**Spin-dependent transport
across anti-phase boundaries in
magnetite films**

Wilma Eerenstein

The work described in this thesis was performed in the groups 'Chemistry of thin films' and 'Solid State Chemistry' (part of the Materials Science Centre) at the Laboratory of Physical Chemistry of the University of Groningen, the Netherlands. The project was supported by the Dutch Organization for Scientific Research (NWO).

Spin-dependent transport across anti-phase boundaries in magnetite films

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts
in het openbaar te verdedigen op
vrijdag 7 november 2003
om 16.00 uur

door

Willemina Eerenstein

geboren op 3 maart 1976
te Odoorn

Promotores: Prof. Dr. T. Hibma
Prof. Dr. T.T.M. Palstra

Beoordelingscommissie: Prof. Dr. L. Niesen
Prof. Dr. G. A. Sawatzky
Prof. Dr. H.W. Zandbergen

It is the possibility of having a dream come true that makes life interesting.

From: 'The Alchemist' by Paulo Coelho

Contents

1	Introduction	5
1.1	General properties of magnetite	5
1.1.1	Research on naturally occurring magnetite	5
1.1.2	Research on single crystals and thin films of magnetite	6
1.2	Motivation	7
1.3	Outline	8
2	Theoretical concepts	11
2.1	Introduction	11
2.2	Structure and properties of bulk Fe_3O_4	11
2.3	Structure and properties of epitaxial Fe_3O_4 films	15
2.4	Conductivity in bulk Fe_3O_4	19
2.4.1	Band calculations using the single electron approach	19
2.4.2	Quantitative description of the conductivity	22
2.5	Conductivity in epitaxial Fe_3O_4 films	23
2.5.1	Blocking of electron transfer due to anti-ferromagnetic boundaries	24
2.6	Spin polarisation	24
3	Experimental methods	27
3.1	Introduction	27
3.2	Thin film growth: molecular beam epitaxy (MBE)	27
3.2.1	The ultra high vacuum setup	28
3.2.2	<i>In-situ analysis</i>	30
3.2.3	Deposition of Fe_3O_4 thin films	31
3.3	<i>Ex-situ</i> analysis: conversion electron Mössbauer spectroscopy (CEMS)	33
3.4	Transmission electron microscopy (TEM)	35
3.4.1	The electron microscope	35
3.4.2	Diffraction patterns	36
3.4.3	Imaging	36
3.4.4	Specimen preparation	39
3.5	Electrical conduction and magneto-resistance measurements	39

4	Diffusive motion of anti-phase domain boundaries in epitaxial Fe_3O_4 films	41
4.1	Introduction	41
4.2	Experimental	42
4.3	Results and discussion I: migration of APB	43
4.3.1	Migration of APB in time	43
4.3.2	Rate equation for APB migration	45
4.4	Results and discussion II: domain sizes versus growth parameters	49
4.4.1	Dependence on growth temperature and flux	49
4.4.2	Growth mechanism for MBE-grown Fe_3O_4 films	53
4.4.3	Domain sizes of Fe_3O_4 films grown on MgAl_2O_4	55
4.5	Conclusions	57
5	Characterisation of anti-phase domain boundaries in epitaxial Fe_3O_4 films	59
5.1	Introduction	59
5.2	Experimental	60
5.3	Results	60
5.3.1	APB morphology	60
5.3.2	Directionality and inclination of APBs	62
5.3.3	Shift vector of the anti-phase boundary	63
5.3.4	Relationship between anti-phase shift and boundary plane	64
5.3.5	High resolution TEM study	65
5.4	Discussion	67
5.4.1	Magnetic exchange interactions at the APB	71
5.5	Conclusions	75
