung with metal beads compressed by spring loaded ferrules. This device allows cables to be pulled or forced around bends and elbows in pipes or tubes.

B65-10035
OCEANBORNE TRANSPONDER PLATFORM HAS GOOD STABILITY
INNOVATOR NOT GIVEN /IBM/ FEB. 1965
M-FS-171

Determination of space vehicle range and orbit is aided by a stable subsurface oceanic transpounder. This device consists of a buoy held below the surface by a three-point system of anchors and mooring lines with an above surface antenna.

B65-10037
IMPROVED HOLDER PROTECTS CRYSTAL DURING HIGH ACCELERATION AND IMPACT
LE VAY, K. H. FEB. 1965
JPL-463

A plastic holder, which retains a crystal blank with standard silvered contacts sandwiched between two copper contacts, protects the crystal against vibration during high acceleration and impact.

B65-10038
FASTENER PROVIDES COOLING AND COMPENSATES FOR THERMAL EXPANSION
INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ FEB. 1965
NU-0003

A fastener composed of a concentric bellows welded to two plates forming an annular cavity provides cooling and thermal expansion compensation in a high temperature environment.

865-10039 NONRESONANT SUPPORT FACILITATES VIBRATION TESTING OF STRUCTURES
INNOVATOR NOT GIVEN /BOEING CO./ FEB. 1965
M-FS-224

An essentially frictionless four-point support system which utilizes bearings and pistons and allows for determination of vibration frequencies of large structures. Retardation of vertical or horizontal motion is due to the viscous damping by the hydrostatic pressure of the oil or by adjustment of the gas volume in the accumulator.

B65-10040 VALUE DESIGNED WITH ELASTIC SEAT MAC GLASHAN, W. F., JR. FEB. 1965 JPL-442

Absolute valve closure is accomplished by a machined valve with an axially annular channel which changes the outlet passage into a thin tubular elastic seat member with a retainer backup ring. The elasticity of the seat provides tight conformity to ball irregularity.

B65-10042 FLEXURE SUPPORT SYSTEM PROTECTS THERMALLY AND DYNAMICALLY LOADED MODELS CRUMPLER, W. B. FEB. 1965 LANGIFY-39

The design of an eight legged flexure support
system which permits differential thermal
expansion of thin skinned models subjected to high
temperatures is done by setting the length—wise
axes of the supporting legs approximately normal
to the line of absolute motion of the model
supported.

B65-10049 SCREW LOCKING CUPS QUICKLY AND NEATLY CRIMPED INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ FEB. 1965 NU-0009

A tool consisting of a positioning pin which is engaged in the screw and depressed until the tool body contacts the locking cup permits quick and neat crimping.

B65-10053 SEAL ALLOWS BLIND ASSEMBLY AND THERMAL EXPANSION OF COMPONENTS INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ FEB. 1965 NU-0005

The design of a seal consisting of two concentric cylinders with outer and inner threaded elements attached to each side of the system interface withstands large temperature changes and allows for blind assembly.

B65-10060 NEW ALLOY BRAZES TITANIUM TO STAINLESS STEEL INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1965 1965 MSC-102

Brazing alloy of palladium, silver and silicon is used in brazing titanium to stainless steel without embrittling metals at the brazed interfaces.

B65-10063 CERAMIC-COATED BOAT IS CHEMICALLY INERT, PROVIDES GOOD HEAT TRANSFER SPITZER, C. R. MAR. 1965 LANGLEY-90

Refractory metal foil sprayed with ceramic coating serves as evaporating boat for inorganic materials. The high thermal conductivity of this boat makes it useful with ohmic heaters.

B65-10064 DEVICE MEASURES CURVED SURFACE FINISH ON GEAR TEETH INNOVATOR NOT GIVEN /GE/ MAR. 1965

Measurement of the curved surface finish on gear teeth is made by a device used in conjunction with a conventional profilometer.

B65-10070 SIMPLE SCALE INTERPOLATOR FACILITATES READING OF GRAPHS FETTERMAN, D. E., JR. MAR. 1965 LANGLEY-88

Simple transparent overlay with interpolation scale facilitates accurate, rapid reading of graph coordinate points. This device can be used for enlarging drawings and locating points on perspective drawings.

B65-10074
NITROGEN DIOXIDE PRODUCED BY SELF-SUSTAINED
PYROLYSIS OF NITROUS OXIDE
SABOL, A. P. MAR. 1965
LANGLEY-32

Apparatus is developed for achieving continuous self-sustaining pyrolysis reaction in the production of nitrogen dioxide from nitrous oxide. The process becomes self-sustaining because of the exothermic reaction and the regenerative heating of the gases in the pyrolysis chamber.

B65-10075
TENSION IS SERVO CONTROLLED IN FILM ADVANCE
SYSTEM
INNOVATOR NOT GIVEN /AM. OPT. CO./ MAR. 1965

LANGLEY-54

Servocontrol device feeds film into a roller system. Two linear potentiometers connected to spring loaded tension rollers furnish servo input signal. Can be used in any continous material transport system.

B65-10077
NEW COUPLING COMPENSATES FOR SHAFT
MISALIGNMENT
INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./
MAR. 1965
NU-0013

Coupling of splined shafts with slight misalignment is accomplished by means of a crown spline and sleeve arrangement.

B65-10078
FABRICATION METHOD PRODUCES HIGH-GRADE ALUMINA CRUCIBLES
PALMOUR, H. MAR. 1965
M-FS-216

Alumina-binder mixture, which has been dry pressed in a die using a mating punch, forms crucibles of various configurations and after firing results in a ceramic structure for use in diffusion experiments.

B65-10090 COMPACT ASSEMBLY GENERATES PLASTIC FOAM, INFLATES FLOTATION BAG APR. 1965 LANGLEY-96

Device for generating plastic foam consists of an elastomeric bag and two containers with liquid resin and a liquid catalyst. When the walls of the containers are ruptured the liquids come into contact producing foam which inflates the elastomeric bag.

B65-10094 CUTTER AND STRIPPER REDUCES COAXIAL CABLE CONNECTION TIME THOMPSON, F. E. APR. 1965

Consisting of three pivoted members, this hand cutter and stripper positions to cut shielding and insulation at the right distance and depth. Coaxial cable is prepared quickly and accurately for connector attachment.

B65-10098
CONTACT STRESSES CALCULATED FOR MINIATURE SLIP RINGS
ALBRIGHT, F. G. DOMEREST, K. E. HORTON, J. C. APR. 1965
M-FS-280

Using mathematical formulations to plot the graphs of the contact preload versus the Hertzian load, calculations of unit loading of the preloaded brushes on slip rings can be made. This optimizes the design of contact brushes and miniature slip rings.

B65-10099
SLIT FEEDS REDUCE UNBALANCED TORQUES IN
GAS-LUBRICATED BEARINGS
BATSCH, F. F. LAUB, J. H. APR. 1965 SEE ALSO
B63-10123 AND B64-10050
JPL-264

Gas-lubricated journal bearing with narrow radial slits forming circular gas-feed passages regulates gas flow in precision instruments. Asymmetrical flow pattern and unbalanced torques are prevented.

B65-10101 JIG AND FIXTURE AID FABRICATION OF TUNGSTEN RIVETS CHATTIN, J. H. APR. 1965 LEWIS-185

Jig and fixture that holds several lengths of tungsten rods produces rivets simply and inexpensively. The apparatus allows sufficient tungsten to be exposed for heating and forging into a rivet head.

B65-10104 LEAF-SPRING SUSPENSION PROVIDES ACCURATE PARALLEL DISPLACEMENTS MC CREARY, R. A. APR. 1965 JPL-480

Leaf-spring suspension device with the springs symmetrically mounted on suspension frames provides accurate parallel displacements of loads over short linear distances.

B65-10109
ROCK BIT REQUIRES NO FLUSHING MEDIUM TO
MAINTAIN DRILLING SPEED
INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ APR.
1965
JPL-WOD-031

Steel drill bit having terraces of teeth intersected by spiral grooves with teeth permits the boring or small holes through rock with lospower. The cuttings are stored in a chamber behind the cutting head. Could be used as sampling device.

B65-10110
MAGNETS POSITION X-RAY FILM FOR WELD
INSPECTION
WAGNER, R. P. APR. 1965
M-FS-253

Film-positioning device uses magnets to hold X-ray film for weld inspection in nonferrous structures, such as tanks, where access to interior points is difficult.

B65-10111
PROBE TESTS MICROWELD STRENGTH
INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ APR.
1965
W00-118

Probe is developed to test strength of soldered, brazed or microwelded joints. It consists of a spring which may be adjusted to the desired test pressure by means of a threaded probe head, and an indicator lamp. Device may be used for electronic equipment testing.

B65-10113
SHOCK MOUNT ISOLATES PRESSURE TRANSDUCERS FROM VIBRATION
ROGERO, R. S., JR. APR. 1965
JPL-631

Pressure transducer is isolated from shock and vibration forces by a pressure-compensated shock mount. Silicone elastomer O-rings within the shock mount serve as shock and vibration-damping pads.

B65-10114
AVERAGING PROBE REDUCES STATIC-PRESSURE SENSING ERRORS
RITCHIE, V. S. APR. 1965
LANGLEY-36

Averaging the high and low pressure admitted to a plenum through circumferentially spaced orifices provides a probe that accurately senses the free-stream static pressure on an aerodynamic surface. This surface does not have a preferred angle of inclination to the direction of the

airstream cross flow.

B65-10115
INERT GAS SPRAYING DEVICE AIDS IN REPAIR OF
HAZARDOUS SYSTEMS
TELEHA, S. APR. 1965
LEWIS-8B

Inert gas spraying device aids in safely making mechanical repairs to a cryogenic fluid system without prior emptying of the system. This method can be applied to any natural or bottled gas system and with modifications to gasoline transports.

B65-10116 LOW-COST TOOL MINIMIZES DAMAGE TO O-RINGS DURING INSTALLATION INNOVATOR NOT GIVEN /N. AM. AVIATION/ APR. 1965 MSC-140

Tapered cylindrical tool enables 0-ring installation over threaded fasteners without seal damage.

B65-10121 FLOW CONTROL VALVE IS INDEPENDENT OF PRESSURE DROP INNOVATOR NOT GIVEN /THIOKOL CHEM. CORP./ APR. 1965 JPL-WDO-039

Remote control of fluid flow in a low-power system is established by a flow control valve with a flapper and nozzle flow control. Constant rates are maintained despite fluctuating pressure across the valve.

B65-10126
COLLAPSIBLE TRUSS STRUCTURE IS AUTOMATICALLY
EXPANDABLE
INNOVATOR NOT GIVEN /GE/ MAY 1965
GSFC-265

Coil springs wound with maximum initial tension in a three-truss, closed loop structure form a collapsible truss structure. The truss automatically expands and provides excellent rigidity and close dimensional tolerance when expanded.

B65-10130 COLLAR POSITIONS STRIP STOCK USED TO FORM COIL ON MANDREL BLAZE, C. J. MAY 1965 JPL-198

Guide collar fastened to a mandrel helps form a coll of strip sheet metal stock. The collar maintains the strip stock in its proper position during winding of each turn of the coil.

B65-10131
APPARATUS FACILITATES PRESSURE-TESTING OF
METAL TUBING
GYORGAK, C. A. MAY 1965
LEWIS-174

Burst-testing of refractory metal tubing is conducted in an apparatus in which tubular specimans are firmly gripped and test pressures and temperatures are applied. Porosity, flaw, and fatigue-stress rupture are also tested.

B65-10134
HIGH PERMEABILITY SEMICONDUCTORS PERMIT
CLOSE-TOLERANCE SOLDERING
INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ MAY
1965
GSFC-319

High permeability semiconductors concentrate magnetic field energy in small areas to allow soldering of small components. This device can be used in microminiature parts in thin-film fabrication.

B65-10135
COILED SPRING MAKES SELF-LOCKING DEVICE FOR THREADED FASTENERS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAY 1965
1965
MSC-149

Coiled spring device provides both easy selflocking and disassembly for screw-threaded fasteners. When the fastener turns in one direction the spring grips one of the fastener threads and releases when the fastener turns in the opposite direction.

B65-10141
INTEGRAL RIBS FORMED IN METAL PANELS BY COLD-PRESS EXTUSION
BRADIE, P. R. SCHUERER, P. H. MAY 1965
M-FS-230

Metal panels with integral ribs are formed by the cold-press extrusion method without material loss. Integral ribs in aluminum-alloy panels are formed by this process.

B65-10144 LIGHTWEIGHT LOAD SUPPORT SERVES AS VIBRATION DAMPER LAYMAN, W. E. MAY 1965 JPL-661

Omnidirectional antennas and solar panels can be supported by a thin-walled tubular strut. Silicon grease is used as the vibration-damping medium and a coil spring supports static loads.

B65-10147 IMPROVED FLUID CONTROL VALVE EXTENDS DIAPHRAGM LIFE MAC GLASHAN, W. F. MAY 1965 JPL-345

Wear resistance of flexible diaphragms in fluid control valves is increased by incorporating a soft rubber washer at the bottom of the piston, a flexible buffer between the diaphragm and the valve seat, and a fluid feedback arrangement. The stress and wear of components at the valve seat are minimized.

B65-10148
BIDIRECTIONAL TORQUE FILTER ELIMINATES
BACKLASH
BAKER, R. VEILETTE, L. WILLIAMS, S. MAY 1965
GSFC-335

Two elastic springs connecting a hub and two spur gears absorb bidirectional step torque differentials and provide antibacklash characteristics between input and output shafts. This device is used in precise control systems.

B65-10149
CANTILEVER SPRINGS MAINTAIN TENSION IN THERMALLY EXPANDED WIRES TERSELIC, R. A. MAY 1965
LEWIS-136

Two deflected cantilever springs strung with wire provide force displacement compensation to maintain tension in the wires as they undergo thermal expansion. This method of maintaining tension in thermally expanded wires is used in electric space heaters and residential heat exchangers.

B65-10150 METAL BELLOWS CUSTOM-FABRICATED FROM TUBING MAY. 1965 LEWIS-192

Mandrel assembly mounted in a lathe chuck is used with a forming wheel to roll-form beliows from standard sheet metal tubing. Spacers and mandrels of various sizes custom-fabricate beliows of any desired dimensions.

B65-10153 TITANIUM TREATMENT IMPROVES BRAZED JOINTS INNOVATOR NOT GIVEN /MIT/ MAY 1965 MSC-127

Pretreating metal with a thin coating of pure titanium improves the wettability and flow of brazing alloys. This can be used in the manufacturing of aviation and aerospace components where high strength-to-weight ratio must be achieved.

B65-10154
SYSTEM MEASURES UNIDIRECTIONAL FORCES,
EXCLUDES EXTRANEOUS FORCES
BEHRENDT, D. R. HEGLAND, D. E. MAY 1965
LEWIS-170

System measures unidirectional force without interference from other directional forces. The

measuring apparatus is mounted so that it only moves vertically and is constrained from horizontal and rotational movement. This system can be used to accurately measure small forces in one direction, or as an analytic balance.

B65-10160 LOW-COST SEAL COMPENSATES FOR SURFACE IRREGULARITIES INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ JUN. 1965 NU-0016

Seal assembly consisting of a steel V-ring and a perforated tubular fluorocarbon polymer 0-ring provides a barrier to gaseous and liquid hydrogen under high pressure.

B65-10163
DEVICE DISCONNECTS SEVERAL COUPLINGS SIMULTANEOUSLY
KORSYTHE, A. K. JUN. 1965
JPL-226

Actuator assembly disconnects electric cable and fluid-line coupling from a rocket. The disconnector incorporates interconnected hydraulic cylinders which effect an equal and simultaneous displacement of pistons upon admission of compressed air through a solenoid control valve.

B65-10166
SPLICE PLATE DESIGN ASSURES STRUCTURAL
SEPARATION BY MILD EXPLOSIVE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1965
MSC-137

Splice plate with mechanical joint is separated by expanding gases of a mild detonating fuse. The gas pressures of the low-yield explosive eliminate component fragmentation and achieve excellent control of the apparation line.

B65-10168
LATHE ATTACHMENT USED TO MACHINE ELLIPTICAL
CONES
ALLEN, J. H., SR. WOBIG, O. A. JUN. 1965
MSC-100

Close-tolerance elliptical cones are fabricated by cutting-tool guide assembly used with conventional tracer cartridge on turret lathe accurately produced in two machine operations.

B65-10170
METAL PARTS HYDROSIZED BY EXPLOSIVE FORCE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1965
M-FS-289

Large metal parts are sized by a charge exploded above a sealed container filled with evacuated die and water. Explosive hydrosizing achieves close dimensional tolerances, eliminates damage to the surface, and allows longer force application and more even pressure distribution.

B65-10174
PRESSURE TRANSDUCER SYSTEM IS FORCE-BALANCED,
HAS DIGITAL DUTPUT
INNOVATOR NOT GIVEN /GIANNINI CONTROLS CORP./
JUN. 1965
M-FS-154

Forced-balanced pressure transducer and associated circuitry controls pressure testing of space equipment systems under actual operating conditions. The transducer and circuitry automatically converts the sensed pressure to digital form.

B65-10176
DEVICE ENABLES MEASUREMENT OF MOMENTS OF INERTIA ABOUT THREE AXES
CONN, J. JUN. 1965
GSFC-49

Device measures moments of inertia of an irregularly shaped mass about three mutually perpendicular axes by the standard pendulum and torque methods. A fixture suspends the test mass at one point and can be adjusted to allow oscillation of the mass.

B65-10177
EPOXY-RESIN PATTERNS SPEED SHELL-MOLDING OF ALUMINUM PARTS
INNOVATOR NOT GIVEN /ALABAMA UNIV./ JUN. 1965
M-FS-303

Half patterns cast from commercial epoxy resin containing aluminum powder are used for shellmolding of aluminum parts. The half patterns are cast in plastic molds of the original wooden pattern. Ten serviceable sand-resin molds are made from each epoxy pattern.

B65-10180
NEW NUT AND SLEEVE IMPROVE FLARED CONNECTIONS GARRARD, J. S. JUN. 1965
M-FS-194

Improved nut and sleeve of standard stainless steel flared tube connection allows forces on the mating surfaces to be uniformly applied. This can be applied to pressurized fluid systems such as refrigeration, air conditioning, and hydraulic systems.

B65-10181 HAND TOOL BENDS COMPONENT LEADS ACCURATELY INNOVATOR NOT GIVEN /CHRYSLER CORP./ JUN. 1965 M-FS-308

Hand-operated die set bends, without damage, electrical component leads to perfectly match holes in printed circuit board. This tool speeds up printed circuit fabrication and reduces the number of component rejections.

B65-10185
DISPENSING SYSTEM ELIMINATES TORSION IN
DEPLOYED HOSES
INNOVATOR NOT GIVEN /IIT RES. INST./ JUN. 1965
MSC-80

Microscing system uses a rotating drum, transfer arm, and stationary drum to deploy, reel in, and store an attached hose. This system which eliminates torsion and minimizes strain and wear of flexible hoses, is used for handling flexible cables that have one end permanently attached to an outlet or connector.

B65-10191
EXTENDIBLE COLUMN CAN BE STOWED ON DRUM
HOLTZ, G. M. HOWARD, E. A. JUN. 1965
JPL-686

Column formed from a series of segments held together by an internal spring or cable can be coiled on a drum or extended into a rigid structure. This storable coil is useful in boring for soil samples and supporting electrical and optical sensors.

B65-10192
SPIRAL HEATER COILS HAND-FORMED WITH FIXTURE
CHATTIN, J. H. JUN. 1965
LEWIS-208

Bench model jig and fixture used for hand fabricating spiral coils of various lengths from flat strip stock. This tool is used to make springs and coils to custom lengths.

B65-10198
SELF-ALIGNING FIXTURE USED IN LATHE CHUCK JAW REFACING
LINN, C. C. JUN. 1965
FRC-21

7-21 Self-aligning tool positions and rigidly holds lathe chuck jaws for refacing and truing of the clamping surface. The jaws clamp the fixture in the manner of clamping a workpiece. The fixture can be modified to accommodate four-jawed checks.

B65-10201
ELECTRICAL CABLE CONNECTOR-CLAMP HAS SMOOTH
EXTERIOR SURPACE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1965
1965
MSC-154

Electrical cable connector-clamp fitted with a collet has a smooth exterior surface that can be easily gripped. The collet clamps a portion of the cable and provides for connecting it to a

standard electrical connector.

B65-10205
BALL AND SOCKET JOINTS PROVIDE ACCURATE
BIAXIAL GIMBAL
ROUZE, E. R. JUL. 1965
JPL-658

Ball-and-socket joints are used to connect two rotating inputs to orthogonally pivoted outputs. This provides an accurate biaxial gimbal which will operate in continuous motion without backlash.

B65-10207 FLUID CHECK VALVE HAS FAIL-SAFE FEATURE GAUL, L. C. JUL. 1965 JPL-0019

Check valve ensures unidirectional fluid flow and, in case of failure, vents the downstream fluid to the atmosphere and gives a positive indication of maifunction. This dual valve consists of a master check valve and a fail-safe valve.

B65-10210 FIBERGLASS DIES SPEED FORMING OF LARGE METAL SHEETS BROWN, R. L. SCHUERER, P. JUL. 1965 M-FS-214

Fiberglass tooling dies accelerate forming of large metal sheets. The dies, fabricated to fit over and fasten to the die bases, are lightweight, quickly replaced and have nongalling surfaces.

B65-10216
WIRE MESH ISOLATOR PROTECTS SENSITIVE
ELECTRONIC COMPONENTS
KERLEY, J. J., JR. JUL. 1965
GSFC-347

Sensitive electronic components are enclosed in wire mesh for protection. The wire mesh isolates the component from shock and vibration. It acts as a heat sink and as a screen against RF interference.

B65-10219
FLEXIBLE MAGNETIC PLANNING BOARDS ARE EASILY
TRANSPORTED
INNOVATOR NOT GIVEN /GEN. DYN./ASTRONAUTICS/ AUG.
1965
M-FS-340

Easily transportable preprinted magnetic planning boards are made by coating thin sheet steel with clear plastic. Flexible magnetic boards used with paper charts are constructed from close mesh steel screen.

B65-10222
INEXPENSIVE CHECK VALVE IS INSTALLED IN STANDARD AN FITTINGS
MARTINEZ, J. S. AUG. 1965

Check valve with a cylindrical flanged tube body is used in standard AN fittings. The valve also has an easily removable spring-loaded piston.

B65-10227
DIAPHRAGM ELIMINATES LEAKAGE IN CRYOGENIC
FLUID DUCT COUPLING
INNOVATOR NOT GIVEN /DDUGLAS AIRCRAFT CO./ AUG.
1965
WOO-142

Duct coupling with nickel steel diaphragm of low thermal expansivity is leakproof when used with cryogenic fluids. The diaphragm, located between the two flanges of the coupling, reduces axial shrinkage at the coupling flanges to a minimum.

B65-10229 SCOOP ATTACHMENT MAKES HELICOPTER RECOVERIES EASIER AND SAFER KOONS, W. E. AUG. 1965 MSC-130

Helicopter with rigid boom and net attachment performs rescue or recovery operations easily and safely. The attachment in the front of the helicopter scoops objects from difficult and otherwise inaccessible areas and pivots to the side hatch of the aircraft so that no crew member need leave the craft. B65-10230
HYDRAULIC DEVICE PROVIDES ACCURATE
DISPLACEMENTS TO MICROINCHES
TSUTSUMI, K. /MIT/ AUG. 1965
MSC-112

Hydraulic drive device translates microinch deviation measurements into precise corrective displacements. The unit is driven by a servomotor activated by the output of an attitude sensing device.

B65-10231 HANDTOOL FACILITATES EXTRACTION OF CIRCUIT MODULES LUSBY, T. K., JR. AUG. 1965 LANGLEY-38

Compact handtool extracts electronic modules from circuit board socket. It is used on modules that have four small notches in the base of the plastic housing.

B65-10235 ANGULAR GLASS TUBING DRAWN FROM ROUND TUBING INNOVATOR NOT GIVEN /DEBELL AND RICHARDSON/ AUG. 1965 HQ-20

Round glass tubing softened in a furnace is drawn over a shaped plug or mandel to form shapes with other than a circular cross section. Irregularly shaped tubing is formed without limitations on tube length or wall thickness.

B65-10236 BURST DIAPHRAGM PROTECTS VACUUM VESSEL FROM INTERNAL PRESSURE TRANSIENTS HOTZ, G. M. HOWARD, E. A. AUG. 1965 JPL-687

Supported dual-mode burst diaphragm protects wacuum wessels from transient internal pressures. It forms the interface between the vacuum in the wessel and an external pressure.

B65-10241 SHOCK ABSORBER OPERATES OVER WIDE RANGE CREASY, W. K. JONES, J. C. AUG. 1965 MSC-168

Piston-type hydraulic shock absorber, with a metered damping system, operates over a wide range of kinetic energy loading rates. It is used for absorbing shock and vibration on mounted machinery and heavy earth-moving equipment.

BG5-10245
CAPTIVE NUT FASTENER SECURELY JOINS BRITTLE
MATERIALS
SACCOCIO, R. M. /WESTINGHOUSE ELEC. CORP./ AUG.
1965
NU-0008

Extension tube captive nut with a standard bolt joins assemblies with an inaccessible nut location. This fastener is excellent for joining brittle materials.

B65-10246
THERMOCOUPLE-TO-INSTRUMENTATION CONNECTOR
FEATURES QUICK ASSEMBLY
HENSHAW, E. /WESTINGHOUSE ELEC. CORP./ AUG. 1965
NU-0022

Rigid thermocouple leads are connected to flexible instrumentation leads by a crimping and bridging process. This method eliminates the need for expensive transition sections and can be accomplished in about five minutes.

B65-10248
SYSTEM TRANSMITS MECHANICAL VIBRATION INTO
HAZARDOUS ENVIRONMENT
ARMSTRONG, D. G. /WESTINGHOUSE ELEC. CO./ GAAL,
A. E. AUG. 1965
NU-0025

Vibration transducers are tested in a hazardous environment using a single axis transmission system with an electromagnetic shaker table and vibrating wires which drive identical rocker arms, one in the test cell and the other outside. This system can be modified for a multiaxis configuration.

B65-10251 CONTROL OF COMPONENT DIFFERENTIAL HARDNESS INCREASES BEARING LIFE ANDERSON, W. J. PARKER, R. J. ZARETSKY, E. V. AUG. 1965 LEWIS-190 Bearing fatigue life is maximized when the bearing ball or roller hardness is between one and two points greater than that of the bearing race as measured on the Rockwell C scale. REMOTELY OPERATED CLAMPING TOOL HAS POSITIVE GRIP ADUCCI, S. A. /WESTINGHOUSE ELEC. CORP./ SEWALD, A. W. AUG. 1965 A. W. NU-0020 Jaw-type clamping tool inserts or removes objects in a hazardous environment. It has a strong, positive gripping force which is remotely operated by means of a wedge-screw mechanism. B65-10256 HOLLOW PLASTIC HOOPS PROTECT THERMOCOUPLE IN STORAGE AND HANDLING OSMOND, L. H. /WESTINGHOUSE ELEC. CORP./ AUG. 1965 NU-0023 Thermocouples are shipped and stored in hollow plastic hoops. The hoop is an inexpensive but efficient method of protection. B65-10262 ROTATING HOLDER PERMITS ACCURATE GRINDING OF METALLURGICAL MICROSAMPLES CRAMER, D. L. SEP. 1965 LEWIS-131 Metallurgical microsamples are held in a fixture which rotates the sample ucross a retating grinding wheel. The dual rotation results in a level, flat surface on the sample. KAMI, S. /HUGHES AIRCRAFT CO./ SEP. 1965 One-shot valve, with spring-loaded plunger and

ONE-SHOT VALVE MAY BE REMOTELY ACTUATED W00-195

sealing diaphragm, incorporates an emergency release actuated by a remote sensor. The plunger is released by the electrical melting of a fuse link and pierces the valve seal. The valve lowers fluid pressure in a container without losing the contained fluid.

B65-10285 DIFFERENTIAL PRESSURE GAUGE HAS FAST RESPONSE WEBER, H. S. /ARMOUR RES. FOUND./ SEP. 1965 M-FS-358

Differential pressure gauge with semiconductortype strain gauge elements measures rapidly changing pressure. Output of the strain gauge elements is a dc voltage that is directly proportional to the pressure difference being

B65-10312 AIR BRAKE-DYNAMOMETER ACCURATELY MEASURES TORQUE OCT. 1965 LEWIS-163

Air brake-dynamometer assembly combines the principles of the air turbine and the air pump to apply braking torque. The assembly absorbs and measures power outputs of rotating machinery over a wide range of shaft speeds. It can also be used as an air turbine.

REFRACTORY METALS WELDED OR BRAZED WITH TUNGSTEN INERT GAS EQUIPMENT WISNER, J. P. OCT. 1965 LEWIS-219

Appropriate brazing metals and temperatures facilitate the welding or brazing of base metals with tungsten inert gas equipment. The highest quality bond is obtained when TIG welding is performed in an inert atmosphere.

B65-10323 VOLUMETRIC SYSTEM CALIBRATES METERS FOR LARGE FLOW RATES INNOVATOR NOT GIVEN /N. AM. AVIATION/ NOV. 1965 ₩OO-130

Volumetric system calibrates meters used for large liquid flow rates. The system employs trip probes and equipment to time the flow of liquid from a tare vessel into a calibrated vessel.

This calibration system is used in the petroleum and chemical industries.

B65~10326 ROUGH SURFACE IMPROVES STABILITY OF AIR-SOUNDING BALLOONS SCOGGINS, J. R. NOV. 1965 M-FS-320

Aerodynamic stability of balloons used for measuring the intensity and direction of atmospheric winds at various elevations is improved by incorporating a rough surface on the balloons. The rough-surfaced balloon is useful for collecting wind profiles and other meteorological data.

B65-10327 PRESSURE RESPONSIVE SEAL HANDLES STATIC AND DYNAMIC LOADS MARSH, H. W. GSFC-441 /N. AM. AVIATION/ NOV. 1965

Ported ball valves are sealed under both static and dynamic load conditions by a line-pressure responsive double-acting seal. The top of the seal engages the ported ball at the outer circumferential edge of the seal upper end, and the bottom of the seal seats on a flat circular land with a continuous wall.

