Changing Market Structures under Changing Resource Spaces:
An Agent-based Computational Approach

Proefschrift

ter verkrijging van het doctoraat in de
Economie en Bedrijfskunde
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr F. Zwarts,
in het openbaar te verdedigen op
donderdag 19 juni 2008
om 16:15 uur

door

César Enrique García Díaz

geboren op 5 augustus 1970
te Bogotá (Colombia)

Promotor: Prof. dr A. van Witteloostuijn

Copromotor: dr G. Péli

Beoordelingscommissie:

Prof. dr H. van Ees
Prof. dr M. Hannan
Prof. dr L. Pólos

Contents

Contents **v**

List of Tables **viii**

List of Figures **ix**

Preface **xiii**

1. Introduction 1
1.1 Background and purpose of the study 1
1.2 Organisational ecology 3
1.3 Industrial organisation 5
1.4. Agent-based computational modelling 6
1.5 Organisation of the book 7

2. Profit-seeking Behaviour and Market-Partitioning Evolution Processes **10**
2.1 Introduction 10
2.2 Theoretical background 13
2.2.1 Resource-partitioning theory 13
2.2.2 Sunk cost theory 15
2.2.3 Simulation models of industry evolution 16
2.3 The model 17
2.3.1 Resource space and firm entry 17
2.3.2 Firms' cost function 21
2.3.3 Consumer behaviour 23
2.3.4 Price setting 25
2.3.5 Firm expansion 27
2.4 Simulation's experimental design 29
2.5 Simulation outcomes 32
2.5.1 Preliminaries 32
2.5.2 Experiment 1: large-scale firms competition 33
2.5.3 Experiment 2: two firm types and a pure selection model 38
2.5.4 Experiment 3: varying entry probability per firm type 44

2.6 Concluding remarks 50
2.7 Background information: additional model calculations 53
2.7.1 Entrant's expected demand in absence of competition (entry at empty taste position) 53
2.7.2 Entrant's expected demand in the presence of competition 54
2.7.3 Vertical expansion (niche penetration) 55
2.7.4 Horizontal expansion (niche expansion) 55
2.7.5 Constants and variables used in the model 56

3. A Computational Approach of the Resource-based Market Structure Theory **59**
3.1 Introduction 59
3.2 Resource spaces, market structure and firm viability 62
3.3 The model 64
3.3.1 Market entry and initial set up 65
3.3.2 Resource space heterogeneity 66
3.3.3 Firms' cost structure 67
3.3.4 Consumer behaviour 69
3.3.5 Price setting 70
3.3.6 Firm expansion 71
3.3.7 Simulation research design 73
3.4 Findings 76
3.4.1 Behaviour of market concentration 76
3.4.2 Behaviour of market density 79
3.4.3 Resource heterogeneity and efficiency 83
3.4.4 Strength of size (S), concentration (C4) and firm type (Type) marginal effects 85
3.5 Concluding remarks 91

4. Co-evolutionary Market Dynamics in a Peaked Resource Space **94**
4.1 Introduction 94
4.2 Theoretical background 95
4.3 Summary of the model 97
4.3.1 Firm behaviour 97
4.3.2 Consumer behaviour 99
4.3.3 Model dynamics 99

4.4 Simulation experiments and results 100
4.4.1 Experiment 1: baseline model without consumer mobility 101
4.4.2 Experiment 2: consumer mobility according to the closest match 101
4.4.3 Experiment 3: consumer mobility according to highest expected utility 104
4.4.4 Effects on small-scale firms' proliferation 105
4.4.5 Effects on large-scale firms' spatial positioning 112
4.5 Concluding remarks 118
4.6 Background information: mobility algorithms 120
4.6.1 Match-improving mobility algorithm 120
4.6.2 Utility-maximising consumer mobility algorithm 122

5. Market Dimensionality and the Proliferation of Small-scale Firms **124**
5.1 Introduction 124
5.2 Theoretical background 125
5.3 The model 127
5.3.1 The resource space 127
5.3.2 Dimensionality computation 128
5.3.3 Demand distribution 129
5.3.4 Market entry 131
5.3.5 Firm behaviour 132
5.3.6 Selecting an entry cell 134
5.3.7 Market competition and profit calculation 137
5.3.8 The organisational niche 137
5.3.9 New production level and eventual niche reduction 138
5.3.10 Niche expansion 139
5.4 Experimental design 142
5.5 Findings 142
5.5.1 Costless scenario 142
5.5.2 Costly expansion 145
5.5.3 Who are the innovators? 148
5.6 Concluding remarks 149
5.7 Additional model information 152

6. Appraisal and Conclusions **154**
6.1 Summary 154
6.2 Contributions 154
6.3 Methodological and simulation issues 158
6.4 Future Research 163
6.4.1 Demographic characteristics, agent-based modelling and market structures 163
6.4.2 Organisational growth and agent-based market structure modelling 163
6.4.3 Co-evolution and Organisational Ecology 164

