Enantioselective Auto- and Cross Catalytic Reactions

Francesca Caprioli

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, The Netherlands.

This work was financially supported by the University of Groningen and the Netherlands Organisation for Scientific Research.

Printed by Ipskamp Drukkers BV, Enschede, The Netherlands

Cover design by Francesca Caprioli

Enantioselective Auto- and Cross Catalytic Reactions

PhD Thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

friday 5 December 2014 at 9:00 hours

by

Francesca Caprioli

born 25 may 1984
 in Venosa, Italy

Promotor:

Prof. S.R. Harutyunyan

Assessment committee

Prof dr B.L. Feringa

Prof. dr. J. Belokon

Prof. dr. J. Lacour

Table of Contents

Chapter 1 Introduction.....	1
1.1 Asymmetric Autocatalysis and self-replication	2
1.2 Design of a self-replicating system	3
1.2.1 Non enzymatic self-replicating systems	4
1.3 Small molecule replication with symmetry breaking-asymmetric autocatalysis	6
1.4 Asymmetric autoinduction	8
1.5 A unique example of Asymmetric Autocatalysis: Soai system	11
1.6 Carreira's example of enantioselective synthesis of Efavirenz by means of the autocatalytic formation of the key intermediate.....	14
1.7 The organo-“Auto”-catalytic asymmetric Mannich reaction: Tsogoeva	15
1.8 Thesis outline.....	18
1.9 References.....	19
Chapter 2 From an autocatalytic design to a system with slow release of a catalyst and catalytic enantioselective synthesis of α-hydroxy acids... 	21
2.1 Introduction.....	22
2.1.1 The imine-enamine catalysis in asymmetric synthesis: examples and mechanism.....	23
2.2 Results and discussions.....	27
2.2.1 Strategy.....	27
2.2.2 Imino acid synthesis.....	29
2.2.3 Towards autocatalytic synthesis of chiral amino acids using Mannich reaction.....	33
2.2.4 Slow release of a catalyst during hydroxy acid formation.....	41
2.2.5 The organocatalytic enantioselective aldol reaction.....	45

2.3	Conclusions.....	51
2.4	Experimental section.....	51
2.4.1	General Remarks.....	51
2.4.2	General Procedure for the synthesis of imino acid.....	52
2.4.3	Kinetic studies of imino acid based reactions.....	54
2.4.4	General procedure for aldol reaction.....	55
2.4.5	General procedure for the <i>ee</i> determination using ¹ H NMR and CSA.....	56
2.5	References.....	57

Chapter 3 Synthetic efforts towards proline-based autocatalytic reactions.....61

3.1	Introduction.....	62
3.1.1	Proline based catalysis.....	63
3.1.2	Proline based catalysis: intermolecular aldol reaction.....	66
3.1.3	Proline-based catalysis: Mannich reaction.....	67
3.1.4	Proline based catalysis: Michael reactions.....	69
3.1.5	Proline based catalysis: Robinson annulation.....	72
3.2	Results and discussions.....	73
3.2.1	Strategic approach.....	73
3.2.2	Strategy I for the synthesis of imino acids precursor 37a: use of Ni(II) complexes.....	75
3.2.3	Strategy II for the synthesis of imino acid precursor 37b: dehydrochlorination pathway.....	79
3.2.4	Strategy III for the synthesis of imino acid precursors 37a and 37b: IBX oxidation.....	80
3.2.5	Strategy IV for the synthesis of imino acid precursor 37b: based on glutamic acid.....	81
3.2.6	Strategy V for substrate synthesis.....	85
3.2.7	Strategy VI for substrate synthesis.....	89
3.3	Conclusions.....	92

3.4	Experimental section.....	93
3.4.1	General Remarks.....	93
3.4.2	Strategy I for substrate synthesis – Ni(II) complex amino acid synthesis.....	94
3.4.3	Strategy II for substrate synthesis – dehydrochlorination pathway.....	97
3.4.4	Strategy III for substrate synthesis – IBX oxidations.....	98
3.4.5	Strategy IV for substrate synthesis.....	98
3.4.6	Strategy V for substrate synthesis.....	100
3.4.7	Strategy VI for substrate synthesis	104
3.5	References.....	107

Chapter 4 Asymmetric Catalytic And Autocatalytic Mannich Reaction Using a Dehydroisoquinoline Derivative.....109