B65-10338 INERT-GAS WELDING AND BRAZING ENCLOSURE FABRICATED FROM SHEET PLASTIC WISNER, J. P. NOV. 1965 LEWIS-220

Custom-fabricated plastic bag maintains an inertgas atmosphere for welding and brazing certain metals. The bag fits over part of the workpieces and the welding and brazing tools. It is also used for metal brazing and fusion plating which require an inert-gas atmosphere.

B65-10339 DISK CALCULATOR INDICATES LEGIBLE LETTERING SIZE FOR SLIDE PROJECTION HULTBERG, R. R. NOV. 1965

Hand-operated disk calculator indicates the minimum size of letters and numbers in relation to the width and height of a working drawing. The lettering is legible when a slide of the drawing is projected.

B65-10342 ELECTROMAGNETIC HAMMER REMOVES WELD DISTORTIONS FROM ALUMINUM TANKS SCHWINGHAMER, R. J. NOV. 1965 M-FS-287

Distortions around weld areas on sheet-aluminum tanks and other structures are removed with a portable electromagnetic hammer. The hammer incorporates a coil that generates a controlled high-energy pulsed magnetic field over localized areas on the metal surface.

B65-10346
IMPROVED POPPET VALVE PROVIDES POSITIVE DAMAGEPROOF SEAL WALLACE, E. D. NOV. 1965 M-FS-293

S-293

Soft-seat poppet valve provides positive closure against fluid without damage to the seating surface on repeated cycling. It incorporates two compressible soft rings and a retaining ring of hard metal. Sealing is effected when the poppet seat is forced into intimate contact with a mating surface on one of the soft rings.

B65-10348 STANDOFF TOOL SPEEDS PLACEMENT OF FRICTION-FIT **ELECTRICAL TERMINALS**

MOORE, D. J. SKIFSTROM, W. W. /SPACE TECHNOL. LABS./ NOV. 1965

Hand operated tool inserts terminals through compartment walls in electronic equipment. The tool is in the configuration of a modified pair of pliers with jaws consisting of a split chuck and anvil.

B65-10351 HYDRAULIC DRIVE SYSTEM PREVENTS BACKLASH ACORD, J. D. NOV. 1965 JPL-371

Hydraulic drive system uses a second drive motor operating at reduced torque. This exerts a relative braking action which eliminates the normal gear train backlash that is intolerable when driving certain heavy loads.

B65-10358
FASTEMER DISTRIBUTES STRESS EVENLY FROM SANDWICH-PANEL-HUNG ITEMS
SHAPIRO, J. /N. AM. AVIATION/ NOV. 1965
MSC-236

Items are attached externally to cellular-core sandwich panels by a fastener anchored in the panel by a constant amount of adhesive. The changes caused to the core cells and skin sheets are minimized.

B65-10360
PORTABLE TOOL REMOVES BURRS FROM PIPE AND TUBING

HEADLEY, C. A. PADILLA, V. E. SCHOPPMAN, R. A. /MCDONNELL AIRCRAFT CORP./ NOV. 1965 MSC-237

Portable tool cleanly removes burrs that remain on tubing when it is cut. It restores the cut end to its original configuration, and carries away all chips and pieces. This tool is used in places of limited access where a larger tool could not be used.

B65-10367
FLEXIBLE PLASTIC RING ASSEMBLY MAKES DURABLE
SHAFT SEAL
INNOVATOR NOT GIVEN /N. AM. AVIATION/ DEC. 1965

Stacked flexible rings interleaved with solid

Stacked flexible rings interleaved with solid metal rings of smaller width provide a durable seal ring for rotating shafts used in vacuum or pressure pumps.

B65-10370
BRAZING METHOD PRODUCES SOLID-SOLUTION BOND
BETWEEN REFRACTORY METALS
INNOVATOR NOT GIVEN /AVCO CORP./ DEC. 1965
LEWIS-212

Brazing two refractory metals by diffusion bonding minimizes distortion and avoids excessive grain growth in the metals. This method requires the selection of an interface metal that forms intermediate low-melting eutectics or solid solutions with the metals to be brazed.

B65-10371
UNIVERSAL BELLOWS JOINT RESTRAINT PERMITS
ANGULAR AND OFFSET MOVEMENT
KUHN, R. F., JR. /N. AM. AVIATION/ DEC. 1965
WOO-102

Universal joint-type restraint that employs ball joints permits maximum angular and lateral offset movement in a bellows joint without danger of rupture or pressure drop in the line. It is used in high pressure and high temperature applications in refineries, steam plants, or stationary power plants.

B65-10375
PORTABLE TOOL CLEANS PIPES AND TUBING
HEADLEY, C. A. /MCDONNELL AIRCRAFT CORP./
HEADLEY, R. JONES, D. D. DEC. 1965
MSC-238

Portable tool cleans and polishes the external surfaces of tubes and pipes without contaminating the interior areas with loose particles. The tool is driven by an electric drill and is connected to a vacuum source that removes debris resulting from the cleaning and polishing action.

B65-10378
REINFORCEMENT CORE FACILITATES O-RING
INSTALLATION
INNOVATOR NOT GIVEN /N. AM. AVIATION/ DEC. 1965

Reinforcement core holds 0-ring in place within a structure while adjacent parts are being assembled. The core in the 0-ring adds circumferential rigidity to the 0-ring material. This inner core does not appreciably affect the sectional elasticity or gland-sealing characteristics of the 0-ring.

B65-10383
THREADED SPLIT RING CONNECTOR SEPARATES STRUCTURAL SECTIONS
MAYO, J. W. JUL. 1965
LANGLEY-145

Threaded split ring connector quickly and cleanly separates two structural members by remote control. The connector is retained in an expanded position by spring plates that are deflected and held by an explosive bolt. Ignition of the bolt effects the separation. This conceptual approach lends itself to various configurations and sizes of structures.

B65-10385
RACK MOUNT DEVICE QUICKLY INSERTS OR EXTRACTS
CHASSIS UNITS
HAERTHER, L. W. ZIMMERMAN, P. A. /COLLINS RADIO
CO./ DEC. 1965
MSC-244

Rack mounted chassis units are quickly inserted or extracted by a device which is driven in either direction by turning a simple hand crank. This device is used in aircraft and water craft.

B65-10386
DRILL BIT DESIGN ASSURES CLEAN HOLES IN
LAMINATED MATERIALS
TILLOTSON, R. N. /DOUGLAS AIRCRAFT CO./ DEC.
1965
WOO-098

Drill bit eliminates delamination when drilling laminated material. It cuts or shaves the material as it progresses through it. The bit acts to hold down the material during drilling to prevent tearing or ripping and produces a clean, smooth and defect-free hole. It prevents chipping in stretched plastic windows for high-altitude, high-performance aircraft.

B65-10388 STRAINER FITS INSIDE FLARED-TUBE FITTINGS PARKER, O. J. DEC. 1965 LANGLEY-180

Cylindrical wire-mesh strainer which fits inside flare-tube fittings is readily installed and easily replaced. It has a collar that seats on the tapered shoulder of the male fitting.

B65-10391
TUMGSTEN WIRE AND TUBING JOINED BY NICKEL
BRAZING
INNOVATOR NOT GIVEN /AUTO-CONTROLS LABS./ DEC.
1965
H-F8-394

Thin tungsten wire and tungsten tubing are brazed together using a contacting coil of nickel wire heated to its melting point in an inert-gas atmosphere. This method is also effective for brazing tungsten to tungsten-rhenium parts.

B65-10393
DIE AND TELESCOPING PUNCH FORM CONVOLUTIONS IN THIN DIAPHRAGM
INNOVATOR NOT GIVEN /HONEYWELL/ DEC. 1965
JPL-SC-135

Die and punch set forms convolutions in thin dished metal diaphragm without stretching the metal too thin at sharp curvatures. The die corresponds to the metal shape to be formed, and the punch consists of elements that progressively slide against one another under the restraint of a compressed-air cushion to mate with the die.

B65-10394 Centrifugal Device Separates Liquid From Gas HANDLEWICH, R. M. /UNITED AIRCRAFT CORP./ STROUP, K. E. DEC. 1965 MSC-282

Liquid-to-gas ratio is reduced from maximum efficiency of jet engine fuel by a centrifugal separator. The amount of liquid removed from the fuel is controlled by the separator-screen mesh size and its rotational speed.

B65-10401
PHOTOSENSORS USED TO MAINTAIN WELDING
ELECTRODE-TO-JOINT ALIGNMENT
BOWEN, J. B. /N. AM. AVIATION/ DEC. 1965
MSC-243

Photosensors maintain electrode-to-joint alignment in automatic precision arc welding. They detect the presence and relative position of a joint to be welded and actuate a servomechanism to guide the welding head accordingly thus permitting alignment for more than straight line or true circle joints.

B65-10402 LIGHTWEIGHT DOOR SEALS CRYOGENIC CONTAINER AGAINST DIAPHRAGM TYPE LOADING ENGLEHART, R. C., JR. /N. AM. AVIATION/ DEC. 1965 M-FS-476

Lightweight, removable, sealed joint access door for a spherical or semispherical pressure vessel containing cryogenic materials uses a joint overlock design to take the shear and moment loads. Oversize bolt holes are used so that the attaching bolts are in tension only.

B66-10001 FORMING TOOL IMPROVES QUALITY OF TUBING FLARES INNOVATOR NOT GIVEN /GEN. DYN./ASTRONAUTICS/ JAN. 1966 WOO-231

Punch and die set improves the quality of tubing flares for use with standard flared-tube fittings in high-pressure systems. It forges a dimensionally accurate flare in the tubing and forces more tubing material into the high-stress areas to improve the strength and tightness of the tubing connection.

B66-10003
IMPROVED TOOL EASILY REMOVES BRAZED TUBE
CONNECTORS
SCHOPPMAN, R. A. /MCDONNELL AIRCRAFT CORP./ JAN.
1966
MSC-263

Portable, compact tool quickly and cleanly removes brazed connectors from system tubes. The tool uses an induction coil to melt the braze and a compression spring to automatically separate the connection. An inert gas is force-fed about the heated area to prevent oxidation of the tube.

B66-10007 FLOATING DEVICE ALIGNS BLIND CONNECTIONS RESEL, J. E. /N. AM. AVIATION/ JAN. 1966 MSC-256

Panel-mounted connectors overcome the misalignment of blind connectors in electronic rack mounted equipment. The connector is free to move in the vertical direction by the action of a parallelogram mount. This freedom of motion maintains the guide pin hole centerline parallel to the guide pin centerline at all times.

B66-10011
TORQUE WRENCH DESIGNED FOR RESTRICTED AREAS
FAGERBERG, E. R. /LOCKHEED MISSILES AND SPACE
CO./ JAN. 1966
LEWIS-246

Wrench with twisting handle grip applies torque to a fastener in a restricted area. The wrench handle may be any length without affecting output torque.

B66-10014
EXPLOSIVE FORCE OF PRIMACORD GRID FORMS LARGE
SHEET METAL PARTS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966
SEE ALSO NASA SP 5017
M-FS-316

Primacord which is woven through fish netting in a grid pattern is used for explosive forming of large sheet metal parts. The explosive force generated by the Primacord detonation is uniformly distributed over the entire surface of the sheet metal workpiece.

B66-10018
COMPACT RETRACTOR PROTECTS CABLING LOOPS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966
M-FS-561

Core and swivel retractor mechanism combined with cable stiffeners provides compact, long-wearing protection for cabling loops in cabinet-mounted electronic equipment drawers.

B66-10019
BUGYANT STOKES LITTER ASSEMBLY USED FOR SEA
RESCUE OPERATIONS
POLLARD, R. A. SHEWMAKE, G. A. JAN. 1966
MSC-131

Standard Stokes litter is fastened to inflatable flotation units for sea rescue operations. The assembly keeps an injured person immobilized during transportation to a first aid station.

B66-10020
O-RING TUBE FITTINGS FORM LEAKPROOF SEAL IN HYDRAULIC SYSTEMS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966
M-FS-481

Leakproof fittings for hydraulic systems are designed to be welded to the ends of the tubing to be joined and mated to form a seal with one U-ring at the joint. Since the fittings are coupled at only one joint, they tend to be more reliable than standard fittings coupled at two joints.

REALIDING PALVE RESPONDS TO DIFFERENTIAL PRESSURE CHANGES
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966

Pressure valve has a moving annular ring seal that automatically reacts to differential pressure changes across the seat. This valve has good potential for the petroleum and chemical industries.

B66-10023 SIMPLE KEY LOCKS TURBINE ROTOR BLADES INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966 MOD-103

Symmetrical, cruciform key has end tabs which bend up to lock turbine rotor blades against axial displacement. The key locks without introducing aerodynamic resistance or upsetting rotor balance.

B66-10030
FRICTION DEVICE DAMPS LINEAR MOTION OF ROTATING SHAFT
INNOVATOR NOT GIVEN /N. AM. AVIATION/ JAN. 1966
WOO-214

Damping device checks the axial motion of a rotating shaft by exerting a controllable, radial frictional load to the outer race of the ball bearing in which the shaft is mounted. The device can be used as a soft bearing mount to damp resonant frequencies at critical shaft speed.

B66-10032 SHEET METAL STRIP UNROLLS TO FORM CIRCULAR BOOM INNOVATOR NOT GIVEN /MELPAR, INC./ JAN. 1966 GSFC-423

Preformed metal strip, coiled flat on a storage drum, unrolls to form a cylindrical boom. Tabs and slots on opposite sides of the strip interlock to form a continuous circular cross section. This retractable boom can be used as a spacecraft antenna, gravity gradient, or positioning device.

B66-10035
RESILIENT CLAMP HOLDS FUEL CELL STACK THROUGH
THERMAL CYCLE
SHINN, B. H. /UNITED AIRCRAFT CORP./ FEB. 1966
MSC-313
Resilient clamping device holds a stack of fuel

cells during thermal expansion and contraction periods. The clamp has torsion bar action which maintains seal integrity over a wide stress range.

B66-10040 ASSEMBLY JIG ASSURES RELIABLE SOLAR CELL MODULES OFARRELL, H. O. /TRW SPACE TECHNOL. LABS./ FEB. 1966 GSFC-455

Assembly jig holds the components for a solar cell module in place as the assembly is soldered and bonded by the even heat of an oven. The jig is designed to the configuration of the planned module. It eliminates uneven thermal conditions caused by hand soldering methods.

B66-10047
HEATED DIE FACILITATES TUNGSTEN FORMING
CHATTIN, J. H. HAYSTRICK, J. E. LAUGHLIN, J. C.
LEIDY, R. A. FEB. 1966
LEWIS-25A

Tungsten forming in a press brake employs a bottom die assembly with a heating manifold between two water-cooled die sections. The manifold has hydrogen-oxygen burners spaced along its length for even heat during forming.

B66-10052 COMBUSTION CHAMBER INLET MANIFOLD SEPARATES VAPOR FROM LIQUID BAKER, D. I. /N. AM. AVIATION/ FEB. 1966 SEE ALSO B63-10251 M-FS-531

Circular manifold with tangential orifices at the inner circumference provides for the vapor constituent of a vaporized cryogenic propellant to enter a rocket combustion chamber before the liquid constituent. The vapor is separated from the liquid by centrifugal action and precedes it into the chamber through carefully positioned orifices.

B66-10054
MODIFIED POWER TOOL RAPIDLY DRIVES SERIES
TORQUE BOLTS
INNOVATOR NOT GIVEN /N. AM. AVIATION/ FEB. 1966
MSC-221

Feeder attachment, which fits on a standard power driver, drives a series of longitudinally attached torque bolts into place with great speed. It allows loading of a series of bolts and then positions individual bolts in the driving head for assembly. The attachment contains a socket gun which may be modified to accommodate different types and sizes of bolts.

B66-10055 HYDROGEN-ATMOSPHERE INDUCTION FURNACE HAS INCREASED TEMPERATURE RANGE CAVES, R. M. GRESSLIN, C. H. FEB. 1966 LEWIS-153

Improved hydrogen-atmosphere induction furnace operates at temperatures up to 5,350 deg. F. The furnace heats up from room temperature to 4,750 deg. F in 30 seconds and cools down to room temperature in 2 minutes.

B66-10056
BENCH VISE ADAPTER GRIPS TUBING SECURELY AND SAFELY
HOWLAND, B. T. JONES, A. S., JR. /N. AM. AVIATION/ FEB. 1966
MSC-279

Plastic self-compressing adapter with grooves, attached to the jaws of a bench vise, secures thin-well tubing vertically or horizontally during cutting and flaring operations without marring or damaging it. Magnets incorporated in both sections of the adapter prevent detachment from the jaws when the vise is opened.

hold materials together during bonding, welding,

B66-10059
CALIBRATED CLAMP FACILITATES PRESSURE
APPLICATION
INNOVATOR NOT GIVEN /N. AM. AVIATION/ FEB. 1966
MSC-298
Spring-loaded clamp applies specific pressure to

and machining. The clamp has two adjustable legs terminating in suction cups for easy attachment to a surface.

B66-10061
INSTRUMENT QUICKLY TRANSPOSES GROUND REFERENCE
TARGET TO EYE LEVEL
GREEN, B. E. VAN DEVENTER, E. L. /N. AM.
AVIATION/ FEB. 1966
MSC-275

Optical alignment of equipment is facilitated by a traverse target with a string suspending a plumb bob to transpose the ground level point to eyelevel operation. This instrument appreciably decreases the time required from the present method but achieves the same degree of precision.

B66-10063
TENSILE-STRENGTH APPARATUS APPLIES HIGH
STRAIN-RATE LOADING WITH MINIMUM SHOCK
COTRILL, H. E., JR. MAC GLASHAN, W. F., JR. FEB.
1966
JPL-28 JPL-29

Tensile-strength testing apparatus employs a capillary bundle through which a noncompressible fluid is extruded and a quick-release valve system. This apparatus applies the test loads at relatively constant very high strain rates with minimal shock and vibration to the tensile specimen and apparatus.

B66-10065
T-HANDLE WRENCH HAS TORQUE-LIMITING ACTION
KEMPLE, S. B. /N. AM. AVIATION/ FEB. 1966
MSC-280

T-handle wrench can be preset to release when a certain torque value is exceeded by means of a spring-loaded roller and groove torque-limiting mechanism contained in the handle of the wrench. The wrench is also equipped with a push button in the handle that permits the operator to lock the handle to the spindle shaft, thus eliminating the torque-limiting function.

B66-10069
RUN-IN WITH CHEMICAL ADDITIVE PROTECTS GEAR
SURFACE
HARTMAN, M. A. /N. AM. AVIATION/ FEB. 1966
M-FS-548

Run-in treatment provides a protective coating on turbopump gear surfaces so that they are capable of operation under marginal conditions in mineral oil and diester lubricants. This treatment protects highly loaded gears during relatively short-term operation.

B66-10071
MECHANISM ISOLATES LOAD WEIGHING CELL DURING
LIFTING OF LOAD
HAIGLER, J. S. /N. AM. AVIATION/ FEB. 1966
MSC-297

Load weighing cell used in conjunction with a hoist is isolated during lifting and manipulation of the load. A simple mechanism, attached to a crane hook, provides a screw adjustment for engaging the load cell during weighing of the load and isolating it from lift forces during hoisting of the load.

B66-10073
CALCULATIONS ENABLE OPTIMUM DESIGN OF MAGNETIC BRAKE KOSMAHL, H. G. FEB. 1966
LEWIS-251

Mathematical analysis and computations determine optimum magnetic coil configurations for a magnetic brake which controllably decelerates a free falling load to a soft stop. Calculations on unconventionally wound coils determine the required parameters for the desired deceleration with minimum electrical energy supplied to the stationary coil.

B66-10074
THREADED PILOT INSURES CUTTING TOOL
ALIGNMENT
GOLDMAN, R. /N. AM. AVIATION/ SCHNEIDER, W. E.
FEB. 1966
M-FS-527

Threaded pilot allows machining of a port component, or boss, after the reciprocating hole has been threaded. It is used to align cutting surfaces with the boss threads, thus insuring precision alignment.

B66-10076 SHOULDER ADAPTER STEADIES SPOT WELDING GUN LOVE, T. H. MAR. 1966 M-FS-321

Shoulder adapter fits on one end of a hand-held spot welding gun. With the adapter, the operator can hold the gun steadily at uniform pressure to ensure defect-free welds.

B66-10077
PLUGGED HOLLOW SHAFT MAKES FATIGUE-RESISTANT
SHEAR PIN
HANKINSON, T. W. E. MAR. 1966
LANGLEY-195

Shear pin coupling with plugged hollow shaft provides required load capacity for shaft protection and has no groove to induce fatigue failure.

B66-10078
THERMAL MOTOR POSITIONS MAGNETOMETER SENSORS
KERWIN, W. J. SCOTT, S. G. MAR. 1966
ARC-51

Reversing, thermal, motor-driven device positions magnetometer sensors for checking zero offset. The device alternately positions two sensors at fixed positions 90 degrees apart. The thermal motor is fabricated completely of nonmagnetic materials.

B66-10080
NYLON SHOCK ABSORBER PREVENTS INJURY TO
PARACHUTE JUMPERS
MANDEL J. A. (COUDVEAR APPRISANCE COSE

MANDEL, J. A. /GOODYEAR ALKUSPACE CORP./ MAR. 1966 MSC-226

Nylon shock absorbers reduce the canopy-opening shock of a parachute to a level that protects the wearer from injury. A shock absorber is mounted on each of the four risers between the shroud lines and the harness. Because of their size and location, they pose no problem in repacking the chute and harness after a jump.

B66-10092 FINGERTIP CURRENT CONTROL FACILITATES USE OF ARC WELDING GUN ROTH, B. /N. AM. AVIATION/ MAR. 1966 MSC-289

Fingertip-operated trigger accurately controls the current supplied to an arc welding gun. The trigger is mounted directly on the handle of the gun.

B66-10093
TOOL PROVIDES CONSTANT PURGE DURING TUBE
WELDING
LANG, E. R. /N. AM. AVIATION/ MAR. 1966
M-FS-547

Tool provides a constant purge of inert gas during in-place welding of tubular components to prevent contamination and oxidation. It also permits self-jigging of the tube and sleeve to be welded.

B66-10100
QUEUING REGISTER USES FLUID LOGIC ELEMENTS
INNOVATOR NOT GIVEN /UNIVAC DIV. OF SPERRY RAND/
MAR. 1966
M-FS-317

Queuing register /a multistage bit-shifting device/ uses a series of pure fluid elements to perform the required logic operations. The register has several stages of three-state pure fluid elements combined with two-input NOR gates.

B66-10102
PIPE CUTTING TOOL IS USEFUL IN LIMITED SPACE
HEADLEY, C. A. /MCDONNELL AIRCRAFT CORP./ JONES,
D. D. MAR. 1966
MSC-36
MSC-36

Portable pipe cutting tool is used in areas of iimited space. The pipe is clamped in the tool and then cut by a rotating cutter assembly that is

internally connected to a drive shaft engaged in the chuck of a portable electric drill. The tool is held in a fixed position during the cutting operation.

B66-10107 MECHANISM CONTINUOUSLY MEASURES STATIC AND DYNAMIC CABLE LOADS MAR. 1966 MSC-217

Pulley mechanism measures the tensile loads on a cable under static and dynamic conditions, without disturbing the continuity of operation of the system. A set of takeoff pulleys are mounted on a pivoted frame that is linked to a strain gage which measures the frame displacement as a function of the static or dynamic tensile load on the cable.

B66-10115
SOLDERING TOOL HEATS WORKPIECES AND APPLIES
SOLDER IN ONE OPERATION
GUDKESE, V. W. MAY 1966
LEWIS-247

Fountain-pen type soldering iron heats workpieces and applies solder to joints in densely packed electronics assemblies. The basic soldering tool is used with different-sized orifice tips, eliminating the need for an assortment of conventional soldering guns.

B66-10116
TELESCOPING OF INSTRUMENTATION TUBING
ELIMINATES SWAGING
MC CLELLAN, E. L. /N. AM. AVIATION/ MAY 1966
M-FS-546

Short sections of stainless steel tubing of slidefit sizes fitted together and silver-soldered at the junctions form small-diameter tubing accephlies with accurately stepped-down dimensions. This method of fabrication eliminates the costly swaging operations formerly used.

B66-10123
HAND DRILL ADAPTER LIMITS HOLES TO DESIRED
DEPTH
INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1966
MSC-346

Adjustable adapter fastened to the shank of a drill bit limits the depth of bored holes. The adapter may be made in sizes appropriate for bits of different diameters.

B66-10124 ECONOMICAL AND MAINTENANCE-FREE GAS SYSTEM OPERATES RAILROAD SWITCHES VISSING, G. S. MAR. 1966 NU-0045

Remote control system that uses bottled nitrogen as a power source operates infrequently used railroad switches. This system is economical and maintenance free.

B66-10125 ALUMINUM OXIDE FILLER PREVENTS OBSTRUCTIONS IN TUBING DURING WELDING OKELLY, K. P. MAR. 1966 MSC-222

Granular aluminum oxide is used as filler in serpentine tubing while welding the tubing to a flat surface. The filler eliminates obstructions in the tubes formed by molten weld nuggets and is porous enough to allow gases to escape from the welding area.

B66-10132 EXPANDABLE INSERT SERVES AS SCREW ANCHOR INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAR. 1966 MSC-301

Expandable self-locking adapter secures components to panels having one accessible side. Mounting holes in the panels may not be threaded to accommodate screws, therefore, the adapter contains a female thread that will mate a mounting screw.

B66-10135 CHART CASE UPENS IN FORM BRIEFING CASEL NELSON, R. A. /N. AM. AVIATION/ APR. 1966 MSC-349

Aluminum carrying case protects charts during transit and opens to form a rigid easel for their presentation. Looseleaf clamps hold the charts in place for both carryng and displaying them.

B66-10136
CRYOGENIC TRAP VALVE HAS NO MOVING PARTS
BRANUM, L. W. WELLS, G. /N. AM. AVIATION/ APR.
1966
M-FS-487

Aluminum-body trap valve with an invar stem keeps cryogenic materials in the liquid state while entering the final component of a system. The valve has no moving parts and is self-actuated and self-monitoring.

B66-10137 ROTATING MANDREL SPEEDS ASSEMBLY OF PLASTIC INFLATABLES MAC FADDEN, J. A. /SCHJELDAHL /G.T./ CO./ STENLUND, S. J. WENDT, A. J. APR. 1966 LANGLEY-155

Rotating mandrel permits the accurate cutting, forming, and sealing of plastic gores for assembly of an inflatable surface of revolution. The gores remain on the mandrel until the final seam is reached. Tolerances are tightly controlled by the mandrel configuration.

B66-10145
PORTABLE POWER TOOL MACHINES WELD JOINTS IN FIELD
SPIER, R. A. APR. 1966
M-FS-258

Portable routing machine for cutting precise weld joints required by nonstandard pipe sections used in the field for transfer of cryogenic fluids. This tool is adaptable for various sizes of pipes and has a selection of router bits for different joint configurations.

B66-10146 EXTENDABLE MAST USED IN ONE SHOT SOIL PENETROMETER HOTZ, G. M. HOWARD, G. A. APR. 1966 JPL-685

Penetrometer to test soil characteristics has a piercing head with soil instrumentation equipment attached to an expandable mast actuated by compressed air. The penetrometer gives continuous measurements as the mast pushes the piercing head through the soil.

B66-10149
DEPTH INDICATOR AND STOP AID MACHINING TO PRECISE TOLERANCES
LAVERTY, J. L. /N. AM. AVIATION/ APR. 1966
M-F3-553

Attachment for machine tools provides a visual indication of the depth of cut and a positive stop to prevent overcutting. This attachment is used with drill presses, vertical milling machines, and jig borers.

B66-10150
MOUNTING FACILITATES REMOVAL AND INSTALLATION
OF FLAME-DETECTOR RODS
CASTLE, F. /N. AM. AVIATION/ APR. 1966
M-FS-555

Flame-detector-rod holder is easily removed from the wall of a gas-fired furnace for maintenance or replacement of the detector rod without requiring shutdown of the furnace. The holder consists of an externally threaded outer bushing, a sleeve which is held inside the outer bushing with a set screw, and a detector rod assembly which screws into the sleeve.

B66-10151
SPLIT GLASS TUBE ASSURES QUALITY IN ELECTRON BEAM BRAZING
KRESSIN, W. J. /N. AM. AVIATION/ APR. 1966
M-FS-564

Sealed enclosure of heat-resistant glass tubing and silicone rubber molds provide good visibility for electron beam brazing of metal tubes in an inert gas atmosphere. The glass tubing and rubber moids, which are bonded together, are easily applied to and removed from the brazing area by operation of a clamp.

B66-10152
NYLON BIT REMOVES CORK INSULATION WITHOUT
DAMAGE TO SUBSTRATE
CRANDALL, J. C. /N. AM. AVIATION/ APR. 1966

scratching the surface.

MSC-381

Nylon router bit in an electric hand-held drill
removes small quantities of cork insulation from
a metal or fiberglass surface without cutting or

B66-10155

SIMPLE DEVICE FACILITATES INERT-GAS WELDING
OF TUBES
CARRITHERS, K. V. /N. AM. AVIATION/ KELLEY, W.
B. APR. 1966
M-FS-558

Metal Y-tube simultaneously directs argon streams over weld areas on both sides of tubes being joined along a line on their outer periphery. The device is advanced along the junction in step with the welding operation.

B66-10167
DUAL REGULATOR CONTROLS TWO GASES FROM A
SINGLE REFERENCE
JACKSON, K. /GARRETT CORP./ APR. 1966
MSC-227

Dual-pressure regulator uses single reference for parallel control of two gases. The regulator uses an external fluid pressure to modulate the flow of one gas, and the regulated flow of the first gas to modulate the flow of the second.

B66-10168
SAFETY SWITCH PERMITS EMERGENCY BRIDGE CRANE
SHUTDOWN
LONG, E. J. R. /N. AM. AVIATION/ APR. 1966
M-FS-549

Safety switch on a crane control pendant must be held closed to operate the crane. This provides for immediate power cutoff to the crane in an emergency or a pendant circuit failure.

