Study of Compression Modes in ^{56}Ni using an Active Target

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 1 May 2015 at 14:30 hours

by

Soumya Bagchi

born on 4 February, 1987
 in Siliguri, India

Supervisors

Prof. N. Kalantar-Nayestanaki

Prof. M.N. Harakeh

Co-supervisor

Dr. J. Gibelin

Assessment committee

Prof. T. Aumann

Prof. A. Bracco

Prof. O. Scholten

Contents

1	Introduction	1
1.1	Historical overview of giant resonances	2
1.2	Experimental setups for the study of giant resonances	5
1.3	Outline	8
2	Giant resonances and nuclear incompressibility	9
2.1	Macroscopic model	9
2.2	Microscopic model	10
2.3	Sum rules	13
2.4	Damping of giant resonances	14
2.4.1	Width of the resonances	14
2.4.2	Decay of giant resonances	15
2.5	Nuclear incompressibility	15
2.6	Giant resonances in Ni isotopes	18
2.6.1	Theoretical predictions	18
2.6.2	Experimental evidences	18
2.7	Theoretical predictions for angular distributions	21
2.7.1	General formalism	22
2.7.2	The optical potential	23
2.7.3	DWBA approximation	24
2.7.4	DWBA for $^{56}\text{Ni}(\alpha, \alpha')^{56}\text{Ni}^*$ reaction	25
3	Experimental Setup	27
3.1	Experimental method and associated constraints	27
3.2	Production of the ^{56}Ni beam	28
3.2.1	GANIL facility	28
3.2.2	Secondary beam production and purification using LISE spectrometer	30
3.3	Detection systems	34

3.3.1	The active target detector MAYA	34
3.3.2	The electrostatic mask	39
3.3.3	The ancillary detectors	41
3.3.4	Electronics	43
4	Data Analysis	49
4.1	The conventions	49
4.2	Calibrations	51
4.2.1	Calibration of the cathode pads	51
4.2.2	Time Calibration of the amplification wires	53
4.2.3	Calibration of the ancillary detectors	54
4.3	Reconstruction of scattering angle and energy of the recoil particle	59
4.3.1	Trajectory reconstruction	59
4.3.2	Determination of the reaction plane	66
4.3.3	Range and scattering-angle reconstruction of the recoil particle	70
4.3.4	Energy reconstruction of the recoil particle	72
4.4	Event selection	72
4.4.1	Selection of the ^{56}Ni beam	72
4.4.2	Selection of the recoil α -particle	73
4.4.3	Geometrical selections of the events in MAYA	74
5	Simulation	77
5.1	Event generation in MAYA	77
5.1.1	Energy-loss calculation for the ^{56}Ni beam and the recoil α -particle	77
5.1.2	Two-dimensional charge projection from energy-loss profile of the beam and recoil α -particle	80
5.1.3	ϕ -angle simulation	83
5.2	Definition of range	84
5.3	Reconstruction uncertainties of kinematics variables	88
5.3.1	Errors in CM-angle reconstruction	89
5.3.2	Uncertainties in excitation-energy reconstruction	89
5.4	Excitation energy versus vertex of interaction	90
5.5	Efficiency and acceptance	91
6	Results and discussion	93
6.1	Events in the laboratory frame	93
6.1.1	Excitation energy spectrum of ^{56}Ni	94
6.2	Angular distribution	96
6.2.1	Normalization	96
6.3	Elastic scattering of ^{56}Ni	97
6.4	Inelastic scattering of ^{56}Ni : Giant resonances	99
6.4.1	Gaussian peak-fitting method for $^{56}\text{Ni}(\alpha, \alpha')^{56}\text{Ni}^*$ reaction	100
6.4.2	Multipole-decomposition analysis (MDA) for $^{56}\text{Ni}(\alpha, \alpha')^{56}\text{Ni}^*$ reaction	106
6.5	Discussion	109

7 Summary and outlook	115
8 Nederlandse samenvatting	121
Appendix A: Decay chain of ^{226}Ra	125
Appendix B: Strength distribution formulas	126
Appendix C: Level scheme of ^{56}Ni	127
Bibliography	129
Acknowledgements	133
