

Light Adaptation and Early Processing in the Human Visual System

The investigations were (in part) supported by the research Council for Earth and Lifesciences (ALW) with financial aid from the Netherlands Organization for Scientific Research (NWO).

Cognitive Neurosciences**

RIJKSUNIVERSITEIT GRONINGEN

Light Adaptation and Early Processing in the Human Visual System

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. D.F.J. Bosscher,
in het openbaar te verdedigen op
vrijdag 3 maart 2000
om 16.00 uur

door

Lieke Poot

geboren op 21 augustus 1972
te Vlaardingen

Promotor: prof. dr. D.G. Stavenga

Co-Promotor: dr. J.H. van Hateren

Referent: dr. H.P. Snippe

Beoordelingscommissie: prof. dr. ir. W.A. van de Grind

prof. dr. J.J. Koenderink

prof. dr. A.C. Kooijman

ISBN 90-367-1199-1

Contents

	Introduction	1
Chapter 1	Dynamics of adaptation at high luminances: Adaptation is faster after luminance decrements than after luminance increments	9
Chapter 2	A temporal model for early vision that explains detection thresholds for light pulses on flickering backgrounds	31
Chapter 3	Dynamics of adaptation after onset and cessation of flicker	61
Chapter 4	Adaptation to natural time series of intensities	73
Chapter 5	A psychophysical signature of a simple cell's receptive field	93
	Samenvatting	103
	Dankwoord	105