B66-10169
MODIFIED DRILL PERMITS ONE-STEP DRILLING
OPERATION
LIBERTONE, C. /N. AM. AVIATION/ APR. 1966
M-FS-559

Drill with modified cutting faces permits one-step drilling operation without chatter upon contact and premature wear. The modification of the drill, which has the same diameter as that of the desired hole, consists of a groove across the bottom of each of the cutting faces of the drill flutes.

B66-10171
MULTISURFACE FIXTURE PERMITS EASY GRINDING
OF TOOL BIT ANGLES
JONES, C. R. /N. AM. AVIATION/ APR. 1966
M-FS-586

Multisurface fixture with a tool holder permits accurate grinding and finishing of right and left-hand single point threading tools. All angles are ground by changing the fixture position to rest at various reference angles without removing the tool from the holder.

B66-10172
FLEXIBLE COILED SPLINE SECURELY JOINS MATING CYLINDERS
COPPERNOL, R. W. /GEN. DYN./ASTRONAUTICS/ APR. 1966
WOO-270

Mating cylindrical members are joined by spline to form an integral structure. The spline is made of tightly coiled, high-tensile-strength steel spiral wire that fits a groove between the mating members. It provides a continuous bearing surface for axial thrust between the members.

B66-10174
EPOXY-COATED CONTAINERS EASILY OPENED BY
WIRE BAND
MC COY, J. W. /N. AM. AVIATION/ APR. 1966

M-FS-592

Epoxy coating reduces punctures, abrasions, and contamination of synthetic cellular containers used for shipping and storing fragile goods and equipment. A wire band is wound around the closure joint, followed by the epoxy coating. The container can then be easily opened by pulling the wire through the epoxy around the joint.

B66-10175
DEVICE SPOT-LAPS SPHERES TO VERY CLOSE TOLERANCES
AVERY, H. W. /GE/ MAY 1966
JPL-SC-119

Device laps precise amounts of metal from high spots on a spherical body to correct minute surface imperfections. The device generates the lapped surface with reference to an existing true surface on the spherical workpiece. Lapping is performed by applying a rotary and oscillatory motion to the workpiece while the lapping tool is held on the workpiece high spot.

B66-10176 LIFTING CLAMP POSITIVELY GRIPS STRUCTURAL SHAPES REINHARDT, E. C. MAY 1966 M-FS-593

Welded steel clamps securely grip structural shapes of various sizes for crane operations. The clamp has adjustable clamping jaws and screw-operated internal V-jaws and provides greater safety than hoisting slings presently used. The structural member can be rotated in any manner, angle, or direction without being released by the clamp.

B66-10188

CONTROL SYSTEM MAINTAINS COMPARTMENT AT CONSTANT TEMPERATURE LINDBERG, J. G. /N. AM. AVIATION/ MAY 1966 JPL-SC-145

Gas-filled permeable insulating material maintains an enclosed compartment at a uniform temperature. The material is interposed between the two walls of a double-walled enclosure surrounding the compartment.

B66-10189
PNEUMATIC SHUTOFF AND TIME-DELAY VALVE
OPERATES AT CONTROLLED RATE
HORNING, J. L. TOMLINSON, L. E. /N. AM.
AVIATION/ MAY 1966
M-FS-602

S-602
Shutoff and time delay valve, which incorporates a metering spool that moves at constant velocity under pneumatic pressure and spring compression, increases fluid-flow area at a uniform rate. Diaphragm areas, control cavity volume, and bleed-orifice size may be varied to give any desired combination of time delay and spool travel time.

B66-10190
BELLOWS DESIGN FEATURES LOW SPRING RATE AND LONG LIFE
LUSIC, R. F. /N. AM. AVIATION/ MAY 1966
MSC-521

High pressure bellows has high strength rigid hoops for strength and stability and sheet stock for low spring rate effects. The simplicity of this bellows design facilitates mass production.

B66-10191
TOOL POST MODIFICATION ALLOWS EASY TURRET
LATHE CUTTING-TOOL ALIGNMENT
FOUTS, L. /N. AM. AVIATION/ MAY 1966
M-FS-581

3-581
Modified tool holder and tool post permit alignment of turret lathe cutting tools on the center of the spindle. The tool is aligned with the spindle by the holder which is kept in position by a hydraulic lock-in feature of the tool post. The tool post is used on horizontal and vertical turret lathes and other engine lathes.

B66-10195 Segmented Ball valve is easy to open and close PRONO, E. SHINAULT, L. H. /N. AM. AVIATION/ SPEISMAN, C. JUN. 1966 WOD-24A

Segmented ball valve and flowmeter in the same spherical housing provide a valve that will handle large fluid volume without bulkiness and weight of blade valves or conventional ball valves. The valve is easily opened or closed and the flowmeter remains stationary, so errors are eliminated.

B66-10197
INTERMEDIATE ROTATING RING IMPROVES
RELIABILITY OF DYNAMIC SMAFT SEAL
MESNY, P. R. /N. AM. AVIATION/ MAY 1966

Intermediate rotating ring improves the reliability of dynamic shaft seals whose rubbing surfaces wear down rapidly at high shaft speeds. The rotating ring is placed between the rotating shaft sealing surfaces and the stationary surface, and driven at one-half the shaft speed.

B66-10201
SELF-CONTAINED CLOTHING SYSTEM PROVIDES
PROTECTION AGAINST HAZARDOUS ENVIRONMENTS
INNOVATOR NOT GIVEN /GARRETT CORP./ MAY 1965
M-FS-536

Self-contained clothing system protects personnel against hazardous environments. The clothing has an environmental control system and a complete protection envelope consisting of an outer garment, inner garment, underwear, boots, gloves, and believet.

B66-10202 BODY-FITTED HARNESS PROVIDES SAFE AND EASY COMPONENT HANDLING MILLER, E. G. ROTHWELL, G. E. /IBM/ MAY 1966 M-FS-533

safely and conveniently handle critical components during their installation or removal. Since the harness supports the components, the worker is able to maneuver through restricted areas with his hands free. It is easily put on, adjusted, and removed, or comfortably worn without interfering with normal activities.

B66-10204
TORQUE WRENCH ALLOWS READINGS FROM
INACCESSIBLE LOCATIONS
DE BARNARDO, M. /N. AM. AVIATION/ MAY 1966
M-FS-598

Torque wrench with an adjustable drive shaft permits indicator to remain in view when used on sections of equipment with limited access. The shaft is capable of protruding from either side of the wrench head by means of spring loaded balls.

B66-10206 LOW POWER HEATING ELEMENT PROVIDES THERMAL CONTROL DURING SWAGING OPERATIONS CROWELL, J. W. /CHRYSLER CORP./ MAY 1966 M-FS-457

Low-power, cylindrical heating element in a swaging anvil assembly heats the material being worked on. The increased ductility of heated material results in crack-free deformation.

B66-10208
TOOL ENABLES PROPER MATING OF ACCELEROMETER
AND CABLE CONNECTOR
STEED, C. N. /N. AM. AVIATION/ MAY 1966
M-FS-611

Tool supports accelerometer in axial alignment with an accelerometer cable connector and permits tightening of the accelerometer to the cable connector with a torque wrench. This is done without damaging the components or permitting them to work loose under sustained, high-level vibrations.

B66-10209
SPECIAL TOOL SEALS CONDUCTORS WITH COMBINATION
OF PLASTIC SLEEVES
YOUNG, S. /N. AM. AVIATION/ MAY 1966
M-FS-579

Special tool seals electrical conductors connecting instrumentation within space vehicle

cryogenic fuel tanks and oxidizer tanks. An inner sleeve of fluorinated ethylene-propylene and an outer sleeve of tetrafluoroethylene enclose a bundle of conductors and are heated with the tool to form a tight seal of the bundle and each individual wire.

B66-10210
ADJUSTABLE CUTTING GUIDE ALIGNS AND POSITIONS STACKS OF MATERIAL
THIEL, A. M. MAY 1966
MSC-321

Adjustable guide tool aligns and positions stacks of material for cutting at various angles. The device adapts its shape to stacks of any corner angle, adjusts to any cutting angle, and quickly aligns the stacks for repeated cutting. With this device, an operator need not place his hands under the knife during alignment.

B66-10211
PRESSURE SEAL RING MAY BE EFFECTIVE OVER WIDE
TEMPERATURE RANGE
INNOVATOR NOT GIVEN /N. AM. AVIATION/ MAY 1966

M-FS-486

Positive pressure seal rings seal bolted flange
joints in pressure vessels containing fluids whose
temperatures can vary over a wide range. The seal
rings mate with grooves in the flanges and
compensate for the excessive thermal expansion or

B66-10212 LIQUID TRAP SEALS THERMOCOUPLE LEADS RUPPE, E. P. /N. AM. AVIATION/ MAY 1966 M-FS-688

contraction of a gasketed joint.

Liquid trap seals thermocouple leads coming out of a brazing retort that operates with a controlled atmosphere so that air cannot enter the retort and hydrogen cannot escape. The trap is fastened to a duct welded to the retort. Thermocouple leads are led out through the duct and trap, with the fluid forming a gastight seal between the atmosphere and the retort.

B66-10213 CYLINDRICAL CLAW CLAMP HAS QUICK RELEASE FEATURE GOODWIN, G. D. /CHRYSLER CORP./ MAY 1966 M-FS-513

Claw clamp grasps cylindrical shapes by pressing its jaws around the object. The clamp is released by retraction of a release pin which extends beyond the clamp handle on both sides for better purchase.

B66-10214
COLLOIDAL SUSPENSION SIMULATES LINEAR
DYNAMIC PRESSURE PROFILE
MC CANN, R. J. /LOCKHEED MISSILES AND SPACE CO./
JUN. 1966
WOO-266

Missile nose fairings immersed in colloidal suspension prepared with various specific gravities simulate pressure profiles very similar to those encountered during reentry. Stress and deflection conditions similar to those expected during atmospheric reentry are thus attained in the laboratory.

B66-10215
ELECTRON BEAM WELDING OF COPPER-MONEL
FACILITATED BY CIRCULAR MAGNETIC SHIELDS
LAMB, J. N. /N. AM. AVIATION/ MAY 1966
M-FS-569

High permeability, soft magnetic rings are placed on both sides of electron beam weld seams in copper-Monel circular joint. This eliminates deflection of the electron beam caused by magnetic fields present in the weld area.

B66-10216 SOFT-SEAL VALVE HOLDS HAZARDOUS FLUIDS SAFELY MAY 1966 SEE ALSO NASA-TN-D-1727 LEWIS-275

Value assembly allows transfer of hazardous or reactive fluids such as liquid fluorine without corrosion of value face and seat material. The assembly consists of a plug to block bulk flow and a soft-seal outer seat to effect zero-leak stoppage.

B66-10217
FIBERGLASS CONTAINER SHELLS FORM
CONTAMINATION-FREE STORAGE UNITS
KRAUS, H. M. /N. AM. AVIATION/ JUN. 1966
WOO-275

Interchangeable molded fiberglass shells are locked together to form storage units of various depths. These units can hold components weighing 1500 pounds, are easily transportable, and protect contents from contamination.

B66-10218
PRESSURE VESSELS FABRICATED WITH HIGH-STRENGTH
WIRE AND ELECTROFORMED NICKEL
ROTH, B. /N. AM. AVIATION/ JUN. 1966
M-FS-580

Metal pressure vessels of various shapes having high strength-to-weight ratios are fabricated by using known techniques of filament winding and electroforming. This eliminates nonuniform wall thickness and unequal wall strength which resulted from welding formed vessel segments together.

B66-10219
TOOL PERMITS DAMAGE-FREE REMOVAL OF SOLAR CELL
BECKLEY, J. E., JR. /COMPREHENSIVE DESIGNERS/
MAY 1966
GSFC-467

Modified soldering iron extracts a wrap-around solar cell that is attached with solder or adhesive to a substrate without destroying the cell removed or damaging adjacent cells. Heat, vacuum, and compressed air, operated from a special head attached to the soldering iron, loosen, extract, and protect the cell.

B66-10226 A CONCEPTUAL DESIGN FOR SQUEEZE FILM BEARINGS INNOVATOR NOT GIVEN /BENDIX CORP./ JUN. 1966 M-FS-573

Squeeze film bearings which require at least one of two adjacent surfaces to oscillate at high frequency and low amplitude have the oscillating /strain-producing/ member on a double gas film. This means of support allows dynamic changing of the gap between the bearing surfaces without the disadvantages produced when the oscillator is affixed to the bearing base itself.

B66-10228
STUDIES REVEAL EFFECTS OF PIPE BENDS ON FLUID FLOW CAVITATION
STONEMETZ, R. E. MAY 1966
M-FS-516

Incipient cavitation in liquids flowing in pipes curved in one plane are affected by the pipe bend radii and pipe diameters, but little by pipe bend angles ranging from 60 to 120 degrees. Critical cavitation indices decrease with higher Reynolds number and pressure ratio. Bulk liquid temperature increase lowers the mean critical velocity at which cavitation occurs.

B66-10229 EXPANDABLE RUBBER PLUG SEALS OPENINGS FOR PRESSURE TESTING MAY 1966 NU-0048

Plug assembly seals openings in piping systems, vessels, and chambers for low pressure leak testing. The assembly, which consists of a rubber sealing plug and the mechanism for expanding it into a pressure-tight configuration, adequately seals irregular diameters without damage to mating surfaces.

B66-10233
QUICK-CLDSING VALVE IS ACTUATED BY EXPLOSIVE
DISCHARGE
MAJESKI, S. J. JUN. 1966
ARC-55

Remotely controlled plug-type valve shuts off a high-pressure, high-temperature gas flow in a few milliseconds. The valve is actuated by a commercially available electrically initiated

squib of low explosive power. More rapid closure is attainable with squibs containing heavier explosive changes.

R66-10235

KEY-LOCKED GUARD PREVENTS ACCIDENTAL SWITCH ACTUATION

HAWTHORNE, K. C. /N. AM. AVIATION/ JUN. 1966 MSC-419

Switch guard, which locks in place on a panel protects individual switches from accidental activation. The guard consists of a cup to cover the switch lever, a standard screw lock tumbler, and a stud that mates with a threaded adapter in the panel.

B66-10236

AUTOMATIC REEL CONTROLS FILLER WIRE IN WELDING MACHINES

MILLETT, A. V. /N. AM. AVIATION/ JUN. 1966 MSC-416

Automatic reel on automatic welding equipment takes up slack in the reel-fed filler wire when welding operation is terminated. The reel maintains constant, adjustable tension on the wire during the welding operation and rewinds the wire from the wire feed unit when the welding is completed.

B66-10237

ADJUSTABLE KNIFE CUTS HONEYCOMB MATERIAL TO SPECIFIED DEPTH

RAUSCHL, J. A. /N. AM. AVIATION/ JUN. 1966 MSC-475

Calibrated, adjustable knife cuts aluminum honeycomb or other soft materials to a desired depth. The frame of the device accommodates standard commercial blades. Since the blade is always visible to the operator, the device can be

B66-10238

INSERT SLEEVE PREVENTS TUBE SOLDERING CONTAMINATION

STEIN, J. /N. AM. AVIATION/ JUN. 1966 MSC-552

Teflon sleeve insert prevents contamination of internal tube surfaces by solder compound during soldering operations that connect and seal the tube ends. The sleeve insert is pressed into the mating tube ends with a slight interference fit.

B66-10239

HAND TOOL PERMITS SHRINK SIZING OF ASSEMBLED TUBING

MILLETT, A. ODOR, M. /N. AM. AVIATION/ JUN. 1966

MSC-504

Portable tool sizes tubing ends without disassembling the tubing installation. The shrink sizing tool is clamped to the tubing and operated by a ratchet wrench. A gear train forces the tubing end against an appropriate die or mandrel to effect the sizing.

B66-10240

JIG PROTECTS TRANSISTORS FROM HEAT WHILE TINNING LEADS

PELLETIER, A. J. WILLIS, G. A. /N. AM. AVIATION/ JUN. 1966 MSC-515

In tinning transistor leads, an aluminum jig is used to dip the leads into the molten tin. The jig*s mass shunts excess heat given off by the molten tin before it reaches and damages the transistor body.

B66-10241

BRAZING PROCESS USING AL-SI FILLER ALLOY RELIABLY BONDS ALUMINUM PARTS

BEUYUKIAN, C. S. JO AVIATION/ JUN. 1966 JOHNSON, W. R. /N. AM.

MSC-448

Brazing process employs an aluminum-silicon filler alloy for diffusion bonding of aluminum parts in a vacuum or inert gas atmosphere. This process is carried out at temperatures substantially below those required in conventional process and produces bonds of greater strength and

reliability.

B66-10242 PORTABLE SANDBLASTER CLEANS SMALL AREAS

SEVERIN, H. J. /N. AM. AVIATION/ MSC-523

Portable sandblasting unit rapidly and effectively cleans localized areas on a metal surface. The unit incorporates a bellows enclosure, masking plate, sand container, and used sand accummulator connected to a vacuum system. The bellows is equipped with an inspection window and light for observation of the sanding operation.

B66-10243

LATHE CHUCK KEY INCORPORATES SAFETY FEATURE CHRISTMAN, G. L. /N. AM. AVIATION/ JUN. 1966 MSC-506

Lathe chuck key with spring loaded plunger cannot inadvertently be left in the chuck when the lathe is started. The plunger automatically ejects the key from the chuck when hand pressure is released.

B66-10244

HOLLOW NEEDLE USED TO CUT METAL HONEYCOMB

STRUCTURES

GREGG, E. A. /N. AM. AVIATION/ JUN. 1966 MSC-486

Hollow needle tool cuts metal honeycomb structures The hollow without damaging adjacent material. needle combines an electrostatic discharge and a stream of oxygen at a common point to effect rapid, accurate metal cutting. The tool design can be varied to use the hollow needle principle for cutting a variety of shapes.

MODIFIED SOLDERING IRON SPEEDS CUTTING OF SYNTHETIC MATERIALS

SCHAFER, W. G., JR. /N. AM. AVIATION/ JUN. 1966

Modified soldering iron cuts large lots of synthetic materials economically without leaving frayed or jagged edges. The soldering iron is modified by machining an axial slot in its heating element tip and mounting a cutting disk in it. An alternate design has an axially threaded bore in the tip to permit the use of various shapes of cutting blades.

B66-10247
PRESSURE-WELDED FLANGE ASSEMBLY PROVIDES
LEAKTIGHT SEAL AT REDUCED BOLT LOADS
MARTENSON, A. J. /GE/ JUN. 1966

M-FS-640

Vibration resistant flange-connector assembly provides a leaktight seal under reduced bolt loads. The assembly consists of ductile metal loads. The assembly consists of ductile met plates that are pressure welded between dies mounted in recessed flanges.

B66-10248

ELECTRICAL UPSETTING OF METAL SHEET FORMS WELD EDGE

SCHERBA, E. S. /N. AM. AVIATION/ JUN. 1966

Electric gathering of sheet stock edges forms metal sheets in the shape of gore sections with metal sneets in the snape of gore sections with heavier edge areas that can be welded without loss of strength. The edges are gathered by progressive resistance heating and upsetting, and are formed automatically. This process avoids disturbance of the metal*s internal structure.

B66-10249

FLUID DAMPING REDUCES BELLOWS SEAL FATIGUE FAILURES

INNOVATOR NOT GIVEN /N. AM. AVIATION/ JUN. 1966

Service life of a bellows-type seal in the presence of mechanical vibration is increased by a system of interconnected bellows with intervening cavities filled with a fluid which damps the amplitude of periodic deflection of the sealing bellows. Different damping fluids are used according to environmental conditions.

R66-10250

DIFFUSION BONDING MAKES STRONG SEAL AT FLANGED

CONNECTOR
GITZENDANNER, L. G. LANIEWSKI, J. P. RATHBUN, F.
O., JR. /GE/ JUN. 1966
M-FS-637

Copper strip seals a high pressure fluid system connector so that it is insensitive to relaxation of the bolt loads. The copper strip is diffusion bonded to the surfaces of the connector flange by application of high pressure and temperature.

B66-10253
TOOL SEPARATES SLEEVE-TYPE UNIONS WITHOUT HEAT
MILLETT, A. U. /N. AM. AVIATION/ JUN. 1966
MSC-497

Tool that uses conventional milling and cutting techniques separates sleeve type tubing unions and tubes without using heat. A selection of holders, associated bits, and cutting wheels permits preparation of varied diameter unions.

B66-10254
MILL PROFILER MACHINES SOFT MATERIALS
ACCURATELY
RAUSCHL, J. A. /N. AM. AVIATION/ JUN. 1966
M-FS-692

Mill profiler machines bevels, slots, and grooves in soft materials, such as styrofoam phenolic-filled cores, to any desired thickness. A single operator can accurately control cutting depths in contour or straight line work.

B66-10255 FLOW RING VALVE IS SIMPLE, QUICK-ACTING LINDFORS, J. A. /N. AM. AVIATION/ JUN. 1966 M-FS-752

Two porting rings, one within the other, control gas or liquid flow by using seal buttons as the sliding valve closers. Multiporting within the ring allows close control of the flow by the slight rotation of the outer porting ring.

B66-10258
CRITICAL PARTS ARE STORED AND SHIPPED IN
ENVIRONMENTALLY CONTROLLED REUSABLE CONTAINER
KUMMERFELD, K. R. /N. AM. AVIATION/ JUN. 1966
M-FS-703

Environmentally controlled, hermetically sealed, reusable metal cabinet with storage drawers is used to ship and store sensitive electronic, pneumatic, or hydraulic parts or medical supplies under extreme weather or handling conditions. This container is compatible with on-site and transportation handling facilities.

B66-10262 ALUMINUM/STEEL WIRE COMPOSITE PLATES EXHIBIT HIGH TENSILE STRENGTH INNOVATOR NOT GIVEN /HARVEY ALUMINUM CO./ JUN. 1966 M-FS-401

Composite plate of fine steel wires imbedded in an aluminum alloy matrix results in a lightweight material with high tensile strength. Plates have been prepared having the strength of titanium with only 85 percent of its density.

B66-10265 COMPACT ACTUATOR CONVERTS ROTARY TO LINEAR MOTION FORD, A. G. JUN. 1966 JPL-786

Compact motor mounted on a stationary base converts rotary to linear motion. The motor rotates a gear train assembly so that the end of an arm attached to the assembly moves in a linear path.

B66-10266
SEAL SURFACES PROTECTED DURING ASSEMBLY
RICHARDSON, G. L. /AEROJET-GEN. CORP./ JUN. 1966
NU-0067

Protection device for sealed surfaces is placed over the polished surface entrance of trapped bosses and removed when the seal fitting has been engaged with the boss threads. This technique applies to various seal types used in close fitting, spring-loaded, threaded fittings.

B66-10267
RADIAL COOLANT CHANNELS FABRICATED BY
SIMPLIFIED METHOD
FREEMAN, A. /AEROJET-GEN. CORP./ JUN. 1966
NU-0070

Radial coolant channels for distributing a coolant over the inner wall of a circular section are fabricated by cold-rolling indentations on the inside circumference of the base section and covering the indentations with a rolled flange.

B66-10269
DIFFERENTIAL EXPANSION PROVIDES PRESSURE FOR DIFFUSION BONDING OF LARGE DIAMETER RINGS INNOVATOR NOT GIVEN /BOEING CO./ JUN. 1966 M-FS-588

External pressure band is used to bond aluminum alloy collars to large diameter, stainless steel rings. The band contracts while cooling and exerts pressure on the joint between the silver-plated surfaces of the ring and collar which expand toward the band. This diffusion bonding by differential expansion minimizes aluminum deformation.

B66-10275
FASTENER PROVIDES FOR BOLT MISALIGNMENT AND QUICK RELEASE OF FLANGE ENGLAND, C. /AEROJET-GEN. CORP./ JUN. 1966 NU-0074

Fastener enables two large flanges to be boited together without close alignment between the bolt and bolt-hole diameters, and provides for a quick release of one of the flanges under emergency conditions. It contains a nut that is retained by a square head in a recess in one side of the removable flange and by a collar and snap ring on the other side of the flange.

B66-10276
REMOTELY CONTROLLED SYSTEM COUPLES AND
DECOUPLES LARGE DIAMETER PIPES
GRIFFIN, P. A. /AEROJET-GEN. CORP./ JUN. 1966
NII-0062

Remote control, air-motor driven, chain-drive system engages and disengages a flange coupling from large-diameter, high pressure fluid lines.

B66-10277
DEVICE FACILITATES CENTERING OF WORKPIECES IN LATHE CHUCK
PRATER, L. /N. AM. AVIATION/ JUN. 1966
M-FS-685

Spring-loaded device used in conjunction with a standard dial indicator facilitates centering a workpiece in an independent four-jaw lathe chuck.

B66-10278
O-RINGS WITH MYLAR BACK-UP PROVIDE HIGH-PRESSURE CRYOGENIC SEAL
FUNK, G. M. /N. AM. AVIATION/ JUN. 1966
M-FS-603

Mylar lip type back-up ring installed in combination with three rubber 0-rings seal the junctions between a tube stub and an adapter during high pressure gas flow at cryogenic to room temperatures. Mylar seals should not be used with oxygen under pressure or in the liquid state.

B66-10279
MAGNETIC LATCHES PROVIDE POSITIVE
OVERPRESSURE CONTROL
LOY, J. L. /WESTINGHOUSE ASTRONUCL. LAB./ JUN.
1966
NU-0057

Louvers are used for overpressure safety venting in rooms or chambers where explosion hazards exist. The louvers have individually hinged closures that are held in locked position by commercially available magnets that quickly release them in an overpressure condition.

B66-10283
FIXED VACUUM PLATE CLAMPS STYROFOAM FOR
MACHINING
RAUSCHL, J. A. /N. AM. AVIATION/ JUN. 1966
M-FS-683 M-FS-726
Aluminum plate holds styrofoam securely in F

Aluminum plate holds styrofoam securely in place for machining operations. The styrofoam is clamped to rubber or cork pads on the plate surface by vacuum. Foam rubber tape provides the vacuum seal.

B66-10284
EXTENSOMETER AUTOMATICALLY MEASURES
ELONGATION IN ELASTOMERS
HOOPER, C. D. JUN. 1966
M-FS-517

Extensometer, with a calibrated shaft, measures the elongation of elastomers and automatically records this distance on a chart. It is adaptable to almost any tensile testing machine and is fabricated at a relatively low cost.

B66-10285
HIGH PRESSURE TUBE COUPLING REQUIRES NO
THREADS OR FLARES
STEIN, J. A. /N. AM. AVIATION/ JUN. 1966
MSC-600

High pressure tube coupling connects to any straight, unthreaded, and unflared tubing end without deforming or damaging the tubing. The coupling grips the tube wall tightly between an external compression sleeve and an internal hollow mandrel. It is adaptable to standard screw fittings for test stand attachment.

B66-10294
PNEUMATIC SEPARATOR GIVES QUICK RELEASE TO
HEAVY LOADS
BUCHANAN, D. C. DAVIS, E. J. PHILLIPS, J. D.
JUL. 1966
KSC-66-10

Pneumatic separator, using applied pressure, quickly releases restraining devices securing heavy loads. With minor modifications this separator can be used as a coupling device.

BOO-10297 DIAPHRAGM SPRING GIVES CLUTCH OVER-CENTER TOGGLE EFFECT ROSENBERG, H. W. /GE/ AUG. 1966 GSFC-499

Diaphragm spring clutch mechanism is used in testing the relative merits of eddy-current and hysteresis dampers. The dampers are alternately coupled to a single damping boom shaft. The floating clutch mechanism enables the inoperative damper to remain completely isolated from the damping boom shaft during test of the other damper.

B66-10301
TOOL PRE-TENSIONS COVERS PRIOR TO LACING
FORMAN, M. A. VOGEL, R. C. /N. AM. AVIATION/
JUL. 1966
MSC-631

In securing a bulky object in a storage compartment, a cinching or tightening tool is used to draw two opposing cover halves together at a predetermined tension to permit quick lacing to retain the stored object. This tool is also useful in fabrication industries to draw components together during assembly or treating.

B66-10302 SIMPLE SCALE INTERPOLATOR FACILITATES READING OF GRAPHS FAZIO, A. HENRY, B. HOOD, D. JUL. 1966 LEWIS-92 LEWIS-93

Set of cards with scale divisions and a scale finder permits accurate reading of the coordinates of points on linear or logarithmic graphs plotted on rectangular grids. The set contains 34 different scales for linear plotting and 28 single cycle scales for log plots.

B66-10303
BYPASS ROD TRANSFERS HEAT DEVELOPED IN
THERMIONIC DIODE
LAZARIDIS, L. J. /THERMO ELECTRON ENG. CORP./
JUL. 1966
JPL-SC-136

In a thermionic diode, a cesium tube joining the emitter-collector area and the cesium reservoir is fitted with a copper bypass rod held in place by two standoff brackets. The rod transfers heat from the emitter-collector to the reservoir

without going through the ceramic seal structure which surrounds the cesium tube and cannot sustain large temperature gradients.

B66-10304 FLEXIBLE FASTENER EFFECTS AIRTIGHT MATERIAL CLOSURE NAY, D. L. JUL. 1966 JPL-684

Flexible tube inserted into a 3/4-round strip receptacle inflates to form an airtight material fastener. Inflation is done with a carbon dioxide and deflation by a manually operated release valve. Device has potential use in space suits, underwater suits, and other protective clothing.

B66-10310
MODIFIED HYDRAULIC BRAKING SYSTEM LIMITS
ANGULAR DECELERATION TO SAFE VALUES
BRIGGS, R. S. COUNCIL, M. GREEN, P. M. /COLLINS
RADIO CO./ JUL. 1966
GSFC-476

Conventional spring-actuated, hydraulically released, fail-safe disk braking system is modified to control the angular deceleration of a massive antenna. The hydraulic system provides an immediate preset pressure to the spring-loaded brake shoes and holds it at this value to decelerate the antenna at the desired rate.

B66-10311
UNION WOULD FACILITATE JOINING OF TUBING,
MINIMIZE BRAZE CONTAMINATION
TERRIL, A. E. /N. AM. AVIATION/ JUL. 1966
MSC-777

B66-10317
FLEXIBLE ARMS PROVIDE CONSTANT FORCE FOR PRESSURE SWITCH CALIBRATION
CAIN, D. E. KUNZ, R. W. /GE/ JUL. 1966
HQ-38

In-place calibration of a pressure switch is provided by a system of radially oriented flexing arms which, when rotated at a known velocity, convert the centrifugal force of the arms to a linear force along the shaft. The linear force, when applied to a pressure switch diaphragm, can then be calculated.

