Carl Calianno, NAVAIR

Presentation Overview

• Overview

- Objectives
- Evolution
- Airplanes
- ARS
 - Tanker airplane, in-depth
- Engine
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

- National Objectives
- Dryden Project Objectives
- Airplane Description
 - Tanker airplane, in-depth
- Flight Test Technique
- Sample Results
- Paratroque Drag
- Drag Relief
- Comparison to Wind Tunnel Predictions
- Drag Polars
- Constant Drag Coefficient?
- Concluding Remarks

National AAR Program Interest

- Overview
- **Objectives**
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

- **Automated Aerial Refueling (AAR)**

- **Unmanned Aerial Vehicles**

- Extends range
- Shortens response for time critical targets
- Maintains in-theater presence using fewer assets

National AAR Program Interest

- Overview

- **Objectives**

- Evolution

- Airplanes

- ARS

- Engine

- FTT

- Sample Data

- Drag Results

- Paratroque

- Relief

- Wind Tunnel

- Drag Polars

- Constant CD

- Conclusions

- Automated Aerial Refueling (AAR)

- **Manned Aircraft**

- Facilitates adverse weather operations
- Improves fueling efficiency
- Enables multi-point simultaneous refueling

Dryden AAR Project Objectives

- Overview

- **Objectives**

- Evolution

- Airplanes

- ARS

- Engine

- FTT

- Sample Data

- Drag Results

- Paratrogue

- Relief

- Wind Tunnel

- Drag Polars

- Constant CD

- Conclusions

- **Quantify Assumptions**

- Drogue is assumed stable in the proximity of a stable receiver aircraft
- The drogue movement is repeatable and predictable

- **Assess the Approach**

- Can adequate flight test data be captured through optical instrumentation?
- Can individual model effects be superimposed to predict final drogue position?
- Are the flight test techniques sufficient to collect the desired data?
- Are the independent model parameters that affect drogue position observable through flight test?
- Sufficient signal to noise ratio, measurement error, parameter coupling, etc.

- **Reduce risk for UCAV AAR program through early flight test**

- Deliver flight validated drogue model to the AAR community for future automatic control system development
- Correlate the drogue model to generic forebody influences
- Develop organic UAV instrumented tanker capability
- Develop expertise in electro-optic sensor technologies
- Applicability of the model to alternate refueling scenarios

Dryden Optical Tracking

- Overview
- **Objectives**
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

Dryden AAR Approach

• Overview

• Objectives

• Evolution

• Airplanes

• ARS

• Engine

• FTT

• Sample Data

• Drag Results

• Paratrogue

• Relief

• Wind Tunnel

• Drag Polars

• Constant CD

• Conclusions

• Phase 0

- Envelope expansion
 - ARS on F/A-18A
 - ARS operational envelope
 - Flight test envelope
 - 1st refueling from a “K” F/A-18A
- Drogue position vs. airspeed
- Pilot proficiency

• Phase 1

- Isolate drogue influences
 - Flight conditions
 - Hose effects
 - Tanker effects
 - Receiver forebody effects
 - Turbulence
- Two additional external tanks

• Opportunity for piggy-back experiment

- Existing instrumentation available onboard from the AFF project
- Drag estimation for paratrogue and hose assembly

Evolution of Aerial Refueling

- Overview

- Objectives

- **Evolution**

- Airplanes

- ARS

- Engine

- FTT

- Sample Data

- Drag Results

- Paratroque

- Relief

- Wind Tunnel

- Drag Polars

- Constant CD

- Conclusions

1921: Wingwalking Transfer Method

2003: Precision Engagements

AAR Project Aircraft

- Overview
- Objectives
- Evolution
- **Airplanes**
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

