# **Bio-inspired Catalysis in Water**

Jens Oelerich

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, The Netherlands.

This work was financially supported by the National Research School Combination Catalysis Controlled by Chemical Design (NRSC-Catalysis) program of Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO) in the Netherlands.

Printed by Ipskamp Drukkers BV, Enschede, The Netherlands

# **Bio-inspired Catalysis in Water**

**PhD thesis**

to obtain the degree of PhD at the  
 University of Groningen  
 on the authority of the  
 Rector Magnificus Prof. E. Sterken  
 and in accordance with  
 the decision by the College of Deans.

This thesis will be defended in public on  
 Friday 20 February 2015 at 12.45 hours

by

**Jens Josef Oelerich**

born on 29 January 1983  
 in Ochtrup, Germany

**Supervisor**

Prof. J.G. Roelfes

**Assessment committee**

Prof. J.G. de Vries

Prof. B. de Bruin

Prof. A.J. Minnaard

This thesis is dedicated to my parents,  
my wife Jacqueline and our unborn child.

# Table of contents

<b>Chapter 1</b>	<b>State of the art in DNA-based asymmetric catalysis</b>	<b>1</b>
1.1.	DNA-based asymmetric catalysis	2
1.1.1.	Hybrid catalysts	2
1.1.2.	Concept of DNA-based catalysis	2
1.1.3.	Non-covalent anchoring	4
1.1.4.	Higher order DNA structures	11
1.1.5.	Covalent anchoring in DNA-based catalysis	12
1.2.	Mechanistic investigations into DNA-based catalysis	14
1.2.1.	General mechanistic aspects	15
1.2.2.	First generation DNA-based catalysts	15
1.2.3.	Second generation DNA-based catalysts	17
1.2.4.	Conjugate addition reactions	19
1.2.5.	Enantioselective hydration of enones	21
1.3.	Goals and outline of this thesis	24
1.4.	References	24
<b>Chapter 2</b>	<b>DNA-based asymmetric organometallic catalysis in water</b>	<b>27</b>
2.1.	Introduction	28
2.1.1.	Organometallic DNA based catalysis	28
2.1.2.	Carbene reactions	28
2.1.3.	Intramolecular cyclopropanation of $\alpha$ -diazo- $\beta$ -keto sulfones	28
2.1.4.	Research goal	29
2.2.	Results and Discussion	29
2.2.1.	Experimental setup	29
2.2.2.	Side reaction	31
2.2.3.	Dppz derivatives	32
2.2.4.	Substrate scope	33
2.2.5.	General observations	34
2.3.	Conclusion	34
2.4.	Experimental Section	35
2.4.1.	General Remarks	35
2.4.2.	Representative procedure	35
2.4.3.	Synthesis protocols and analytic data	36
2.5.	References	42

<b>Chapter 3</b>	<b>Iron-porphyrins in DNA-based asymmetric catalysis: Structure dependent enantioselectivity and dramatic rate enhancement</b>	<b>45</b>
3.1.	Introduction	46
3.1.1.	The interaction of cationic porphyrins with DNA	46
3.1.2.	Catalytic reactions with porphyrins and DNA	47
3.1.3.	Cyclopropanation reactions catalyzed by iron porphyrins	48
3.1.4.	Research goal	49
3.2.	Results and Discussion	50
3.2.1.	Pyridyl <i>N</i> -methyl porphyrines in DNA-based catalysis	50
3.2.2.	Water insoluble metallo-porphyrins as catalyst	53
3.2.3.	The influence of the porphyrin structure	54
3.2.4.	The oxidation state of iron during the reaction	54
3.3.	Conclusion	55
3.4.	Experimental Section	55
3.4.1.	General remarks	55
3.4.2.	Representative procedures for the catalytic reactions	56
3.4.3.	HPLC analysis	56
3.4.4.	Reference compounds and catalysts	57
3.5.	References	58
<b>Chapter 4</b>	<b>Alkylidene malonates as substrates in DNA-based asymmetric catalysis</b>	<b>61</b>
4.1.	Introduction	62
4.1.1.	Bidentate coordinating substrates	62
4.1.2.	Asymmetric Friedel-Crafts alkylation reactions with malonate substrates	62
4.1.3.	Research goal	63
4.2.	Results and Discussion	64
4.2.1.	Screening of catalysts	64
4.2.2.	Optimization of conditions	66
4.2.3.	Substrate Scope	69
4.3.	Conclusion	70
4.4.	Experimental Section	70
4.4.1.	General remarks	70
4.4.2.	Representative procedure for the catalytic reactions	70
4.4.3.	Conversions determined by HPLC	71
4.4.4.	HPLC column conditions and retention times	71
4.5.	References	72

<b>Chapter 5</b>	<b>Iron porphyrin catalyzed N-H bond insertion in water</b>	<b>73</b>
5.1.	Introduction	74
5.1.1.	N-H bond insertion	74
5.1.2.	Biochemical applications of N-H bond insertions in water	74
5.1.3.	X-H insertion reactions catalyzed by iron porphyrins	74
5.1.4.	Possible intermediates	75
5.1.5.	Heme vs iron-porphyrin	76
5.1.6.	Research Goal	76
5.2.	Results and discussion	76
5.2.1.	Optimization	77
5.2.2.	Preparative scale reaction	79
5.2.3.	Limitations	80
5.2.4.	Mechanistic considerations	80
5.3.	Conclusions	81
5.4.	Experimental section	82
5.4.1.	General remarks	82
5.4.2.	Representative procedure	82
5.4.3.	Synthesis of reference compound	82
5.5.	References	83
<b>Chapter 6</b>	<b>Micellar catalysis with alkylidene malonates and <math>\alpha,\beta</math>-unsaturated <math>\alpha'</math>-hydroxyketones</b>	<b>85</b>
6.1.	Introduction	86
6.2.	Results and Discussion	87
6.3.	Conclusions	91
6.4.	Experimental section	92
6.4.1.	General remarks	92
6.4.2.	Representative procedure	92
6.4.3.	Synthesis protocols and analytic data	92
6.5.	References	97

<b>Chapter 7 Summary, conclusions and perspectives .....</b>	<b>99</b>
7.1. Introduction.....	100
7.2. Research overview .....	101
7.3. Important characteristics of metals and ligands .....	103
7.4. Rate acceleration by DNA .....	104
7.5. Mechanistic considerations.....	105
7.6. Perspectives for DNA-based asymmetric catalysis.....	107
7.7. Reference.....	108
<b>Nederlandse samenvatting .....</b>	<b>109</b>
<b>Acknowledgements .....</b>	<b>112</b>