B66-10318
TORUS ELEMENTS USED IN EFFECTIVE SHOCK
ABSORBER
CUNNINGHAM, P. PLATUS, D. L. /AEROSPACE RES.
ASSOC./ JUL. 1966
W00-114

Energy absorbing device forces torus elements to revolve annularly between two concentric tubes when a load is applied to one tube. Interference forces can be varied by using focus elements of different thicknesses. The device operates repeatedly in compression or tension, and under problems of large onset rate tolerance or structural overload.

B66-10319
FIBER LENGTH AND ORIENTATION PREVENT MIGRATION
IN FLUID FILTERS
REIMAN, P. A. /ARTHUR D. LITTLE/ JUL. 1966
M-FS-541

Stainless steel fiber web filter resists fiber migration which causes contamination of filtered fluids. This filter is capable of holding five times more particulate matter before arbitrary cutoff pressure drop and shows excellent retention in fuel flow at high rates.

B66-10321 SWIVELING LATHE JAW CONCEPT FOR HOLDING IRREGULAR PIECES DAVID, J. /N. AM. AVIATION/ JUL. 1966 M-FS-783

Clamp holds irregularly shaped pieces in lathe

chuck without damage and eliminates excessive time in selecting optimum mounting. Interchangeable jaws ride in standard jaw slots but swivel so that the jaw face bears evenly against the workpiece regardless of contour. The jaws can be used on both engine and turret lathes.

B66-10323
SPECIAL MANDREL PERMITS UNIFORM WELDING OF
OUT-OF-ROUND TUBING
DOR, M. E. 'FUEG, L. B. WHIFFEN, E. L. /N. AM.
AVIATION/ JUL. 1966
M-FS-706

Segmented, expandable mandrel provides uniform weld bead chilling in machine welding of circumferential seams on out-of-round tubes. Radial expansion of a rubber actuator forces the individual mandrel segments into intimate contact with the inner walls of mating tubes. Various sizes of tubing may be welded by using different mandrels and actuators.

B66-10326 EXTERNAL LINKAGE TIE PERMITS REDUCTION IN DUCTING SYSTEM FLANGE THICKNESS PFLEGER, R. O. /N. AM. AVIATION/ JUL. 1966 M-FS-823

External linkage tie reduces flange thickness and increases seal efficiency in high pressure ducting and piping systems. The linkage transmits the pressure separating load to the tube wall behind the flange allowing the flange to support only the seal.

B66-10328
CORK IS USED TO MAKE TOOLING PATTERNS AND MOLDS
HOFFMAN, F. J. /N. AM. AVIATION/ JUL. 1966
MSC-425

Sheet and waste cork are cemented together to provide a tooling pattern or mold. The cork form withstands moderately high temperatures under vacuum or pressure with minimum expansion, shrinkage, or distortion.

B66-10329
INSPECTION OF FINE WIRES SIMPLIFIED BY
CAPILLARY TUBE WIRE HOLDER
RAPHAEL, H. A. /N. AM. AVIATION/ JUL. 1966
MSC-358

Capillary tube wire holder provides a mount for fine wires for photomicrographs. The holder is mounted in a stainless steel tube and cast in a transparent casting material. It protects and permits easy location of the wire.

B66-10330
ADAPTER ASSEMBLY PREVENTS DAMAGE TO TUBING DURING HIGH PRESSURE TESTS
STINETT, L. L. /N. AM. AVIATION/ JUL. 1966
MSC-563

Portable adapter assembly prevents damage to tubing and injury to personnel when pressurizing a system or during high pressure tests. The assembly is capable of withstanding high pressure. It is securely attached to the tubing stub end and may be removed without brazing, cutting or cleaning the tube.

B66-10332
BELLOWS JOINT ABSORBS TORSIONAL DEFLECTIONS IN DUCT SYSTEM DANIELS, C. M. /N. AM. AVIATION/ JUL. 1966
M-FS-882

Long, thin-walled bellows compressed into a short length absorbs the same amount of torsional deflection as the same tube in full length condition and saves in cost, complexity and space. This bellows has lower torsional spring rate to absorb the bulk of the duct assembly tortional deflections, leaving the other bellows free to absorb axial and angular deflections.

B66-10333
VIBRATOR IMPROVES SPARK EROSION CUTTING
PROCESS
THRALL, L. R. /AEROJET-GEN. CORP./ JUL. 1966
NU-0071
Variable frequency mechanical vibrator improves

spark erosion cutting process. The vibration of the cutting tip permits continual flushing away of residue around the cut area with nondestructive electric transformer oil during the cutting process.

B66-10334 STRIPPABLE GRID FACILITATES REMOVAL OF GRID-SURFACED CONICAL WORKPIECE FROM DIE RUPPE, E. P. /N. AM. AVIATION/ JUL. 1966 M-FS-716

Female die facilitates the removal of a sheet metal structure from a die used for explosive forming of the metal. The female die consists of a smooth conical frustum made of fiberglass with a cured epoxy-resin surface on which a molded grid pattern made of a polyurethane resin is overlaid.

B66-10335
SHOCK-OPERATED VALVE WOULD AUTOMATICALLY
PROTECT FLUID SYSTEMS
BRANUM, L. W. WELLS, G. H. /N. AM. AVIATION/
JUL. 1966
M-FS-801

Glandless valve shuts down high-pressure fluid systems when severe shock from an explosion or earthquake occurs. The valve uses a pendulum to support the valve closure plug in the open position. When jarred, the valve body is moved relative to the pendulum and the plug support is displaced, allowing the plug to seat and be held by spring pressure.

B66-10336 CONCEALED HINGE PERMITS FLUSH MOUNTING OF DOORS AND HATCHES HOLMAN, E. V. /N. AM. AVIATION/ JUL. 1966 MSC-623

Hinge assembly permits flush mounting of doors and hatches of considerable thickness so that the axis of instant rotation, produced by the hinge, lies outside the panel surface and beyond the perimeter adjacent to the hinge. In operation, motion of the assembly is initially parallel, changing to angular after clearing the panel perimeter.

B66-10337
SEMIAUTOMATIC DEVICE TESTS COMPONENTS WITH
BIAXIAL LEADS
MARSHALL, T. C. /N. AM. AVIATION/ AUG. 1966 SEE
ALSO B65-10243
MSC-516

Semiautomatic device with a four-terminal network tests quantities of components having biaxial leads. The four-terminal network permits the testing of components in different environments. This device is easily modified for completely automatic operation.

B66-10338
LATCHING MECHANISM OPERATES IN LIMITED ACCESS AREA
HOLMAN, E. V. /N. AM. AVIATION/ JUL. 1966
MSC-230

Latching mechanism that is securely locked by the movement of the operating handle in one direction, is used in limited access areas. This mechanism is operated by a force applied to the handle at small angles.

B66-10339 SIMULATOR EFFECTS PARTIAL GRAVITY CONDITIONS JOHNSON, H. I. TRADER, A. G. JUL. 1966 MSC-152

Adjustable apparatus which simulates partial to zero gravity partially supports the weight of convalescing patients in rehabilitation exercises. This device is an ideal tool for physical therapy.

B66-10342
GAS DIFFUSER FACILITATES WITHDRAWAL OF
CRYOGENIC LIQUIDS FROM TANKS
DUNN, J. D. /N. AM. AVIATION/ JUL. 1966
M-FS-915

Compact, cylindrical gas diffuser with radial exhaust slots and internal axial flow channels maintains the necessary pressure for the desired withdrawal rate of cryogenic liquids from tanks.

The diffuser minimizes pressure loss which results from condensation of nitrogen gas in the liquid and prevents direct impingement of gas jets on liquid surface to reduce turbulence.

B66-10343
CONCEPT FOR PASSIVE SYSTEM TO CONTROL GAS FLOW INDEPENDENTLY OF TEMPERATURE
CHAVEZ, E. S. MILLEMAN, S. E. RICKEMAN, E. C.
/N. AM. AVIATION/ JUL. 1966
M-FS-982

Volumetric flow rate of gas is maintained at a constant value independent of temperature by passing the gas through a parallel or series combination of turbulent flow and laminar flow resistors. By proper combination of resistors, the flow rate may be automatically made to vary as an increasing or decreasing function of temperature.

B66-10345
FRICTION LOADING DEVICE ENABLES ACCURATE
TESTING OF BRITTLE MATERIALS
HENGSTENBERG, T. F. ZIBRITOSKY, G. /WESTINGHOUSE
ASTRONUCL. LAB./ JUL. 1966
NU-0051

Friction loading device gives axial symmetry to test specimen of brittle materials during tensile testing. This axial alignment prevents bending stresses which hinder measurement of tensile strength.

B66-10346 TOOL FORMS RIGHT ANGLES IN COMPONENT LEADS GLENN, C. G. JUL. 1966 M-FS-722

Hand tool forms right angles in electronic component leads so they fit the spaced holes of a printed circuit board. This tool firmly holds the leads at points near the component ends to prevent damage and provide accuracy.

B66-10352
BRAZING PROCESS PROVIDES HIGH-STRENGTH BOND
BETWEEN ALUMINUM AND STAINLESS STEEL
HUSCHKE, E. G., JR. NORD, D. B. /N. AM.
AVIATION/ AUG. 1966
M-FS-803

Brazing process uses vapor-deposited titanium and an aluminum-zirconium-silicon alloy to prevent formation of brittle intermetallic compounds in stainless steel and aluminum bonding. Joints formed by this process maintain their high strength, corrosion resistance, and hermetic sealing properties.

B66-10354
WELDS CHILLED BY LIQUID COOLANT MANIFOLD
ODOR, M. E. WHIFFEN, E. E. /N. AM. AVIATION/
AUG. 1966
M-FS-679 M-FS-680

Liquid coolant chill tool provides uniform cooling to materials adjacent to weld areas on long or contoured butt welds. This tool incorporates a manifold that clamps to the weld joint by vacuum and circulates liquid in direct contact with adjacent material.

B66-10357
SUPPRESSOR PLATE ELIMINATES UNDESIRED ARCING DURING ELECTRON BEAM WELDING
HANCHEY, K. K. KUBIK, J. MAHON, J. C. /HAYES
INTERN. CORP./ AUG. 1966
M-FS-1126

Suppressor grid eliminates undesired arcing during electron beam welding in one of two ways. A grid at ground potential collects secondary emission of ions and electrons produced by the beam as it strikes the workpiece, or a negatively energized grid repels the plasma arc back to the workpiece. This eliminates ground screens used to cover view ports.

B66-10360
ALUMINUM CORE STRUCTURES BRAZED WITHOUT USE OF FLUX
INNOVATOR NOT GIVEN /AERONCA MFG. CORP./ AUG. 1966
M-FS-659

Aluminum alloy face sheets are brazed to aluminum alloy honeycomb cores without using corrosive flux by means of one or three methods. The completed brazed structure has the high-strength characteristics of heat treated aluminum alloys.

B66-10364 VERSATILE MACHINE MILLS, SAWS LIGHT MATERIALS RAUSCHL, J. A. /N. AM. AVIATION/ AUG. 1966 M-FS-827

Versatile milling/sawing machine performs angle cuts, flat and profile milling, machining of grooves and slots, and edge trimming of phenolic panels. The machine is mounted on rails above a table equipped with vacuum capability for holding workpieces.

B66-10365
DIAPHRAGM VALVE FOR CORROSIVE AND HIGH
TEMPERATURE FLUID FLOW CONTROL HAS UNIQUE
FEATURES
EBIHARA, B. T. VARY, A. AUG. 1966
LEWIS-304

Monometallic diaphragm valve is used for corrosive and high temperature fluid flow control. The body, diaphragm, and plug of the valve are welded together to form an integral leakproof unit for containing the fluid as it passes through the valve from inlet to outlet.

B66-10366
HOLLOW SPHERICAL ROTORS FABRICATED BY
ELECTROPLATING
AVERY, H. W. CONROY, T. F. /GE/ AUG. 1966
JPL-SC-117

Equatorial bands are fabricated to provide a locating fit for the hemispheres of hollow spherical rotors which are then jointed by electroplating. Several nonmagnetic materials may be used to form the joint, such as aluminum, copper, iron, gold, plantinum, and ging.

B66-10367
DOT PATTERNS PROVIDE REPRODUCIBLE FLAW AREAS
FOR STUDY OF ADHESIVE BONDS
FRANK, L. SCHMITZ, G. /GEN. AM. TRANSPORTATION
CORP./ AUG. 1966
M-FS-862

Photographic production of a small-dot pattern of known geometry on the surface of a substrate for controlled area degradation enables a study of adhesive bond strengths. These dot patterns may also be applied to force-limiting devices which must depend on the adhesive bonding strength between mating surfaces.

B66-10369 AUTOMATIC PROTECTIVE VENT HAS FAIL-SAFE FEATURE DAMERON, C. E. AUG. 1966 LANGLEY-218

Delayed vent valve system in a mechanical backing pump in a vacuum system allows the pneumatic foreline valve to seal before the pump vent opens. The system is designed to be fail-safe and operate even though there is loss of electrical power.

B66-10370
PORTABLE LIGHTWEIGHT CELL PROVIDES CONTROLLED ENVIRONMENT
SHELTON, S. TARR, J. /N. AM. AVIATION/ AUG. 1966
MSC-648

Inflatable, lightweight cell provides a separate, secondary environment for a spacesuited man in case of spacesuit damage or malfunction. The cell has a pressure-sealing zipper and is equipped to maintain a livable atmosphere.

B66-10371
BRAZING RETORT MANIFOLD DESIGN CONCEPT MAY MINIMIZE AIR CONTAMINATION AND ENHANCE UNIFORM GAS FLOW RUPPE, E. P. /N. AM. AVIATION/ AUG. 1966 M-FS-707

Brazing retort manifold minimizes air contamination, prevents gas entrapment during purging, and provides uniform gas flow into the retort bell. The manifold is easily cleaned and turbulence within the bell is minimized because all manifold construction lies outside the main enclosure.

B66-10375

IMPACT- AND PUNCTURE-RESISTANT MATERIAL PROTECTS PARTS FROM DAMAGE SHERIFF, D. D. /N. AM. AVIATION/ AUG. 1966 MSC-747

Uniform sized, laminated panels protect delicate parts and equipment from damage during storage and transportation. The panels consist of sheets of steel foil bonded between sheets of elastic foam. They are lightweight, impact— and puncture-resistant, and, when formed into an enclosure, provide a barrier against moisture and thermal shock.

B66-10378

NONHAZARDOUS ACID ETCHES WELD SAMPLES ALLEN, B. C. /N. AM. AVIATION/ AUG. 1966

Nonhazardous citric acid solution used with 24volt dc power supply etches weld samples. This etching method is limited to 300 stainless steel and a small range of other high temperature alloys.

B66-10381

GAS-INJECTION VALVE OPERATES AT HIGH SPEED HOH, F. C. LOWDER, R. S. /ADVANCED KINETICS, INC./ AUG. 1966 HQ-49

Fast acting gas valve is used for injecting a short pulse of gas into a vacuum chamber plasma acceleration experiments. It contains a lightweight closure disk that is forced away from the valve seat when an electromagnetic coil momentarily energized and immediately rebounds from a stop back onto the seat.

GEAR DRIVE AUTOMATICALLY INDEXES ROTARY TABLE JOHNS, M. F. /N. AM. AVIATION/ AUG. 1966 M-FS-753

Combination indexer and drive unit drills equally spaced circular hole patterns on rotary tables. It automatically rotates the table a distance exactly equal to one hole spacing for each revolution of a special idler gear.

B66-10384

UNIVERSAL TRANSLOADER MOVES DELICATE EQUIPMENT WITHOUT STRESS

BARBOUR, J. R. KESSLER, P. N. /N. AM. AVIATION/ AUG. 1966 MSC-654

Transloader moves delicate or heavy items over irregular surfaces without transmitting stress to the load. The loader is supported on three pivot points which produce a wrap-free base. The base is supported by an articulated four-wheel frame.

B66-10385

INFLATABLE O-RING SEAL WOULD EASE CLOSING OF HATCH COVER PLATE

NEARY, K. J. /N. AM. AVIATION/ AUG. 1966 MSC-740

Inflatable O-ring seal provides positive sealing means that does not require the manual exertion of a large compressive force during opening or closing of a rotary-type hatch cover plate. The O-ring is deflated during opening and closing, and inflated after closure by a gas pressure SOUPCE.

B66-10390

ONE-PIECE TRANSPARENT SHELL IMPROVES DESIGN OF HELMET ASSEMBLY
JONES, R. L. OKANE, J. H. AUG. 1966

MSC-187

One-piece transparent helmet shell made of polycarbonate is equipped with a helmet protection pad, a visor assembly, a communications skull cap, and an emergency oxygen supply. This design offers improvements over previous designs in weight, visual field, comfort and protection.

B66-10399 EXPANDABLE TAKEUP REEL FACILITATES PAPER TAPE REMOVAL WESTERMAN, H. E. /DOUGLAS AIRCRAFT CO./ SEP. 1966 W00-271

Takeup reel receives continuous paper tapes from data recording machines. The roller is recessed to have four longitudinal members about its periphery which can be extended or retracted to change the overall diameter of the assembly to allow easy removal of the tapes.

B66-10402 ROTARY VALVE CONTROLS MULTIPLE HYDRAULIC LEVELING CYLINDERS INNOVATOR NOT GIVEN /BOEING CO./ SEP. 1966

M-FS-361

Single rotary valve controls a circular bank of hydraulic leveling cylinders that must maintain large loads within plus or minus three arc minutes of the true vertical. Since the position of the valve spool determines the flow rate of each bank of cylinders and hence cylinder position, different flow rates may be obtained by changing the spool shape.

B66-10403 SPECIAL TOOL KIT AIDS HEAVILY GARMENTED WORKERS

HOLMES, A. E. /MARTIN CO./ SEP. 1966 MSC-163

Triangular aluminum tool kit, filled with polyurethane is constructed to receive various tools and hold them in a snug but quick-release fit as an aid to heavily gloved workers. The kit is designed to allow mounting within easily accessable reach and to provide protection of the tools during storage.

B66-10405 DESIGN RELIABILITY GOAL DEVELOPED FROM SMALL SAMPLE BURROWS, D. L. HEATHCOCK, R. SEP. 1966 M-FS-403

Sampling distributions, constructed by Monte Carlo simulation are used in hardware development to establish a design reliability goal, to place a confidence coefficient on reliability estimates, and to determine whether sample stress/strength data demonstrate a specified reliability at a specified confidence level.

CLOSED LOOP OPERATION ELIMINATES NEED FOR AUXILIARY GAS IN HIGH PRESSURE PUMPING STATION

LANDY, D. G. /N. AM. AVIATION/ SEP. 1966 M-FS-893

Closed loop system for a liquid nitrogen high pressure pump feeds back gaseous nitrogen generated by heat leak into the reservoir to maintain the pressure in the storage tank. This safer, more efficient system eliminates the need for auxiliary gas to maintain the tank pressure and can be used on relatively high cryogenic pumping systems.

B66-10410 ALIGNMENT TOOL FACILITATES PIN PLACEMENT ON IRREGULAR HORIZONTAL SURFACES

BOYLE, J. V. SEP. 1966 LANGLEY-219

Alignment tool facilitates spotting and cementing plastic pins on the true vertical to irregular concave and convex surfaces. The tool consists of a wood tripod with individually adjustable legs, a wood block with a hole for placing the pins and two spirit levels at a 90 degree angle for easy alignment.

B66-10411 HEAVY DUTY PRECISION LEVELING JACKS EXPEDITE SETUP TIME ON HORIZONTAL BORING MILL DELLENBAUGH, W. JONES, C. /N. AM. AVIATION/ SEP. 1966 M-FS-1084

Leveling jack is a precise alignment tool which expedites the setup of components or assemblies up

to 2500 pounds on horizontal boring mills. This tool eliminates the necessity of wedges and blocks to shim the components to proper position.

B66-10415 ELECTROPLATING ELIMINATES GAS LEAKAGE IN BRAZED AREAS

LEIGH, J. D. /N. AM. AVIATION/ SEP. 1966 M-FS-923

Electroplating method seals brazed or welded joints against gas leakage under high pressure. Any conventional electroplating process with many different metal anodes can be used, as well as the build up of layers of different metals to any required thickness.

B66-10416
MATCHING FLOW CHARACTERISTICS OF STANDARD
SHUTOFF VALVES ELIMINATES NEED FOR CUSTOM
FABRICATED VALVES
BEVAN, A. F. /N. AM. AVIATION/ SEP. 1966
M-FS-1069

Standard high pressure valves are used in low pressure fluid system testing when a substantial system pressure increase is required. The flow-vs-valve stroke is matched with that of the valves being replaced. Some correction to the plug contour may be necessary.

B66-10417
MODIFIED PLIERS FACILITATE COUPLING OF BAYONET-TYPE CONNECTORS
HARRIS, F. /N. AM. AVIATION/ SEP. 1966

Modified single-tube hole punch or grommet-setting pliers couples or uncouples spring-loaded bayonet-type connectors quickly and easily. The anvil and tube or punch of the single-tube hole punch or pliers are removed and an open-end slot is machined in the tipe of the jaws.

B66-10418
BEARING PULLER FACILITATES REMOVAL AND REPLACEMENT OF BEARING ASSEMBLIES SCHAUS, R. B. /N. AM. AVIATION/ SEP. 1966 M-FS-1538

Bearing puller removes ball bearing assemblies, which carry the rotor, from turbine type flowmeters. It matches the bearing configuration to facilitate removal of the bearing assemblies from the support members.

B66-10422 LARGE DIAMETER METAL RING SEAL PREVENTS GAS LEAKAGE AT 5000 PSI MIDDELKOOP, J. H. /N. AM. AVIATION/ SEP. 1966 M-FS-1064

Large metal ring seal prevents gas leakage in hydrogen, helium, or nitrogen storage bottles at pressures up to 5,000 psi. The grooved ring seal which contains elastomer O-rings is installed between the mating faces of the access cover and the storage bottle.

B66-10424
LABYRINTH-TYPE VALVE SEAT INCREASES VALVE
LIFE BY DECREASING FLUID VELOCITY
HICKS, J. E. /N. AM. AVIATION/ SEP. 1966
M-FS-1051

Labyrinth-type valve seat and a moving piston with V-notch openings reduce the fluid velocity and thus, the erosion rate of regulator valves.

B66-10425
INTERIOR SERVICING PLATFORM SIMPLIFIES
MAINTENANCE OF STORAGE TANKS
RANGER, C. S. /N. AM. AVIATION/ OCT. 1966
M-FS-1300

Folded work platform simplifies the servicing of the interiors of storage tanks and vessels with limited access openings. The extendable platform which can be lowered through the limited access openings is mounted on a segmented shaft which is externally supported.

B66-10428
FLEXIBLE DRIVE ALLOWS BLIND MACHINING AND
WFLDING IN HARD-TO-REACH AREAS
HARVEY, D. E. ROHRBERG, R. G. /N. AM. AVIAIIUN/

OCT. 1966 MSC-524

Flexible power and control unit performs welding and machining operations in confined areas. A machine/weld head is connected to the unit by a flexible transmission shaft, and a locking-indexing collar is incorporated onto the head to allow it to be placed and held in position.

B66-10434
ROTATING MAGNETIC POLES USED TO PUMP MERCURY
EBIHARA, B. T. LOWDERMILK, W. H. VARY, A. OCT.
1966 SEE ALSO NASA-TN-D-2965
LEWIS-276

Rotating magnetic pump with redesigned pump cell is used for pumping mercury. The modified pump has better electrical continuity, more efficient heat removal, and good wetting characteristics in the mercury flow channel.

B66-10443
NEW BACKUP-BAR GROOVE CONFIGURATION IMPROVES
HELIARC WELDING OF 2014-T6 ALUMINUM
BLACK, F. J. /N. AM. AVIATION/ OCT. 1966
MSC-806

Backup chill bars with new grooved dimensions improve welding of 2014-T6 aluminum. This groove geometry affords optimum chilling characteristics, reduces shrinkage and the weld bead is narrower and consistently free from impurities or voids.

B66-10446
SEAL-OFF ASSEMBLY PERMITS RAPID EVACUATION
OF AIR FROM CONTAINERS
DEMERS, R. R. /RCA/ OCT. 1966
GSFC-513

Seal-off assembly which permits rapid container evacuation using large diameter tubing has a vacuum valve that permits sealing plate transfer Irom the vacuum valve start to the container after evacuation. The sealing plate can be reused repeatedly. This device can repump in case of a small leak without exposing the container to the atmosphere.

B66-10450
METAL TUBE CAN BE FOLDED FOR COMPACT STOWAGE, IS SELF-ERECTING OCT. 1966 SEE ALSO NASA-TM-X-1187 LEWIS-288

Metal tube configuration reduces the section modulus to that of a thin plate, thus permitting the section to be bent into a coil for stowage in limited space without destructive yielding of the material. It is readily released to serve as a rigid fluid transportation conduit or structural

B66-10455
MYLAR FILM ELIMINATES SILK SCREENING OF
EQUIPMENT PANELS
CONGER, D. R. /N. AM. AVIATION/ OCT. 1966
MSC-798

Equipment panel designs and nomenclature are photographed on clear Mylar film to permit fast and inexpensive panel redesigns and revisions and to eliminate the silk screen process. The film is coated with an adhesive and impressed on the panel. For revisions, the film is easily peeled off and replaced.

B66-10457 LOGIC SYSTEM AIDS IN EVALUATION OF PROJECT READINESS MARIS, S. J. OBRIEN, T. J. /N. AM. AVIATION/ OCT. 1966 MSC-753

Measurement Operational Readiness Requirements /MORR/ assignments logic is used for determining the readiness of a complex project to go forward as planned. The system uses logic network which assigns qualities to all important criteria in a project and establishes a logical sequence of measurements to determine what the conditions are.

B66-10459
IMPROVED METHOD FACILITATES DEBULKING AND CURING OF PHENOLIC IMPREGNATED ASBESTOS

GAINES, P. /N. AM. AVIATION/ OCT. 1966 MSC-949

Workpieces covered with phenolic impregnated asbestos tape and then wrapped with a specified thickness of nylon yarn under pressure, are debulked and cured in a standard oven. This method of debulking and curing is used in the fabrication of ablative chambers for the Gemini and Apollo attitude control engines.

B66-10460 CHART SYSTEM SIMPLIFIES IDENTIFICATION OF COMPLEX DESIGN ASSEMBLIES MORIN, H. P. /N. AM. AVIATION/ OCT. 1966 MSC-752

Identification breakdown chart that lists the component parts required for any specific end item is used to identify rapidly and accurately, from numerous drawings, all the component parts of a complex design assembly. Cylindrical and complex configurations are depicted as continuous flat surfaces for ready identification.

B66-10463
MICROMINIATURE THERMOCOUPLE MONITORS OWN
INSTALLATION
GARRETT, A. J. SELLERS, J. P., JR. /N. AM.
AVIATION/ OCT. 1966
M-FS-1111

Microminiature thermocouple makes precision gas sidewall temperature readings inside large thrust chambers. It is installed by a technique whereby the sensor monitors its own installation to insure against thermal damage to the thermocouple and ensure minimum disturbance to chamber surfaces.

B66-10464
LARGE SEALS FABRICATED FROM SMALL SEGMENTS
REDUCE PROCUREMENT LEAD TIME
DANIELS, C. M. HANES, V. D. /N. AM. AVIATION/
OCT. 1966
M-FS-1117

Large diameter seals are fabricated from narrow strip stock welded in segments to form a complete ring. This technique could be used to reduce the cost of critical, large diameter seals in the heating and ventilating industry, petrochemical industry, and marine fabrication industry.

B66-10470
INDICATOR SYSTEM PROVIDES COMPLETE DATA OF
ENGINE CYLINDER PRESSURE VARIATION
MC JONES, R. W. MORGAN, N. E. /VICKERS, INC./
DEC. 1966
LEWIS-291

Varying reference pressure used together with a balanced pressure pickup /a diaphragm switch/ to switch the electric output of the pressure transducer in a reference pressure line obtains precise engine cylinder pressure data from a high speed internal combustion engine.

B66-10471 COPPER-ACRYLIC ENAMEL SERVES AS LUBRICANT FOR COLD DRAWING OF REFRACTORY METALS BEANE, C. KARASEK, F. NOV. 1966 ARG-54

Acrylic enamel spray containing metallic copper pigment lubricates refractory metal tubing during cold drawing operations so that the tubing surface remains free from scratches and nicks and does not seize in the die. Zirconium alloys, zirconium, tantalum alloys, niobium alloys, and titanium alloys have been drawn using this lubricant.

B66-10472 RUBBER AND ALUMINA GASKETS RETAIN VACUUM SEAL IN HIGH TEMPERATURE EMF CELL HESSON, J. C. NOV. 1966

Silicone rubber gasket and an alumina gasket retain a vacuum inside a high temperature EMF cell in which higher and lower density liquid metal electrodes are separated by an intermediate density fused salt electrolyte. This innovation is in use on a sodium bismuth regenerable EMF cell in which the fused salts and metals are at about 500 deg to 600 deg C.

B66-10473 MINIATURE VALVE ACCURATELY CONTROLS SMALL VOLUME FLUID FLOW GRUNWALD, A. NOV. 1966 ARG-66

G-66
Hydraulic or pneumatic actuated valve accurately controls small volume flow of liquids or gases by expanding or relaxing an O-ring within an annular flow space. In one application, 2 such valves were used to accurately meter small volumes of helium under a pressure of 1000 psi.

B66-10477
CONCEPT OF PLANETARY GEAR SYSTEM TO CONTROL
FLUID MIXTURE RATIO
MC GROARTY, J. D. /N. AM. AVIATION/ DEC. 1966
M-FS-1785

Mechanical device senses and corrects for fluid flow departures from the selected flow ratio of two fluids. This system has been considered for control of rocket engine propellant mixture control but could find use wherever control of the flow ratio of any two fluids is desired.

B66-10484
BRAKING MECHANISM IS SELF ACTUATING AND BIDIRECTIONAL
PIZZO, J. /N. AM. AVIATION/ OCT. 1966
M-FS-1299

Mechanism automatically applies a braking action on a moving item, in either direction of motion, immediately upon removal of the driving force and with no human operator involvement. This device would be useful wherever free movement is undesirable after an object has been guided into a precise position.

