

## The NASA Electronic Parts and Packaging (NEPP) Program – *Results and Direction*

Kenneth A. LaBel  
Co- Manager, NEPP Program  
NASA/GSFC  
ken.label@nasa.gov  
301-286-9936  
<http://nepp.nasa.gov>

## Outline of Presentation

- Introduction – a NEPP overview
- Partnering and Impact on the Community
- Cost of Doing Business
- Highlights of FY06 (Current Tasks)
- FY07 Task Planning Based on FY06 Tasks and New Efforts

*Latent damage sites:  
device did not fail during ground irradiation,  
but at some time afterward*

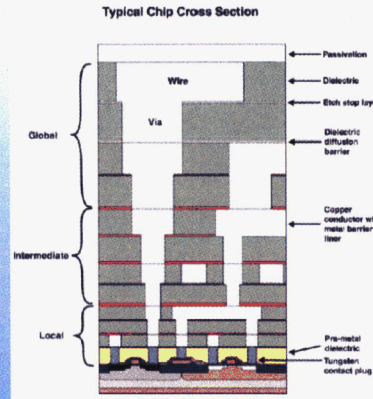

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

2

# NEPP Mission

- The NEPP mission is to provide guidance to NASA for the selection and application of microelectronics technologies, to improve understanding of the risks related to the use of these technologies in the space environment and to ensure that appropriate research is performed to meet NASA mission assurance needs.
- NEPP subset: NASA Electronic Parts Assurance Group (NEPAG)
  - Focuses on daily needs of parts assurance knowledge-base

A typical IC takes over 1500 processing steps

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

3

# NEPP Program – Goals and Objectives

- Main goal – *Mission reliability* to meet NASA exploration and science objectives
  - Ensure reliability of missions by “smart” investments in EEE parts technology, knowledge gathering and research
    - Minimize engineering resources required to maximize space and earth science data collection
- NEPP objectives
  - Evaluate NASA needs for and reliability/radiation issues of new and emerging EEE technologies with a focus on near to mid term needs
    - Explore failure mechanisms and technology models
  - Develop guidelines for technology usage, selection, and qualification
  - Investigate radiation hardness assurance (RHA)/reliability issues
    - Increase system reliability and reduce cost and schedule

“There’s a little black spot on the sun today”

SOHO Image

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

4

# NEPP and NEPAG: Overview

Feature	NEPP	NEPAG
Target customer	Projects in preliminary design and planning phases	Projects in or near hardware build phases
Target technologies	Current state-of-the-art and next generations	Commercially available
Sample partners	Technology developers, radiation hardened microelectronics programs	Defense Supply Center Columbus (DSCC)
Sample products	Technology guidelines, test methods, evaluation reports, models	GIDEP alerts, FAs, DPA,s audit report
Website (w/ cross-links)	nepp.nasa.gov	nepag.nasa.gov
Other information dissemination paths	Conferences, NEPP flash and newsletter	Weekly telecon, GIDEP system, space parts working groups

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

5

## Samples of NEPP Impact to the Community (1 of 2)

*NASA Flight Projects and some of the related areas that NEPP has provided a knowledge-base that has directly aided flight projects*

- MAP
  - Single Event Transients (SETs) – anomaly resolution led to NASA alert
- TERRA
  - Optocouplers, Solid State Recorders (SSR), High Gain Antenna anomaly
- AURA
  - Oscillators
- AQUA
  - Interpoint DC-DC converters
- TRMM, XTE
  - SSRs, Fiber Optics
- TOPEX/Poseidon
  - Optocouplers
- SeaStar
  - SSRs
- Launch Vehicles
  - Optocouplers
- Suborbital
  - Parts screening
- LWS
  - FPGAs, memories
- Hubble Space Telescope
  - Optocouplers, Capacitors, SSRs, Fiber Optic Data Bus (FODB), Xilinx FPGAs, detector technologies
- Hubble Robotic Servicing
  - Processors, memories, FPGAs, packaging
- JWST
  - Detector technologies, memories
- Cassini
  - Interpoint DC-DC converters, optocouplers, processors
- AXAF/Chandra
  - Optics
- SWIFT
  - ACTEL FPGAs
- MER, MRO
  - ELDRS, Processors, Memories, Packaging, FPGAs
- ISS
  - Fiber optics, wire/cable
- Shuttle
  - ACTEL FPGAs, capacitors
- GLAST
  - Lasers

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

6

## Samples of NEPP Impact to the Community (2 of 2)

NEPP has supported DoD and other government anomaly/problem issues, technology developments, as well as joint knowledge-base development that have import to the NASA community

In addition, NEPP has worked with industry to develop improved products for spaceflight including many small businesses

- Government partners
  - DoD
    - USD(AT&L)
    - Defense Threat Reduction Agency (DTRA)
    - Air Force Research Laboratory (AFRL)
    - Air Force Space and Missile Command (AFSMC)
    - Missile Defense Agency (MDA)
    - Defense Advanced Research Projects Agency (DARPA)
    - NAVSEA
    - NAVAIR
    - Naval Research Laboratory
    - US Army Strategic and Missile Defense Command (USASMDC)
    - OGA
  - DOE
    - Sandia National Laboratories
    - Lawrence Livermore National Laboratories
    - Brookhaven National Laboratories
    - Los Alamos National Laboratories
  - NSF
    - National Superconducting Cyclotron Laboratory
  - ESA
  - JAXA
  - CNES
- Industry partners
  - Actel
  - Lambda/International Rectifier
  - Interpoint
  - Vishay
  - Presidio
  - BAE Systems
  - Honeywell
  - Aeroflex
  - Intersil
  - Xilinx
  - IBM
  - Freescale (formerly Motorola)
  - Cardinal
  - LSI Logic
  - Ball Aerospace
  - ATK
  - Micro RDC
  - Seakr
  - Maxwell
  - Texas Instruments
  - SAIC
  - Boeing

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

7

## Sample Partnership Matrix

Task Area	Other Government	Industry	University	NASA
Scaled CMOS	DARPA, AFRL, LANL, NAVSEA, MDA, OGA, AFOSR – in-kind; DTRA – direct funding, in-kind	TI, Samsung, Elpida, IBM, Boeing, Xilinx, Actel, Aeroflex, Nantero, Freescale – test samples, Mayo Foundation – mitigation design, packaging	Vanderbilt, Arizona State MIT – modeling and data analysis - test support	Multiple flight programs
SiGe Radiation	DARPA, OGA, AFOSR – in-kind; DTRA – direct funding, in-kind	Jazz Semiconductor, IBM, TI – test samples, Mayo Foundation – mitigation design, packaging	Auburn, Georgia Tech, Arizona State, Vanderbilt – modeling and data analysis	RHESE - (Georgia Tech)
Sensor Technology	AFRL – test samples, joint test; DTRA – direct funding, in-kind	Ball Aerospace, Raytheon, Full Circle Research – joint test and data analysis	U of Arizona, U of Hawaii	JWST, HST WFC3

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

8

## Hypothetical New Technology Part Qualification Cost

<i>Item</i>	<i>Cost</i>	<i>Note</i>
Parts Procurement (500-1000 devices for testing only)	\$25-1000K	Individual device costs can run from cents to tens of thousands
Standard Qualification Tests	\$300K	
Radiation Tests and Modeling	\$400K	Assumes total dose and single event (heavy ion) only
Failure Modes Analysis	\$300K	Out-of-the-box look at the "hows and whats" for non-standard research required for qualification
Additional Tests, Modeling, and Analysis based on Failure Modes	\$500K	
Total cost for one device type	\$1.5-3M	Not all new technologies will meet standard qualification levels: technology limitations document

**Assumption: it takes 12-24 months to develop sufficient data for technology confidence**

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

9

## The Increasing Cost of Doing Business -

**Example: Radiation Single Event Effect Test Costs  
Qualification Testing of a Commercial Memory – 1996 to 2006 (1 of 2)**