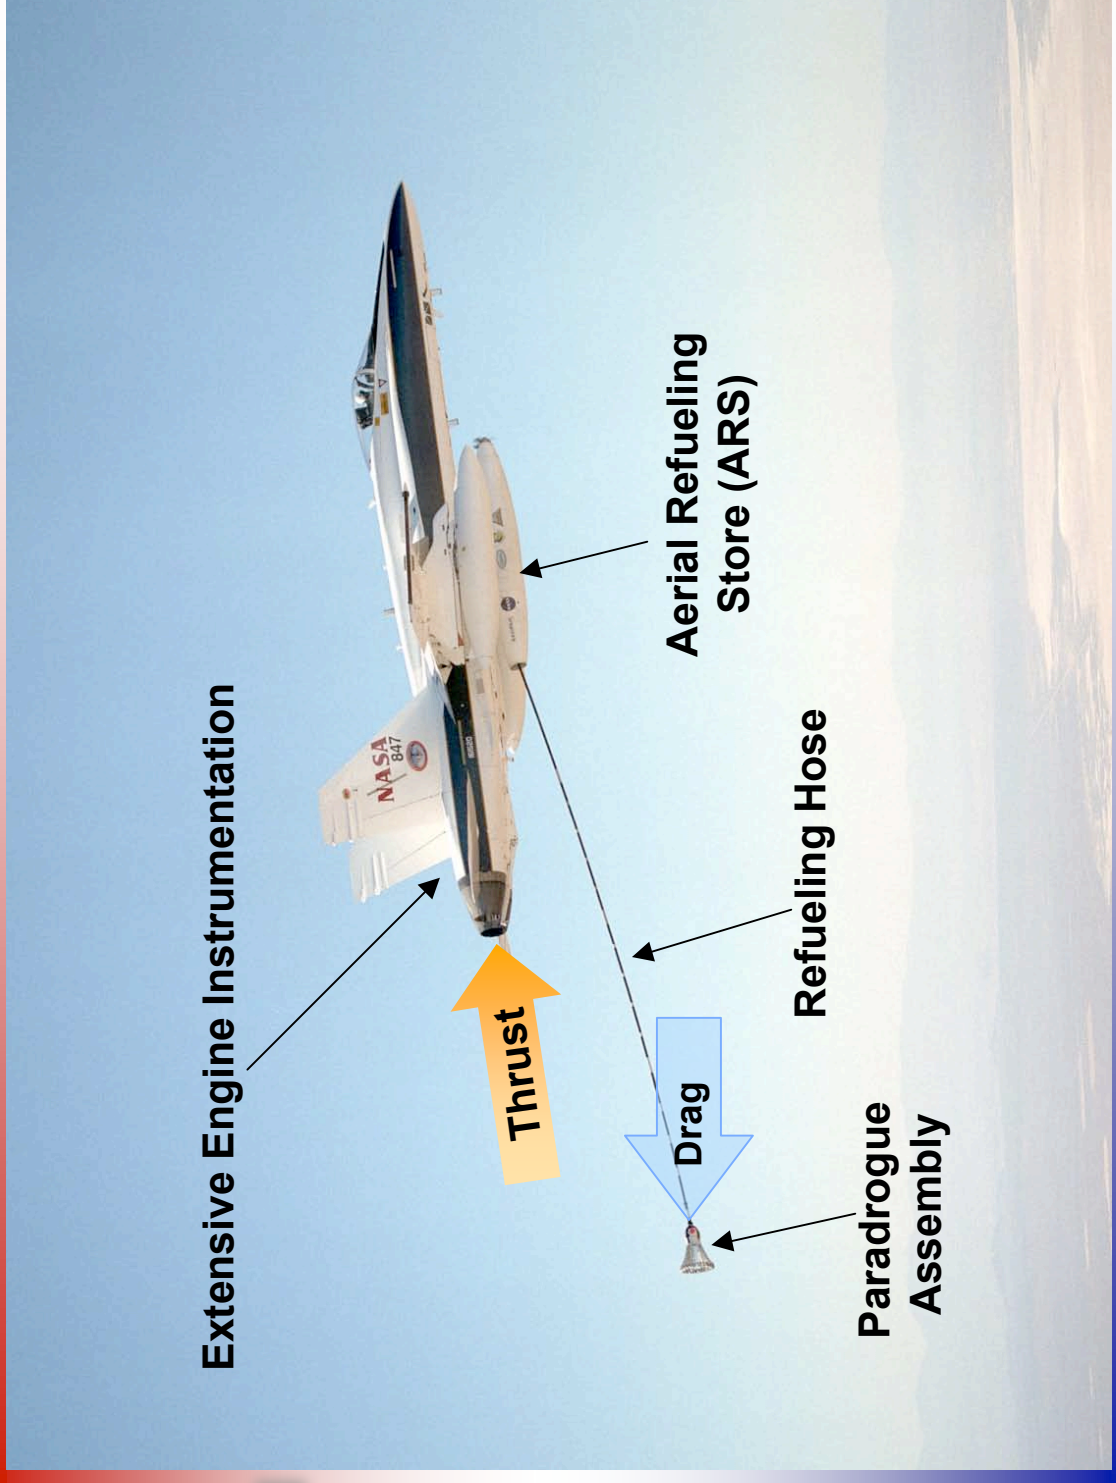

- **NASA 845**
 - Two-seater
 - Systems Research Testbed
 - Two forward-facing cameras
- **NASA 847**
 - Single-seater
 - Tanker configuration w/ ARS
 - Thrust Instrumentation
 - Two aft-facing cameras
- Dual instrumentation
 - GPS receivers
 - Wireless modems
 - Multiple telemetry streams
- Additional NASA F/A-18s
 - Phase 0 chase support