B66-10485
COMBINATION SPACER AND GASKET PROVIDES
EFFECTIVE STATIC SEAL
JONES, F. B. /N. AM. AVIATION/ OCT. 1966
M-FS-1397

Closely machined steel ring having narrow sealing lands on both faces and a thin coating of a commercially available halocarbon polymer combines the functions of a spacer and static seal ring or gasket having a minimum of potential leak paths. The device is effective over a wide range of temperatures down to minus 423 deg F and at pressure up to 180 psig.

B66-10489
PLUG REPLACES WELD FILLER AS SEAL IN COMPLEX
CASTING
GOUNDREY, R. L. HARRIS, C. L. /AEROJET-GEN.
CDRP./ OCT. 1966
NU-0049

Expandable metal plug is inserted to provide a seal to support the mold core with small blocks, referred to as chaplets, during the casting of a complex volute. Weld-warpage and multiple X-ray inspection are eliminated by use of this technique.

B66-10495 SPOOL VALVE CYCLES AT CONTROLLED FREQUENCY CHARLTON, K. W. VAN ARNAM, D. E. /BECKMAN INSTR./ NOV. 1966 MSC-143

Spool valve accurately controls the cycle of a pneumatically-actuated system over long periods. Regulation of pressure from the external source, positioning of the adjusting plugs, and magnet selection, together afford wide variation in cyclic timing and speed of closure in either direction.

B66-10498 QUICK-RESPONSE SERVO AMPLIFIES SMALL HYDRAULIC PRESSURE DIFFERENCES WIEGARD, D. E. NOV. 1966 ARG-99

Hydraulic servo, which quickly diverts fluid to either of two actuators, controls the flow rates and pressures within a hydraulic system so that the output force of the servo system is independent of the velocity of the mechanism which the system actuates. This servo is a dynamic feedback control device.

B66-10513
OPPOSED ARCS PERMIT DEEP WELD PENETRATION
WITH ONLY ONE PASS
BUDDS, L. E. /N. AM. AVIATION/ NOV. 1966
M-FS-1696

٠

Arc welding technique uses opposed electrodes on either side of the workpiece, operated in right angles, out-of-phase, pulsating direct current. Complete penetration has been obtained with this technique in metals ranging from 0.062- to 1.0-inch thickness.

B66-10514
IN-TANK SHUTOFF VALVE IS PROVIDED WITH
MAXIMUM BLAST PROTECTION
HOLDEN, C. F. /N. AM. AVIATION/ NOV. 1966
M-FS-1529

In-tank shutoff valve is installed with the valve poppet and actuator inside the tank to provide maximum blast protection during rocket engine test operation. This valve design is applicable wherever explosive fuels are used and is currently being used in lox and liquid hydrogen tanks at a rocket engine test site.

B66-10522
SELF-ACTUATING GRAPPLE AUTOMATICALLY
ENGAGES AND RELEASES LOADS FROM OVERHEAD
CRANES
FROEHLICH, J. A. KARASTAS, G. A. NOV. 1966
ARG-81

Two-piece grapple mechanism consisting of a lift knob secured to the load and a grapple member connected to the crane or lift automatically disengages the load from the overhead lifting device when the load contacts the ground. The key feature is the sliding collar under the lift knob which enables the grapple latch to be stripped off over the lift knob.

B66-10523 HYDRAULIC FLUID SERVES AS MANDREL FOR SMALL DIAMETER REFRACTORY TUBE DRAWING MAYFIELD, R. M. DEC. 1966 ARG-44

Sealing hydraulic fluid within a tube and passing the tube through a reducing die produces high quality small diameter refractory metal tubing. The encased fluid eliminates the need for mandrel or ductile core removal and drawing can proceed with less handling operations.

B66-10530
PERFORATIONS IN JET ENGINE SUPERSONIC INLET
INCREASE SHOCK STABILITY
KEPPLER, C. R. /UNITED AIRCRAFT CORP./ NOV. 1966
NEO-8

Modification of a conventional jet engine internal compression supersonic inlet results in increased shock stability and thus, engine instantaneous response to changes in inlet air properties. This technique provides a large amount of bleed near the maximum pressure recovery at the expense of minor bleed flow during critical operation.

B66-10537
GAGE TESTS TUBE FLARES QUICKLY AND ACCURATELY
GRIFFIN, F. D. NOV. 1966
KSC-66-19

Flared tube gauge with a test cone that is precisely made with a tapering surface to complement the tube flare is capable of determining the accuracy of a tube flare efficiently and economically. This device should improve the speed, efficiency, and accuracy of tube flare inspections.

B66-10545
HOIST IS AUTOMATICALLY STOPPED AT LOW
DECELERATION RATE
GEORGE, T. R. HESS, H. C. /N. AM. AVIATION/
DEC. 1966
M-FS-1639

In operating a hoist to transport delicate or fragile components, an automatic stopping device is adjusted to impose a predetermined deceleration rate during stopping.

B66-10546
INTERNAL MACHINING ACCOMPLISHED AT CONSTANT
RADII
GOLLIHUGH, T. E. /N. AM. AVIATION/ DEC. 1966
M-FS-1573

Device machines fluid passages in workpieces at constant radii through two adjacent surfaces that are at included angles up to approximately 120 degrees. This technique has been used extensively in fabricating engine parts where close control of fluid flow is a requirement.

B66-10550
DAMPER REDUCES EFFECTS OF RESONANCE ON
FORCE TRANSDUCER
POSTMA, R. W. /N. AM. AVIATION/ NOV. 1966
WSO-321

Viscous-film damper eliminates response lag of resonance generated noise when inserted into the thrust measuring system. This technique can be applied to automated devices when pulsed force or low order impact is involved, and where signal noise is produced by stopping or reversal of mechanical travel or by water hammer.

B66-10562
METALLOGRAPHIC HOLDING FIXTURE PERMITS
POLISHING OF SOFT METALS ON VIBRATORY
LAPPING MACHINE
MATRAS, S. DEC. 1966
ARG-42

Circular fixture which mounts several specimens within a single turret prevents specimen smearing during grinding and polishing operations performed on a vibratory lapping machine. Each specimen is loaded individually with a weight small enough to prevent smearing but large enough to promote polishing.

BOD-10367
HEAT EXCHANGER TUBES SUPPORTED IN HIGH
VIBRATION ENVIRONMENT
URQUIDI, R. /N. AM. AVIATION/ DEC. 1966
M-FS-1401

Cantilevered structure supports heat exchanger coils against vibration loading while allowing freedom for differential thermal growth. The support channels will accept a variety of coil angles with the same coil pitch, thus reducing the number of parts required. This design, with slight modification, could be used to support parallel rows of straight piping.

B66-10570
STATIONARY DEVICE PRODUCES HOMOGENEOUS
MIXTURE OF FLUIDS
BAKER, D. I. CALLISON, M. P. /N. AM. AVIATION/
DEC. 1966
M-F8-525

Stationary device produces a homogeneous mixture of two or more one-phase or two-phase fluids. The device contains two concentric flow guides with helical passageways through which the fluids are forced into turbulent flow by the system pressure differential.

BOS-105/I DUCTILE MANDREL AND PARTING COMPOUND FACILITATE TUBE DRAWING BURT, W. R., JR. MAYFIELD, R. M. POLAKOWSKI, N. H. DEC. 1966 ARG-43

Refractory tubing is warm drawn over a solid ductile mandrel with a powder parting compound packed between mandrel and the tube*s inner surface. This method applies also to the coextrusion of a billet and a ductile mandrel.

B66-10573
ORTHOPEDIC STRETCHER WITH AVERAGE-SIZED
PERSON CAN PASS THROUGH 18-INCH OPENING
LOTHSCHUETZ, F. X. /MASON-RUST CO./ DEC. 1966
M-FS-811

Modified Robinson stretcher for vertical lifting and carrying, will pass through an opening 18 inches in diameter, while containing a person of average height and weight. A subject 6 feet tall and weighing 200 pounds was lowered and raised out of an 18-inch diameter opening in a tank to test

the stretcher.

B66-10575
EMERGENCY ESCAPE SYSTEM USES SELF-BRAKING
MECHANISM ON FIXED CABLE
BILLINGS, C. R. MC DARIS, R. A. MC GOUGH, J. T.
NEAL, P. F. DEC. 1966
KSC-66-44

Slide-wire system with a twist level slide device incorporates automatic descent and braking for the safe and rapid evacuation of personnel from tall structures. This device is used on any tall structure that might require emergency evacuation. It is also used to transfer materials and equipment.

B66-10582 COMPOSITE BULKHEAD FABRICATION DEVELOPMENT ORR, J. DEC. 1966 M-FS-1264

Composite bulkhead is produced by a fabrication concept utilizing vacuum and/or autoclave pressure to hold preformed welded sandwich elements in place during bonding and aging.

B66-10585
ROTATIONAL FLUID COUPLING ELIMINATES HOSE
ENTANGLEMENTS
AUBOL, P. B. /TRW/ DEC. 1966
MSC-312

Rotational fluid coupling mechanism circulates a temperature controlled fluid between a stationary heat exchanger and a coolant plate on a rotating platform. The mechanism consists of two concentric cylinders containing one or more flexible tubes which are controlled and positioned in such a way that it eliminates tubing entanglement.

B66-10587 QUALITY CONTROL CRITERIA FOR ACCEPTANCE TESTING OF CROSS-WIRE WELDS BRYANT, R. D. /N. AM. AVIATION/ DEC. 1966 MSC-627

Visual inspection criteria assure the metallureical integrity of spot welds joining nickel Lou and nickel ribbon in a 90-degrecross-wire configuration.

B66-10588
PLASTIC TUBING PROTECTS FLEXIBLE COPPER HOSE
MELLGREN, B. E. /N. AM. AVIATION/ DEC. 1966
M-FS-722

Flexible copper purge and coolant hoses is covered with a high-temperature shrinkable plastic for protection against severe vibration during rocket engine tests. This type of tubing is being used on all flexible water tubes used in F-1 engine tests.

B66-10589
POSITIVE DISPLACEMENT CYLINDER MEASURES
CORROSIVE LIQUID VOLUME
MARIMAN, R. A. VENDL, C. J. /N. AM. AVIATION/
DEC. 1966
MSC-1038

Positive displacement cylinder accurately measures volumetric flow rates of corrosive liquids. The cylinder is compatible with corrosive liquids and handles flow rates from zero to 75 gpm at pressures to 900 psig with an accuracy of 0.25 per cent.

B66-10593 FLUID LOGIC CONTROL CIRCUIT OPERATES NUTATOR ACTUATOR MOTOR INNOVATOR NOT GIVEN /BENDIX CORP./ DEC. 1966 SEE ALSO NASA-CR-54788 LEWIS-294

Fluid logic control circuit operates a pneumatic nutator actuator motor. It has no moving parts and consists of connected fluid interaction devices. The operation of this circuit demonstrates the ability of fluid interaction devices to operate in a complex combination of series and parallel logic sequence.

866-10595 TREATMENT INCREASES STRESS-CORROSION RESISTANCE OF ALUMINUM ALLOYS
JACOBS, A. J. /N. AM. AVIATION/ DEC. 1966
M-FS-1840

Overaging during heat treatment of the aluminum alloys immediately followed by moderate plastic deformation, preferably by shock loading achieves near optimum values of both yield strength and resistance to stress corrosion. Similar results may be obtained by substituting a conventional deformation process for the shock loading step.

B66-10597
GRIT BLASTING NOZZLE FABRICATED FROM MILD TOOL STEEL PROVES SATISFACTORY MC FARLAND, J. E. TURBITT, B. DEC. 1966
M-FS-1420

Dry blasting with glass beads through a nozzle assembly descales both the outside and inside surfaces of tubes of Inconel 718 used for the distribution of gaseous oxygen. The inside of the nozzle is coated with polyurethane and the deflector with a commercially available liquid urethane rubber.

B66-10601
EQUATIONS PROVIDE TUBULAR INFORMATION ON EFFECTS OF UNIFORM AND VARIABLE LOADS ON THIN, FLAT, CIRCULAR PLATES HEAP, J. C. DEC. 1966
ARG-151 ARG-152

Unit-mass system of derivation of equations determines the deflection, slope, and moments for thin, flat, circular plates subjected to either a uniform or a symmetrical variable load. The derived equations are computed, organized in tabular form, and graphically depicted.

B66-10604
HOLE SAW DRILL ATTACHMENT HAS ZERO FORCE
REACTION
RILEY, R. H., JR. /BLACK AND DECKER MFG. CO./
HOLMES, A. E. /MARTIN CO./ DEC. 1966
MSC-543

Zero reaction tools require no force application by workers in space. The tool accomplishes hole cutting by holding the workpiece and feeding the cutting blade into and through it by forces entirely absorbed within the tool.

B66-10608
FRICTION BRAKE CUSHIONS ACCELERATION AND
VIBRATION LOADS
FRASER, G. F. ZAWADSKI, G. Z. /N. AM. AVIATION/
DEC. 1966
MSC-715

Friction brake cushions an object in a vehicle from axially applied vibration and steady-state acceleration forces. The brake incorporates a doubly tapered piston that applies a controlled radial force to friction brake segments bearing against the walls of a cylinder.

B66-10610
SELECTIVE TUBE ROUGHENING INCREASES HEAT
TRANSFER CAPABILITY
CARLSON, L. W. DEC. 1966
M-FS-599

Selectively roughening inside surfaces of tubes increases the heat transfer capabilities, but, minimizes the pressure drop. This technique is used to construct roughened test sections for hydrogen heat transfer studies.

B66-10611
MULTILAYER REFRACTORY NOZZLES PRODUCED BY
PLASMA-SPRAY PROCESS
BLITON, J. L. RAUSCH, J. L. /IIT RES. INST./
DEC. 1966
WOO-318

Multilayer rocket nozzles formed by plasma spraying have good thermal shock resistance and can be reheated in an oxidizing environment without loss of coating adherence. Suggested application of this process are for the production of refractory components, which can be formed as surfaces of revolution. B66-10613
NEW WELDABLE HIGH STRENGTH ALUMINUM ALLOY
DEVELOPED FOR CRYGGENIC SERVICE
INNOVATOR NOT GIVEN /ALUMIUM CO. OF AM./ DEC.
1966
M-F8-737

Wrought aluminum alloy has improved low temperature notch toughness and weldability. This alloy can be mill-fabricated to plate and sheet without difficulty. Post-weld aging improves weld ductility and strength properties. A typical treatment is 8 hours at 225 deg F plus 16 hours at 300 deg F.

B66-10618
A DESIGN PROCEDURE FOR THE WEIGHT
OPTIMIZATION OF STRAIGHT FINNED RADIATORS
BURIAN, R. J. HARRIS, D. W. KETCHMAN, J. J.
/BATTELLE MEM. INST./ DEC. 1966 SEE ALSO
NASA-TN-D-3489
GSFC-547

Design technique evaluates optimum weight of space radiator consisting of finned, right circular cylinder.

B66-10620
TURBINE BLADE ROOT DESIGN CONCEPT PROMISES
SUPERIOR ALIGNMENT
KING, O. D. /N. AM. AVIATION/ DEC. 1966
M-FS-1685

Blade-to-hub mounting concept assures excellent alignment integrity and results in elimination of some welding problems associated with present designs. With this design, if rework is required, blade removal and replacement may be readily accomplished without damage to blade positioning media on the wheel hub.

B66-10626 HYDRAULICALLY CONTROLLED FLEXIBLE ARM CAN BEND IN ANY DIRECTION GRIFFIN, F. D. DEC. 1966 KSC-66-20

C-66-20
Arm assembly consisting of four flexible tubes controlled by a four-way hydraulic or pneumatic vaive can bend in any direction. The flexible arm could be used for probing areas that cannot be reached by ordinary tools, handling hazardous materials, and for graph recording.

QUICK ATTACH AND RELEASE FLUID COUPLING ASSEMBLY IS SELF-ALIGNING, SELF-SEALING HEROLD, C. P. STAHLEY, S. D. DEC. 1966 KSC-66-8

C-66-8
Fluid coupling assembly that is self-aligning, self-sealing and contains a bellow ball and socket coupling for quick attach and release is highly reliable and can handle cryogenic fluids where icing is encountered. The fluid coupling assembly is used in many fluid systems but is particularly applicable to cryogenic systems.

B66-10628
CONTROLLED RELEASE DEVICE PREVENTS DAMAGE
FROM DYNAMIC STRESSES
BURCHAM, T. W. DEC. 1966
KSC-66-14

Controlled release device that retards motion by extruding or drawing a tapered ductile pin through a die will control launch vehicle motion at liftoff. The device prevents the damaging dynamic stresses that are imposed on the vehicle when it is instantaneously released at full thrust.

B66-10633
PREDICTING SURFACE HEATING RATES AND
PRESSURES RESULTING FROM HOT EXHAUST GASES
PIESKI, E. T. SIMKIN, D. J. /N. AM. AVIATION/
DEC. 1966
MSC-971

Structural tests determine experimentally the amount of thermal protection required on the Apollo service module because of plume impingement heating. Exhaust flow field analysis correlates with flat plate heating rate and surface pressure in a vacuum.

B66-10634
EMERGENCY ESCAPE SYSTEM PROTECTS PERSONNEL
FROM EXPLOSION AND FIRE
OFFIK, W. G. /MARTIN CO./ DEC. 1966
KSC-66-12

:-66-12 Elevator-type emergency escape system evacuates personnel from tall structures, especially when the possibility of explosion or fire exists. The system consists of a spike shaped rescue cabin which descends along a vertical guide cable, penetrates the dome shaped roof of an underground blast shelter and stops in a deceleration bed of granular material.

B66-10635 LIGHTWEIGHT, ALL-METAL HOSE ASSEMBLY HAS HIGH FLEXIBILITY AND STRENGTH OVER WIDE RANGE OF TEMPERATURE AND PRESSURE BESSING, L. L. /N. AM. AVIATION/ DEC. 1966 M-FS-1831

Lightweight flexible, metal braid reinforced hose assembly is used in high and low pressure oxygen, helium, and hydrogen systems. These hose assemblies have been successfully used on the Saturn-II stage to provide joints of sufficient flexibility to absorb movement resulting from structural and load induced excursions and temperature variations.

B66-10641
POWER ARC WELDER TOUCH-STARTED WITH
CONSUMABLE ELECTRODE
JEANNETTE, J. C. /AIR REDUCTION CO./ DEC. 1966
M-FS-1485

Power arc welder formed as a hand-held welding gun touch-starts, retracts a consumable electrode to create the desired arc, and then commences feeding of the consumable electrode at the rate required to form the intended bead or spot. This device achieves uniform spot welds repeatedly.

B66-10642
DEVICE MEASURES REACTION ENGINE THRUST VECTOR
DEVIATIONS
LEOMARD, K. SHIEBER, H. /TRW SPACE TECHNOL.
LABS./ DEC. 1966
JPL-SC-163

Gimbal mounted test device measures thrust vector deviation of reaction engines in terms of angular displacement and thus precludes force interaction.

B66-10648
FUEL AND OXIDIZER VALVE ASSEMBLY EMPLOYS
SINGLE SOLENOID ACTUATOR
INNOVATOR NOT GIVEN /PARKER AIRCRAFT CO./ DEC.
1966
MSC-1046

Valve assembly simultaneously starts or stops the flow of oxidizer and fuel from separate inlet channels to reaction control motors. The assembly combines an oxidizer shutoff valve and a fuel shutoff valve which are mechanically linked and operated by a single high-speed solenoid actuator.

B66-10655
CHECK VALVE INSTALLATION IN PILOT OPERATED
RELIEF VALVE PREVENTS REVERSE PRESSURIZATION
OSWALT, L. /N. AM. AVIATION/ DEC. 1966
M-FS-1925

Two check valves prevent reverse flow through pilot-operated relief valves of differential area piston design. Title valves control pressure flow to ensure that the piston dome pressure is always at least as great as the main relief valve discharge pressure.

B66-10656
MECHANICAL GAUGE ACCURATELY CHECKS TUBING FLARE, ROUNDNESS, AND CONCENTRICITY CLARK, L. K. /IBM/ DEC. 1966
M-FS-1822

Mechanical gauge checks flare roundness and concentricity of metal tubing. The gauge, which is available from off-the-shelf standard toolmaking supplies, provides the needed accuracy and is easily operated.

B66-10662 METHOD FOR PREDICTING FRICTIONAL LOSS IN METAL BELLOWS AND FLEXIBLE HOSE CLEVELAND, J. R. DANIELS, C. M. /N. AM. AVIATION/ DEC. 1966 M-FS-883

Test data obtained concerning the frictional pressure loss to fluids flowing in unsleeved bellows and flexible hose. This data should be useful in the design of fluid systems where high delivery velocities are involved and flexible hose or bellows must be employed.

B66-10663 LATERAL RING METAL ELASTIC WHEEL ABSORBS SHOCK LOADING GALAN, L. /BENDIX CORP./ DEC. 1966 M-FS-1312

Lateral ring metal elastic wheel absorbs practically all shock loading when operated over extremely rough terrain and delivers only a negligible shock residue to associated suspension components. The wheel consists of a rigid aluminum assembly to which lateral titanium ring flexible elements with treads are attached.

B66-10665
SPHERICAL PIPE JOINT DELIVERS LOADS EQUALLY
TO MATING FLANGE

PFLEGER, R. O. /N. AM. AVIATION/ DEC. 1966 M-FS-807

Oxidizer inlet duct with a ball joint pipe fitting incorporating two spherical bearing races and balls in contact with centering cage springs transmits an evenly distributed load to the mating flange. This design should find application in piping systems where unequal load distributions exist.

B66-10667
SILAZANE ELASTOMER REMAINS RESILIENT AT
400 DEG C
INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DEC.
1966

Smooth, unfoamed elastomer is unaffected by common acids, alkalies, and organic solvents. Its thermal stability, chemical resistance, and physical properties make it of interest for various applications.

B66-10672
RESONANT FREQUENCY CAN BE ADJUSTED ON VIBRATION MOUNT HODGES, F. /RYAN AERON./ DEC. 1966
JPL-SC-134

M-FS-1144

Vibration mount allows adjustment of its resonant frequency and is insensitive to wide temperature variation. The concept is essentially a multidirectional, frictionally damped spring with an adjustable cap. The mount provides vibration isolation in both compression and shear and may be applicable to space use.

B66-10674
ELIMINATION OF ROCKET ENGINE ASYMMETRIC
LOADS DURING TESTS AT SEA LEVEL
JOHNSON, J. R. /N. AM. AVIATION/ DEC. 1966
M-FS-1730

Secondary injection concept eliminates asymmetric loads and may increase thrust rocket engine loads during sea level tests. The concept uses either a tubular manifold with evenly spaced injection ports or secondary fluid injected at the turbine exhaust inlet to the thrust chamber.

B66-10676 STUDY MADE OF DESTRUCTIVE SECTIONING OF COMPLEX STRUCTURES FOR EXAMINATION RILEY, T. DEC. 1966 LEWIS-341

Advances in destructive sectioning of very small or complex structures are discussed. Examination is made by filling the structure in a vacuum with a low viscosity potting compound and then cutting without danger of spatial disorientation.

B66-10677 Study Made to Control Depth of Potting COMPOUND FOR HONEYCOMB SANDWICH FASTENERS CUSHMAN, J. /GEN. DYN./CONVAIR/ DEC. 1966 LEWIS-370

Study determines optimum fastener insert size and shape, type of embedding cement, diameter, undercut and depth control by fiberglass plug in a honeycomb structure for maximum tensile strength. The best potting compound is 5-5-1 weight mixture of epoxy resin, curing agent, and milled glass fibers.

B66-10678
IMPROVED ROLLING ELEMENT BEARINGS PROVIDE
LOW TORQUE AND SMALL TEMPERATURE RISE IN
ULTRAHIGH VACUUM ENVIRONMENT
GLENN, D. C. DEC. 1966
LEWIS-359

wis-559
Rolling element bearing with stainless steel races and rolling elements and a porous bronze cage successfully operates in ultrahigh vacuum environments at a low torque and with small temperature rise. All components are burnished in molybdenum disulfide.

B66-10683
VALVE EFFECTIVELY CONTROLS AMOUNT OF
CONTAMINANT IN FLOW STREAM
SCHNITZER, T. E. DEC. 1966
M-FS-1771

Contaminant valve with a coaxial groove rotor uniformly deposits contaminant into a flow stream under full pressure and flow conditions. The valve tests filters and filter elements of hydraulic oil, fuel, or lubricant systems without any detrimental effect on the performance.

B66-10686
ACTUATOR DEVICE SCHEDULES RATE OF VALVE
CLOSURE
INNOVATOR NOT GIVEN /WHITTAKER CORP./ DEC. 1966
M-FS-1556

Prevalve actuator schedules the closure rate of a valve. The actuator is spring-loaded to produce a normally open valve and pneumatically powered to close the valve. The closure rate is controlled by means of pneumatic snubber and booster circuitry.

B66-10688
PREFORMED STIFFENERS USED TO FABRICATE
STRUCTURAL COMPONENTS FOR PRESSURIZED
TANKS
LEWIS, J. C. SHERBA, E. S. /N. AM. AVIATION/
DEC. 1966
M-FS-1796

Process of fabricating stiffened section components of pressurized tanks for aerospace use was developed. A potential use of the fabrication process is the production of gore and quarter-panel sections of hydrogen and oxygen tanks for space-vehicle boosters.

B66-10694
MECHANICAL DEVICE ACCURATELY MEASURES RF
PHASE DIFFERENCES IN VHF OR UHF RANGES
HOPP, L. A. /N. AM. AVIATION/ DEC. 1966
M-FS-1738

Dual range linear measurement device accurately measures RF phase differences in either VHF or UHF ranges. The device has a capability consisting of a course range extending to 30 cm readable to 1 mm, and any fine range portion of 2.5 cm readable to .01 mm.

B66-10695
MOTION DRIVE SYSTEM IS ACCURATELY CONTROLLED
IN THE 1-MICRON RANGE
MORECROFT, J. H. DEC. 1966
JPL-864

Motion drive system has been developed for use with interferometers where accurate control of minuscule distance in the 1-micron range is of prime importance. The drive system is applicable to any device that requires extremely accurate positioning control.

B66-10697 COMBINATION DOUBLE DOOR HIGH-VACUUM VALVE PROVIDES ACCESS TO VACUUM CHAMBER YAGER, S. P. DEC. 1966 JPL-849

Double door provides an extreme high vacuum seal as well as access to a vacuum chamber for insertion of test devices into the vacuum environment. This arrangement is applicable to any vacuum chamber and could be of value in cryopumping or mechanically pumped chambers.

B66-10698
MECHANISM FACILITATES COATING OF INNER
SURFACES OF METAL CYLINDERS
BILLINGSLEY, J. M. TAFT, A. R. DEC. 1966
GSFC-515

Cylinder is rotated about shielded hot filament to vapor deposit thin coatings of aluminum or other metallic substances on the inner surface of a cylinder while avoiding heat-producing high-density current flow which causes outgassing of the coating surface. This method is acceptable for glass or metal.

B66-10702
TEFLON SHEET PERMITS VALVE AND VALVE
OPERATOR TO MOVE AS A SINGLE UNIT IN A
CRYOGENIC PIPE LINE
KINDER, S. K. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1966
NU-0077

Free floating support system in cryogenic pipe lines maintains the valve and valve operator in alignment. A Teflon sheet that is placed between the slide support plate and the base plate permits the valve and valve operator to move freely, as a unit, when the pipe line moves.

B66-10703
SILVER PLATING TECHNIQUE SEALS LEAKS IN
THIN WALL TUBING JOINTS
BLENDERMAN, W. H. /N. AM. AVIATION/ DEC. 1966
NU-0090

Leaks in thin wall tubing joints are sealed by cleaning and silver plating the hot gas side of the joint in the leakage area. The pressure differential across the silver during hydrostatic test and subsequent use forces the ductile silver into the leak area and seals it.

B66-10704
METAL BOOT PERMITS FABRICATION OF
HERMETICALLY SEALED SPLICES IN METAL
SHEATHED INSTRUMENTATION CABLES
CHAMBERS, G. /WESTINGHOUSE ASTRONUCL. LAB./ DEC.
1966 SEE ALSO B66-10705
NU-0083

-0083
Metal boot splices hard sheathed instrumentation cables used with high temperature strain gauges and thermocouples. Silver brazing the conductors together, hermetically seals the splice. This boot is a highly reliable sealed splice which is equally effective at cryogenic temperatures, high temperatures, nuclear environments, and combinations of the above.

B66-10707
PNEUMATIC WRENCH RETAINS OR DISCHARGES NUTS
OR BOLTS AS DESIRED
BOUILLE, J. R. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1966
NU-0085

Pneumatic wrench grips, screws or unscrews, and discharges a nut or bolt as desired. The device consists of a standard pneumatic wrench modified with a special hex bolt head socket assembly and a diaphragm air cylinder.

B66-10708
AIR BEARING PROVIDES FRICTION-FREE SUPPORT
FOR SHAKER SYSTEM SLIP TABLE
SKOFF, R. W. /WESTINGHOUSE ASTRONUCL. LAB./ DEC.
1966
NU-0086

Air bearing system supports a shaker system slip table with minimum friction. At each corner of a square of grooves made on the table, a hole is drilled through the table and fitted with air connections. Air pressure is simultaneously fed to the four fittings forming an air bearing. B66-10711
CARRIAGE SYSTEM REMOTELY MOVES DRAWER OVER
EXTENDED DISTANCE
SALZANO, G. H. /PARSONS-JURDEN CORP./ DEC. 1966
NU-0092

In the transferring of material remotely through thick radiation shielding walls, a drawer is mounted on rollers which operate on rails carried on a slide carriage to eliminate the feature of the slide hardware projecting beyond the drawer when the drawer is extended its full distance.

B66-10712 SIMPLE MOTOR DRIVE SYSTEM OPERATES HEAVY HINGED DOOR PITKIN, R. G. /PARSONS-JURDEN CORP./ DEC. 1966 NU-0093

Motor drive system remotely operates heavy steel radiation shielding doors. The drive consists of a standard motor reducer unit which is mounted on the door. This reducer drives a sprocket which is linked by chain to a fixed sprocket of the same size on the door jamb.