- **Device under test (DUTs):  
Commercial Memory**
  - For use in solid state recorder (SSR) applications
- **1996**
  - **SRAM memory**
    - 4 Mbits per device
    - <50 MHz bus speed
    - Ceramic packaged DIP or LCC or QFP
- **2006**
  - **DUT: DDR2 SDRAM**
    - 1 Gbit per device
    - >500 MHz bus speed
    - Plastic FBGA or TSOP
    - Hidden registers and modes
    - Built-in microcontroller
- **Issues**
  - **Size of memory**
    - Drives complexity on tester side for amount of storage, real time processing, and length of test runs
  - **Speed**
    - Difficult to test at high-speeds reliably
      - Need low-noise and high-speed test fixture
    - Classic bit flips (memory cell) extended to include transient propagation (used to be too slow a device to respond)
    - Thermal and mechanical issues (testing in air/vacuum)
  - **Packaging**
    - Modern devices present problems for reliable test board fixture, die access (heavy ion tests) requiring expensive facility usage or device repackaging/thinning
    - Difficulty in high-temp testing (worst-case)
  - **Hidden registers and modes**
    - Functional interrupts driving "anomalous data"
      - Not just errors to memory cells!
  - **Microcontroller**
    - Not just a memory

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

10

**Example: Radiation Single Event Effect Test Costs**  
**Qualification Testing of Commercial Memories - 1996 to 2006 (2 of 2)**

1996 SEE Test of a 4M SRAM				2006 SEE Test of SDRAM					
Description	Man-weeks or units	Cost in \$	Total	Note	Description	Man-weeks or units	Cost in \$	Total	Note
Heavy ion at BNL SEUTF				Includes eng, rad, other to define what needs to go into test set with project.	Heavy ion at TAMU				Includes eng, rad, other to define what needs to go into test set with project.
Test plan	0.20	\$4,000.00	\$800.00		Test plan	1.00	\$4,000.00	\$4,000.00	
Device procurements	10.00	\$50.00	\$500.00	Device procurements	10.00	\$75.00	\$750.00		
Misc parts	1.00	\$250.00	\$250.00	Misc parts	1.00	\$1,000.00	\$1,000.00	Higher speed drives cost	
Device delidding	0.05	\$3,500.00	\$175.00	Sockets, connectors, etc...	Assumes FBGA package; If this does not work, more expensive test facility like NSCL needed: >\$100K delta				
Test board design - electrical and layout	0.40	\$4,000.00	\$1,600.00	Device thinning and package processing	10.00	\$350.00	\$3,500.00		
Board fab and population	1.00	\$3,500.00	\$3,500.00	Daughterboard Board design - electrical	0.40	\$4,000.00	\$1,600.00		
Board/tester debug	0.50	\$4,000.00	\$2,000.00	Daughterboard Board design - PCB	0.50	\$3,500.00	\$1,750.00		
Rad expert (test oversight and plan)	0.40	\$5,000.00	\$2,000.00	Test Boards	10.00	\$500.00	\$5,000.00		
Heavy ion test performance - contractor	2.00	\$1,500.00	\$3,000.00	Board population	0.40	\$3,500.00	\$1,400.00		
BNL Beam	6.00	\$700.00	\$4,200.00	Board/tester debug	0.50	\$4,000.00	\$2,000.00		
Data analysis	1.00	\$3,500.00	\$3,500.00	Tester VHDL development	3.00	\$4,000.00	\$12,000.00		
Test report (eng, rad expert, rad lead)	0.50	\$4,000.00	\$2,000.00	Technician	1.00	\$3,500.00	\$3,500.00		
				Rad expert (test oversight and plan)	0.60	\$5,000.00	\$3,000.00		
				Heavy ion test performance - contractor	2.00	\$2,000.00	\$4,000.00	2X time required: more data, more error types, more complex results	
				TAMU	16.00	\$750.00	\$12,000.00		
				Data analysis	3.00	\$3,500.00	\$10,500.00		
				Test report (eng, rad expert, rad lead)	1.00	\$4,000.00	\$4,000.00		
				<b>Total</b>				<b>\$70,000.00</b>	