Tanker Description

- Overview
- Objectives
- Evolution
- **Airplanes**
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars

- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

NASA F/A-18A Airplane, T/N 847

Note: Not to scale

Engine Thrust Instrumentation

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- **Engine**
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

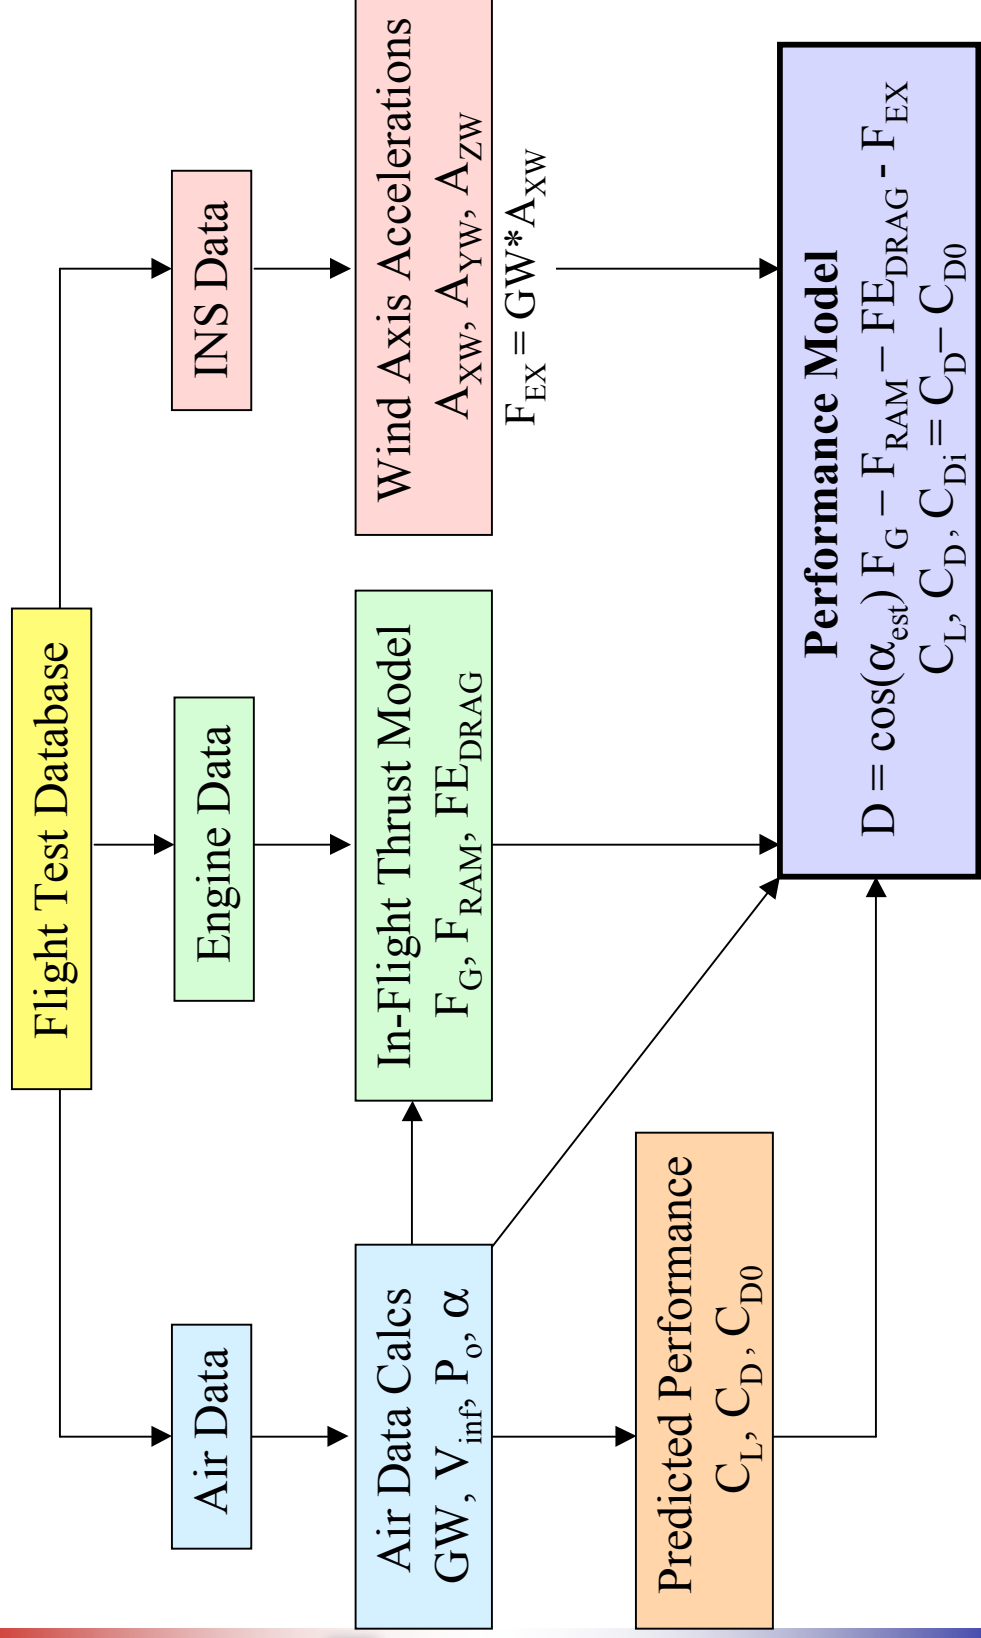

- F404 Engines – Instrumented for Thrust Determination
 - Flight-test, volumetric fuel-flow meter installed (WF_E)
 - Turbine exit plane pressure rakes (P_{T558})
- Manufacturer's In-Flight Thrust Model used to calculate thrust

Lift and Drag Analysis

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- **Engine**
- FTT
- Sample Data
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

Flight Test Technique

- **Test Point Description**
 - All-subsonic test points
 - Stabilized paradrogue deployments and retractions
- **Data Uncertainty**
 - Drag calculation ~ 3 to 5%
 - Trim angle of attack < 1%
 - Airplane weight
 - Drogue deployment
- **Data Quality**
 - Bias error is virtually eliminated by acquiring test data at back-to-back points during each flight, eliminating the effects of
 - Weight changes
 - Atmospheric effects
 - Calculation bias errors
 - Auto-throttle control
 - Variations in extended hose length < 2 feet
 - Extensions and retractions
 - Receiver engagements
 - Control room displays for evaluating data and maneuver quality

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- **FTT**

- Sample Data
- Drag Results
 - Paradrogue
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

Sample Drag Change

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- **Sample Data**
- Drag Results
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