4.1	Introduction.....	110
4.2	Importance of the 1-substituted tetrahydroisoquinoline motif and methods of its synthesis.....	111
4.2.1	Asymmetric organocatalytic addition of acetone to β -carboline.....	114
4.3	Results and discussions.....	115
4.3.1	Preparation of the 3, 4-dihydroisoquinoline substrate.....	115
4.3.2	Tetrahydroisoquinoline based autocatalytic system.....	116
4.3.3	Asymmetric organocatalyzed Mannich reaction on 3,4-dihydroisoquinoline: Optimization studies.....	117
4.3.4	Mannich reaction: racemization studies.....	121
4.3.5	Acyl-Mannich reaction: circumventing the racemization.....	125
4.4	Conclusions.....	126
4.5	Experimental section.....	127
4.5.1	General Remarks.....	127
4.5.2	Procedure A: for the synthesis of 3,4-dihydroisoquinoline.....	127
4.5.3	Procedure B: for the synthesis of 3,4-dihydroisoquinoline.....	138

4.5.4	General procedure for the organocatalysed Mannich reaction of acetone on 3,4- dihydroisoquinoline.....	128
4.5.5	<i>ee</i> determination of the Mannich product 2 using ¹ H-NMR and Pirkle's acid.....	129
4.5.6	General procedure for the racemization study during the Mannich reaction.....	129
4.5.7	General procedure for the Boc protection of Mannich product	129
4.5.8	General procedure for iminium salt formation followed by the organocatalyzed Mannich reaction	130
4.6	References.....	131

Chapter 5 Asymmetric organocatalytic synthesis of C-1 substituted tetrahydroisoquinolines.....133

5.1	Introduction.....	134
5.1.1	Tetrahydroisoquinoline and tetrahydro-β-carboline motifs in alkaloid structures.....	134
5.2	Results and discussions.....	138
5.2.1	Optimization of the reaction conditions: enone concentration.....	139
5.2.2	Optimization of the reaction conditions: catalysts screening...	141
5.3.3	Optimization of the reaction conditions: solvent screening.....	142
5.2.4	Substrate scope: enones.....	152
5.2.5	Substrate scope: imines.....	154
5.2.6	Study of the Diastereoisomers: 2D-NMR and X-ray	157
5.2.7	Jacobsen 2013: Asymmetric aza-Diels Alder reaction.....	164
5.3	Conclusions.....	168
5.4	Experimental section.....	169
5.4.1	General Remarks.....	169
5.4.2	General procedure for the synthesis of 3,4- dihydroisoquinolines.....	169
5.4.3	General procedures for the synthesis of enones.....	171

5.4.4	General procedure for organocatalysed addition of enones to dihydroisoquinolines.....	172
5.4.5	X-ray.....	180
5.5	References.....	182

Chapter 6 Asymmetric amplification due to difference in phase behavior of Cu-diphosphine based chiral complexes.....187

6.1	Introduction.....	188
6.1.1	Non linearity in asymmetric synthesis	189
6.2	Results and discussions.....	193
6.2.1	Asymmetric amplification in the 1,2-addition of a Grignard reagent to enone, catalysed by scalemic L1-Cu complexes.....	193
6.2.2	Generality of the phenomenon: other metals.....	200
6.2.3	Solution and solid state of the corresponding copper complexes	202
6.2.4	Mechanistic considerations.....	204
6.2.5	Access to copper free enantiopure and racemic ferrocenyl diphosphine ligand.....	209
6.3	Conclusions.....	210
6.4	Experimental section.....	211
6.4.1	General Remarks.....	211
6.4.2	1,2-addition of Grignard reagents.....	212
6.4.3	General procedure for preparing the CuBr complexes.....	213
6.4.4	CuBr-rev Josiphos L1.....	214
6.4.5	CuBr complex of JosiPhos-L2.....	215
6.4.6	CuBr complex of racemic JosiPhos-L2.....	216
6.4.7	CuBr complex of enantiopure JosiPhos-L2	216
6.4.8	CuBr complex of TaniaPhos-L3.....	216
6.4.9	CuBr complex of WalPhos-L4.....	217
6.4.10	CuBr complex of BINAP.....	217
6.4.11	General procedure for preparing the PdCl ₂ complexes.....	217

6.4.12	JosiPhos-L2 PdCl ₂ complex.....	218
6.4.13	PdCl ₂ complex of TaniaPhos-L3.....	219
6.4.14	X-ray diffraction data with crystal packing characteristics.....	219
6.5	References.....	221
	Samenvatting.....	223
	Summary.....	229
	Acknowledgments.....	235
