ISBN: 90-367-2932-7

Cover: Microscopical analysis of virosome-mediated siRNA delivery. BHK cell incubated with virosomes containing Cy-5 labeled siRNA (red). Cells were stained with rhodamine-phalloidin (green) and DAPI (blue) to visualize stress fibers and nuclei, respectively.

Cover design: Jørgen de Jonge

The research described in this thesis was performed at the Faculty of Medical Sciences, Department of Medical Microbiology, Molecular Virology Section in collaboration with the Faculty of Mathematics and Natural Sciences, Department of Pharmaceutical Technology and Biopharmacy within the Groningen University Institute for Drug Exploration (GUIDE).

This work was supported by The Netherlands Organization for Scientific Research (NWO), under the auspices of the Chemical Foundation (CW) and the Technology Foundation (STW, Grant 790.33.571).

This thesis was financially supported by:

Solvay Pharmaceuticals

TABLE OF CONTENTS

<i>CHAPTER 1</i>	Introduction	9
<i>CHAPTER 2</i>	Use of a dialyzable short-chain phospholipid for efficient solubilization and reconstitution of influenza virus envelopes	57
<i>CHAPTER 3</i>	Efficient gene transfer mediated by influenza virosomes with encapsulated plasmid DNA	81
<i>CHAPTER 4</i>	Reconstituted influenza virus envelopes as an efficient carrier system for cellular delivery of small interfering RNAs	111
<i>CHAPTER 5</i>	Inulin sugar glasses preserve the structural integrity and biological activity of influenza virosomes during freeze-drying and storage	143
<i>CHAPTER 6</i>	Discussion	171
<i>CHAPTER 7</i>	Samenvatting voor nietingewijden	191
<i>APPENDICES</i>	I. Dankwoord.	201
	II. List of contributing authors	206
	III. List of publications	208
	IV. Abbreviations	210
