Acknowledgements

This dissertation has been completed with the great help of some organisations and many individuals. I would like to take this opportunity to acknowledge all of them. First of all, I would like to express my deep gratitude to NUFFIC and the Faculty of Economics of the University of Groningen for their financial support. Without their support the research could never have been completed.

I would like to acknowledge my supervisors, Prof. Robert Lensink and Dr. Ger Lanjouw, for their invaluable feedback and support over the last four years. Moreover, Dr. Ger Lanjouw spent much time as an English editor for this book. My special thanks go to Prof. Frans Tempelaar, member of the reading committee, for giving me very useful comments, and Prof. Lex Hoogduin and Prof. Victor Murinde, the other members of the reading committee, for reading the manuscript. I would also like to thank two anonymous referees of *The Economics of Transition* for their valuable comments on a paper which is to be published in this journal and which is included in this book as Chapter 6.

I would also like to express my sincere gratitude to those people who created the necessary conditions for my Ph.D. study. I wish to thank Mr. Nguyen Tan Nhan, Dr. Mai Van Nam, Mrs. Nguyen Thanh Nguyet, Mr. Bui Van Trinh for providing me a chance to study at the University of Groningen. I would like to acknowledge Dr. Le Khuong Ninh and Dr. Luu Thanh Duc Hai for taking care of me during the first several weeks of my new life in Groningen. I greatly appreciate the assistance from many members of the Office for International Relations, especially Madeleine Gardeur-Veltman, Gonny Lakerveld, Anita Veltmaat, Wiebe Zijlstra and Erik Haarbrink. I would like to extend my profound gratitude to all staff members of the Centre for Development Studies for their hospitality, especially to Mr. Arthur de Boer for his arrangements during my entire study period in Groningen and the assistance in the layout of this book.

I would like to thank Mrs. Vi Thi Nam Huong, Mrs. Nuyen Thi Hong, Mr. Nguyen Dinh Thong, Mr. Le Ngoc Khoi and Mr. Vuong Quoc Duy for assisting me in collecting the data. I also wish to acknowledge Mr. Nguyen Van Ngan and Mr. Le Long Hau for putting the data from the questionnaires into the computer.

My thanks also are due to Dr. Vo Thanh Danh and Dr. Vo Thi Thanh Loc for sharing useful knowledge and experiences related to statistics and econometrics. I would like to acknowledge my colleagues and friends in Groningen who made my life in Groningen easy and enjoyable. Finally, I would like to thank Mr. Le Nguyen Doan Khoi and Mr. Arthur de Boer who are my two “paranimfen”.

Last but not least, I am greatly indebted to my parents and my mother-in-law for their constant love, support and encouragement. I would like to acknowledge my wife, Nguyen Thi Ngoc Diem, and my son, Truong Hoang Phuc, for their patience when I lived away from home. Their loving support has considerably contributed to the completion of the thesis.
