Contents

PREFACE	7
1. INTRODUCTION	9
1.1 General perspective	11
1.2 Aims of this study	13
2. DATA AND BASIC METHODS	17
2.1 Study area	19
2.2 Species selection and their breeding distribution	20
2.3 Wader counts	21
2.4 Processing captured waders	23
3. METHODS USED TO STANDARDIZE BODY MASSES	33
3.1 Mass loss during the period of captivity	35
3.2 Methods for analysing body masses in relation to morphology	37
4. METHODS FOR ASSESSING BREEDING ORIGIN	41
4.1 Corrections applied to museum values of wing- and culmen lengths	43
4.2 Correcting wing- and culmen lengths with respect to annual and seasonal variation	45
4.3 The statistical approach for estimating population composition with respect to breeding origin	49
5. NUMBERS	57
6. AGE COMPOSITION	69
7. PRIMARY MOULT	77
8. BODY MASS AND FLIGHT RANGE ESTIMATES	85
8.1 Estimating energy reserves	87
8.2 Variability of energy reserves	92
8.3 Flight range estimates	98
8.4 Spatial variation in the body mass of waders in primary moult	99

9. BREEDING ORIGINS PER SPECIES	103
9.1 Ringed Plover	106
9.2 Grey Plover	107
9.3 Red Knot	111
9.4 Curlew Sandpiper	114
9.5 Dunlin	116
9.6 Bar-tailed Godwit	124
9.7 Eurasian Curlew	128
9.8 Redshank	132
10. DISCUSSION	137
10.1 The appropriateness of the methodology used	140
10.2 Reliability of the population composition estimates	140
10.3 Areas of origin: an overview	143
10.4 Turnover of southward bound migrants	151
10.5 The mainland ‘highway’ and island ‘moult resorts’	153
11. EPILOGUE	157
SUMMARY	171
SAMENVATTING	171
GEARFETTING	172
ACKNOWLEDGEMENTS	173
REFERENCES	179
ANNEX 1. SELECTED RECOVERIES AND CONTROLS	207
Explanation of the breeding distribution maps	226