Paradrogue Drag Summary

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data

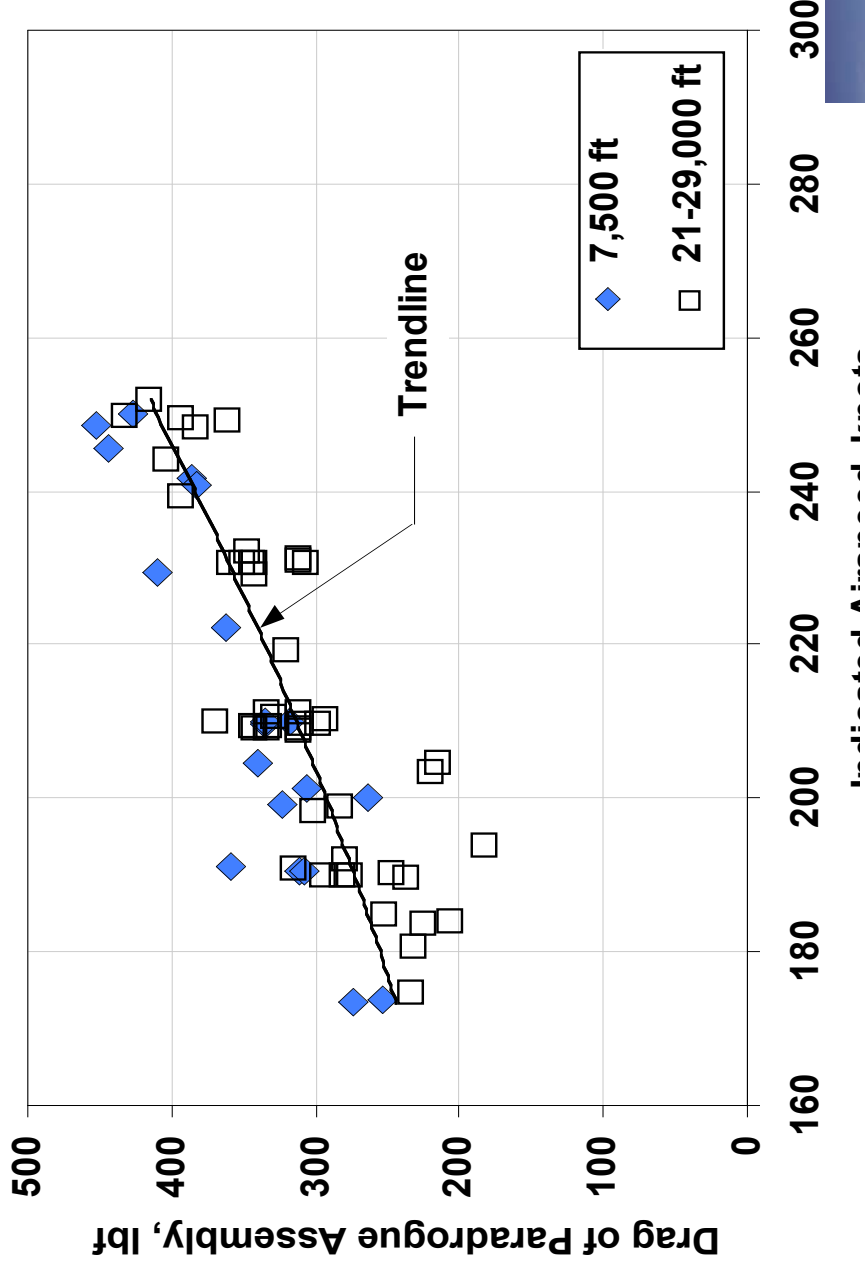

• Drag Results

• Paradrogue

- Relief
- Wind Tunnel
- Drag Polars
- Constant CD

• Conclusions

- Parabolic trend evident
- Results appear to be independent of altitude

Receiver Engagements

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratroque
 - Relief
 - Wind Tunnel
 - Drag Polars
 - Constant CD
- Conclusions

- Magnitude of drag relief is significant
- Data Scatter

Wind Tunnel Tests

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratroque
 - Relief
- **Wind Tunnel**
 - Drag Polars
 - Constant CD
- Conclusions

- **Purpose**
 - Baseline aerodynamic performance of the Navy ‘-18’ canopy for comparison purposes
 - Test various canopy designs for next-generation ARS canopy
 - Material type
 - Size, shape, cross-sectional area
 - Test various paratroque mechanical designs
 - Struts
 - Linkages
 - Thread types
 - Used for attaching canopy to struts and maintaining shape while inflated
- **Tunnel Characteristics**
 - 3 Foot diameter test section
 - Maximum Airspeed = 200 kts
 - Blockage = Approximately 10%

Wind Tunnel Setup

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratroque
 - Relief
- **Wind Tunnel**
 - Drag Polars
 - Constant CD
- Conclusions

