The Purpose of this report is to analysis and examine the effects of three factors (1. The way a student entered the university. 2. The experience of exercises before the entrance. and 3. The exercises that carried out after the entrance.) to the measured scores of the Physical Fitness Test (Vertical Jump, Side-Step Test, Trunk Flexibility, Push Ups).

According to analysis of measured socres of Physical Fitness Test, the following results were obtained.

1. The difference in the way of entering the university (examination, recemmen-
dation, or from high schools attached university) will be one of the cause for
regulating the chance to do fitness training, exercises or sport. In the case of
male students, the difference between students who took the entrance examination
and the others, is apparently observed in the exercises of Side-Step Test and
Push-Ups. For female students, the exercises of Vertical Jump and Side-Step Test.
The scores of Physical Fitness Test of students who took entrance was examina-
tion was lower than the others.
2. The Physical Fitness Tests clearly shows a person who had special exercise
experience before entrance obtained higher scores than who had none except the
case of female student's Trunk Flexibility.
3. Afer a year, the improvement of the measured scores of Physical Fitness Test
is confirmed in the Side-Step Test and Push-Ups for male Students, Vertical Jump
