54th International Instrumentation Symposium

Pensacola, FL USA

5-8 May 2008

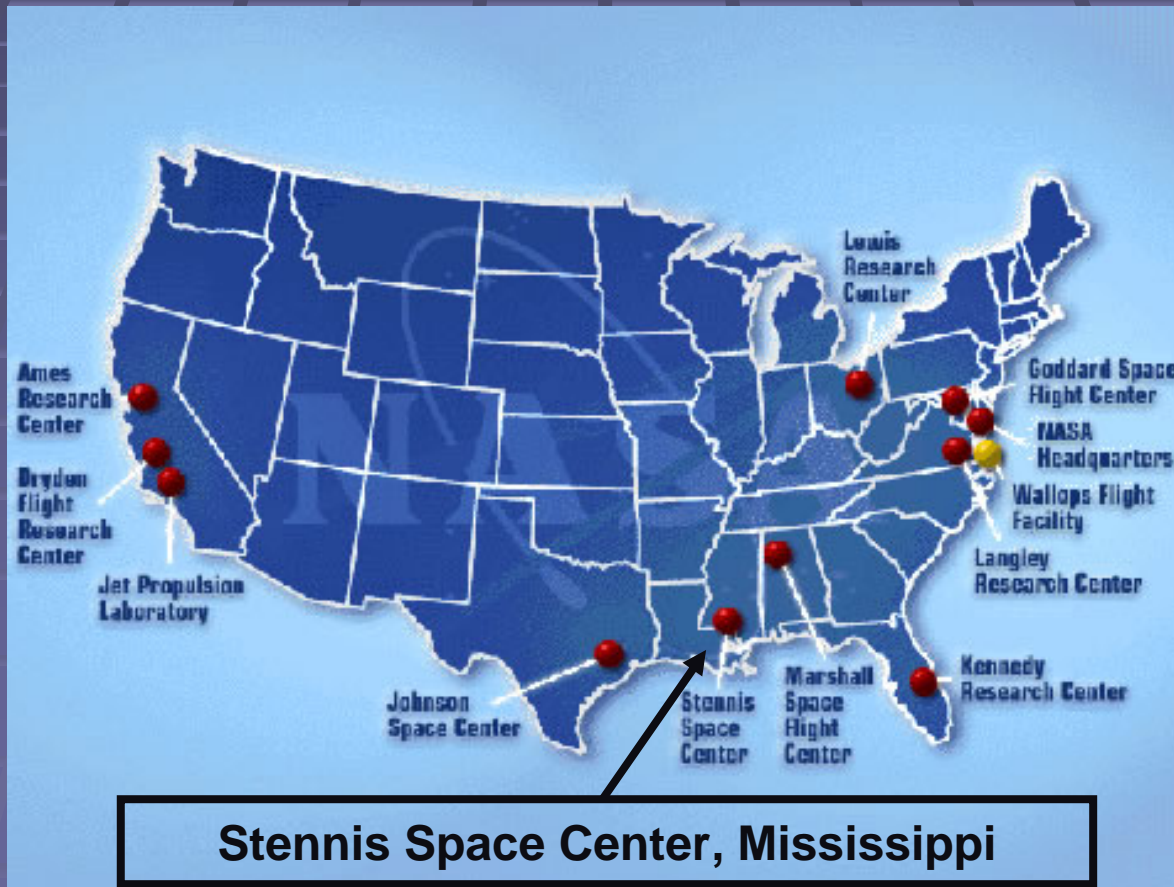

Outline

- Integrated Systems Health Management and the Role of Intelligent Sensors
- Intelligent Sensors
- The Role of IS in Future Space Flight

NASA Centers

Rocket engine testing at NASA-Stennis is distributed over a 13,500 acre (5,500 ha.) site +120,000 acre (48,500 ha.) noise abatement easement

ISHM Requirements

- Improve quality
 - By making better and more reliable measurements
- Minimize costs
 - Of reconfiguration between test articles
 - Of repair and calibration
- Avoid downtime
 - By predicting impending failures
 - By timely intervention
- Increase safety (protect people and assets)

Technologies and Tools for ISHM

- ISHM Architecture
- Health assessment database
- Anomaly detection methods
- Predictive modeling
- Root cause analysis
- **Intelligent elements**
- Integrated awareness

A View of an ISHM Application

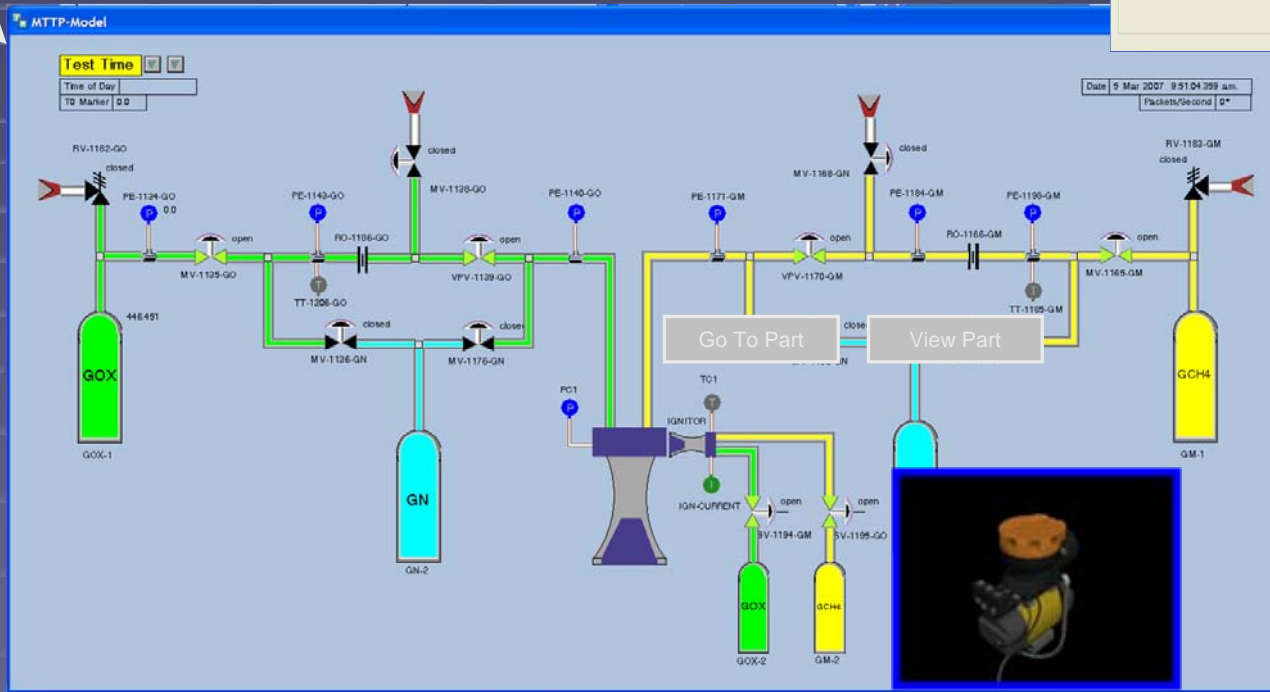

ISHM Models (Embedded Data, Information, and Knowledge):
MTTP Implementation

Health Assessment Database:
Health Electronic Data Sheets
Repository of anomalies

Anomaly Detection:
Leaks, etc.

Intelligent Sensors: IEEE Standard+Health

Embedding of Predictive Models

Root Cause Analysis

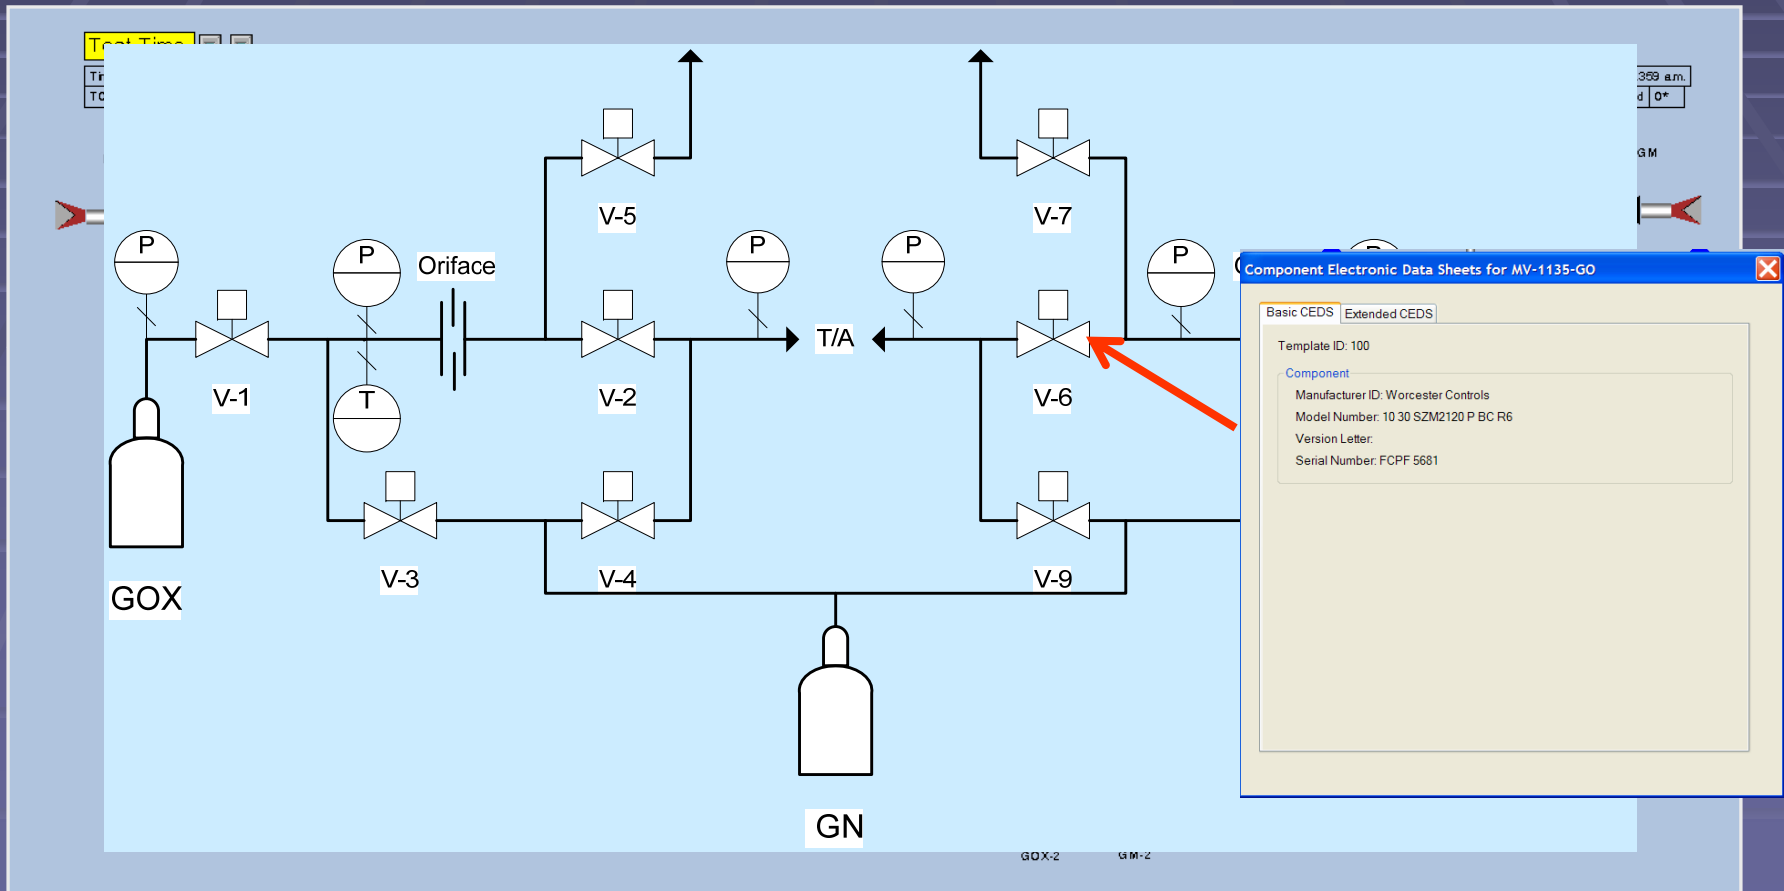

Integrated Awareness:
3-D Health Visualization of MTTP

ISHM Enabling Technologies: ISHM Architecture

The Piping and Instrumentation Diagram (P&ID) for a system...

Populated by component objects with associated xEDS...

ISHM Enabling Technologies: Health Assessment Database

- Historical data records
 - Nominal
 - Anomalous
- Algorithm repository
 - Complex for implementation at upper ISHM architecture levels
 - Simplified for embedding in Intelligent Sensor
- Electronic Data Sheets (EDS)
 - Transducer Electronic Data Sheets (TEDS)
 - Health Electronic Data Sheet (HEDS)
 - Component EDS (CEDS)
 - Others

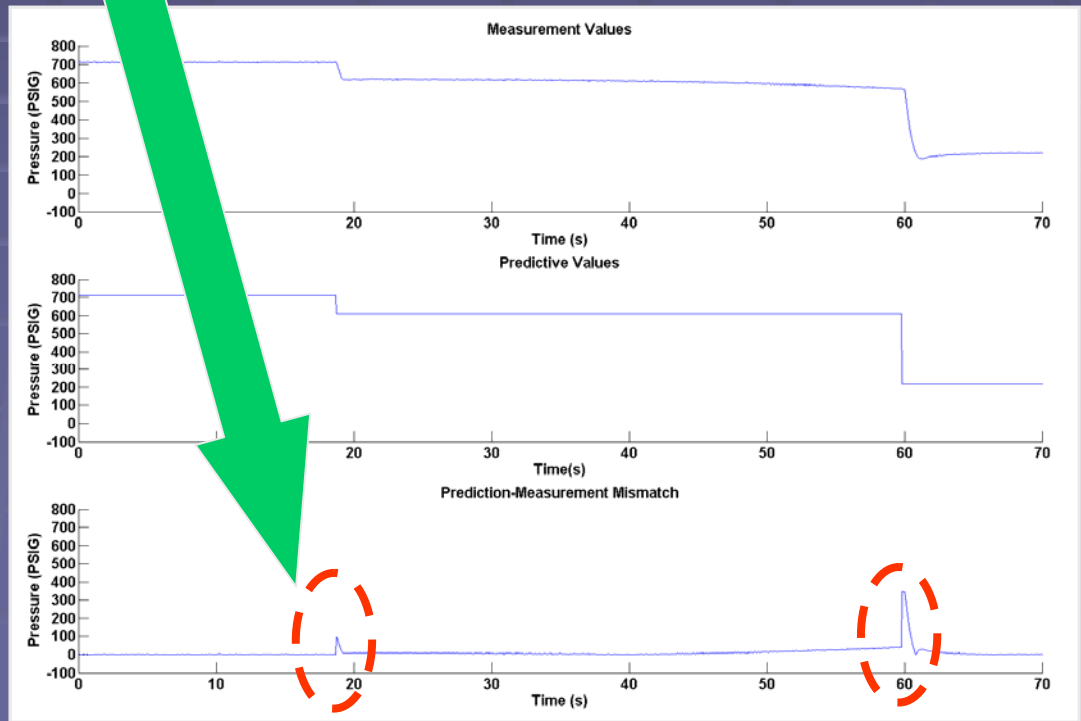

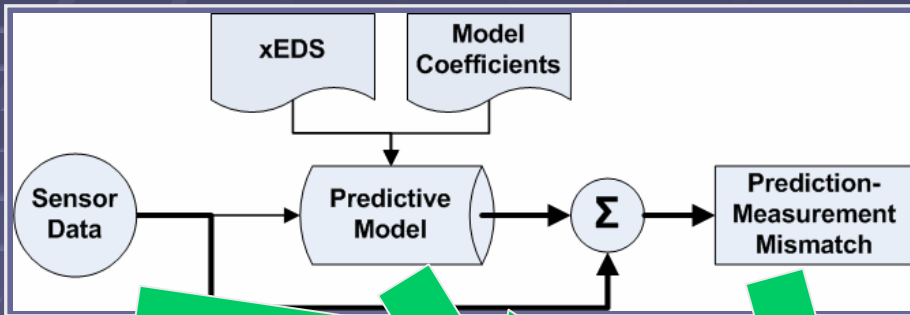

ISHM Enabling Technologies: Anomaly Detection

- NASA (Glenn Research Center)
 - Developed as part of Atlas-Centaur pneumatic and hydraulic system post-flight analysis ('80's)
 - Noise Events
 - Spike Events
 - Flat-line Events
 - Level Shift Events
 - Drift Events
- Open literature

ISHM Enabling Technologies: Predictive Modeling

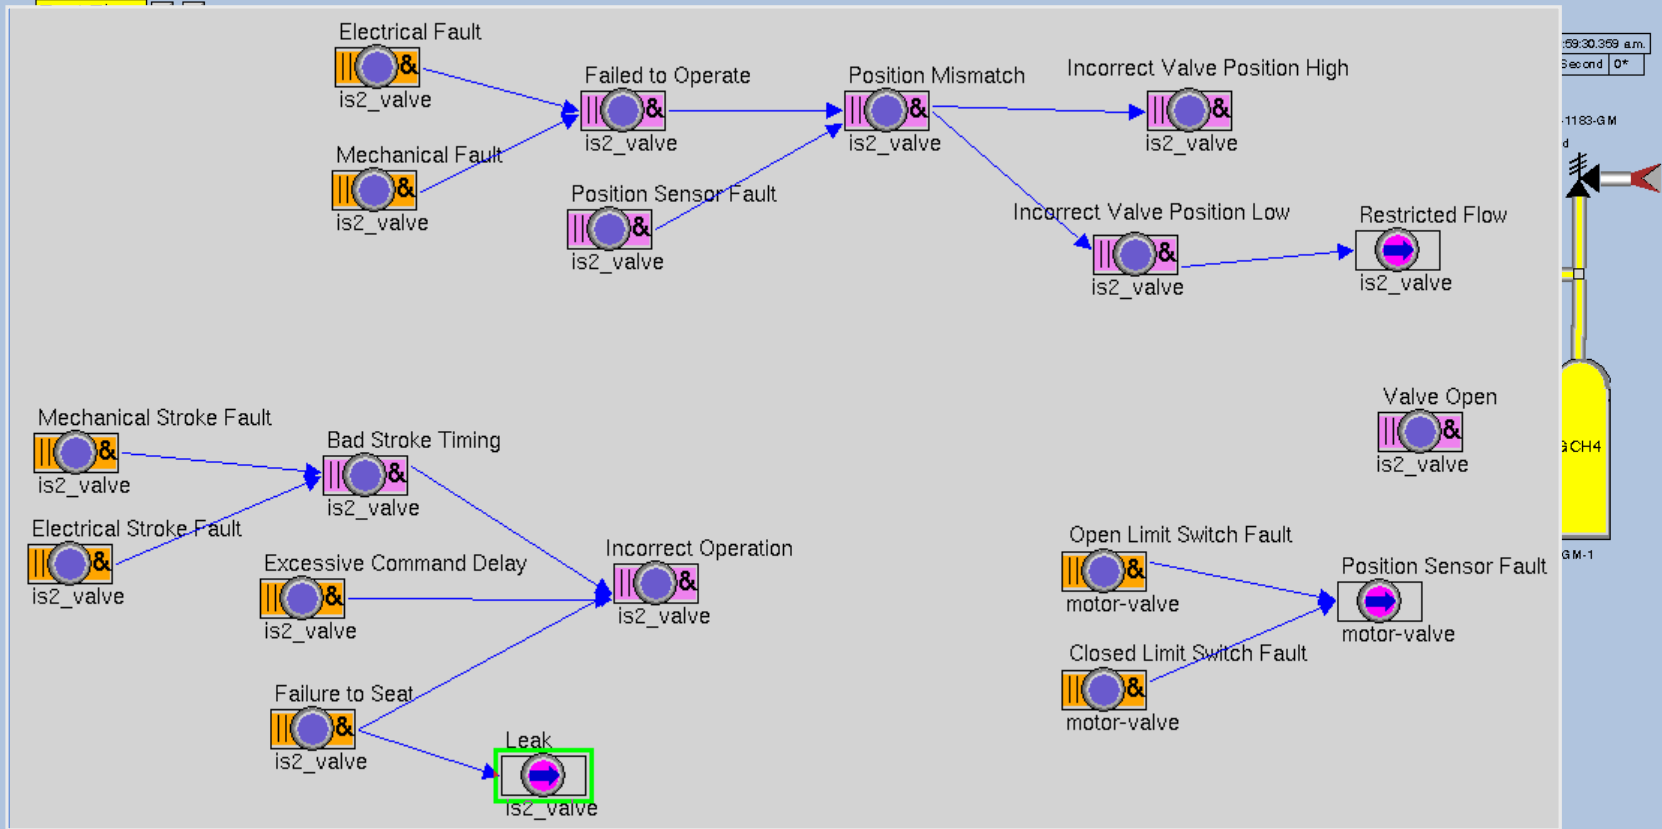

Model compared with model
predictions...