B66-10713 SWING-OUT RAIL SYSTEM SEPARATES OVERHEAD CRANE RAILS

PITKIN, R. G. /PARSONS-JURDEN CORP./ DEC. 1966 NU-0094

Swing-out rail system separates and reconnects the overhead traveling crane rails of a building to provide for the passage of a thick concrete radiation shield sliding door through the rails. In the swing-out position, the rail cantilevered from an axial shaft.

B67-10004
MICROMANIPULATION TOOL IS EASILY ADAPTED TO
MANY USES
SHLICHTA, P. J. JAN. 1967
JPL-129

A special micromanipulation tool equipped with a plunger mounted in a small tube can be easily adapted to such work operations as cutting, precision clamping, and spot welding of microscopic filaments or other parts. This tool is valuable where extreme steadiness of high magnification is required.

B67-10006
COMPLEX SURFACES PLATED BY THIN-FILM
DEPOSITION IN ONE OPERATION
BUCKLEY, D. H. PRZYBYSZEWSKI, J. S. SPALVINS, T.
JAN. 1967
LEWIS-292

Ion plating deposits thin film on complex surface in one operation. The ionized materials follow electric lines of force to all points on the objects, uniformly plating the surface from all sides simultaneously.

B67-10010
PROCESS SEQUENCE PRODUCES STRONG, LIGHTWEIGHT
REFLECTORS OF EXCELLENT QUALITY
READER, A. F. RUSSELL, W. E. WERNER, E. A. FEB.
1967
LEWIS-331

Large compound curved surfaces for collecting and concentrating radiation are fabricated by the use of several common machining and forming processes. Lightweight sectors are assembled into large reflectors. With this concept of fabrication, integrally stiffened reflective sectors up to 25 square feet in area have been produced.

B67-10011
ELASTIC GUIDES REDUCE HYSTERESIS EFFECT IN
BELLEVILLE SPRING PACKAGE
HC GLASHAN, F., JR. TOTH, L. R. JAN. 1967
JP1-910

Peripheral support guides that elastically flex with the slight breathing on radial displacement during actuation can greatly reduce the hysteresis present in a Belleville spring package. This technique provides a control device that enhances the precision of pressure regulating valves, pressure switches, and vacuum actuators.

B67-10018
TECHNIQUE CUTS TIME AND COST OF BENDING
JACKETED PIPING
GARDNER, J. N. /N. AM. AVIATION/ FEB. 1967
WSO-333

Technique uses a stiff medium in the annular space between inner and outer pipes of jacketed piping in transfer lines. The process eliminates splitting and welding and makes possible the use of standard pipe-bending tools.

B67-10019
ORBITAL TUBE FLARING SYSTEM PRODUCES TUBING CONNECTORS WITH ZERO LEAKAGE WILLIAMS, J. R. FEB. 1967
M-FS-2016

An orbital tube flaring system produces tubing connectors with a zero-leak potential needed in high pressure hydraulic and pneumatic systems. The flaring system incorporates a rolling cone and rolling die to closely control flare characteristics.

B67-10023
TESTS SHOW THAT ALUMINUM WELDS ARE IMPROVED BY BEAD REMOVAL HOOD, D. W. /BOEING CO./ FEB. 1967
M-FS-1817

Tests with 2218-T87 aluminum alloy plate indicate improvements in strength, ductility, fatigue properties, and burst pressure result when one or both of the top and bottom weld beads are removed. There is, however, a drop in yield strength. The consistency of test data is considerably improved by weld bead removal.

B67-10039
SIMPLE PUMP MAINTAINS LIQUID HELIUM LEVEL IN
CRYOSTAT
BUCHHOLD, T. A. /GE/ MAR. 1967
M-FS-1763

Reciprocating pump maintains a precise level of liquid helium in a cryostat. The pump contains a niobium solenoid armature that is maintained in a superconductive state by the liquid helium.

B67-10043 HIGH SPEED BLOWDOWN SYSTEM PROVIDES RAPID PRESSURE LOSS BRITTAN, H. C. /GEN. DYN./CONVAIR/ MAR. 1967 LEWIS-375

High speed blowdown takes advantage of discretely maintained differential pressures to vent a test chamber from high to ambient pressure with minimum time lag. This technique is advantageous where the use of pyrotechnics is undesirable.

B67-10045
RESISTANCE HEATING RELEASES STRUCTURAL ADHESIVE
GLEMSER, N. N. /BOEING CO./ MAR. 1967
M-FS-1607

Composite adhesive package bonds components together for testing and enables separation when testing is completed. The composite of adhesives, insulation and a heating element separate easily when an electrical current is applied.

B67-10047
VISCO SEAL DESIGN OFFERS ZERO-LEAKAGE AND
WEAR-FREE CHARACTERISTICS
KETOLA, H. N. MC GREW, J. M. /GE/ MAR. 1967 SEE
ALSO NASA-TM-X-52245
WSO-329

Study provides specific design criteria in sealing applications for continuous duty pumps used in bulk liquid transfer. A basic sealing equation predicts visco seal performance in the turbulent realms.

B67-10048
TECHNIQUE FOR STRIPPING TEFLON INSULATED
WIRE
BABB, B. D. /HAYES INTERN. CORP./ MAR. 1967
M-FS-1774

Cryogenic stripping of Teflon insulated wire leaves no residue and produces no physical damage. After the wire is immersed in liquid nitrogen,

bent slightly, and returned to room temperature, the Teflon is removed by fingernails or flat-nosed pliers.

B67-10052 LABORATORY ARC FURNACE FEATURES INTERCHANGEABLE HEARTHS ARMSTRONG, J. L. KRUGER, O. L. MAR. 1967 ARG-125

Laboratory arc furnace using rapidly interchangeable hearths gains considerable versatility in casting so that buttons or special shaped castings can be produced. It features a sight glass for observation.

B67-10059
VACUUM CHAMBER IS REMOTELY SEALED BY
EUTECTIC METAL
CORDOVA, R. SACOANE, G. H. /AEROJET-GEN. CORP./
APR. 1967
NU-0091

Vacuum chamber is remotely sealed by a design using metal seal blades which are inserted into a molten eutectic metal by pressurizing an expansion bellows. The process increases allowable manipulations by improving working space and safety factors.

B67-10063 FLUIDIC OSCILLATOR USED AS HUMIDITY SENSOR PROKOPIUS, P. R. MAR. 1967 LEWIS-340

Fluidic oscillator measures the humidity of the hydrogen stream leaving a hydrogen-oxygen fuel cell. The instrument provides continuous readings with a certain speed of response.

B67-10064
NEGATIVE FEEDBACK SYSTEM REDUCES PUMP
OSCILLATIONS
ROSENMANN, W. /N. AM. AVIATION/ MAR. 1967
M-FS-1852

External negative feedback system counteracts low frequency oscillations in rocket engine propellant pumps. The system uses a control piston to sense pump discharge fluid on one side and a gas pocket on the other.

B67-10066
HOLDING FIXTURE FACILITATES PIPE THREAD
GAGE MEASUREMENTS
CUPPS, B. HILL, J. /N. AM. AVIATION/ MAR. 1967
M-FS-2009
Holding fixture that holds the thread gage and
three wires in the proper relationship facilitat

three wires in the proper relationship facilitates the measurement of the pitch diameter of the tapered threads of a pipe thread gage. Modified, this device can be used to involute spur gears.

B67-10067

ADJUSTABLE, SELF-LOCKING LADDER INCLUDES

OPTIONAL WORK PLATFORM

WEBSTER, R. E. /N. AM. AVIATION/ APR. 1967

M-FS-1922

Height-adjustable ladder with a self-locking
platform at its top makes elevated locations more
accessible, increases the quantity and size of
tools handled there, and decreases the risk of
disturbance or damage to components. The
retractable platform adapts the ladder to normal

B67-10073
COLDPLATE OF PIN FIN DESIGN MAKES EFFICIENT
HEAT EXCHANGER
DYER, W. F. /N. AM. AVIATION/ APR. 1967
MSC-1093

Flat, hollow coldplate that permits the flow of coolant liquid within it removes heat from heat-generating electronic equipment. This coldplate solves usual problems of bulk, weight, and excessive pumping requirements.

B67-10081 RIGID-BODY MOTION EXTRACTED FROM TOTAL MOTION OF A FLEXIBLE BODY HOWARD, J. C. APR. 1967 ARC-63

Control system eliminates or reduces flexibility

effects on the manual and automatic control of large flexible vehicles. It extracts rigid-body and flexible-body motion and adapts well when a flexible-body frequency coincides or nearly coincides with the control mode frequency.

B67-10094
ULTRASONICS PERMITS BRAZING COMPLEX STAINLESS
STEEL ASSEMBLY WITHOUT FLUX
BAKER, W. H. /WESTINGHOUSE ASTRONUCL. LAB./ APR.
1967
NU-0115

Ultrasonic vibration of an assembly of stainless steel instrumentation tubes ensures brazing without flux. Vibration with an ultrasonic transducer permits the brazing material to flow down each tube in contact with a seal plug installed in a pressure vessel wall.

B67-10096
UNDERCOAT PREVENTS BLISTERING OF SILVER
PLATING AT ELEVATED TEMPERATURES
KUSTER, C. A. /N. AM. AVIATION/ APR. 1967
M-FS-2049

Gold undercoat prevents blistering in the silver plating of Inconel 718 seals from steam at high temperatures. The undercoat is diffused into the surface of the parent metal by baking prior to silver plating.

B67-10098
TOROIDAL RING PREVENTS GAS IGNITION AT VENT STACK DUTLET
SPRING, T. R. /N. AM. AVIATION/ APR. 1967
M-FS-2042

Torodial ring welded to the vent stack outlet prevents static discharges which ignite combustible gases in a venting system. The ring inhibits the flow of current by removing the cause of turbulence characteristics of a sharply defined vent exit.

TOOL FACILITATES INSTALLATION OF MARMON
CLAMPS
PETERS, G. A. WARMING, K. /N. AM. AVIATION/ MAY
1967
M-FS-2039

Adjustable tool facilitates the installation of Marmon clamps. It provides sufficient mechanical advantage to force the clamps into place, permitting one man operation. Two handles provide the major leverage, and a pivoting arm with a slot enables snap-out action.

B67-10107 COMPOSITE WELD ROD CORRECTS INDIVIDUAL FILLER WEAKNESSES GRIMALDO, S. /N. AM. AVIATION/ MAY 1967 M-FS-1923

Composite filler wire welds together an assembly made from components of Rene 41 nickel base alloy. Using equal parts of Rene 41 and Hastelloy W weld wire in the filler reduces the cracking and weaknesses of the individual parent metals.

B67-10117
INVESTIGATION OF PRESSURIZED TOROIDAL SHELLS
INNOVATOR NOT GIVEN /MARTIN CO./ MAY 1967 SEE
ALSO NASA-CR-261
HQ-27

The effect of internal pressure and external load on thin-walled toroidal shells was investigated. The result of the analysis agreed with experimental results on a 54-inch-diameter toroidal shell subjected to both pressurization and axial loading.

B67-10123 LOCK-DISCONNECT MECHANISM GIVES POSITIVE RELEASE TO JOINED BODIES BEAVER, C. E. /BOEING CO./ MAY 1967 M-FS-2147

Umbilical system mechanism locks and unlocks through an internal collet device that is controlled by a single reciprocating shaft. The reduction in the number of operational parts results in higher reliability.

B67-10154
ASPIRATOR INCREASES RELIEF VALVE POPPET
STROKE
BIDDLE, M. E. /N. AM. AVIATION/ MAY 1967
HQ-77

Addition of an aspirator to a relief valve increases the valve poppet stroke under dynamic flow conditions. The aspirator allows poppet inlet dynamic forces to overcome relief valve spring force. It reduces the fluid pressure in the skirt cavity by providing a low pressure sense probe.

B67-1013 SINGLE WRENCH SEPARATES NUTS FROM FREE-FLOATING BOLTS THOMPSON, C. /WESTINGHOUSE ASTRONUCL. LAB./ MAY 1967 NUC-10013

Pneumatic impact wrench removes the nuts from freely turning bolts when the heads cannot be reached or the shafts anchored. It uses a fixed screwdriver blade that fits a slot cut into the threaded end of the bolt shaft.

B67-10167
HYDROSTATIC FORCE USED TO HANDLE OUTSIZED,
HEAVY OBJECTS
CRAFT, G. W. STARKEY, A. W. /BELLCOMM. INC./
JUN. 1967
HQ-90

Specially fitted barge is used to load and transport large, heavy objects to a dock side site. There the barge itself can lift, rotate, and position the objects. Typical functions are economically accomplished by water buoyancy.

B67-10174 SCANNING MEANS FOR CASSEGRAINIAN ANTENNA GIANDOMENICO, A. RUSCH, W. V. T. JUN. 1967 JPL-946

Mechanical antenna beam switching device detects weak signals over atmospheric and equipment noise sources in microwave antennas. It periodically nutates the paraboloidal subdish in a Cassegrainian reflector system.

B67-10177
EFFECT OF WELDING POSITION ON POROSITY
FORMATION IN ALUMINUM ALLOY WELDS
HARYUNG, J. WROTH, R. S. /DOUGLAS AIRCRAFT/
JUN. 1967
M-FS-2318

Program investigates the effects of varied welding positions on weld qualities. Progressive changes in bead geometry occur as the weld plane angle is varied from upslope to downslope. The gravitational effect on the weld puddle varies greatly with welding position.

B67-10178
FIXTURE FACILITATES HELIUM LEAK TESTING OF
PIPE WELDS
RONEY, J. A. /HAYES INTERN. CORP./ JUN. 1967
M-FS-2167

Fixture facilitates inspection testing of circumferential pipe welds for vacuum tightness, using helium gas as a leakage tracer in conjunction with a mass spectrometer. It consists of a split rubber torus and a mating clamping ring with a vacuum hose fitting.

B67-10180
WORK PLATFORM IS SUPPORTED BY SELF-LOCKING BLADES
RUDDEROW, T. /N. AM. AVIATION/ JUN. 1967
M-FS-2297

Work platform has a supporting plate to engage the deck edge of the supporting structure when lowered into place. The plate is attached to blades hinged to the platform, rigidly supporting the platform when latched, and allowing the platform to be moved away when unlatched.

BOY-10163
CONTINUOUS INTERNAL CHANNELS FORMED IN ALUMINUM FUSION WELDS
GAULT, J. SABO, W. /N. AM. AVIATION/ JUN. 1967
M-FS-2399

Process produces continuous internal channel systems on a repeatable basis in 2014-T6 aluminum. Standard machining forms the initial channel, which is filled with tungsten carbide powder. TIG machine fusion welding completes formation of the channel. Chem-mill techniques enlarge it to the desired size.

B67-10195
WELD PROCEDURE PRODUCES QUALITY WELDS FOR
THICK SECTIONS OF HASTELLOY-X
FLENS, F. J. FLETCHER, C. W. GLASIER, L. F., JR.
/AEROJET GEN./ JUN. 1967
NUC-10048

Welding program produces premium quality, multipass welds in heavy tube sections of Hastelloy-X. It develops semiautomatic tungsten/inert gas procedures, weld wire procurement specifications, material weld properties, welder-operator training, and nondestructive testing inspection techniques and procedures.

B67-10198
GLASS BEAD SHOT PEENING RETARDS STRESS
CORROSION FAILURE OF TITANIUM TANKS
BALES, T. T. LISAGOR, W. B. MANNING, C. R.
SEYFFORT, M. B. JUN. 1967
LANGLEY-319

Rigidly controlled shot peening retards the incompatibility between titanium alloys and nitrogen tetroxide in rocket-propellant storage tanks. This sets up a residual compressive stress in the surface of a material which reduces tensile stresses in the material fibers, alleviating stress corrosion.

B67-10200
WORKMANSHIP STANDARDS FOR FUSION WELDING
PHILLIPS, M. D. /AEROJET GEN./ JUN. 1967
NUC-10050

Workmanship standards manual defines practices, that adhere to rigid codes and specifications, for fusion welding of component piping, assemblies, and systems. With written and pictorial presentations, it is part of the operating procedure for fusion welding.

B67-10202

APPARATUS FOR FABRICATION OF AMERICIUMBERYLLIUM NEUTRON SOURCES PREVENTS CAPSULE CONTAMINATION

MOHR, W. C. VAN LODM, J. A. JUN. 1967

ARG-184

Modified gloved enclosure is used to fill a capsule with a mixture of americium and beryllium radioactive powders to seal weld the opening, and to test it for leaks. It contains a horizontal partition, vortex mixer, mounting press, welder, test vessel, and radiation shielding to prevent surface contamination.

B67-10210 ENVIRONMENTAL STUDY OF MINIATURE SLIP RINGS RADMIK, J. L. /IIT RES. INST./ JUN. 1967 M-FS-2443

Investigation studied the long term operation of miniature slip ring assembles in high vacuum of space and included the influence of ring, brush, and insulator materials on electrical noise and mechanical wear. Results show that soft metal vapor plating and niobium diselenide miniature slip rings are beneficial.

B67-10211 HIGH-STRENGTH BRAZE JOINTS BETWEEN COPPER AND STEEL KUHN, R. F. /N. AM. AVIATION/ JUN. 1967 M-FS-2519

High-strength braze joints between copper and steel are produced by plating the faying surface of the copper with a layer of gold. This reduces porosity in the braze area and strengthens the resultant joint.

B67-10212
DESIGN CONCEPT TO DECREASE RELATIVE SPEED
OF BALL BEARINGS
JESMAN, S. /N. AM. AVIATION/ MAY 1967

M-FS-2003

Intermediate ring decreases the rolling speed of a ball bearing relative to the rotational speed of the shaft. It has raceways on its inner and outer peripheries and an additional row of balls. The modification permits operation at much higher shaft speeds than usual.

B67-10214
SYSTEM EMABLES DIMENSIONAL INSPECTION OF
VERY LARGE STRUCTURES
SIMPSON, R. R. /BOEING CO./ JUN. 1967
M-FS-2477

Precision rotary table with an integrated optical tooling bar system enables accurate and rapid measurement of linear and angular dimensions on very large structures of any configuration. The structure is mounted on the turntable, which can be rotated to expose any desired surface.

B67-10219 SOLEMOID VALVE DESIGN HAS ONE MOVING PART ANDERSON, J. W. JUL. 1967 NPO-10039

Solenoid valve structure has only one moving part, a ball and spring assembly. This eliminates wear caused by sliding motion contact between stationary and moving parts or between moving parts.

B67-10225
TEMPERATURE RESPONSIVE VALVE WITHSTANDS
HIGH IMPACT LOADING
GRAM, M. B. JUL. 1967
NPO-10186

Valve regulates the flow of a reactant to a chemical heater used in a space application and withstands extreme impact loading. The valve has an upper and a lower housing, the lower containing an inlet and an outlet port, and upper containing a cavity.

B67-10237
POST-STRESSED CONCRETE FOUNDATION MAY REDUCE MACHINERY VIBRATION FISTEDIS, S. H. JUL. 1967
ARG-130

Post-stressing concrete mat foundation reduces excessive vibrations in machinery. The mat is stressed in compression after the machinery is mounted, thus closing any cracks in it, altering the distribution of the soil subgrade reaction on the mat, and changing the mat-subgrade natural frequency.

B67-10238
TRAVELING WIRE ELECTRODE INCREASES
PRODUCTIVITY OF ELECTRICAL DISCHARGE
MACHINING /EDM/ EQUIPMENT
KOTORA, J., JR. SMITH, S. V. AUG. 1967
ARG-136

Traveling wire electrode on Electrical Discharge Machining /EDM/ equipment reduces the time requirements for precision cutting. This device enables cutting with a minimum of lost material and without inducing stress beyond that inherent in the material. The use of wire increases accuracy and enables tighter tolerances to be maintained.

B67-10241
A SIMPLIFIED PERT SYSTEM
DUNCAN, J. G. MEYER, H. L. WHITE, G. R. /DOUGLAS AIRCRAFT CO./ JUL. 1967
M-FS-2267

Modified PERT technique processes the input data and arranges it in familiar graphic form in a booklet which is issued at periodic intervals. The tabulated data provides readily available information to management personnel concerned with monitoring the progress of a program.

B67-10244
CABLE CLAMP BOLT FIXTURE FACILITATES
ASSEMBLY IN CLOSE QUARTERS
SUNDERLAND, G. H. /BOEING CO./ JUL. 1967
KSC-67-80

Cable clamp bolt holding fixture facilitates forming of electrical cable runs in limited

equipment space. The fixture engages the threads of the short clamp bolt through the clamp and maintains tension against clamp tendency to open while the operator installs the nut without difficulty.

B67-10256 LINE ADAPTER PROVIDES QUICK DISCONNECT UNDER MODERATE SIDE LOADING WOLFRAM, E. A. /N. AM. AVIATION/ JUL. 1967 M-FS-2159

Line adapter acts as quick and simple disconnect system. It quickly separates upon the application of a side load of 15 pounds with standing line pressure at 100 psig.

B67-10271
PIPE JOINTS REINFORCED IN PLACE WITH FITTED
ALUMINUM SLEEVES
CORTEZ, I., JR. SIEGFRIED, J. WOBIG, O. AUG.
1967
MSC-11109

Installation of an aluminum sleeve, using specially designed tools, reinforces solder—sealed ferrule joints in installed small-diameter aluminum tubing. Tubing joints reinforced by this method withstand considerable torsional, tensional, and vibrational stresses at moderately elevated temperatures.

B67-10272
PORTABLE MACHINE WELDING HEAD AUTOMATICALLY
CONTROLS ARC
OLEKSIAK, C. E. ROBB, M. A. /N. AM. AVIATION/
AUG. 1967
M-FS-12763

Portable weld tool makes weld repairs out-ofstation and on the side opposite the original weld. It provides full automatic control of the arc voltage, current, wire feed, and electrode travel speed in all welding attitudes. The device is readily adaptable to commercially available straight polarity dc weld packs.

B67-10273
SPHERICAL JOINT CONNECTS AXIALLY MISALIGNED
FLANGES
MC GROARTY, J. D. /N. AM. AVIATION/ AUG. 1967
M-FS-2238

Interconnecting straight tube connects axially misaligned flanges in a duct assembly. It adjusts to accommodate variations in relative location of the flanges by pivoting. Adjustment is by spherical mating faces and a spherical-faced indexing swivel flange for bolting backup.

B67-10283
CONCEPT FOR MODIFYING DRAFTING INSTRUMENTS
TO MINIMIZE SMEARING
RENNIE, T. A. /BOEING CO./ AUG. 1967
KSC-10056

Ball bearing standoffs added to drafting instruments enable the instruments to be moved about, with their surfaces out of contact with the drawing paper. This provides a safeguard against smearing of the lines.

B67-10285 STATIC SEAL CONCEPT TO ACCOMMODATE SEAT TOLERANCES HARDY, J. F., III /N. AM. AVIATION/ AUG. 1967 M-FS-1854

Static seal permits compensation for flange separation and flange-groove tolerances without large seal-leg deflections.

B67-10291
REMOTELY OPERATED HIGH PRESSURE VALVE
PROTECTS TEST PERSONNEL
HOWLAND, B. T. /N. AM. AVIATION/ AUG. 1967

High pressure valve used in testing certain spacecraft systems, is safely opened and closed by a remotely stationed operator. The valve is self-regulating in that if the incoming pressure drops below a desired value the valve will automatically close, warning the operator that the testing pressure has dropped to an undesired level.

B67-10292
WELDING OF AM350 AND AM355 STEEL
DAVIS, R. J. WROTH, R. S. /DOUGLAS AIRCRAFT CO./
AUG. 1967
M-FS-2314

A series of tests was conducted to establish optimum procedures for TIG welding and heat treating of AM350 and AM355 steel sheet in thicknesses ranging from 0.010 inch to 0.125 inch. Statistical analysis of the test data was performed to determine the anticipated minimum strength of the welded joints.

B67-10293
SQUARE TUBING REDUCES COST OF TELESCOPING
BRIDGE CRANE HOIST
BERNSTEIN, G. GRAAE, J. SCHRAIDT, J. AUG. 1967
ARG-13

Using standard square tubing in a telescoping arrangement reduces the cost of a bridge crane hoist. Because surface tolerances of square tubing need not be as accurate as the tubing used previously, and because no spline is necessary, the square tubing is significantly less expensive than splined telescoping tubes.

B67-10308
JACKETED CRYDGENIC PIPING IS STRESS
RELIEVED
BOWERS, W. M. /N. AM. AVIATION/ AUG. 1967
M-FS-985

Jacketed design of piping used to transfer cryogenic fluids, relieves severe stresses associated with the temperature gradients that occur during transfer cycles and ambient periods. The inner /transfer/ pipe is preloaded in such a way that stress relief takes place automatically as cycling occurs.

B67-10321
APPLICATION OF DISTORTED MODELS IN
DEVELOPING SCALED STRUCTURAL MODELS
WHITE, R. W. /WYLE LABS./ SEP. 1967
M-FS-2540

In the design and development of dynamically similar structural models a distorted model of the panel is used. The panel thickness is made larger than that dictated by geometric scaling, and the mass of the panel is decreased by adding mass to the surface of the panel to counteract the additional stiffness obtained by the thickness increase.

B67-10325 SEGMENTED, ARCH-BOUND CARBON SEAL IS PRESSURE LOADED BURCHAM, R. E. /N. AM. AVIATION/ SEP. 1967 M-FS-12777

Conventional segmented carbon seal has a low leakage rate and minimum loading requirements for a high pressure, large diameter fluid impeller shaft with large axial and radial movements. Modifications in the segments allow part of the load to be carried in hoop stress.

B67-10341
DEVELOPMENT OF TECHNOLOGY FOR HOT-DRAPE FORMING OF LARGE TORUS SECTIONS
INNOVATOR NOT GIVEN /FAIRCHILD HILLER
CORP./ OCT. 1967
M-FS-12141

Compound-contoured sheet metal structure development is aided by hot-drape forming, a method combining hot-stretch forming, die quenching, and age forming. It permits in-process control of material gauge thin-out through a flexible process of heat zone control.

B67-10353
ULTRASONIC WRENCH PRODUCES LEAKTIGHT
CONNECTIONS
BLAISE, H. T. MAROPIS, N. /TECHNIDYNE/ OCT.
1967
M-FS-12561

Ultrasonic wrench system produces leaktight seals in flared tubing connections. It induces a flexural vibration mode in the coupling nut. The system consists of a frequency converter, a junction box, and wrench assembly.

B67-10355
EXTRUSION OF SMALL-DIAMETER, THIN-WALL
TUNGSTEN TUBING
AUG. 1967 SEE ALSO NASA-TN-D-3772
LEWIS-335

Small-diameter, thin-wall seamless tubing of tungsten has been fabricated in lengths of up to 10 feet by hot extrusion over a floating mandrel. Extrusion of 0.50-inch-diameter tubing over 0.4-inch-diameter mandrels was accomplished at temperatures ranging from 3000 degrees to 4000 degrees F.

B67-10358 STEEL TEST PANEL HELPS CONTROL ADDITIVES IN PYROPHOSPHATE COPPER PLATING HOLLAR, W. T. /GEN. DYN./CONVAIR/ OCT. 1967 LEWIS-10101

Test panel helps control maximum tolerance level for plating solution contaminants. It provides low-, medium-, and high-current density areas such as exist in production plating, and plating is examined for uniformity of texture and ductility.

B67-10360
PRESSURE LEVELS AND PULSATION FREQUENCIES
CAN BE VARIED ON HIGH PRESSURE/FREQUENCY
TESTING DEVICE
ROUTSON, J. W. /GEN. DYN./CONVAIR/ OCT. 1967
LEWIS-10205

Hydraulic system components test device obtains a pulsating pressure from a hydraulic actuator that is being driven by a vibration exciter of sufficient force and displacement. Input to the exciter controls the frequency of pressure variation.

B67-10364
RESILIENT BEARING SUPPORTS ARE GAS
CONTROLLED
SIX, L. D. /GARRETT CORP./ OCT. 1967 SEE ALSO
NASA-CR-706
LEWIS-10109

Self-acting, partial-arc, pivoted-pad bearings in which the bearing-to-journal applied load is pneumatically controlled are used in the operation of a radial flow gas generator where shaft speeds are on the order of 38,500 rpm.

B67-10373
ECCENTRIC DRIVE MECHANISM IS ADJUSTABLE
DURING OPERATION
DENISON, O. J., JR. KUEHNE, B. J. /GE/ OCT.
1967
M-FS-2576

Eccentric drive mechanism can be adjusted throughout its off-center range while in the operating mode to change the width of a weld weaving pattern. No associated tooling need be removed.

B67-10377
STABILIZING STAINLESS STEEL COMPONENTS FOR CRYOGENIC SERVICE
HOLDEN, C. F. /N. AM. AVIATION/ OCT. 1967
M-FS-13127

Warpage and creep in stainless steel valve components are decreased by a procedure in which components are machined to a semifinish and then cold soaked in a bath of cryogenic liquid. After the treatment they are returned to ambient temperature and machine finished to the final drawing dimensions.

B67-10379
MACHINE TESTS SLOW-SPEED SLIDING FRICTION IN HIGH VACUUM
SKYRUS, J. WILKINSON, C. /DOUGLAS AIRCRAFT/
OCT. 1967
M-FS-12341

Testing machine that operates without any lubrication of the machine elements within the vacuum chamber measures static friction and sliding friction at very low speeds. Moving parts are held to a minimum to simplify operation in the vacuum chamber.

867-10380 SINGLE-SOURCE MECHANICAL LOADING SYSTEM PRODUCES BIAXIAL STRESSES IN CYLINDERS FLOWER, J. F. STAFFORD, R. L. /DOUGLAS AIRCRAFT CO./ OCT. 1967 M-FS-12530

Single-source mechanical loading system proportions axial-to-hoop tension loads applied to cylindrical specimens. The system consists of hydraulic, pneumatic, and lever arrangements which produce biaxial loading ratios.

B67-10385
WELDING TORCH AND WIRE FEED MANIPULATOR
WILLIAMS, R. T. /N. AM. AVIATION/ OCT. 1967
M-FS-13102

Welding torch and wire feed manipulator increase capability for performing automatic welding operations. The manipulator rotates on its horizontal axis to avoid obstacles as they approach the torch. The initial individual attitudes of the torch and wire guide are set with respect to the general configuration of the part.

