Abstract

Traditional Gardens design of Bali is considered to be potent for development as local genius in garden design department as local cleverness, in hope to be able to give insviration for garden designs in Indonesia, and other countries in the world. As for an examination subject there was once a landcape architecture task inheritance of kingdoms in Bali that is presentable. This examination, hermeneutics approximation was used, a variety science of knowledge represents the character of interpretation. Process analysis to his interactive scrutiny analysis model was aoolied. Analysis produce, landscape architecture inheritante kingdoms in Bali were used as a basis for the philosophical concept of Mandhara Giri in the Ksirarnawa building. Forms of design are expected to be developed into modern designs in the global era, without destroying the essensial values. Universal values in the traditional gardens of Bali are expected to be able to give positive contributions to the world's civilization.