ISHM Enabling Technologies: Root Cause Analysis

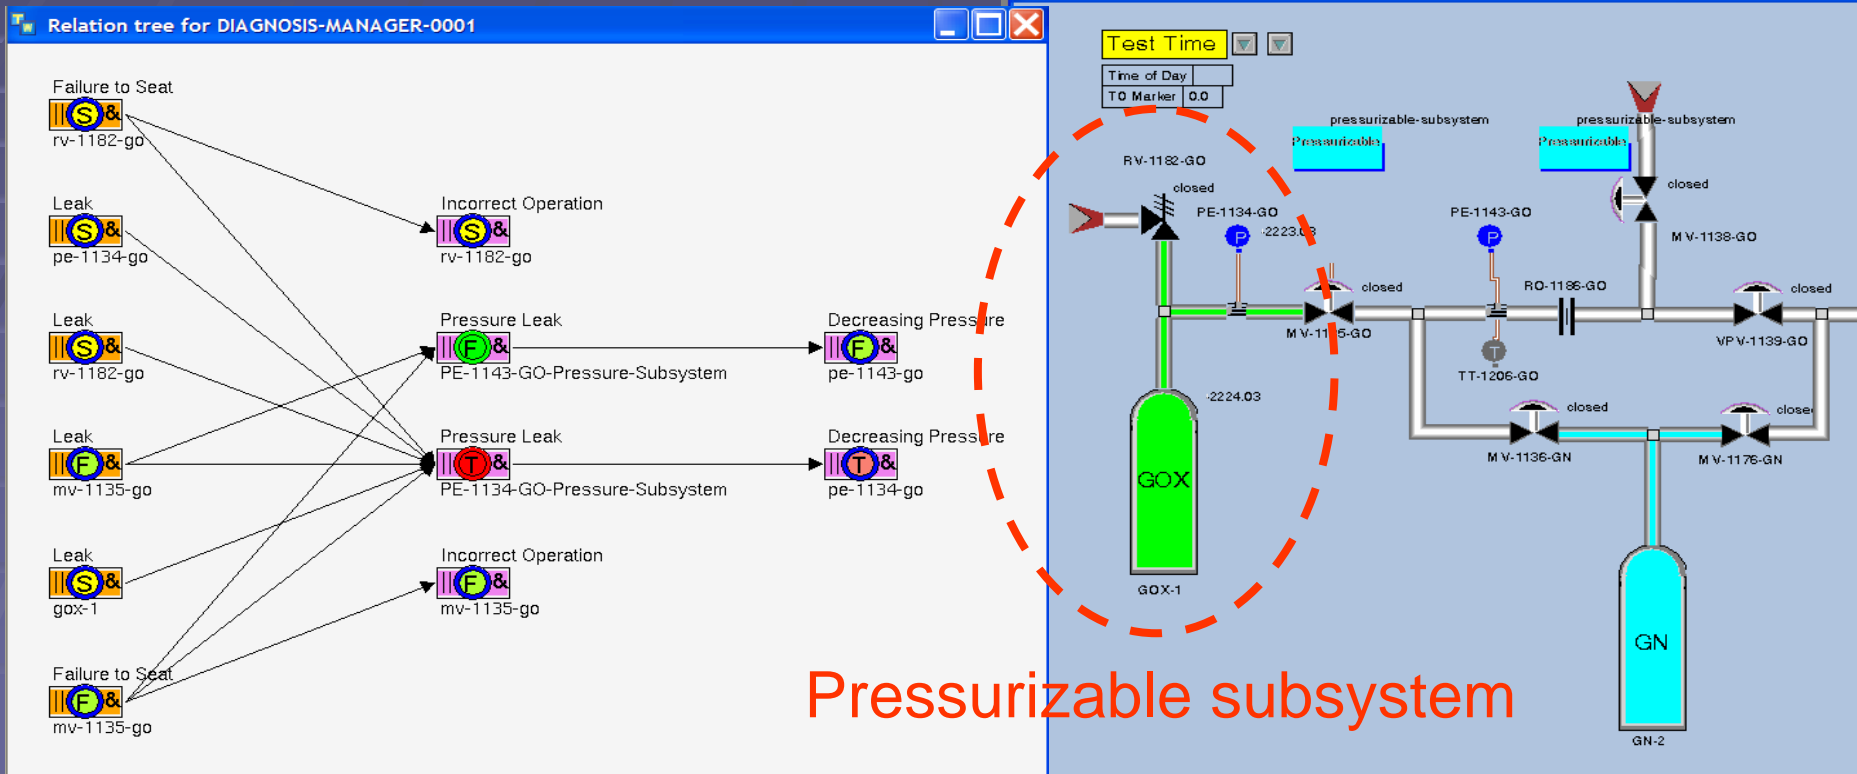

Within the ISHM model is a root cause analysis layer...
What describes cause-effect relationships...

Example Leak RCA

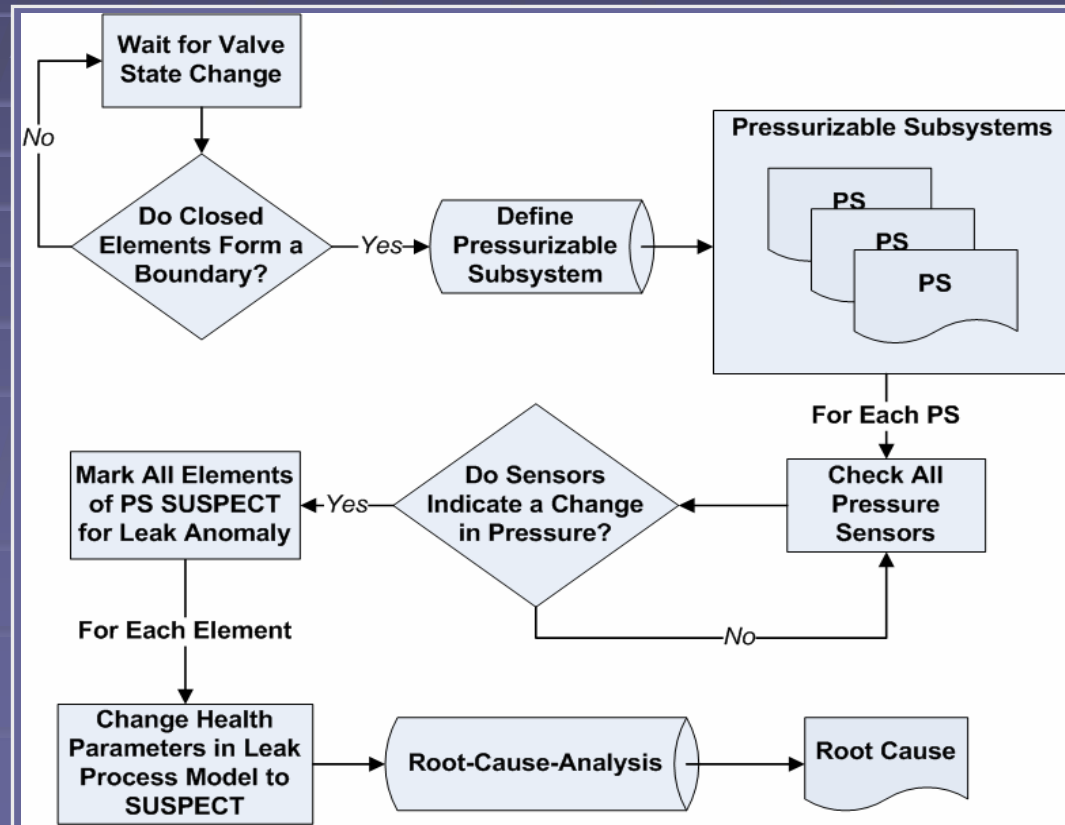

A decreasing pressure measurement associated with a pressurizable subsystem is used to reason about the possible cause/effects.

Pressure Leaks

- Leaks are critical in hydraulic systems
- One approach for leak detection:

ISHM Enabling Technologies: Integrated Awareness

- User interface
 - Minimize information overload
 - Provide navigation through 3d structure
 - Spatial relationships between components
 - Maintenance guide

Definition of an Intelligent Sensor

An *Intelligent Sensor* consists of a *Smart Sensor* augmented by support for application-specific algorithms and associated electronic data sheets (xEDS).

That means, we first have to deal with Smart Sensors...

Smart Sensors

- A Smart Sensor adheres to one of the IEEE 1451.x Standards; for distributed systems, important to have a network capable application processor (NCAP)
 - IEEE 1451.0 Defines a set of common commands, operations and Transducer Electronic Data Sheets (TEDS) for the family of IEEE 1451 standards
 - IEEE 1451.1 Defines a common object model describing the behavior of a Network Capable Applications Processor (NCAP)

