Printing: Canon business services, Noord Nederland

Distribution: Grafisch centrum, Lentis

The work in this thesis was performed at the Center for Integrative Psychiatry, Lentis.

This research was supported by Lentis, Mental Health Care, Groningen, the Netherlands.

* The Borobudur stupa mandala is situated in Central Java, Indonesia. It was constructed out of volcanic stone in the 8th century by three generations of the Sailendra Buddhist Dynasty. It is the largest surviving Buddhist mandala in the world that displays all three 'yanas' of Buddhism: Theravada, Mahayana and Varjayana. Due to a large volcanic eruption in the 9th century it lay covered with volcanic ash and mud for over 1000 years. It was completely overgrown by jungle vegetation when, in the 19th century it was rediscovered and excavated by Dutch and English colonial explorers. Dutchman Theodor van Erp initiated in 1902 the first attempt to restore it. Between 1975 and 1982 it was completely rebuilt and renovated by the Indonesian government and UNESCO. It is recognized as a world heritage site since 1991.