B67-10393
STUDY MADE TO ESTABLISH PARAMETERS AND
LIMITATIONS OF EXPLOSIVE WELDING
POLHEMUS, F. C. /PRATT AND WHITNEY AIRCRAFT/
OCT. 1967
M-FS-13006

It is theorized that metal jetting must be present for welding to occur, therefore an explosive weld interface may indicate the relation between the metal jet velocity and shock wave velocity in the welding. Parameters for effecting explosive welding in patches of 3 or 4 inches in diameter were established, and found applicable to explosive welding of patches of various sizes.

B67-10400
STANDARD SURFACE GRINDER FOR PRECISION
MACHINING OF THIN-WALL TUBING
KOTORA, J., JR. REIN, J. SMITH, S. V. STRACK,
D. STUCKEY, D. OCT. 1967
ARG-10014

Standard surface grinder performs precision machining of thin-wall stainless steel tubing by electrical discharge grinding. A related adaptation, a traveling wire electrode fixture, is used for machining slots in thin-walled tubing.

B67-10401
METAL TUBE REDUCER IS INEXPENSIVE AND
SIMPLE TO OPERATE
MAYFIELD, R. M. OCT. 1967 SEE ALSO ANL-7127 AND
ANL-7176
ARG-49

Low-cost metal tube reducer accepts tubing up to 1 inch outer diameter and can reduce this diameter to less than 1/2-inch with controlled wall thickness. This device can reduce all of the tube without waste. It produces extremely good surface finishes.

B67-10403
WEAR STUDIES MADE OF SLIP RINGS AND GAS
BEARING COMPONENTS
FURR, A. K. /VIRGINIA POLYTECH. INST./ NOV. 1967
M-FS-12882

Neutron activation analysis techniques were employed for the study of the wear and performance characteristics of silp ring and rotor assemblies and of the problems arising from environmental conditions with special reference to surface contamination. Results showed that the techniques could be successfully applied to measurement of wear parameters.

B67-10418
HYDRAULIC SYSTEM PROVIDES SMOOTH CONTROL OF
LARGE TRACKING AND ANTENNA DRIVE SYSTEMS
AT VERY LOW TRACKING RATES
PARKER, G. L. NOV. 1967
NPO-10316

Hydraulic system provides smooth control of large tracking and antenna drive systems at very low tracking rates. This configuration modifies a series connection of the drive motors with compensating orifices to offset the effects of drain line loss. Linearization of response by eliminating cogging or cyclic operation is thus

obtained.

B67-10419
CDAXIAL CABLE STRIPPING DEVICE FACILITATES
RF CABLING FABRICATION
HUGHES, R. S. TOBIAS, R. A. NOV. 1967
NPO-10315

Coaxial cable stripping device assures clean, right angled shoulder for RF cable connector fabrication. This method requires minimal skill and creates a low voltage standing wave ratio and mechanical stability in the interconnecting RF cables.

B67-10423
PRECISION METAL MOLDING
TOWNHILL, A. /N. AM. AVIATION/ OCT. 1967
M-FS-13305

Method provides precise alignment for metalforming dies while permitting minimal thermal
expansion without die warpage or cavity space
restriction. The interfacing dowel bars and die
side facings are arranged so the dies are
restrained in one orthogonal angle and permitted
to thermally expand in the opposite orthogonal
angle.

B67-10427
HEAVY-GAGE BONDED HONEYCOMB SANDWICH AS PRIMARY LOAD-BEARING STRUCTURE
INNOVATOR NOT GIVEN /GEN. DYN./ OCT. 1967
M-FS-12060

Heavy-gauge bonded honeycomb sandwich is used as a primary load-bearing structural material in large-diameter boosters. Theoretical investigations based on **small deflection theory** for prediction of stress fields and buckling loads, and structural testing were made. This structure is a potential weight saver for compression load-critical components.

B67-10445
SAFETY YOKE WOULD PROTECT CONSTRUCTION
WORKERS FROM FALLING

GOFORTH, O. H. /TRANS WORLD AIRLINES/ NOV. 1967 KSC-10075 Simple dismountable yoke protects construction

J-10075
Simple dismountable yoke protects construction workers on narrow steel **!** beams at high levels. The yoke engages the upper flat of the **!** beam and slides freely along it to permit freedom of movement to the worker while limiting his ability to fall by a harness attached to the yoke.

B67-10453
PUMP SIMULATOR PROVIDES VARIABLE PRESSURE-FLOW CHARACTERISTICS
PACKE, D. R. /PRATT AND WHITNEY AIRCRAFT/ NOV. 1967
LEWIS-10122

Pump simulator with variable pressure flow characteristics permits ready experimental determination of optimum pump-load matching. It has been successfully used to investigate the effect of feed pump characteristics on the stability of a Rankine system boiler.

B67-10464
TUBE-TO-HEADER JOINT FOR BIMETALLIC
CONSTRUCTION
LESSMANN, G. G. STONER, D. R. /WESTINGHOUSE
CORP./ NOV. 1967
LEWIS-10282

Design advantages of bimetallic construction enables an all-welded bimetallic joint to be made from the accessible header side of the tube-to-header joint. In the two-plece header design the weld joints completely seal the tube-header plate crevice and prevent crevice and stringer corrosion.

B67-10466
HAND-OPERATED PLUG INSERTION VALVE
JONES, R. G. RONEY, J. A. /HAYES INTERN. CORP./
NOV. 1967
M-FS-12019

Hand-operated plug insertion valve seals an evacuated insulation system for upper stage liquid hydrogen tanks on the launch pad. It is light in

weight, demountable, and permits evacuation of the system plus sealing after evacuation.

B67-10472 ALUMINUM AND STAINLESS STEEL TUBES JOINED BY SIMPLE RING AND WELDING PROCESS TOWNHILL, A. /N. AM. AVIATION/ NOV. 1967 M-FS-13120

Duranel ring is used to join aluminum and stainless steel tubing. Duranel is a bimetal made up of roll-bonded aluminum and stainless steel. This method of joining the tubing requires only two welding operations.

B67-10473
TOOL SAMPLES SUBSURFACE SOIL FREE OF
SURFACE CONTAMINANTS
KEMMERER, W. W. WOOLEY, B. C. NOV. 1967
MSC-10988

Sampling device obtains pure subsurface soil that is free of any foreign substance that may exist on the surface. It is introduced through a contaminated surface area in a closed condition, opened, and a subsurface sample collected, sealed while in the subsurface position, and then withdrawn.

B67-10483 CONCEPT FOR DESIGN OF VARIABLE STIFFNESS DAMPER LOHR, J. J. DEC. 1967 ARC-11225

Damping mechanism, containing polymeric-like materials is applicable to a wide range of shock and vibration. The polymeric-like material changes from a relatively stiff material to a relatively soft, rubbery material in the region of their glass transition temperatures. The energy absorption characteristics and stiffness are controllable with temperature.

B67-10488
COMBINED ATTENUATOR AND LATCH FOR
CARTRIDGE POWERED ACTUATOR
MURPHY, D. W. /N. AM. AVIATION/ DEC. 1967
MSC-11242

Combined attenuator and latch stops and latches in place a given mass which is to be moved a discrete distance to effect a desired condition. This device is used in a retraction actuator driven by a pyrotechnic thruster, and can be tailored to meet specific design requirements.

B67-10498
ROCK ANCHORS RESTORE BROKEN SWAMP ANCHORS
ECONOMICALLY
MC ALLISTER, J. W. DEC. 1967
WLP-10004

Swamp anchors, used to convey power lines across marshes, are restored economically by installing a rock anchor in the upper portion of the pipe that remains attached to the original swamp anchor.

B67-10512
FLOW LINER EXTENDS OPERATING LIFE OF HIGHANGULATION BELLOWS
RUMPH, D. G. /BOEING CO./ DEC. 1967
M-FS-12023

Linear extends the service life of high-angulation /26-degree/ bellows used as ducts for high-velocity fluid flow in a liquid oxygen fill and drain system. It consists of a conical frustum or nozzle on the upstream side and a cylindrical section or catcher on the down-stream side.

B67-10518 STUDY MADE OF THIN-WALLED PIPE RESPONSE TO TURBULENT FLUIDS CLINCH, J. M. /IIT RES. INST./ DEC. 1967 M-FS-1321

Report summarizes the experimental and theoretical data on the vibrational response of thin-walled pipe sections to the wall pressure field applied within them by a fully-developed turbulent fluid flow. The predicted responses were in good agreement with previous data obtained.

B67-10525

VARIABLE-SPEED, PORTABLE ROUTING SKATE PESCH, W. A. /HAYES INTERN. CORP./ DEC. 1967 M-FS-13772

Lightweight, portable, variable-speed routing skate is used on heavy metal subassemblies which are impractical to move to a stationary machine. The assembly, consisting of the housing with rollers, router, and driving mechanism with transmission, weighs about forty pounds. Both speed and depth of cut are adjustable.

B67-10526 DYNAMIC VALVE SEAL IS RELIABLE AT CRYDGENIC TEMPERATURES

MOXLEY, H. E. M-FS-12987 /N. AM. AVIATION/ DEC. 1967

C-shaped PTFE /polytetrafluoroethylene/ seal ring provides a reliable seal in cryogenic fluids over a fluid pressure range of 0 to 2000 psig. It is interference-fitted internally with a metal expander ring and a metal compressor ring.

B67-10528 ACCUMULATOR ISOLATOR PREVENTS MALFUNCTIONING OF FAULTY HYDRAULIC SYSTEM WALSH, G. D. /BOEING CO./ DEC. 1967 H-FS-1415

corrected.

Special isolator valve prevents malfunction of a closed hydraulic system by converting the initial accumulator-reservoir to a reservoir function only when the system loses oil, or gaseous nitrogen precharge, or has a jammed piston. This permits near-normal operation until the defect is

867-10529 DEVELOPMENT OF LUNAR DRILL TO TAKE CORE SAMPLES TO 100-FOOT DEPTHS INNOVATOR NOT GIVEN /WESTINGHOUSE DEFENSE AND SPACE CENTER/ DEC. 1967 M-FS-13015

Lunar drill takes lunar surface cores to depths of 100 feet and is being developed to the samples at greater depths. The wireline drill system has been adapted to operate in the lunar environment by providing a sealed dc motor and solid metallic base lubricants.

LEAD PLATED ALUMINUM RING PROVIDES STATIC HIGH PRESSURE SEAL FOR LARGE DIAMETER PRESSURE VESSEL LOCKE, J. N. /AEROJET-GEN. CORP./ DEC. 1967 NUC-10008

Lead plated aluminum ring provides a positive static seal for a large diameter pressure vessel for use in a hazardous environment at cryogenic temperatures with high pressure fluid flow. This design can be used in high and low pressure lines of any diameter for any fluid, with appropriate material modification. material modification.

PRECISION TRIMMER AIDS IN PREPARING BIOMEDICAL SPECIMEN BLOCKS FOR ULTRATHIN TAHMISIAN, T. N. DEC. 1967 ARG-242

Precision trimmer, which neatly trims blomedical specimen blocks for ultrathin sectioning, eliminates the risk of human error. 4 inches in diameter and 3 inches in height, it supports the block and serves as a support for a cutting tool and can be adjusted in three dimensions.

B67-10547 POWER TORQUE WRENCH CONCEPT FOR PRECISION TORQUE APPLICATION PETERS, G. A. WARMING, K. /N. AM. AVIATION/ DEC. 1967 M-FS-13546

Precision electromechanical power wrench applies a given amount of torque to a series of fasteners. It uses a commercially available dc permanent magnet torque motor with a current-controllable torque output and torque value indicator designed to the principles of human engineering. B67-10555 B67-10555 STUDY MADE OF HEAT TRANSFER AND PRESSURE DROP THROUGH TUBES WITH INTERNAL INTERRUPTED FINS NAMKOODIG, D., JR. DEC. 1967 SEE ALSO NASA-TM-X-1428 LEWIS-10280

Argon gas flow through an internal interrupted finned tube was investigated to obtain heat transfer and frictional pressure drop data. The results were plotted against the same data for corresponding louvered plate-finned surfaces.

B67-10563 INSTRUMENT ACCURATELY MEASURES WELD ANGLE AND OFFSET BOYD, W. G. M-FS-12849 /N. AM. AVIATION/ DEC. 1967

Weld angle is measured to the nearest arc minute and offset to one thousandth of an inch by an instrument designed to use a reference plane at two locations on a test coupon. A special table for computation has been prepared for use with the instrument.

B67-10567 BUTTERFLY VALVE WITH METAL SEALS CONTROLS FLOW OF HYDROGEN FROM CRYOGENIC THROUGH HIGH TEMPERATURES JOHNSON, L. D. /AEROJET GEN. CORP./ DEC. 1967 NUC-10034

butterfly valve with metal seals operates over a temperature range of minus 423 deg. to plus 440 deg. F with hydrogen as a medium and in a radiation environment. Media flow is controlled by an internal butterfly disk which is rotated by an actuation shaft.

B67-10581 FLAT CABLE INSULATION STRIPPING MACHINE SCHAEFER, J. H. /VIKING IND./ DEC. 1967 M-FS-13776

Flat cable insulation stripping machine operates on a principle of variable parameters of abradive wheel speed, wheel pressure on the flat cable, and flat cable feed speed into the abradive wheel. Application of connectors is handled efficiently with this flat terminal termination technique.

B67-10588 HIGH ENERGY FORMING FACILITY CIURLIONIS, B. /N. AM. AVIATION/ DEC. 1967 M-FS-14026

watertight, high-explosive forming facility, 25 feet in diameter and 15 feet deep, withstands repeated explosions of 10 pounds of TNT equivalent. The shell is fabricated of highstrength steel and allows various structural elements to deform or move elastically and independently while retaining structural integrity.

B67-10591 FLUOROCARBON SEAL REPLACES METAL PISTON RING IN LOW DENSITY GAS ENVIRONMENT MORATH, W. D. MORGAN, N. E. /VICKERS, INC./ DEC. 1967 LEWIS-10277

Reinforced fluorocarbon cupseal, which provides an integral lip-type seal, replaces the metal piston rings in piston-cylinder configurations used in the compression of low density gases. The fluorocarbon seal may be used as cryogenic compressor piston seals.

SELF-ALIGNING ROD PREVENTS ECCENTRIC VANDERGRIFT, E. F. /WESTINGHOUSE ASTRONUCL. LAB./ DEC. 1967 NUC-10525

Tensile specimens can be tested in liquid nitrogen without subjecting the cryostat to tilting during assembly of the specimen in the liquid nitrogen-filled cryostat. A universal joint with a semielliptical head and socket that reduces misalignment and permits only limited side travel.

```
B67-10607
HONEYCOMB SEAL BACKING RING INCREASES
TURBOPUMP DISK LIFE
BROOKS, W. S. LARSON, E. W. /N. AM. AVIATION/
DEC. 1967
M-FS-13303
     Turbopump disk life increased by thin, relatively rigid metal backing ring installed to the honeycomb seal. The aerodynamic and friction damping provided by this modification eliminates
        first-stage disk cracking.
WILKES, D. F. NOV. 1967
SAN-10001
     Rolamite, a mechanical suspension system, provides
        substantial reductions in friction in the realm of extremely low bearing pressures. In addition, rolamite devices are easily microminiaturized, are extremely tolerant of production variations and are inherently capable of virtually all functions to construct met electromechanics!
         to construct most electromechanical devices.
B67-10619
YAGER, S. P. DEC. 1967
JPL-847
     Insulated feed-thru conduit minimizes heat pickup
        by a cryogenic fluid passing through the walls of
a double high-vacuum chamber, and is capable of
expansion and contraction with the walls of the
        chamber. It uses a bellows and rigid cylinder to provide a low-loss feed-thru for the cryogenic liquid.
B67-10622
FIRE EXTINGUISHER CONTROL SYSTEM PROVIDES
RELIABLE COLD WEATHER OPERATION
BRANUM, J. C. /N. AM. AVIATION/ DEC. 1967
M-FS-13031
     Fast acting, pneumatically and centrally
        controlled, fire extinguisher /Firex/ system is effective in freezing climates. The easy-to-operate system provides a **fail-dry** function which is activated by an electrical power failure.
```

FERROMAGNETIC CORE VALVE GIVES RAPID ACTION ON MINIMUM ENERGY DETHLETSEN, R. LARSON, A. V. LIEBING, L. /GEN. DYN./CONVAIR/ DEC. 1967 LEWIS-10135 Miniature solenoid valve controls propellant flow

during tests on a coaxial plasma accelerator. It uses an advanced ferromagnetic core design which meets all the rapid-acting requirements with a minimum of input energy.

TENSILE TESTING GRIPS ARE EASILY ASSEMBLED UNDER LIQUID NITROGEN SKALKA, R. J. VANDERGRIFT, E. F. /WESTINGHOUSE ASTRONUCL. LAB./ DEC. 1967 NUC-10524

:-10524 Split-screw grips for tensile testing provide uniform loading on the specimen shoulders. Holes in the heads enable the screws and specimen to be threaded as an assembly into a grip body, closely controlled guides and seats afford positive seating, and precision machining of mating surfaces minimizes misalignment effects.

B67-10638 EDDY CURRENT DISK VALVE
DETHLETSEN, R. LARSON, A. V. LIEBING, L. /GEN.
DYN./CONVAIR/ DEC. 1967 LEWIS-10123

Quick-opening, intermittent flow valve requires a small amount of electrical energy to open and closes by the restoring action of a rubber stop. This eddy current disk valve opens in less than 100 microseconds and takes only 10 joules of energy.

B67-10639 SOLENOID HAMMER VALVE DEVELOPED FOR QUICK-OPENING REQUIREMENTS DETHLETSEN, R. LARSON, A. V. LIEBING, L. /GEN.

DYN./CONVAIR/ DEC. 1967 LEWIS-10134 Quick-opening lightweight solenoid hammer valve requires a low amount of electrical energy to open, and closes by the restoring action of the mechanical springs. This design should be applicable to many quick-opening requirements in fluid systems. DEVELOPMENT OF HELICAL SEAL FOR HIGH TEMPERATURE /2000 DEGREES F/ APPLICATION HELD, C. /N. AM. AVIATION/ JAN. 1968 M-FS-13304 in a high temperature environment. The seal design incorporates a new cross-sectional shape, a metal strip with a slight radius, and the use of premolded asbestos. It provides equal load distribution under compression loads, allows for minimum loss and recovery values, and increases the temperature range. B67-10667 SOLENOID VALVE DESIGN MINIMIZES VIBRATION AND SLIDING WEAR PROBLEM GILLON, W. A., JR. /N. AM. AVIATION/ JAN. 1968 M-FS-14079 Two-way cryogenic solenoid valve resists damage from vibration and metallic interfacial sliding. The new system features a flat-faced armature guided by a flexure disk which eliminates sliding surfaces and is less subject to contamination and wear. B67-10670 RECONNECT MECHANISM
MOORE, D. L. /BOEING CO./ JAN. 1968 M-FS-12968 Mechanism remotely-controls de-mating of two bodies by unlock and withdrawal of one body from the other and, upon command, extends, locates, remates and relocks the two bodies. The system is designed to transfer fluids from a dispensing body to a receiving body. B67-10673 CRYOGENIC SEAL CONCEPT FOR STATIC AND DYNAMIC CONDITIONS DE GAETANO, E.A/N. AM. AVIATION/ JAN. 1968 M-FS-12986 Seal rings reduce cryogenic pump seal leakage an rings reduce cryogenic pump seal leakage under static and dynamic conditions. The rings are fitted into annular diaphragms, which are affected by cryogenic pressure and temperature, to move against a mating ring, to increase seal-bearing loads under static conditions. CHANDLER, J. A. GRUBBS, T. M. JAN. 1968 MSC-12052 Improved control system power unit drives the

IMPROVED CONTROL SYSTEM POWER UNIT FOR LARGE PARACHUTES

control surfaces of very large controllable parachutes. The design features subassemblies for determining control surface position and cable loading, and protection of the load sensor against the possibility of damage during manipulation.

06 COMPUTER PROGRAMS

B67-10169 STUDY OF DYNAMIC RESPONSE OF ELASTIC SPACE STATIONS KAMRATH, P. /N. AM. AVIATION/ JUN. 1967 NP0-10124 Analytical procedure and the requisite computer programs compute the dynamic responses of two large elastic space stations. The linearized equations of motion are derived from Lagrange*s equations. Then the normal modes of free vibration of the nonrotating space station are used to define the elastic degrees of freedom.

B67-10172 SPACE TRAJECTORIES PROGRAM FOR IBM 7090 HOLDRIDGE, D. B. JUN. 1967 SEE ALSO 32-223 NPO-10125

Space Trajectories Program studies the motion of a space probe confined to the solar system and influenced by the nonspherical Earth and Moon, and the point masses defined by the Sun, Venus, Mars, and Jupiter. It is written in the Fortran Assembly Program language.

B67-10173 LINEAR CIRCUIT ANALYSIS PROGRAM FOR IBM 1620 MONITOR II, 1311/1443 DATA PROCESSING SYSTEM /CIRCS/ HATFIELD, J. JUN. 1967 NPO-10131

CIRCS is modification of IBSNAP Circuit
Analysis Program, for use on smaller systems.
This data processing system retains the basic dc,
transient analysis, and Fortran II formats. It
can be used on the IBM 1520/1311 Monitor I Mod
5 system, and solves a linear network containing
15 nodes and 45 branches.

B67-10193
COMPUTER PROGRAM SIMULATES PHYSICAL SYSTEMS
BY SOLVING THE SIMULTANEOUS DIFFERENTIAL
EQUATIONS DESCRIBING THE SYSTEMS
MANKOVITZ, R. J. JUN. 1967
NPO-10019

DIANA, a digital-analog simulation program for IBM 1620 II computer, simulates physical systems by solving the simultaneous differential equations describing the systems. It expands and optimizes the input-output capabilities, permits additional flexibility in midstream program alternation, and minimizes the computational time.

B67-10217 A MODAL COMBINATION COMPUTER PROGRAM FOR DYNAMIC ANALYSIS OF STRUCTURES BAMFORD, R. M. JUN. 1967 NPO-10129

Computer program determines the response of a composite linear structure to sinusoidal base motion of a restrained structure or sinusoidal forces of a free structure. This program is applied to problems of testing practices and closed-loop stability of autopilot controlled space vehicles. It is written for the IBM 7094 in Fortran IV language.

B67-10222
SUBROUTINES GEORGE AND DRASTC SIMPLIFY
OPERATION OF AUTOMATIC DIGITAL PLOTTER
ENGLEL, F., III GRAY, W. H. RICHARD, P. J.
/WESTINGHOUSE ASTRONUCL. LAB./ JUL. 1967
NUC-10044

Fortran language subroutines enable the production of a tape for a 360-30 tape unit that controls the CALCOMP 566 Digital Incremental Plotter. This provides the plotter with instructions for graphically displaying data points with the proper scaling of axes, numbering, lettering, and tic marking.

867-10223
CALCULATION OF RESONANCE NEUTRON ABSORPTION
IN TWO-REGION PROBLEMS /THE GAROL CODE/
SMITH, C. V. STEVENS, C. A. /GEN. DYN./ JUL.
1967
NUC-10045

GARCL computer program explicitly takes into account those effects which arise from neutron resonance overlap of an individual resonance absorber and of mixtures of different resonance absorbers. GARCL computes effective group cross-sections for the resolved resonances of a mixture of isotopes in a two-region cell.

867-10224
COMPUTER PROGRAM CALCULATES STEADY-STATE
TEMPERATURE DISTRIBUTION WITHIN PLANE OR
AXISYMMETRIC SOLIDS
WILSON, E. L. /AEROJET-GEN. CORP./ JUL. 1967
NUC-10049

Digital computer program, using the finite element analysis technique, determines the steady-state

temperature within plan or axisymmetric solids composed of many different materials of various geometry. Program output is used to plot isotherms and provide data enabling the performance of stress analysis or heat transfer calculations upon the bodies.

B67-10233
LAND LANDING COUCH DYNAMICS COMPUTER PROGRAM
HERTING, D. N. POHLEN, J. C. POLLACK, R. A. /N.
AM. AVIATION/ JUL. 1967
MSC-1210

Computer programs perform landing stability studies of mechanical impact system designs for advanced spacecraft. The programs consider variation in spacecraft vertical and horizontal velocity, attitude and orientation, shock strut load-stroke characteristics, and ground coefficient of friction.

B67-10235
COMPUTER PROGRAM SIMPLIFIES DESIGN OF
ROTATING COMPONENTS OF TURBOMACHINERY
LEFEVRE, J. C. /AEROJET-GEN. CORP./ JUL. 1967
NUC-10046

C-10046
Digital computer program performs stress analysis and burst speed calculations on rotating axisymmetric turbomachinery components. The computer printout contains the displacement of each nodal point, the stress at the center of each element, the average tangential stress within the component, and the burst speed.

B67-10240
VIS-A-PLAN /VISUALIZE A PLAN/ MANAGEMENT
TECHNIQUE PROVIDES PERFORMANCE-TIME SCALE
RANCK, N. H. /TRANS WORLD AIRLINES/ JUL. 1967
KSC-10073

Vis-A-Plan is a bar-charting technique for representing and evaluating project activities on a performance-time basis. This rectilinear method presents the logic diagram of a project as a series of horizontal time bars. It may be used supplementary to PERT or independently.

B67-10261
ANALYTICAL TECHNIQUE PERMITS COMPARISON OF RELIABILITY OF ALTERNATE MECHANICAL DESIGNS HENNING, F. W. /WESTINGHOUSE ASTRONUCL. LAB./JUL. 1967
NUC-10065

Failure Rate Index analysis permits comparison of reliability of alternate mechanical designs. All failure modes for a mechanical component are identified, and computed on an index which relates the failure mode to failure of the component. The summation of all failure mode indexes relates the potential reliability of the component.

B67-10278
CINDA - CHRYSLER IMPROVED NUMERICAL
DIFFERENCING ANALYZER COMPUTER PROGRAM
GASKI, J. D. LEWIS, D. R. /CHRYSLER CORP./ AUG.
1967 SEE ALSO B66-10404
M-FS-2298

Dimensionless multioption systems compiler computer program constructs and analyzes a mathematical model of any arbitrary one, two, or three dimensional lumped parameter representation of a physical system. It automatically optimizes the utilization of computer core space and is more general and versatile than BETA.

B67-10279
COMPUTER PROGRAM FOR DETERMINATION OF
NATURAL FREQUENCIES OF CLOSED SPHERICAL
SANDWICH SHELLS
WILKINSON, J. P. D. /N. AM. AVIATION/ AUG. 1967
MSC-1246

Solutions for the axially symmetric motion of an elastic spherical sandwich shell have been obtained from a theory of shells which includes the effects of transverse shear deformation and rotary inertia. Frequency equations and mode shapes are derived for the full vibrations of a closed spherical shell.

B67-10280 Master Control Data Handling Program Uses AUTOMATIC DATA INPUT ALLISTON, W. DANIEL, J. /BOEING CO./ AUG. 1967 M-FS-2259

General purpose digital computer program is applicable for use with analysis programs that require basic data and calculated parameters as input. It is designed to automate input data preparation for flight control computer programs, but it is general enough to permit application in other appara

B67-10281 COMPUTER PROGRAM PREDICTS THERMAL AND FLOW TRANSIENTS EXPERIENCED IN A REACTOR LOSS-OF-FLOW ACCIDENT HALE, C. J. /GEN. DYNAMICS/ AUG. 1967 NUC-10054

Program analyzes the consequences of a loss-offlow accident in the primary cooling system of a heterogeneous light-water moderated and cooled nuclear reactor. It produces a temperature matrix 36X 41 /x,y/ which includes fuel surface temperatures relative to the time the pump power was lost.

B67-10287
COMPUTER PROGRAM PROVIDES LINEAR SAMPLEDDATA ANALYSIS FOR HIGH ORDER SYSTEMS
BUNN, D. B. KIMBALL, R. B. /N. AM. AVIATION/
AUG. 1967
AUG. 1967

Computer program performs transformations in the order S-to-W-to-Z to allow arithmetic to be completed in the W-plane. The method is based on a direct transformation from the S-plane to the W-plane. The W-plane poles and zeros are transformed into Z-plane poles and zeros using the bilinear transformation algorithm.

B67-10306
COMPUTER PROGRAM USES MONTE CARLO TECHNIQUES
FOR STATISTICAL SYSTEM PERFORMANCE ANALYSIS
WOHL, D. P. /N. AM. AVIATION/ AUG. 1967
M-FS-2234

Computer program with Monte Carlo sampling techniques determines the effect of a component part of a unit upon the overall system performance. It utilizes the full statistics of the disturbances and misalignments of each component to provide unbiased results through simulated random sampling.

B67-10307
COMPUTER PROGRAM DETERMINES THERMAL
ENVIRONMENT AND TEMPERATURE HISTORY OF
LUNAR ORBITING SPACE VEHICLES
HEAD, D. E. MITCHELL, K. L. /BOEING CO./ AUG.
1967
M-FS-12916

Program computes the thermal environment of a spacecraft in a lunar orbit. The quantities determined include the incident flux /solar and lunar emitted radiation/, total radiation absorbed by a surface, and the resulting surface temperature as a function of time and orbital position.

B67-10309 STUDY OF RANDOM PROCESS THEORY AIDS DIGITAL DATA PROCESSING BORDNER, G. W. /CORNELL AERON. LAB./ AUG. 1967 M-FS-1475

75-1475
Study of techniques for all random process technology, including stationary, nonstationary, and Gaussian bivariate, aids digital data processing. It presents material on digital filtering, correlation function, optimal spectral smoothing, deterministic data processing, and nonstationary spectrum and correlation analyses.

B67-10310
COMPUTER PROGRAM FOR MASS OPTIONAL SOLUTIONS
OF SOME EMDPOINT TRAJECTORY PROBLEMS
BENNETT, A. G. ESHRIDGE, C. D. OMAHONY, M. S.
/B0EING CO./ AUG. 1967
M-FS-12976

Optimization of trajectories for minimal propellant consumption is achieved by incorporating a coast are device into a three-

dimensional fixed end-point steepest ascent computer program. It calculates a trajectory between any two points in space defined by initial and final position vectors, without restrictions on thrust or orbit characteristics.

