NASA TECH BRIEF

Ames Research Center

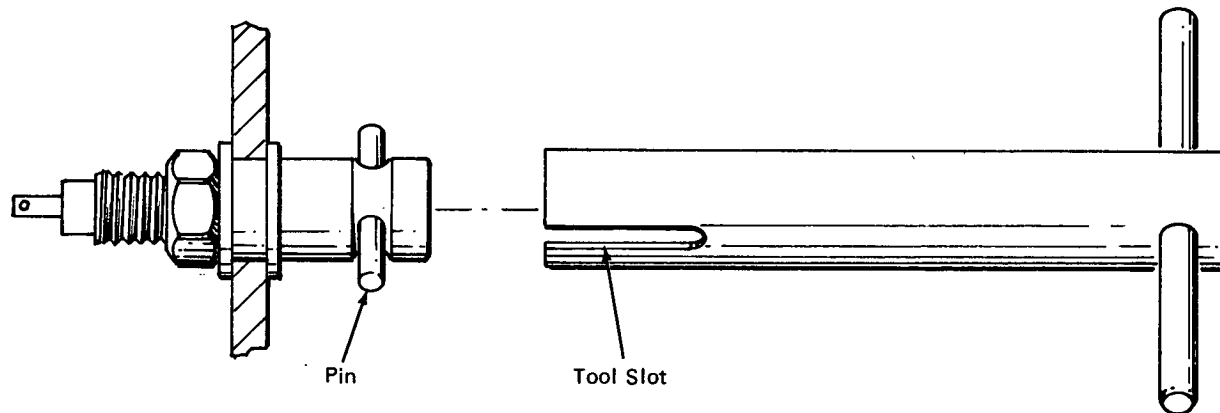

NASA Tech Briefs announce new technology derived from the U.S. space program. They are issued to encourage commercial application. Tech Briefs are available on a subscription basis from the National Technical Information Service, Springfield, Virginia 22151. Requests for individual copies or questions relating to the Tech Brief program may be directed to the Technology Utilization Office, NASA, Code KT, Washington, D.C. 20546.

Tool Expedites Installation of BNC Connectors

The problem:

To devise a satisfactory method of installing standard BNC connectors. Pliers can cause damage to the connectors and can leave them insufficiently tightened.

The tool is placed over the connector and the pins are fitted into the tool slots. The connector is then held firmly with the tool while a wrench is used to tighten the nut.

The solution:

A tool which holds the connector during installation and permits tightening the nut without damaging the connector.

How it's done:

The tool (see fig.) contains slots into which the indexing pins of the BNC connector are fitted. This prevents rotation of the connector during installation.

The connector and its mounting hardware are placed in position and the nut is hand tightened.

Note:
