

Numerical Relativity, Black Hole Mergers, and Gravitational Waves: Part III

Joan Centrella

Deputy Director, Astrophysics Science Division
NASA's Goddard Space Flight Center
Greenbelt, MD 20771 USA

This series of 3 lectures will present recent developments in numerical relativity, and their applications to simulating black hole mergers and computing the resulting gravitational waveforms. In this third and final lecture, we present applications of the results of numerical relativity simulations to gravitational wave detection and astrophysics.
