

# **HOW LACTOBACILLI SYNTHESIZE INULIN:**

## **Characterization of fructosyltransferase enzymes**

**Munir Ahmad Anwar**

The front cover shows the overall 3D structure of the *Lactobacillus johnsonii* NCC 533 inulosucrase (InuJ) protein.

The back cover shows Crocus flowers portraying onset of spring in Groningen.

Munir A. Anwar

How lactobacilli synthesize inulin: Characterization of fructosyltransferase enzymes

This PhD project was carried out in the research group Microbial Physiology of the Groningen Biomolecular Sciences and Biotechnology Institute (GBB), according to the requirements of the Graduate School of Science (Faculty of Mathematics and Natural Sciences, University of Groningen). The author thankfully acknowledges the support for this research provided by both GBB and Genencor.

Munir Ahmad Anwar gratefully acknowledges the financial support of the Higher Education Commission (HEC), Government of Pakistan, for this PhD research project.

# **HOW LACTOBACILLI SYNTHESIZE INULIN: Characterization of fructosyltransferase enzymes**

**Proefschrift**

ter verkrijging van het doctoraat in de  
Wiskunde en Natuurwetenschappen  
aan de Rijksuniversiteit Groningen  
op gezag van de  
Rector Magnificus, dr. F. Zwarts,  
in het openbaar te verdedigen op  
maandag 8 november 2010  
om 16:15 uur

door

**Munir Ahmad Anwar**  
geboren op 28 september 1965  
te Lahore, Pakistan

Promotor: Prof. dr. L. Dijkhuizen

Copromotor: Dr. S. Kralj

Beoordelingscommissie: Prof. dr. D. B. Janssen

Prof. dr. A. J. M. Driessen

Prof. dr. W. Van den Ende

# Contents

<b>Chapter 1</b>	General introduction: Fructosyltransferase enzymes of lactic acid bacteria: current advancements and emerging concepts	<b>7</b>
<b>Chapter 2</b>	The probiotic <i>Lactobacillus johnsonii</i> NCC 533 produces high molecular mass inulin from sucrose using an inulosucrase enzyme	<b>53</b>
<b>Chapter 3</b>	Inulin and levan synthesis by probiotic <i>Lactobacillus gasseri</i> strains: Characterization of three novel fructansucrase enzymes and their fructan products	<b>77</b>
<b>Chapter 4</b>	The crystal structure of inulosucrase InuJ from <i>Lactobacillus johnsonii</i> NCC 533	<b>107</b>
<b>Chapter 5</b>	Probing the <i>Lactobacillus reuteri</i> inulosucrase reaction and product specificity by site-directed mutagenesis of conserved amino acid residues	<b>131</b>
<b>Chapter 6</b>	Summary and Concluding Remarks	<b>153</b>
<b>Chapter 7</b>	Samenvatting en conclusies	<b>167</b>
	Acknowledgements	<b>177</b>