**1996 vs 2006 a 3X Cost Delta**  
**Other test costs (radiation and reliability) have increased commensurately!**

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

**State-of-the-art Flash Memory Evaluation**

Micron 2Gb NAND Flash - Number of Bad Bits  
90 nm CMOS

ST 1Gb NAND Flash - Number of Bad Bits  
110 nm CMOS

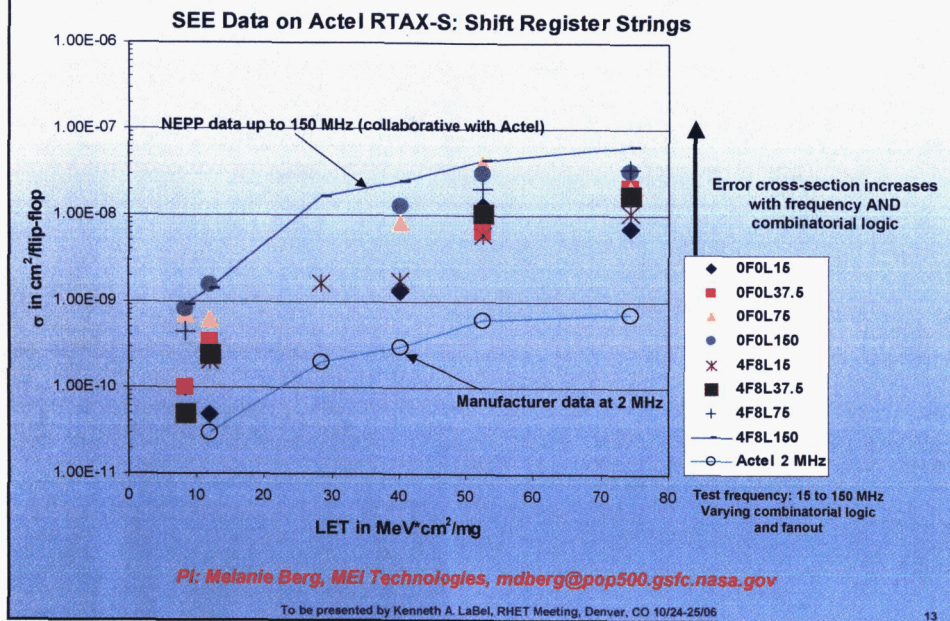

Note mode dependence of results.  
**Novel error mode observed**

NEPP evaluates state-of-the-art and emerging non-volatile memories (NVMs) focusing on:  
 - Technology, architecture, and application issues

PI: **Tim Oldham, QSS Corp, toldham@pop500.gsfc.nasa.gov**

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

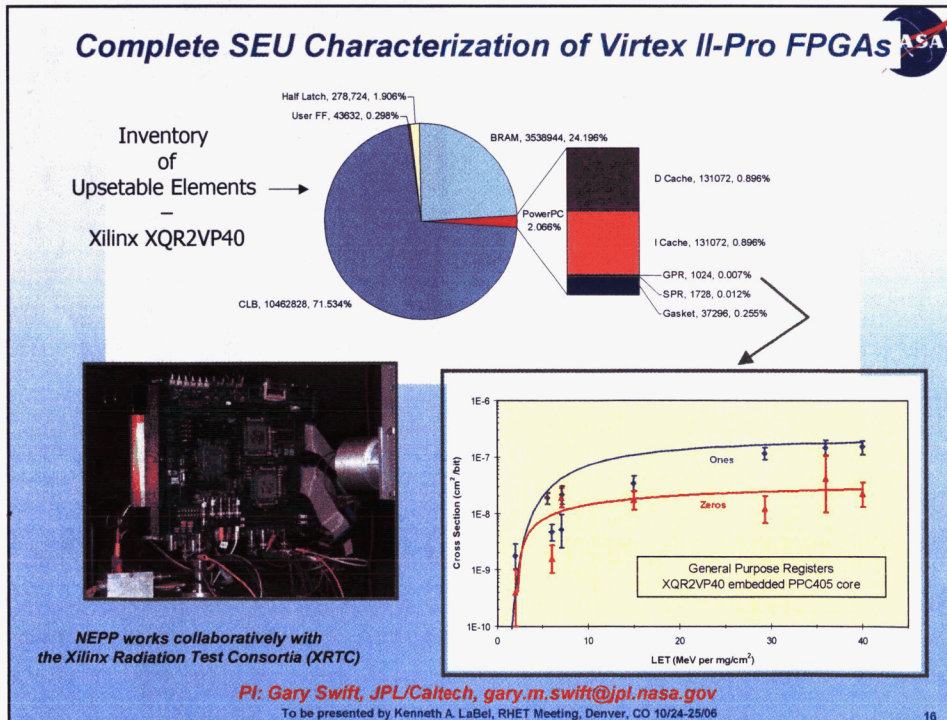

## First at speed SEE data on Actel RTAX-S FPGA

## Power MOSFETs -

Partial and Catastrophic SEGR in 100V Devices

# State-of-the-art SDRAM Memory Evaluation – Challenges for test preparation and data collection/analysis

X-Ray Photo of a DUT

Determining effective LET as a function of angle requires correcting for the energy lost by the ion as it traverses overburden to the sensitive volume, as well as the usual  $1/\cos\theta$  dependence.