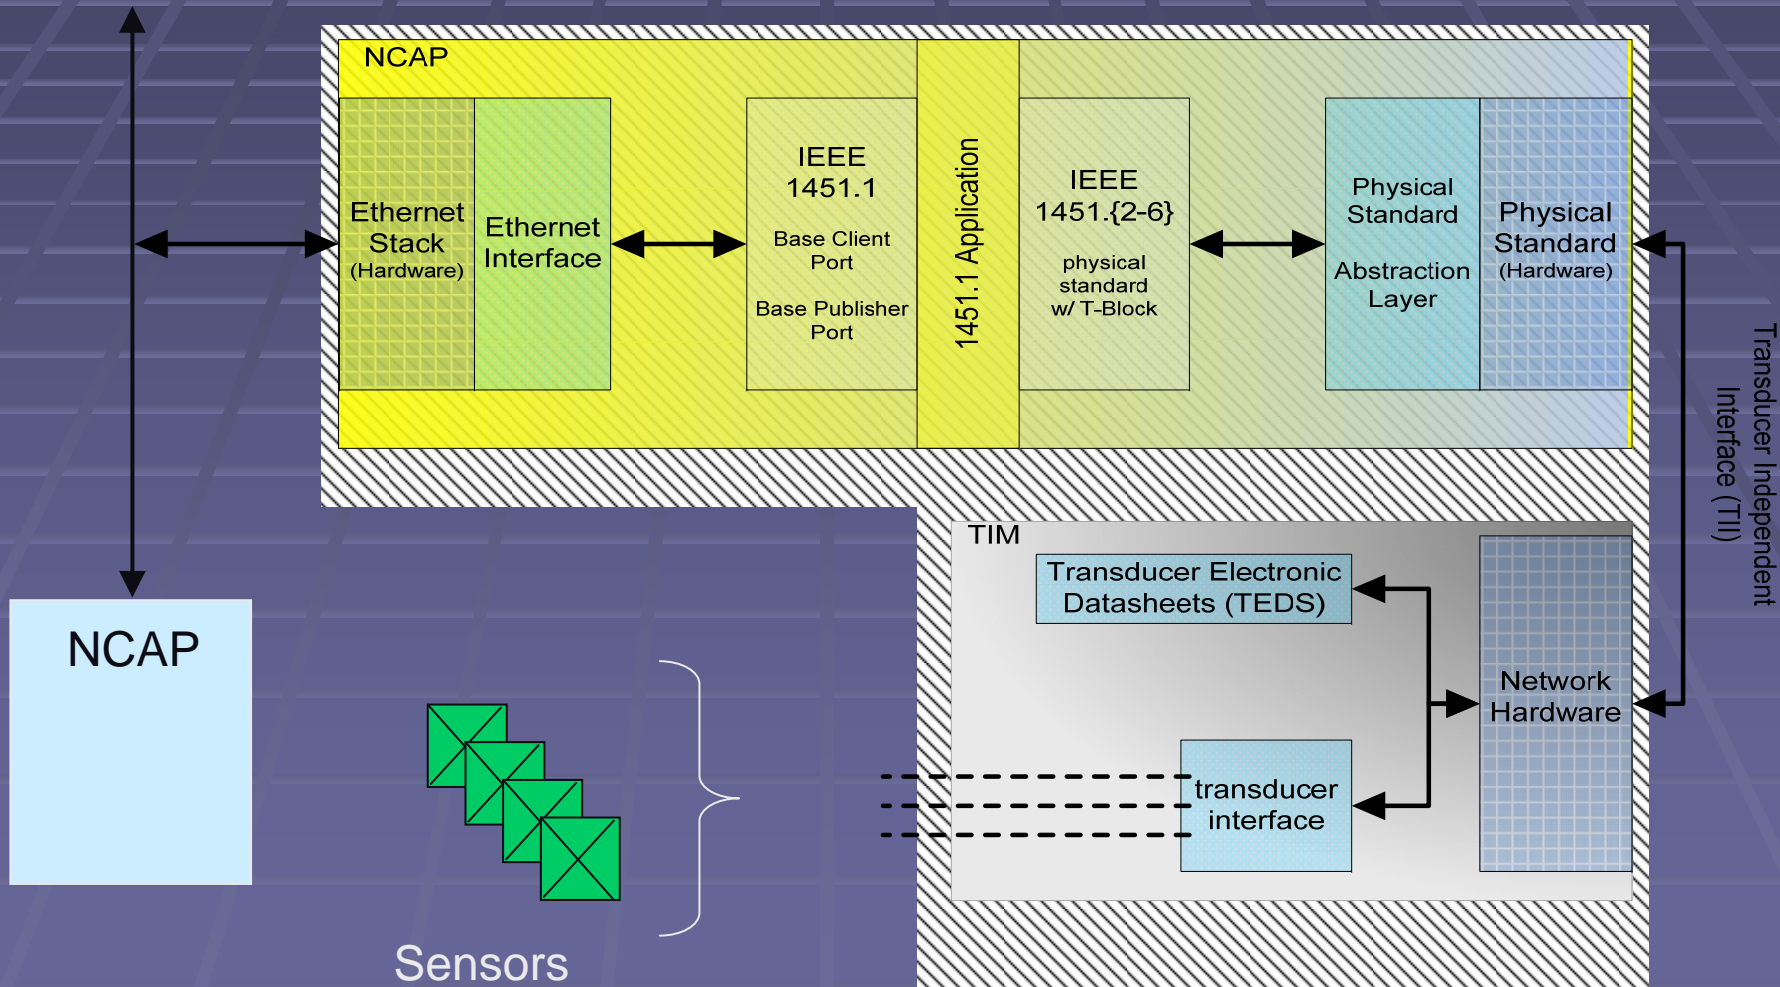

More IEEE 1451.X Smart Sensor Standards

- IEEE 1451.2 Defines a transducer to NCAP transducer independent interface (TII) and TEDS for a point-to-point configuration of transducer interface modules (TIMs)
- IEEE 1451.3 Defines a transducer to NCAP interface and TEDS for multi-drop transducers
- IEEE 1451.4 Defines a mixed-mode interface for analog transducers with analog and digital operating modes; simplest 1451 model
- IEEE 1451.5 Defines a TII interface and TEDS for wireless transducers
- IEEE P1451.6 Defines a TII interface and TEDS using the controller area network (CAN)
- IEEE P1451.7 Defines an RFID interface