Canopy Aerodynamics

•The canopy is an inflatable airfoil which generates lift and drag

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data

•Drag Results

- Paradogue
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

ORIGINAL CONFIGURATION

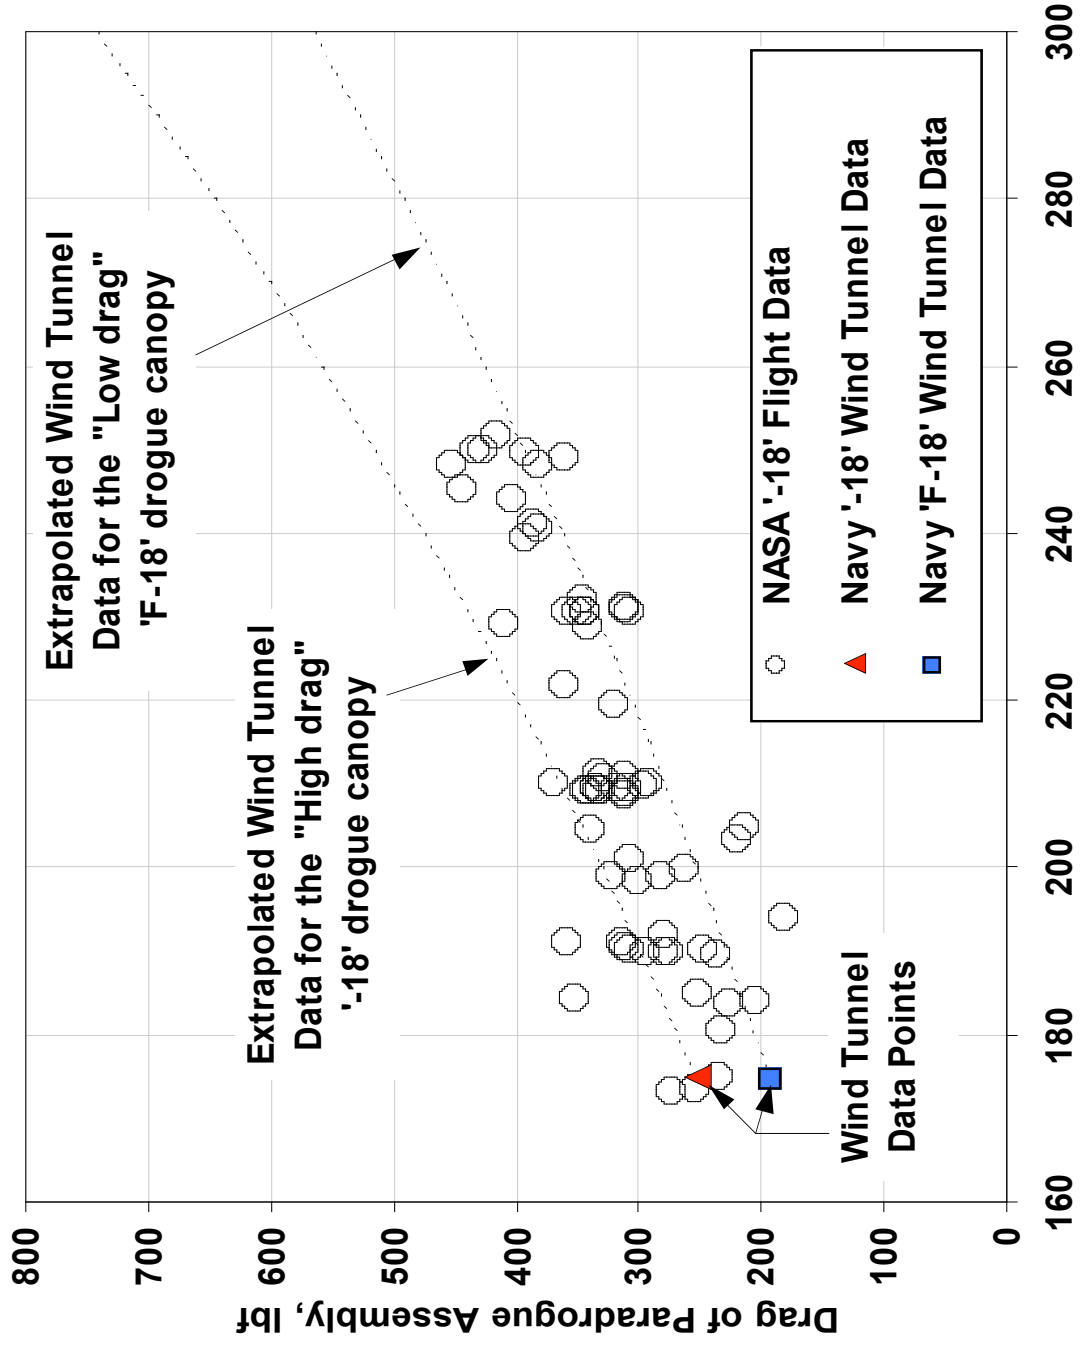

MODIFIED CONFIGURATION

Flight vs. Wind Tunnel

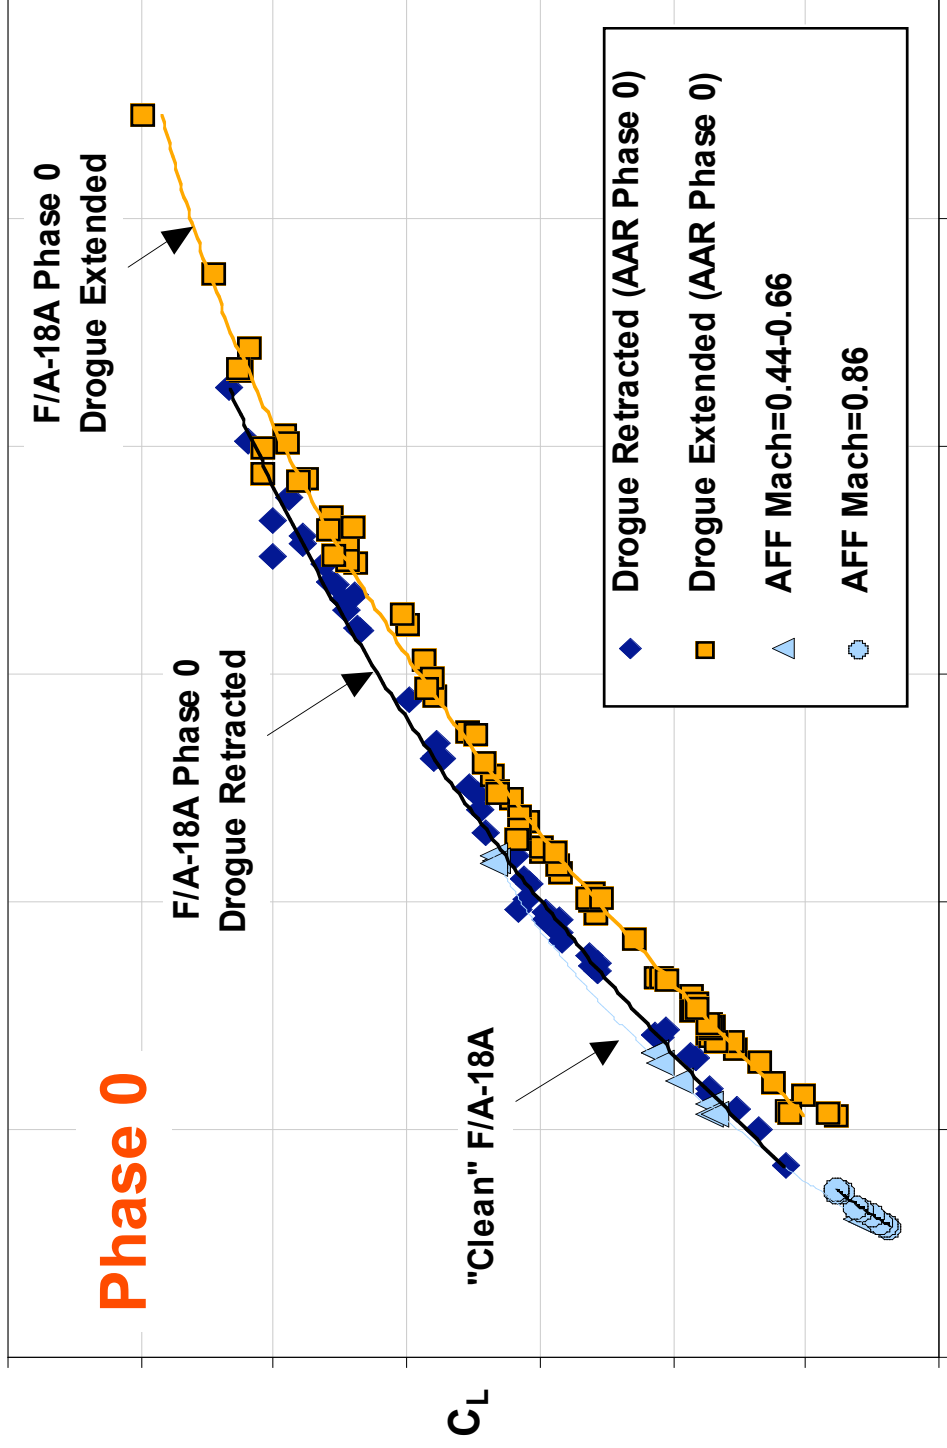

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratroque
 - Relief
 - **Wind Tunnel**
 - Drag Polars
 - Constant CD
- Conclusions

Drag Polars

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratroque
 - Relief
 - Wind Tunnel
- Drag Polars
 - Constant CD
- Conclusions

Drag Polars

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- **Drag Results**
 - Paratrogue
 - Relief
 - Wind Tunnel
- **Drag Polars**
 - Constant CD
- Conclusions