Bibliography **165**

List of Tables

Table 2.1: The model's set up. 30
Table 2.2: Parameter setting. 31
Table 2.3: Large-scale firms' hazard rates results. 35
Table 2.4: Hazard rate results of the pure selection model. 42
Table 2.5: Hazard rate results of the varying entry probability model. 47
Table 3.1: Resource space typology. 67
Table 3.2: Pseudo-code for firm's profit maximisation mechanism at entry. 71
Table 3.3: Simulation scenarios. 74
Table 3.4: Average market concentration (C_4) at t = 400. 78
Table 3.5: Marginal effect of size on log hazard rate. 87
Table 3.6: Marginal effect of C_4 on log hazard rate. 88
Table 3.7: Marginal effect of firm type on log hazard rate. 90
Table 3.8: Comparison of results. 93
Table 4.1: Simulation combinations for computational experiments. 101
Table 4.2: Mann-Whitney test results (two-tailed) from market density comparisons (average over last 25 time periods). 107
Table 4.3: Mann-Whitney test results (two-tailed) from market density comparisons (average over last 50 time periods). 108
Table 4.4: Mann-Whitney test results (two-tailed) from large-scale firms' space

contraction. 114
Table 5.1: Pseudo-code for firm's niche reduction. 141
Table 5.2: Parameter values used for density-dependent model. 152
Table 5.3: Parameter values used for LRAC curve. 152

List of Figures

Figure 1.1: Thesis outline. 9
Figure 2.1: The resource space. 19
Figure 2.2: Two production cost curves samples (dashed lines) from the same LRAC curve (solid line). 22
Figure 2.3: Conceptual framework for consumer behaviour. 24
Figure 2.4: Firm movement towards the market centre. 33
Figure 2.5: Concentration and density behaviour with large-scale firm competition. 36
Figure 2.6: Behaviour of market's average scale advantage over time. 38
Figure 2.7: Average behaviour of market concentration with two firm types and a pure selection model. 40
Figure 2.8: Average behaviour of density with two firm types and a pure selection model. 40
Figure 2.9: Concentration behaviour in Experiment 2; ExpCoef = 0.05, σ = 0.1. 43
Figure 2.10: Firms' niche distribution in Experiment 2; ExpCoef = 0.875, σ = 0.1. 43
Figure 2.11: Average concentration behaviour with varying entry probability per firm type. 45
Figure 2.12: Average behaviour of density with varying entry probability per firm type. 46
Figure 2.13: Behaviour of market's average scale advantage over time. 48
Figure 2.14: Average unit cost vs. niche centre positioning (all runs) at t = 400 (circles ≡ small-scale; dots ≡ large-scale). 49
Figure 2.15: Concentration behaviour in Experiment 3; ExpCoef = 0.05, σ = 0.1. 50

Figure 2.16: Aggregate results for Experiment 2 and 3 with Qo= 20, ExpCoef = 5%, σ = 0.1, (circles ≡ small-scale; dots ≡ large-scale). 51
Figure 3.1: Example of a density-dependent entry mechanism. 66
Figure 3.2: Resource space typology. 68
Figure 3.3: Sample runs from a unimodal space (scenario 8). 78
Figure 3.4: C_4 behaviour for scenario 1 in flat (left), unimodal (middle) and condensed (right) resource spaces. 80
Figure 3.5: C_4 behaviour for scenario 5 in flat (left), unimodal (middle) and condensed (right) resource spaces. 80
Figure 3.6: C_4 behaviour for scenario 12 in flat (left), unimodal (middle) and condensed (right) resource spaces. 81
Figure 3.7: Density behaviour for scenario 1 in flat (left), unimodal (middle) and condensed (right) resource spaces. 81
Figure 3.8: Density behaviour for scenario 5 in flat (left), unimodal (middle) and condensed (right) resource spaces. 82
Figure 3.9: Density behaviour for scenario 12 in flat (left), unimodal (middle) and condensed (right) resource spaces. 82
Figure 3.10: Average unit cost, scenario 3; flat (solid line), unimodal (dashed line) and condensed (dotted line) resource spaces. 84
Figure 3.11: Average unit cost, scenario 5; flat (solid line), unimodal (dashed line) and condensed (dotted line) resource spaces. 84
Figure 3.12: Average unit cost, scenario 9; flat (solid line), unimodal (dashed line) and condensed (dotted line) resource spaces. 85
Figure 3.13: Average unit sales price; flat (solid line), unimodal (dashed line) and condensed (dotted line) resource spaces. 85
Figure 3.14: Marginal effects of firm type on log hazard rates. 90
Figure 4.1: Consumer immobility. 103
Figure 4.2: Match-improving consumer mobility. 104
Figure 4.3: Utility-maximising consumer mobility. 106
Figure 4.4: Market density simulation combination 1. 109
Figure 4.5: Market density simulation combination 3. 109
Figure 4.6: Market density simulation combination 6. 110
Figure 4.7: Market density simulation combination 1. 110