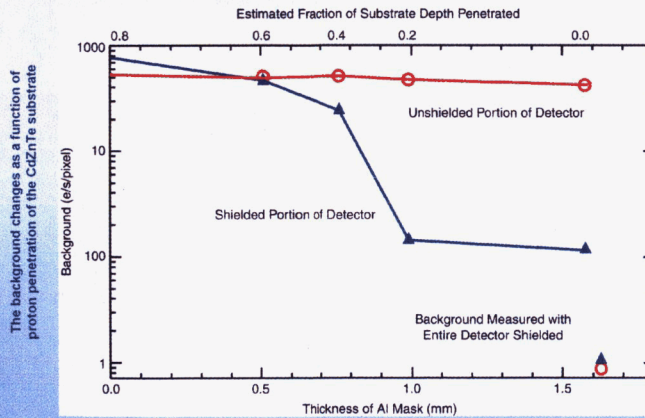

NEPP evaluates state-of-the-art and emerging SDRAMs focusing on:  
- Technology, architecture, and test methodology issues

PI: Ray Ladbury, NASA-GSFC, [rladbury@pop500.gsfc.nasa.gov](mailto:rladbury@pop500.gsfc.nasa.gov)

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

17

# Sensor Technologies – Key Results

Investigation of anomalously high background noise in infrared imagers during proton irradiation  
-DUT: 1.7 micron Wide Field Camera 3 (WFC3) HgCdTe imagers for Hubble Space Telescope  
-Issue: High background signal which was about 10 times higher than expected at 150K temperature  
-Suspected cause: Proton-induced luminescence in the CdZnTe substrate.  
-Verification of cause: Probe the detector layers with proton beams of varying energy and therefore varying penetration depths as shown in the graph above  
-Results: Validated hypothesis  
WFC3: new devices with substrate removed were acquired and tested with protons in December 2005. No evidence of the luminescence-induced background was observed. HAPPY SCIENTISTS!

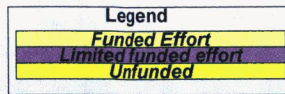

PI: Cheryl Marshall, NASA-GSFC, [cmarshall2@aol.com](mailto:cmarshall2@aol.com)

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06

# FY07 Plans for NEPP Research:

## Focus on "large value" results

Packaging and passives have similar "roadmaps"

## Summary and Comments

- **NEPP Provides Critical Guidance for Flight Projects**
  - Challenge: Keeping ahead of the flight projects
    - New technology devices are often inserted by flight projects at 1<sup>st</sup> silicon; the same time NEPP gets access to the technology!
    - Given a 12-24 month time period for test, evaluation, and qualification definition as a minimum, flight projects take a large risk by not waiting.
      - *We provide guidance, but are not policeman!*
- **NEPP Partners Throughout the Aerospace Industry**
  - NEPP/NEPAG lead in fostering information exchange throughout NASA and the community
    - Example: NEPP has initiated partnering with the Radiation Hardened Electronics for Space Exploration (RHESE) Program
- **NEPP Strives to Develop Cost-Effective Qualification Methods**
  - Challenge is the ever-increasing cost of doing business
- **Suggested NEPP Augmentation Areas**
  - Sample technical effort shortfalls were highlighted in FY07 plans
    - Example: Entire NEPP planned FY07 budget could be used for FPGA efforts!
  - New training modules are required for new technology insertion
    - More than just a parts, packaging, and radiation issue
    - Currently collaborating with CNES, ESA and others on radiation training class (SERESSA)
  - Increased university presence
    - Shortfall of qualified parts, packaging, and radiation specialists
      - Example: Difficulty in finding US citizens for radiation positions
    - Scholarships, post-doc opportunities, etc are being considered

To be presented by Kenneth A. LaBel, RHET Meeting, Denver, CO 10/24-25/06
