Exploring Protein Energy Landscapes

Beoordelingscommissie:

Prof. dr. H.J.C. Berendsen

Prof. dr. H. Frauenfelder

Prof. dr. D. Haarer

Prof. dr. S. Völker

This work was supported by the Netherlands Foundation for Physical Research (FOM) with financial aid from the Netherlands Organization for the Advancement of Science (NWO).

RIJKSUNIVERSITEIT GRONINGEN

Exploring Protein Energy Landscapes

PROEFSCHRIFT

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de Rector Magnificus, dr. F. van der Woude,
in het openbaar te verdedigen op maandag 22 december 1997
des namiddags te 4.15 uur

door

Daniël Thorn Leeson

geboren op 15 mei 1969
te Amsterdam

Promotor: Prof. dr. D.A. Wiersma

CONTENTS

Chapter 1: GENERAL INTRODUCTION	1
1.1 Protein structure and dynamics	1
1.2 Structural dynamics and spectral diffusion	3
1.3 Complex systems	4
1.4 Scope and organization of this thesis	5
Chapter 2: CONCEPTS	7
2.1 Energy landscapes	7
2.2 The topology of multidimensional potential energy surfaces	9
2.2.1 The mapping onto minima approach	9
2.2.2 The topological disconnectivity graph	12
2.2.3 Classification of potential energy surfaces	12
2.2.4 Basin kinetics and basin connectivity graphs	14
2.3 Experimental and computational explorations of protein energy landscapes	16
2.3.1 Rebinding of small ligands to myoglobin	17
2.3.2 X-ray crystallography and other methods	18
2.3.3 The hierarchical organization of the energy landscape of myoglobin	20
2.3.4 Molecular dynamics simulations	21
2.4 The two-level system model	23
Chapter 3: METHODS	25
3.1 An introduction into optical line narrowing spectroscopy and spectral diffusion	25
3.2 Photon echo generation	29
3.3 The decay of the stimulated photon echo: Dephasing and spectral diffusion	33
3.4 Derivation of the stimulated echo correlation function	36
Appendix: The density matrix for a two-level system	39
Chapter 4: EXPERIMENTAL	41
4.1 Temporal and spatial configuration of photon echo experiments	41
4.2 The laser set-up	41
4.3 Detection of photon echo signals	43
4.4 Data collection and handling	44
4.5 Sample preparation and handling	45

Chapter 5: SPECTRAL DIFFUSION IN HEME PROTEINS	47
5.1 Introduction	47
5.2 Spectral diffusion in Zn-cytochrome <i>c</i> and Zn-myoglobin below 2.0 K	47
5.3 Spectral diffusion in Zn-myoglobin between 1.7 and 3.4 K	50
5.4 Spectral diffusion in Zn-myoglobin between 3.0 and 23 K	52
5.5 The importance of heating effects in stimulated photon echo experiments	57
5.6 The population dimension of the stimulated photon echo	61
5.7 Temperature cycle spectral hole burning experiments	64
5.8 The structure of the energy landscape	67
5.9 The organization of the energy landscape	74
5.10 Summary and outlook	80
Appendix: Spectral diffusion in ethanol glass	82
Chapter 6: OPTICAL DEPHASING IN ZN-MYOGLOBIN	85
6.1 Introduction	85
6.2 Results and discussion	86
References	93
Samenvatting	97