IEEE 1451 – Smart Sensor

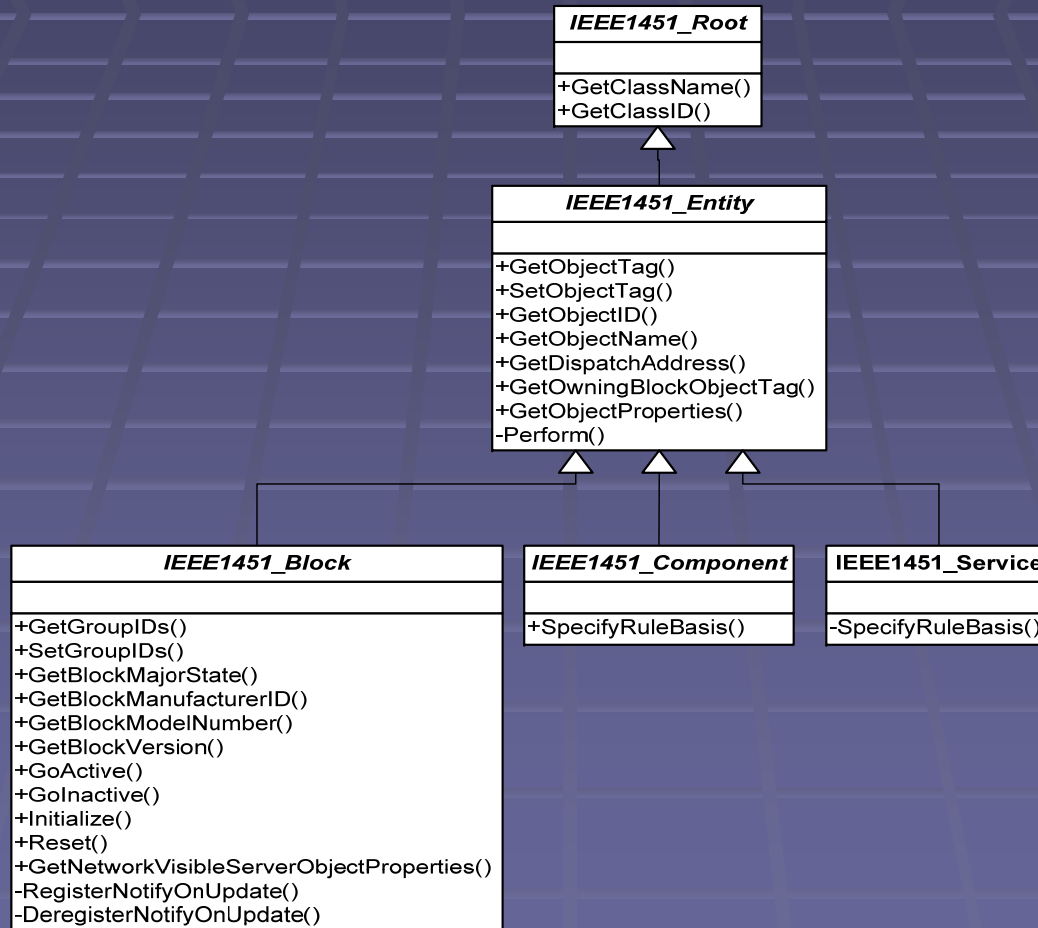

TEDS

- The transducer electronic data sheet provides the means to tag a sensor with a description.
 - Manufacturer
 - Serial number
 - Calibration status
 - Coefficients
 - Physical location
- Offers practical means for reducing costs/errors associated with measurement system configuration

IEEE 1451.1 - Information Model

Making a Smart Sensor Intelligent

- Capable of embedding algorithms; for example, for ISHM:
 - Noise detection (broadband, bandlimited, spike)
 - Instrumentation anomalies
 - Flat line
 - Drift
 - Sensor anomalies
 - Open/short
 - Debondment

Augmenting Core IEEE 1451 Functions

- NCAP
 - Publish normal data + health
- Extended TEDS
 - Health electronic data sheet (HEDS)
 - Set_HEDS
 - Get_HEDS
 - Component electronic data sheet (CEDS)
 - Set_CEDS
 - Get_CEDS

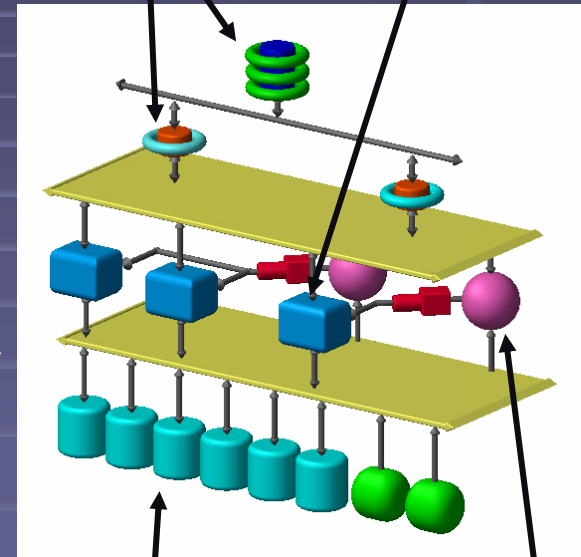

Intelligent Sensors

- Smart sensor
 - NCAP (Go Active, Announce)
 - Publish data
 - Set/Get TEDS
- Intelligent sensor
 - Set/Get HEDS
 - Publish health
- Detect classes of anomalies using:
 - Using statistical measures
 - Mean
 - Standard deviation
 - RMS
 - Polynomial fits
 - Derivatives (1st, 2nd)
 - Filtering—e.g., Butterworth HP
 - FFT—e.g., 64-point
 - Algorithms for
 - Flat
 - Impulsive (“spike”) noise
 - White noise
 - Other (ANN, etc.)

Intelligent (Sub)Systems

Intelligent Processes

Intelligent Actuators

Intelligent Sensors

Example ISHM-Enabled Intelligent Sensors

IEEE 1451 & O/S

- NCAPBlock_Go_Active
- NCAP_Block_Go_InActive
- Request_NCAPBlock_Announcement
- NCAPBlock_Announcement
- PublishNormalData

Hardware

- 3-Ch Thermocouple
- 24-bit ADC
- 8-bit μ P
- 1 MB RAM/Flash
- SPI
- Ethernet (802.3af)

ISHM

- Mean, Std dev, Min/Max, RMS
- dv/dx , d^2v/dx^2
- Poly fit
- Bu HPF (13th)
- 64-pt FFT
- Anomalies: Flat, Spike, Noise

- PublishNormalData+Health
- Channel_Sample_Rate
- Get_HEDS •Set_HEDS •Get_TEDS •Set_TEDS

ISHM Enabling Technologies: Intelligent Sensors

- Unfortunately, intelligent sensors are not widely available; to realize IS benefits in a system populated with conventional sensors, create a Virtual IS
- The Virtual Intelligent Sensor is software that mimics IS behavior and allows use of conventional sensors and data acquisition systems

