- DEVELOP A REACTION KINETICS BASED MODEL OF THE PHOTODEGRADATION PROCESS EXPERIENCED BY ENCAPSULANTS
- DEVELOP A COMPUTER CAPABILITY TO UTILIZE THE REACTION KINETICS MODEL FOR PREDICTIVE PURPOSES

RELIABILITY PHYSICS

Goal

DEVELOP A REACTION KINETICS BASED MODEL OF THE PHOTODEGRADATION PROCESS EXPERIENCED BY ENCAPSULANTS, MEASURE ALL IMPORTANT RATE CONSTANTS, DEVELOP A COMPUTERIZED COMPUTER MODEL CAPABLE OF PREDICTION OF PHOTODEGRADATION RATE AND FAILURE MODES ASSOCIATED WITH IT OVER A THIRTY YEAR PERIOD, AND VALIDATE THE MODEL

FY84-85 Objectives

- EXTEND THE COMPUTERIZED DEGRADATION MODEL DEVELOPED FOR POLYETHYLENE TO EVA AND EVA (A-9918)
- EVALUATE THE EFFECT OF STABILIZERS ON PHOTODEGRADATION RATE
- PROVIDE GUIDELINES FOR SELECTION OF MOST EFFECTIVE CLASSES OF UV ~~ABC~~ STABILIZER
- INITIATE ~~THE~~ STUDY OF THE EFFECT OF TEMPERATURE VARIATION ON THE MODEL

ORIGINAL PAGE IS
OF POOR QUALITY

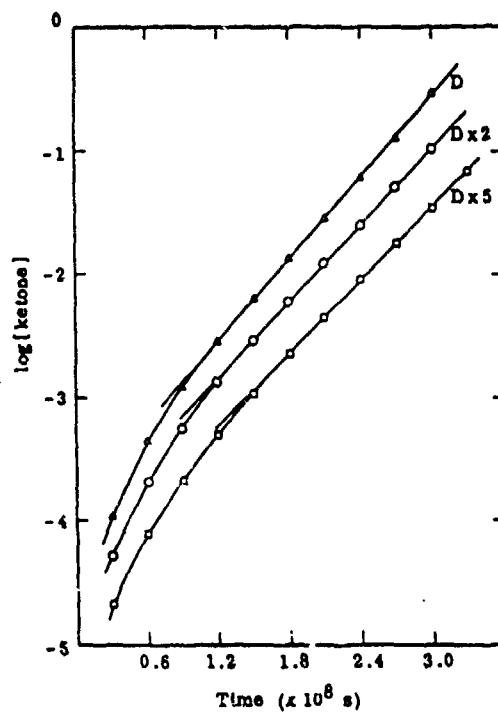

Accomplishments

- THE COMPUTERIZED PHOTODEGRADATION MODEL FOR POLYETHYLENE IS SHOWN TO CORRECTLY PREDICT FAILURE (EMBRITTLEMENT) OF ELVAX 150 ON OUTDOOR EXPOSURE, AND CROSS-LINKED ELVAX 150 ON OUTDOOR EXPOSURE
- OUTDOOR EXPOSURE AND ACCELEROMETER TESTS INDICATE THAT CROSS-LINKING EVA DOES NOT SIGNIFICANTLY CHANGE ITS DEGRADATION RATE
- PARALLEL TESTS ON STABILIZED POLYTHYLENE AND EVA (A-9918) SHOW THAT THE EFFECT OF THE STABILIZER PACKAGE IS APPROXIMATELY EQUIVALENT ON BOTH POLYMERS — i.e. THE PE MODEL CAN BE USED FOR A-9918 WITH MINOR CHANGES, AND STABILIZER CONSUMPTION RATE IS A USEFUL DIAGNOSTIC MEASURE FOR EARLY PHOTODEGRADATION
- COMPUTERIZED MODEL INDICATES THAT PEROXIDE (HYDROPEROXIDE) DECOMPOSERS AND UV ABSORBERS ARE MOST EFFECTIVE STABILIZERS — BETTER THAN ANTIOXIDANTS
- EFFECT OF TEMPERATURE CYCLING IS BEING INVESTIGATED
