RIJKSUNIVERSITEIT GRONINGEN

FUNDAMENTALS OF GRINDING

SURFACE CONDITIONS OF GROUND MATERIALS

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. D.F.J. Bosscher,
in het openbaar te verdedigen op
maandag 18 december 2000
om 16.00 uur

door

Johannes Bernardus Jan-Willem Hegeman

geboren op 16 maart 1973
te Groningen

Promotor: Prof. Dr. J. Th. M. De Hosson

Beoordelingscommissie:

Prof. Dr. T. Hibma

Prof. Dr. A. van Veen

Prof. Dr. G. de With

Hegeman, Hans

Fundamentals of Grinding

Surface conditions of ground materials

University of Groningen, 2000

Print: University press-Groningen

Cover: The cover is an impression of ploughed land near the city of Groningen. Although the length scales are very different, the overall impression is very similar to the ground surface of cobalt-tungsten carbide (figure 4.5, on page 77 of this thesis).

Photographer: Janneke Ronhaar

ISBN: 90-367-1324-2

The work described in this thesis has been performed as part of the Priority Program for Materials. It has been made possible by the financial support of the Netherlands Foundation for Technical Science (STW - Utrecht) and the 'Nederlandse Organisatie voor Wetenschappelijk Onderzoek' (NWO)

Nu

Nu ligt besloten in de toekomst
als een droom die je wilt grijpen

Nu is nog kleiner dan een flits
meteen gevangen door het verleden

Nu is een aaneenschakeling
van verleden, heden en toekomst

Nu is je leven

MIREILLE RONHAAR

CONTENTS

1. INTRODUCTION	1
2. BASIC CONCEPTS	5
2.1. Introduction	5
2.2. Grinding models and theory	6
2.2.1. Basic principles of the grinding process and the grinding machine	6
2.2.2. Grinding models	9
2.2.3. Roughness analysis	15
2.2.4. Materials response during the grinding process	17
2.3. Experimental methods	19
2.3.1. Scanning Confocal Microscopy	20
2.3.2. Scanning Electron microscopy	24
2.3.3. X-ray diffraction and residual stress measurements	26
2.3.4. Additional experimental methods	29
3. MODELLING OF THE GRINDING PROCESS	33
3.1. Introduction	33
3.2. The kinematic grinding model	35
3.2.1. Generation of the grinding wheel	37
3.2.2. Kinematics of the plane grinding process	45
3.2.3. Materials response and force calculations	48
3.2.4. Prediction of the change in materials properties	50
3.3. Results of the grinding model	52
3.4. Discussion and conclusions	56

4. GRINDING OF CEMENTED CARBIDES	65
4.1. Introduction	65
4.2. Microstructural aspects of cemented carbides and preparation	67
4.2.1. Materials and sample preparation	67
4.2.2. Microstructure and properties of cemented carbides	68
4.3. Scratch experiments on tungsten-carbide hardmetals	73
4.4. The resulting surface of ground cemented carbides	75
4.4.1. The resulting surface layer	76
4.4.2. Surface topography of ground tungsten carbides	84
4.4.3. Analysis of residual stress induced by the grinding process	89
4.5. Comparison between the experiments and the grinding model	92
4.5.1. Comparison of the topography	92
4.5.2. Applied stress and residual stresses	99
4.6. Discussion and conclusions	101
5. GRINDING OF MNZN FERRITES	109
5.1. Introduction	109
5.2. The microstructure and properties MnZn ferrites	110
5.3. Scratch tests on MnZn ferrite	111
5.4. The morphology of and surface condition of ground MnZn ferrite	115
5.4.1. The morphology of ground MnZn ferrite	115
5.4.2. Surface roughness of ground MnZn ferrite	117
5.4.3. Magnetic measurements of ground MnZn	121
5.4.4. Recovery of the properties of MnZn ferrite by annealing	122
5.5. Modelling of the grinding process of ceramic materials	123
5.6. Discussion and conclusions	128
SUMMARY	133
SAMENVATTING	137
WOORDEN VAN DANK	141