HEDS Extensions to IEEE-1451

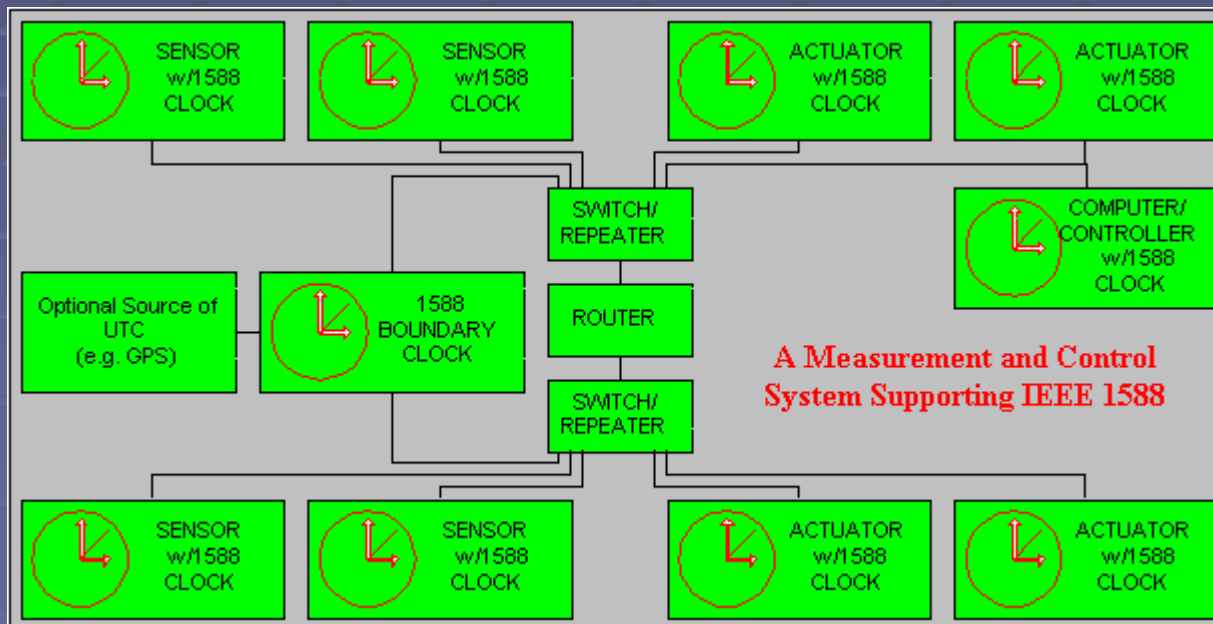

Data Structure Model for IEEE-1451

Field No.	Description	Type	No. of Bytes
	Data structure related data sub-block		
1	Extension: TEDS length	U32L	4
2	Extension TEDS ID Number	U16E	2
3	Extension TEDS version number	U16E	2
	Application related data sub-block		
	Fields 4-8 repeat for each health condition.		
4	Phase code	U8C	1
5	Condition code	U8C	1
6	Detection algorithm + arguments	STRING	Varies
	Data integrity data sub-block		
N	Checksum for the extension TEDS	U16C	2

Timing in Sensor Networks

- Need to provide time synchronization across multiple IS nodes in order to time-align measurements
- IEEE-1588 in distributed networks
 - For spatially-localized networks (e.g., Test stand, Space vehicle, Labs)
 - μs to sub- μs accuracy
 - Local oscillators synchronized to reference oscillator(s) by measuring network transport delays

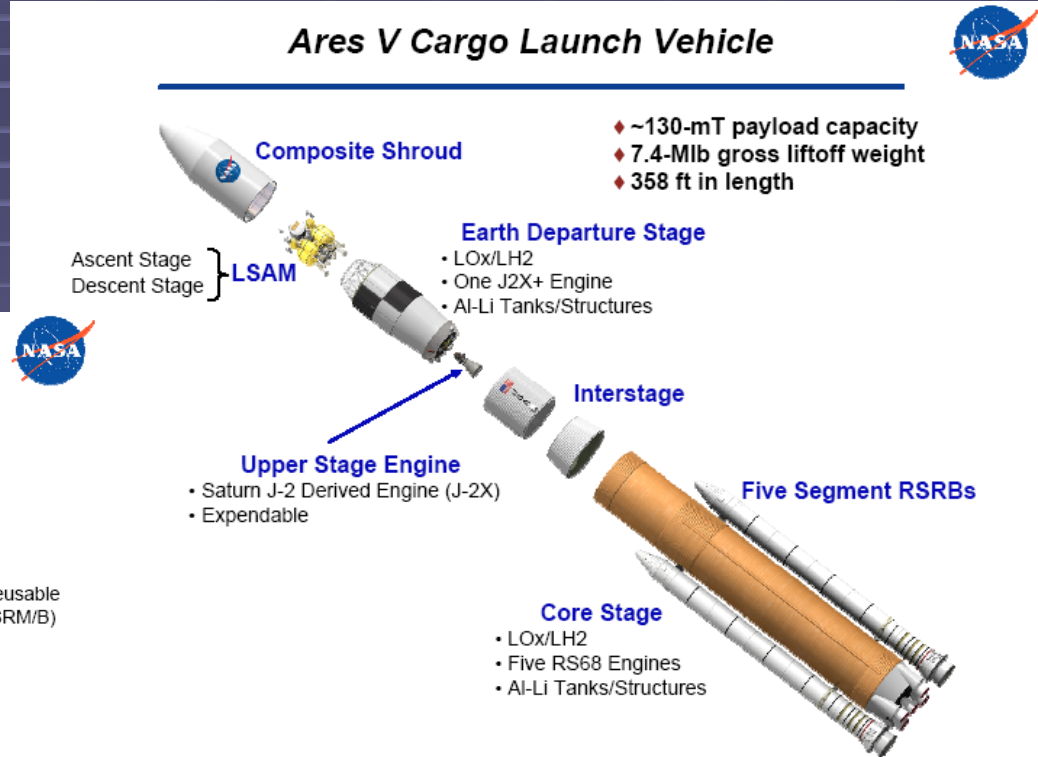

The Role of IS in Future Space Flight

Ares I Crew Launch Vehicle

Ares I: Crew Launch Vehicle

Ares V Cargo Launch Vehicle

Ares V: Cargo Launch Vehicle

Intelligent Sensors in Space

- Space-qualified intelligent sensors
 - Size, mass, power constraints
 - Trade spaces: Minimized wiring, distributed computing, distributed intelligence
 - Integrated with guidance, navigation & control (GN&C) architecture
 - Bus structure/protocol
 - Bandwidth, reliability

Lunar Habitat

Constellation: Return to the Moon

VTS_06_1.VOB
