Science is essentially critical; it consists of bold conjectures, controlled by criticism, and it may, therefore, be described as revolutionary. But there is need for some dogmatism. If we give in to criticism too easily, we shall never find out where the real power of our theories lies.

Karl R. Popper

<b>Contents:</b>	<b>Page:</b>
<b>INTRODUCTION</b>	
Chapter 1: Introduction	1
<b>SECTION I: CLINICAL EFFICACY</b>	
Chapter 2: Reduction of proteinuria by angiotensin converting enzyme inhibition.	9
Kidney International 1987;32:78-83	11
Chapter 3: Efficacy and variability of the antiproteinuric effect of ACE inhibition by lisinopril.	
Kidney International 1989;36:272-279	27
Chapter 4: Additive antiproteinuric effect of the NSAID indomethacin and the ACE inhibitor lisinopril.	
American Journal of Nephrology 1990;10(suppl 1):94-97	45
<b>SECTION II: MECHANISM OF ACTION</b>	
Chapter 5: The effects of lisinopril on renal hemodynamics in patients with renal disease.	
Current Opinion in Cardiology 1989;4(suppl 1):29-34	57
Chapter 6: Angiotensin-I converting enzyme inhibition: clinical effects in chronic renal disease.	
American Journal of Kidney Diseases 1991;17(suppl 1):85-88	69
Chapter 7: Mechanism of the antiproteinuric effect of angiotensin converting enzyme inhibition.	
Contributions to Nephrology 1990;83:160-165	79
Chapter 8: Additive antiproteinuric effect of angiotensin converting enzyme inhibition and non-steroidal anti-inflammatory drug therapy: a clue to the mechanism of action.	
Clinical Science 1991;81:367-372	87
Chapter 9: Angiotensin II does not acutely reverse the reduction of proteinuria by long-term ACE inhibition.	
Kidney International 1991;40:734-741	101