B67-10319
TRANSIENT ANALYSIS GENERATOR /TAG/ SIMULATES BEHAVIOR OF LARGE CLASS OF ELECTRICAL NETWORKS
THOMAS, W. J. SEP. 1967
NPO-10031

Transient Analysis Generator program simulates both transient and dc steady-state behavior of a large class of electrical networks. It generates a special analysis program for each circuit described in an easily understood and manipulated programming language. A generator or preprocessor and a simulation system make up the TAG system.

B67-10323 COMPUTER PROGRAM UTILIZES FORTRAN IV SUBROUTINES FOR CONTOUR PLOTTING BLOCK, N. GARRET, R. LAWSON, C. SEP. 1967 NPO-10127

Computer program constructs lists of xy-coordinate pairs that define contour curves for an arbitrary given function of two variables and transmits these lists to plotting equipment to produce contour plots. The principal subroutine, CONTOUR, is independent of any specific system of plotting subroutines and equipment.

B67-10327
MULTIPLE CORRELATION COMPUTER PROGRAM
DETERMINES RELATIONSHIPS BETWEEN SEVERAL
INDEPENDENT AND DEPENDENT VARIABLES
KASPAR, H. NEWSBAUM, J. B. /N. AM. AVIATION/
SEP. 1967
M-FS-13024

Relationships between independent and dependent variables determined by multiple correlation computer program. This is applied to research and experimental design and development of complex hardware and components that require test programs.

B67-10328
COMPUTER OPTIMIZATION PROGRAM FINDS VALUES
FOR SEVERAL INDEPENDENT VARIABLES THAT
MINIMIZE A DEPENDENT VARIABLE
WARECH, E. J. /N. AM. AVIATION/ SEP. 1967
M-FS-13030

Computer program finds values of independent variables which minimize the dependent variable. This optimization program has been used on the F-1 and J-2 engine programs to establish minimum film coolant requirements.

B67-10329
COMPUTER PROGRAM RESOLVES RADIATIVE,
CONDUCTIVE, AND CONVECTIVE HEAT TRANSFER
PROBLEMS FOR VARIETY OF GEOMETRIES
ELKIN, R. MC GARRITY, A. L. SEP. 1967
M-FS-1910

Computer program computes temperature distribution as a function of time in a given body which has been subdivided into a network of nodes. Thermal resistances and capacitances may be computed from nodal geometry.

B67-10330
IMPROVED COMPUTER PROGRAM FOR ELASTIC
ANALYSIS OF HIGHLY REDUNDANT STRUCTURAL
CONFIGURATIONS
HROMJAK, A. J. /N. AM. AVIATION/ SEP. 1967
M-FS-13087

Computer program provides elastic analysis of highly redundant structural configurations. Punched output of flexibility and stiffness matrices are obtained for use in a natural frequency analysis. Member reaction output in card or tape form is used in conjunction with other programs to perform stress analyses.

B67-10331
GENERAL PURPOSE COMPUTER PROGRAMS FOR NUMERICALLY ANALYZING LINEAR AC ELECTRICAL

AND ELECTRONIC CIRCUITS FOR STEADY-STATE CONDITIONS EGEBRECHT, R. A. THORBJORNSEN, A. R. /BOEING CO./ SEP. 1967 M-FS-13094

Digital computer programs determine steady-state performance characteristics of active and passive linear circuits. The ac analysis program solves the basic circuit parameters. The compiler program solves these circuit parameters and in addition provides a more versatile program by allowing the user to perform mathematical and logical operations.

B67-10344
COMPUTER SUBROUTINE ISUDS ACCURATELY SOLVES
LARGE SYSTEM OF SIMULTANEOUS LINEAR ALGEBRAIC
EQUATIONS
COLLIER, G. /WESTINGHOUSE ASTRONUCL. LAB./ SEP.
1967
NUC-10051

C-10051
Computer program, an Iterative Scheme Using a Direct Solution, obtains double precision accuracy using a single-precision coefficient matrix. ISUDS solves a system of equations written in matrix form as AX-B, where A is a square non-singular coefficient matrix, X is a vector, and B is a vector.

B67-10345
COMPUTER PROGRAM VARI-QUIR III PROVIDES
SOLUTION OF STEADY-STATE, MULTIGROUP, TWODIMENSIONAL NEUTRON DIFFUSION EQUATIONS
COLLIER, G. /WESTINGHOUSE ASTRONUCL. LAB./ SEP.
1967
NUC-10052

Computer program VARI-QUIR III provides Gauss-Seidel type of solution with inner and outer iterations for steady-state, multigroup, two-dimensional neutron diffusion equations. The program has no restrictions on any of the input parameters such as the number of groups, regions, or materials.

B67-10348
COMPUTERIZED PARTS LIST SYSTEM COORDINATES
ENGINEERING RELEASES, PARTS CONTROL, AND
MANUFACTURING PLANNING
HORTON, W. KINSEY, M. /WESTINGHOUSE ASTRONUCL.
LAB./ SEP. 1967
NUC-10073

Computerized parts list system compiles and summarizes all pertinent and available information on complex new systems. The parts list system consists of three computer subroutines - list of parts, parts numerical sequence list, and specifications list.

B67-10405
SATURN S-II AUTOMATIC SOFTWARE SYSTEM
/SASS/
PARKER, P. E. /N. AM. AVIATION/ NOV. 1967
M-FS-1741

Saturn S-II Automatic Software System /SASS/ was designed and implemented to aid Saturn S-II program development and to increase the overall operating efficiency within the S-II data laboratory. This program is written in Fortran II for SDS 920 computers.

B67-10406 COMPUTER PROGRAM FOR NETWORK SYNTHESIS BY FREQUENCY RESPONSE FIT GREEN, S. /IBM/ NOV. 1967 M-FS-12686

Computer program synthesizes a passive network by minimizing the difference in desired and actual frequency response. The program solves for the critical points of the error function /weighted least squares fit between calculated and desired frequency response/ by the multivariable Newton-Raphson method with components constrained to an admissible region.

B67-10407
EARTH ORBIT RENDEZVOUS EVALUATION PROGRAM
BENNETT, A. G. ESKRIDGE, C. D. HANAFY, L. M.
HOLM, G. L. OMAHONY, M. L. /BOEING CO./
QUARLES, I. D. NOV. 1967

M-FS-13016
Study program written in Fortran IV developes an orbital rendezvous guidance scheme for large, constant thrust launch vehicles. It concentrates on /1/ an investigation of the direct extension of the present Saturn Iterative Guidance Mode /IGM/ Scheme, and /2/ a scheme formulated in a

reference frame moving with the target satellite.

B67-10411
COMPUTER PROGRAM GENERATES AVERAGED VALUE
DATA TAPES
WATKINS, F. L. /N. AM. AVIATION/ NOV. 1967
M-FS-12728

Computer program generates a magnetic output tape containing time and averaged data values of a specified number of major frames over a specified time interval. A decommutation system is used to acquire the raw data, which is then reformated and averaged.

B67-10414
COMPUTER PROGRAM PROVIDES STEADY STATE
ANALYSIS FOR LIQUID PROPELLANT PROPULSION
SYSTEMS
CLARK, R. L. /N. AM. AVIATION/ NOV. 1967
MSC-10064

Computer program uses Bernoulli*s formula and Newton-Raphson method to provide steady state fluid flow analysis of line pressure drop in a system with six outlets for each of two main storage tanks. Program flexibility arises in the ease with which changes in the fluid line geometry can be made.

B67-10415
COMPUTER PROGRAM ANALYZES GENERALIZED
ENVIRONMENTAL CONTROL AND LIFE SUPPORT
SYSTEMS
AND ANALYZES ARECPAET CO. (

VAUGHAN, R. L. /DOUGLAS AIRCRAFT CO./ NOV. 1967 MSC-1157

Versatile computer program analyzes environmental control and life support systems. The program permits changes of /1/ system component arrangements, /2/ component design details, and /3/ operating modes. It is written in Fortran IV language for use on the IBM 7094 computer.

B67-10450
COMPUTER PROGRAM FPIP-REV CALCULATES
FISSION PRODUCTS INVENTORY FOR U-235
FISSION
BROWN, W. S. CALL, D. W. /WESTINGHOUSE
ASTRONUCL. LAB./ NOV. 1967
NUC-10089

Computer program calculates fission product inventories and source strengths associated with the operation of U-235 fueled nuclear power reactor. It utilizes a fission-product nuclide library of 254 nuclides, and calculates the time dependent behavior of the fission product nuclides formed by fissioning of U-235.

B67-10456
COMPUTER PROGRAM MCAP-TOSS CALCULATES STEADYSTATE FLUID DYNAMICS OF COOLANT IN PARALLEL
CHANNELS AND TEMPERATURE DISTRIBUTION IN
SURROUNDING HEAT-GENERATING SOLID
LEE, A. Y. /WESTINGHOUSE ASTRONUCL. LAB./ NOV.
1967
NUC-10042

Computer program calculates the steady state fluid distribution, temperature rise, and pressure drop of a coolant, the material temperature distribution of a heat generating solid, and the heat flux distributions at the fluid-solid interfaces. It performs the necessary iterations automatically within the computer, in one machine run.

B67-10457
COMPUTER PROGRAM MCAP PROVIDES FOR STEADY
STATE THERMAL AND FLOW ANALYSIS OF MULTIPLE
PARALLEL CHANNELS IN HEAT GENERATING SOLID
PIERCE, B. L. /WESTINGHOUSE ASTRONUCL. LAB./
DEC. 1967
NUC-10043

Computer program /MCAP/ calculates the temperature distribution in a heat generating

solid complicated by nonuniform power and flow distributions between multiple channels. It determines the channel diameters coefficients, the effects of tolerances, the pressure drop at a given flowrate, or the flowrate for a specific pressure drop.

B67-10476
COMPUTER PROGRAM CONDUCTS FACILITIES
UTILIZATION AND OCCUPANCY SURVEY
MINER, R. R. SPRAGUE, H. R. ZIMMERMAN, J. S.
DEC. 1967
NPO-10326

Computer program identifies the various uses of all facility rooms and provides information on the net area in each room as well as the number and classification of people occupying them. The program, which is easily updated, also provides a means to indicate unsatisfactory work areas.

B67-10478
KOPE /KALENDAR ORIENTED PROGRAM EFFORTS/
PROVIDES DATA FOR MANAGEMENT DECISIONS
KARKAINEN, T. A. /CHRYSLER CORP./ DEC. 1967
M-FS-12331

KOPE /Kalendar Oriented Program Efforts/ is a computer program that establishes controls over project efforts to assure management of meeting a specified completion date. With the appropriate input data, KOPE computes the starting and completion dates, the manning level for each activity, and the composite manning level for the program.

B67-10479
FORTRAN PROGRAM FOR TWO-IMPULSE
RENDEZVOUS ANALYSIS
BARLING, W. H., JR. BROTHERS, W. J. /LOCKHEED
MISSILES AND SPACE CO./ DEC. 1967
M-FS-13971

Program determines if rendezvous in near space is possible, and performs an analysis to determine the approximate required values of the magnitude and direction of two thrust applications of the upper stage of a rocket firing. The analysis is performed by using ordinary Keplerian mechanics.

B67-10480
NUMERICAL LEAST-SQUARE METHOD FOR RESOLVING
COMPLEX PULSE HEIGHT SPECTRA
SCHMADEBECK, R. TROMBKA, J. I. /MELPAR/ DEC.
1967
GSFC-10142

Linear least-square method resolves complex pulse height spectra, allowing for calculation of relative intensity, of statistical variance based on counting statistics of the correlation between library components, and of the goodness-of-fit chi square. Some applications are to gamma-ray, X-ray, and charged-particle spectroscopy.

B67-10489
COMPUTER PROGRAM CALCULATES SONIC-BOOM
PRESSURE SIGNATURES
CRAIDON, C. B. DEC. 1967
LANGLEY-10096

Computer programs calculate sonic boom characteristics of airplane configurations for a range of flight conditions. One program provides the area distribution, and another program provides the equivalent area due to lift. Program outputs are the complete near field /or far field/ pressure signature, including shock wave strengths and locations.

B67-10490 COMPUTER PROGRAM USES CHARACTERISTICS METHOD FOR FREE-JET INVESTIGATION CRAIDON, C. B. DEC. 1967 LANGLEY-10117

Computer program computes the free-jet boundary contours and other flow properties within the exhaust plume from highly underexpanded nozzles operating in near-vacuum conditions. The calculations are made by the method of characteristics which makes use of three-dimensional irrotational equations of flow.

B67-10492
COMPUTER PROGRAM REDUCES AND PROVIDES
PROFILE PLOT OF SURFACE PLATE CALIBRATION
DATA
REED, R. W. /N. AM. AVIATION/ DEC. 1967
M-FS-13866

Computer program which yields CRT displays will decrease the time and labor required to reduce and provide a profile plot of surface plate calibration data. The displays depict actual and resolved data points for each individually calibrated line.

B67-10493 ASSEMBLY PROCESSOR PROGRAM CONVERTS SYMBOLIC PROGRAMMING LANGUAGE TO MACHINE LANGUAGE PELTO, E. V. /N. AM. AVIATION/ DEC. 1967 M-FS-13262

Assembly processor program converts symbolic programming language to machine language. This program translates symbolic codes into computer understandable instructions, assigns locations in storage for successive instructions, and computer locations from symbolic addresses.

B67-10494
COMPUTER PROGRAM PERFORMS AEROTHERMODYNAMIC
FLIGHT TEST DATA CORRELATION
SCHMUS, F. SOWERS, D. A. /N. AM. AVIATION/ DEC.
1967
MSC-10075

Computer program plots flight test data /stored on magnetic tape during the flight/ with comparative data from other tapes /design and post-flight predictions/. Information as to which measurements are on each tape, the order in which they appear, and the exact time span is supplied by the source of the data.

MULTIDIMENSIONAL REACTION KINETIC ABLATION
PROGRAM / REKAP/
ASTON, B. BINCK, E. COLLINGSWOOD, B. /GE/ DEC.
1967
MSC-10079

Multidimensional reaction kinetics ablation program provides an improved capability for analyzing thermal performance of partially penetrated charring ablator heat shields. The capability was provided for determining transient temperature histories in an ablating three-dimensional shape consisting of up to five layers of material.

B67-10504 COMPUTER PROGRAMS FOR ANTENNA FEED SYSTEM DESIGN AND ANALYSIS LUDWIG, A. DEC. 1967 NPO-10359

Fourteen computer programs have been developed for antenna feed system design and analysis. The programs cover a large spectrum of feed design problems, from primary feed pattern synthesis to the farfield pattern of the main reflector, including analyses of structural distortions.

B67-10509
PROGRAM COMPUTES EQUILIBRIUM NORMAL SHOCK
AND STAGNATION POINT SOLUTIONS FOR
ARBITRARY GAS MIXTURES
CALLIS, L. B. KEMPER, J. T. DEC. 1967
LANGLEY-10090

Program computes solutions for flow parameters in arbitrary gas mixtures behind a normal and a reflected normal shock, for in-flight and shock-tube stagnation conditions. Equilibrium flow calculations are made by a free-energy minimization technique coupled with the steady-flow conservation equations and a modified Newton-Raphson iterative scheme.

B67-10510
PROBABILISTIC APPROACH TO LONG RANGE
PLANNING OF MANPOWER
LEJK, R. A. /TEX. A AND M UNIV./ DEC. 1967
MSC-11524

Publication presents a total long range planning model for project oriented organizations. The

total model consists of planning systems which originate - /l/ at the project level and consolidate into an overall plan, and /2/ from a budetary ceiling and allocate to the individual projects. Analysis of /l/ and /2/ is provided for management decision making.

B67-10511 LOGIC REALIZATION OF SIMPLE MAJORITY VOTING CONNECTIVES ANDERSON, T. O. GOLOMB, S. W. LUSHBAUGH, W. A. DEC. 1967 JPL-727

Redundant circuitry is added to computer network to eliminate incorrect output obtained do to a component failure, noise, or some other disturbance. This circuitry provides majority operation. Only NAND gates are employed, and the modules used are among the most popular microelectronic or integrated circuits presently

B67-10520 COMPUTER PROGRAM PERFORMS RECTANGULAR FITTING STRESS ANALYSIS BERTRAND, A. R. /BOEING CO./ DEC. 1967 M-FS-13010

Computer program simulates specific bulkhead fittings by subjecting the desired geometry configuration to a membrane force, an external force, an external moment, an internal tank pressure, or any combination of the above. This program generates a general model of bulkhead fittings for the Saturn boosters.

B67-10521
GENERAL FREQUENCY RESPONSE PROGRAM CALCULATES
FREQUENCY RESPONSE OF SYSTEM, OPEN AT ANY
SPECIFIED ELEMENT
PROSCH, J. / BOEING CO./ DEC. 1967
M-FS-12817

The general frequency response program provides the frequency response of any linear feedback control system including the open loop control system. The system characteristic matrix, obtained from the Laplace transformations of the dynamic and control equations, is input to the program. A variety of outputs are available.

B67-10522
COMPUTERIZED SCHEDULE EFFECTIVENESS
TECHNIQUE /SET/ DETERMINES PRESENT AND
FUTURE SCHEDULE POSITION
BALLARD, D. BIRDSONG, J. CALVA, R. /BOEING CO./
DEC. 1967
M-FS-13012

Computerized scheduling system calculates an index of overall schedule effectiveness. The schedule-effectiveness index is a measurement of actual overall performance against the existing schedule, and a series of schedule-effectiveness values indicates the trend of actual performance. This computer program is written in Fortran IV.

B67-10523
ANALYSIS OF DYNAMIC SYSTEMS WITH DAP4H
COMPUTER PROGRAM
ABSALOM, J. G. /N. AM. AVIATION/ DEC. 1967
M-FS-13999

Dynamic Analysis Program, Fortran IV Level H /DAP4H/, developed from 27 subprograms, features liberal use of the subroutines, subprograms, and skeletonization to minimize programming effort in formulating models of new systems and components. It formulates mathematical models of complex mechanical, pneumatic, and hydraulic dynamic systems.

B67-10524
DYANA - AN ADVANCED PROGRAMMING SYSTEM FOR
LARGE CLASSES OF DYNAMIC AND EQUIVALENT
SYSTEMS
MC CORMICK, W. J. /BDEING CO./ NOV. 1967
DYANA /dynamic analyzer/ is an advanced
programming system which performs automatically
the computing of a problem, as well as a major
portion of the programming and analysis. The
system is divided into time response and frequency
response of dynamic and equivalent systems.

PROGRAM COMPUTES ZERO LIFT WAVE DRAG OF
ENTIRE AIRCRAFT
CRAIDON, C. B. HARRIS, R. V., JR. DEC. 1967
LANGLEY-10079
Computer program computes zero lift wave drag of
an entire aircraft including any combination of
the wing, body, pods, fins, and carnard. The
program computes the external volume of the wing
and the axial area distribution of the wing

B67-10531
COMPUTER PROGRAM PROVIDES IMPROVED
LONGITUDINAL RESPONSE ANALYSIS FOR
AXISYMMETRIC LAUNCH VEHICLES
SMITH, W. WALTON, W. C., JR. DEC. 1967
LANGLEY-10093

equivalent body.

R67-10530

Computer program calculates axisymmetric launch vehicle steady-state response to axisymmetric sinusoidal loads. A finite element technique is utilized to construct the total launch vehicle stiffness matrix and mass matrix by subdividing the prototype structure into a set of /1/-axisymmetric shell components, /2/ fluid components, and spring-mass components.

B67-10536
N-SAP AND G-SAP NEUTRON AND GAMMA RAY ALBEDO
MODEL SCATTER FIELD ANALYSIS PROGRAM
SAPOVCHAK, B. J. STEPHENSON, L. D. /WESTINGHOUSE
ASTRONUCL. LAB./ DEC. 1967
NUC-10126

Computer program calculates neutron or gamma ray first order scattering from a plane or cylindrical surface to a detector point. The SAP Codes, G-SAP and N-SAP, constitute a multiple scatter albedo model shield analysis.

B67-10537
SDC-DS COMPUTER CODE PROVIDES TOOL FOR DESIGN EVALUATION OF HOMOGENEOUS TWO-MATERIAL NUCLEAR SHIELD DISNEY, R. K. RICKS, L. O. /WESTINGHOUSE ASTRONUCL. LAB./ DEC. 1967
NUC-10142
SDC-DS Code /Shield Optimization Code-

OC-DS Code /Shield Optimization Code-Direct Search/, selects a nuclear shield
material of optimum volume, weight, or cost to
meet the requirements of a given radiation dose
rate or energy transmission constraint. It is
applicable to evaluating neutron and gamma ray
shields for all nuclear reactors.

B67-10543 COMPUTER PROGRAM CALCULATES PERIPHERAL WATER INJECTION COOLING OF AXISYMMETRIC SUBSONIC DIFFUSER GREY, J. /GREYRAD CORP./ JAN. 1968 NUC-10541

Digital computer program calculates the cooling effectiveness and flow characteristics resulting from the mixing of a cool liquid injectant /water/with a hot sonic or subsonic gas stream /hydrogen/. The output of the program provides pressure, temperature, velocity, density, composition, and Mach number profiles at any location in the mixing duct.

B67-10549 COMPUTER PROGRAM FOR OPTICAL SYSTEMS RAY TRACING FERGUSON, T. J. KONN, H. JAN. 1968 FRC-10017

Program traces rays of light through optical systems consisting of up to 65 different optical surfaces and computes the aberrations. For design purposes, paraxial tracings with astigmation and third order tracings are provided.

B67-10566
COMPUTER PROGRAM ETC IMPROVES COMPUTATION
OF ELASTIC TRANSFER MATRICES OF LEGENDRE
POLYNOMIALS P/O/ AND P/1/
GIBSON, G. MILLER, M. /WESTINGHOUSE ASTRONUCL.
LAB./ DEC. 1967
NUC-10070

P/0/ and P/1/. Rather than carrying out a double integration numerically, one of the integrations is accomplished analytically and the numerical integration need only be carried out over one variable.

B67-10568
GRAPHIC VISUALIZATION OF PROGRAM PERFORMANCE
AIDS MANAGEMENT REVIEW
EISENHART, G. N. /AEROJET-GEN. CORP./ DEC. 1967
NUC-10011

Chart technique /PERTREE/ which displays the essential status elements of a PERT system in a vertical flow array, of high graphic quality, enables visual review by management of program performance. Since the display is versatile, it can accommodate any aspect of the program which the presenter wishes to accent.

B67-10612
EQUATION RELATES FLOW AT FREE JET TO FLOW
DOWNSTREAM
FENWICK, J. R. /N. AM. AVIATION/ DEC. 1967
M-FS-13789

Nonlinear equation relates the flowrate at an orifice to that at a station downstream from the orifice. This equation should aid in understanding combustion instabilities and should not be subject to the substantial errors of prior analytical methods.

B67-10625
PROPELLANT TANK PRESSURIZATION ANALYSIS
PROGRAM
EPSTEIN, M. /N. AM. AVIATION/ DEC. 1967
M-FS-1506

Computer program for the analysis of a single propellant tank pressurization system includes many pertinent physical phenomena previously ignored in other mathematical models. This program can be used for analysis, simulation, and design of propellant pressurization systems.

B67-10626
VERSATILE ANALOG PULSE HEIGHT COMPUTER
PERFORMS REAL-TIME ARITHMETIC OPERATIONS
BRENNER, R. STRAUSS, M. G. DEC. 1967
ARG-10052

Multipurpose analog pulse height computer performs real-time arithmetic operations on relatively fast pulses. This computer can be used for identification of charged particles, pulse shape discrimination, division of signals from position sensitive detectors, and other on-line data reduction techniques.

B67-10630 COMPUTER PROGRAM FOR VIDEO DATA PROCESSING SYSTEM /VDPS/ BILLINGSLEY, F. C. NATHAN, R. DEC. 1967 NPO-10042

Video data from spacecraft photographic mission telemetry is scanned to generate digital tape computer program which prints out intensity points, cleans noise and telemetry drop-out, enhances contrast, modifies the picture, and calculates contour lines. The output is converted into new photographic film.

B67-10631
DIGITAL COMPUTER PROGRAM PREDICTS EFFECTS
OF LOCAL PRESSURE TRANSIENTS ON DEFORMATION
AND STRESSES IN CYLINDRICAL DUCTS
ECHENOZ, Y. LUBERACKI, W. PADLOG, J. REISMANN,
H. /BELL AEROSYSTEMS CO./ DEC. 1967
M-FS-13058

Digital computer program determines the dynamic response of circular cylinders subjected to pressure transient forms commonly encountered in propulsion systems. The method can be readily used to obtain solutions for all possible combinations of admissible boundary conditions.

B67-10632 AUTOMATIC DESIGN OF OPTICAL SYSTEMS BY DIGITAL COMPUTER CASAD, T. A. SCHMIDT, L. F. DEC. 1967 NPO-10265

Computer program uses geometrical optical

techniques and a least squares optimization method employing computing equipment for the automatic design of optical systems. It evaluates changes in various optical parameters, provides comprehensive ray-tracing, and generally determines the acceptability of the optical system characteristics.

B67-10651
DEVELOPMENT OF RELIABILITY PREDICTION
TECHNIQUE FOR SEMICONDUCTOR DIODES
RYERSON, C. M. /HUGHES AIRCRAFT CO./ DEC. 1967
SEE ALSO NASA-CR-702
GSFC-10231

New fundamental technique of reliability prediction for semiconductor diodes based on realistic mathematical models can be applied to component failure rate prediction including mechanical degradation, electrical degradation, environmental stress factors, and electrical load stress factors.

B67-10654 X-Y PLOTTER ADAPTER DEVELOPED FOR SDS-930 COMPUTER ROBERTSON, J. B. JAN. 1968 NPO-10220

Graphical Display Adapter provides a real time display for digital computerized experiments. This display uses a memory oscilloscope which records a single trace until erased. It is a small hardware unit which interfaces with the J-box feature of the SDS-930 computer to either an X-Y plotter or a memory oscilloscope.

B67-10664
DIGITAL PROGRAM ANALYZES SUPERSONIC FLOW
ELLIOTT, J. J. STROMSTA, R. R. /N. AM. AVIATION/
JAN. 1968
M-FS-14292

Digital computer program analyzes the supersonic flow field within an axisymmetric, bell-shaped rocket nozzle for specified gas properties, nozzle geometry, and input or starting line. This program is written in Fortran II for the IBM 360 computer.

B67-10665
COMPUTER PROGRAM CALCULATES GAMMA RAY
SOURCE STRENGTHS OF MATERIALS EXPOSED TO
NEUTRON FLUXES
HEISER, P. C. RICKS, L. O. /WESTINGHOUSE
ASTRONUCL. LAB./ JAN. 1968
NUC-10143

Computer program contains an input library of nuclear data for 44 elements and their isotopes to determine the induced radioactivity for gamma emitters. Minimum input requires the irradiation history of the element, a four-energy-group neutron flux, specification of an ally composition by elements, and selection of the output.

B67-10666
COMPUTER PROGRAM CALCULATES WING AERODYNAMIC
CHARACTERISTICS FOR FIXED WINGS WITH DIHEDRAL
AND VARIABLE-SWEEP WINGS AT SUBSONIC SPEEDS
LAMAR, J. E. MARGASON, R. J. DEC. 1967
LANGLEY-10191

Vortex lattice is used to describe the lifting surface of an arbitrary wing planform in steady potential subsonic compressible flow in computer program which calculates wing aerodynamic characteristics. Estimates of flow field characteristics in the vicinity of a lifting wing can also be programmed.

B67-10678
COMPUTER PROGRAM /P1-GAS/ CALCULATES THE
P-0 AND P-1 TRANSFER MATRICES FOR NEUTRON
MODERATION IN A MONATOMIC GAS
COLLIER, G. GIBSON, G. /WESTINGHOUSE ASTRONUCL.
LAB./ JAN. 1968
NUC-10141

Fortran IV program /P1-GAS/ calculates the P-0 and P-1 transfer matrices for neutron moderation in a monatomic gas. The equations used are based on the conditions that there is isotropic scattering in the center-of-mass coordinate system, the scattering cross section is constant,

06 COMPUTER PROGRAMS

and the target nuclear velocities satisfy a Maxwellian distribution. $% \left\{ \left(1\right\} \right\} =\left\{ \left(1\right\} \right\} =\left\{ \left(1\right) \right\}$

SUBJECT INDEX -

Issue 6

| Subject 1 | ndex |
|-----------|------|
|-----------|------|

The title of each Tech Brief is listed under several selected subject headings to provide the user with a variety of approaches in his search for specific information. The Tech Brief number, e.g., B67-10148, is located under and to the right of the title and is followed by a two-digit number, e.g., 05, which designates the subject category in which the entire entry can be found.

Issue 6

Originator/Tech Brief Number Index

The left hand column identifies the originator number, to the right of each originator number is the Tech Brief number, e.g., 867-10023, followed by a two-digit number, e.g., 01, which identifies the subject category containing the entire citation.

TECH BRIEF/ORIGINATOR NUMBER INDEX -

Cumulative Index to Tech Briefs

Issue 6

| Tech Brief | /Originator | Number | Index |
|-------------------|-------------|--------|-------|
|-------------------|-------------|--------|-------|

The left hand column identifies the Tech Brief number, e.g., B67-10023, followed by a two digit number, e.g., 01, which identifies the subject category containing the entire citation. Following the subject category number is the originator number.

If Undeliverable (Section 15: Postal Manual) Do Not Retu

"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."

— NATIONAL AERONAUTICS AND SPACE ACT OF 1958

NASA TECHNOLOGY UTILIZATION PUBLICATIONS

These describe science or technology derived from NASA's activities that may be of particular interest in commercial and other non-aerospace applications. Publications include:

TECH BRIEFS: Single-page descriptions of individual innovations, devices, methods, or concepts.

TECHNOLOGY SURVEYS: Selected surveys of NASA contributions to entire areas of technology.

OTHER TU PUBLICATIONS: These include handbooks, reports, notes, conference proceedings, special studies, and selected bibliographies.

Details on the availability of these publications may be obtained from:

National Aeronautics and Space Administration Code UT Washington, D.C. 20546 Technology Utilization publications are part of NASA's formal series of scientific and technical publications. Other's include Technical Reports, Technical Notes, Technical Memorandums, Contractor Reports, Technical Translations, and Special Publications.

Details on their availability may be obtained from:
