Elucidating the mechanisms of action of short-chain fatty acids

From dietary fiber to host metabolism

Gijs den Besten

The work in this thesis was carried out at the Department of Pediatrics, Center for Liver, Digestive, and Metabolic Diseases, University of Groningen, University Medical Center Groningen, Groningen, The Netherlands.

The research described in this thesis was funded by the Netherlands Genomics Initiative via the Netherlands Consortium for Systems Biology.

The author gratefully acknowledges the financial support for printing this thesis by:

Groningen University Institute for Drug Exploration (GUIDE)

Rijksuniversiteit Groningen (RuG)

Universitair Medisch Centrum Groningen (UMCG)

Top Institute for Food and Nutrition (TIFN)

Greiner Bio-One

Research Diet Services B.V.

CONTENTS

Chapter 1	General introduction and scope of the thesis	9
Chapter 2	The short-chain fatty acid uptake fluxes by mice on a guar gum supplemented diet associate with amelioration of the metabolic syndrome	31
Chapter 3	Gut-derived short-chain fatty acids are vividly assimilated into host carbohydrates and lipids	51
Chapter 4	Gut-derived acetate and butyrate increase gluconeogenesis and decrease lipogenesis via the hepatic cAMP-PKA-CREB protein signaling pathway	69
Chapter 5	Dietary short-chain fatty acids protect against high-fat diet-induced obesity via a PPAR γ -dependent switch from lipogenesis to fatty-acid oxidation	85
Chapter 6	Protection against the metabolic syndrome by guar gum-derived short-chain fatty acids depends on peroxisome proliferator-activated receptor γ and glucagon-like peptide-1	109
Chapter 7	General discussion	125
Appendices	References	139
	Summary	157
	Nederlandse samenvatting	161
	Biografie/Biography	165
	List of publications	167