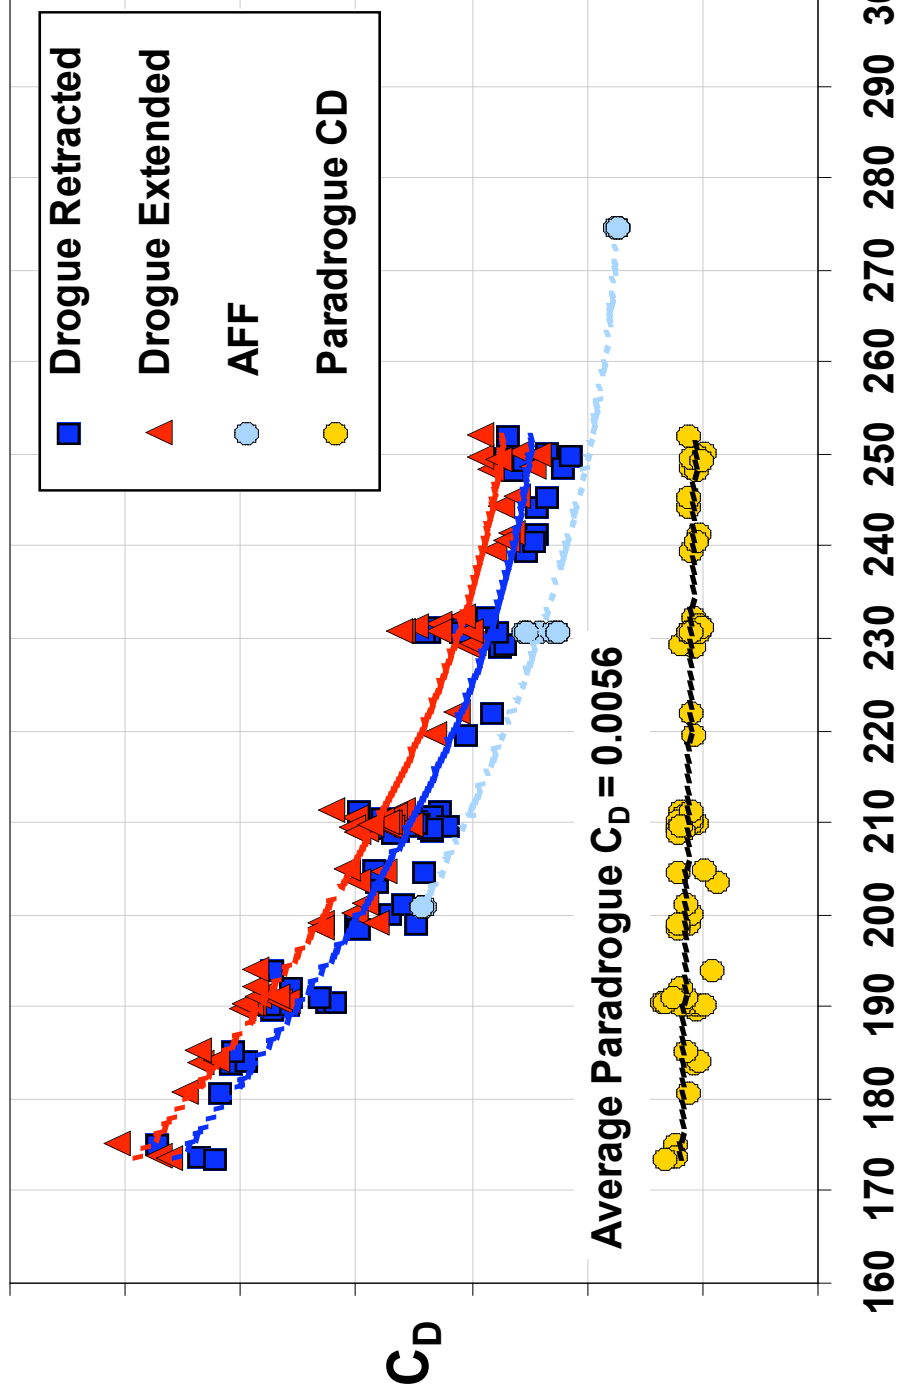

Constant Drag Coefficient?

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data

• Drag Results

- Paratrogue
- Relief
- Wind Tunnel
- Drag Polars
- **Constant C_D**

- Conclusions

Indicated Airspeed. knots

Note: Average Paratrogue $C_{DA} = 2.24 \text{ ft}^2$

Conclusions

- First known measurement and publication of in-flight drag of an aerial refueling system
- Paratrogue drag
 - 200 lbf at 170 kias
 - 450 lbf at 250 kias
 - Good correlation with wind tunnel results
- Tanker drag relief during engagements
 - 35 lbf at 170 kias
 - 270 lbf at 250 kias
- “Constant” paratrogue $C_D = 0.0056$
 - Based upon F/A-18 wing area
- All results compare favorably with clean F/A-18 data from the AFF project

- Overview
- Objectives
- Evolution
