RIJKSUNIVERSITEIT GRONINGEN

Quantum Optical Control
of Donor-bound Electron Spins in
GaAs

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 11 februari 2011
om 11:00 uur

door

Maksym Sladkov

geboren op 10 september 1982
te Uzhgorod, Oekraïne

Promotor: Prof. dr. ir. C. H. van der Wal

Beoordelingscommissie: Prof. dr. M. Bayer
Prof. dr. ir. L. M. K. Vandersypen
Prof. dr. ir. P. H. M van Loosdrecht

Contents

1	Introduction	1
1.1	Quantum information science	2
1.2	Quantum memory	3
1.3	Electromagnetically Induced Transparency	3
1.4	EIT in an optically dense solid state medium	5
1.5	Outline of this thesis	6
	References	7
2	Towards quantum optics and entanglement with electron spin ensembles in semiconductors	11
2.1	Introduction	12
2.2	Preparing and detecting entangled states via quantum optical measurement	13
2.3	Conclusions	16
2.4	Acknowledgments	17
	References	17
3	Optical transitions in the $D^0 - D^0X$ system in n-GaAs	21
3.1	Neutral donor D^0 , free exciton X and donor-bound exciton D^0X	22
3.1.1	Neutral donor: D^0	22
3.1.2	D^0 in a magnetic field	23
3.1.3	Free exciton: X	24
3.1.4	X in a magnetic field	24
3.1.5	Neutral donor-bound exciton: D^0X	25
3.1.6	Neutral donor-bound excitons D^0X in a magnetic field	25
3.2	Polarization selection rules of the optical transitions in $D^0 - D^0X$ system	28

References	30
4 Optical control of three-level systems: Theory	33
4.1 Introduction	34
4.2 Density matrix and equation of motion	35
4.3 Rotating frame transformation and rotating wave approximation (RWA)	37
4.4 Lindblad relaxation operator	38
4.5 Analytical solution in no-population transfer approximation	40
4.6 Full solution of the density matrix equation	40
4.7 Optical spectra of n -GaAs in a strong optical driving regime	42
References	43
5 Polarization-preserving confocal microscope for optical experiments in a dilution refrigerator with high magnetic field	45
5.1 Introduction	46
5.2 Microscope design and operation	47
5.2.1 Modular compact microscope unit	47
5.2.2 Polarization maintaining fiber	47
5.2.3 Confocal microscope in Voigt geometry	49
5.2.4 Focussing mechanics and wiring to the piezo motors	51
5.2.5 Optical detection and cooling down procedure	52
5.2.6 Focal plane positioning and spot size	52
5.3 Characterization of performance	54
5.3.1 Polarization purity	55
5.3.2 Heat load and heat-sinking of optical power	57
5.4 Application: Spectroscopy and EIT with n -GaAs	58
5.4.1 Photoluminescence	58
5.4.2 Transmission spectroscopy	58
5.4.3 Electromagnetically induced transparency with donor-bound electrons	59
5.5 Summary	62
5.6 Acknowledgements	62
References	62
6 Electromagnetically induced transparency in low-doped n-GaAs	67
6.1 Introduction	68
6.2 Samples preparation and measurements technique	69
6.3 Transmission spectroscopy	71
6.4 Pump assisted transmission spectroscopy	71
6.5 Demonstration of EIT	72

6.6 Spin coherence time T_2^* and signatures of Dynamic Nuclear Polarization	74
6.7 Conclusions	75
References	75
7 Ultrafast preparation and detection of coherent dark states in low-doped n-GaAs	79
7.1 Introduction	80
7.2 Spectral properties of D^0 electron spin system	81
7.3 The coherent dark state for an electron spin in the optically driven Λ -system	84
7.4 Theory of the fast dark state preparation using picosecond optical pulses	86
7.5 Experiment on coherent dark state preparation with single picosecond optical pulses	92
7.6 Probing the coherent optical dark state	97
7.7 Time resolved study of the coherence of electron spin bound to the neutral donor	99
7.8 Conclusions	101
References	102
Summary	107
Samenvatting	111
Curriculum Vitae	117
List of Publications	119
