Orbital Ordering and Multiferroics

Gwilherm Nénert

University of Groningen
**Zernike Institute
for Advanced Materials**

Cover: Photo assembly between sand from Mont Saint-Michel (France) and from Yucatan (Mexico).

Cover design: Dewi Nénert

The work described in this thesis was performed in the group "Solid State Chemistry" (part of the Zernike Institute for Advanced Materials) of the University of Groningen, the Netherlands.

ISBN 97-367-2973-4

Zernike Institute for Advanced Materials Ph.D.-thesis series 2007-06

ISSN 1570-1530

Rijksuniversiteit Groningen

Orbital Ordering and Multiferroics

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 16 maart 2007
om 16.15 uur

door

Gwilherm Nénert

geboren op 08 September 1979
te Rennes, Frankrijk

Promotor: Prof. dr. T. T. M. Palstra

Beoordelingscommissie: Prof. dr. M. Pérez-Mato
Prof. dr. P. Radaelli
Dr. L.-P. Regnault

Contents

1	Introduction	5
1.1	Transition metal oxides	5
1.2	Orbital Ordering: Cooperative versus dynamical Jahn-Teller effect	7
1.3	Multiferroic materials	9
2	A double approach	13
2.1	Experimental approach	13
2.1.1	Powder Diffraction versus Single crystal diffraction . .	13
2.1.2	Single crystal growth	14
2.1.3	X-ray and neutron diffraction	15
2.1.4	Magnetometer SQUID	17
2.1.5	Dielectric Properties	18
2.2	Theoretical approach: Use of group-theory	21
2.2.1	Group theoretical techniques in magnetic structure analysis	21
2.2.2	The magnetoelectric effect	32
3	Orbital Ordering in RTiO₃	37
3.1	Introduction	37
3.2	Experimental	39
3.3	Results	39
3.3.1	Refinements	39
3.3.2	Asymmetric peak shape below T _N	43
3.4	Discussion	44
3.4.1	Possible structural signature of Orbital Ordering . . .	44
3.4.2	GdFeO ₃ distortion versus Orbital Ordering	47
3.4.3	A reduced magnetic moment	52
3.5	Conclusions	52
4	Mechanism for ferroelectricity in hexagonal RMnO₃	55
4.1	Introduction	55
4.2	Historical perspective	58

4.3	Contribution of group theory	60
4.3.1	Introduction	60
4.3.2	Possibility of an antiferroelectric intermediate phase	61
4.3.3	Possibility of a paraelectric intermediate phase	62
4.3.4	Conclusion	68
4.4	Experimental Techniques	69
4.4.1	Sample preparation	69
4.4.2	Neutron experiment	69
4.4.3	X-ray experiments	70
4.4.4	Differential Thermal Analysis	71
4.4.5	Thermomechanical analysis	71
4.5	Powder experiments	72
4.6	Single-crystal experiments	82
4.7	Contribution of Band structure calculations	87
4.7.1	Introduction	87
4.7.2	Results and Discussion	89
4.8	Discussion	90
4.8.1	Powder results	90
4.8.2	Single crystal results	91
4.9	Conclusion	95
5	Interplay between polarization and dielectric properties	101
5.1	Magnetodielectric coupling in an organic-inorganic hybrid	101
5.1.1	Introduction	101
5.1.2	Experimental section	102
5.1.3	Results and Discussion	103
5.1.4	A phenomenological description	105
5.1.5	Conclusion	110
5.2	Magnetoelectricity in $\text{Ho}_2\text{BaNiO}_5$ Haldane gap system	111
5.2.1	Introduction	111
5.2.2	Magnetic symmetry analysis	112
5.2.3	Synthesis and characterization	113
5.2.4	Magnetic properties	113
5.2.5	Magnetoelectricity	119
5.2.6	Conclusion	122
6	Predictions for new magnetoelectrics/multiferroics	125
6.1	Introduction	125
6.2	Study of selected fluorides	126
6.2.1	Study of $\alpha\text{-KCrF}_4$	127
6.2.2	Study of KMnFeF_6	129
6.2.3	Study of 2 members of the $\text{Ba}_6\text{M}_n\text{F}_{12+2n}$ family	131
6.2.4	Study of CsCoF_4	132

6.3	Other materials of interest	134
6.3.1	Introduction	134
6.3.2	LiFeP_2O_7	134
6.3.3	$\text{Sr}_2\text{CoSi}_2\text{O}_7$	141
6.4	Inversion center breaking due to antiferromagnetic ordering . .	145
6.4.1	Introduction	145
6.4.2	$\text{Cu}_2\text{MnSnS}_4$	145
A	Symmetry-adapted mode analysis	153
Summary		155
Samenvatting		157
