Targeting Proteostasis in Atrial Fibrillation

Molecular Footprints and Novel Therapeutic Strategies

Deli Zhang

张德丽

The research described in the thesis was mainly conducted at the department of Clinical Pharmacy and Pharmacology, University Medical Center Groningen, University of Groningen, the Netherlands, and partly in Montreal Heart Institute, Montreal, Canada.

Publication of this thesis is financially supported by the Dutch Heart Foundation, University of Groningen, Graduate School of Medical Sciences and Pfizer Nederland B.V.

Targeting proteostasis in Atrial Fibrillation

Molecular footprints and novel therapeutic strategies

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 26 October 2015 at 14.30 hours

by

Deli Zhang

born on 1 March 1981 (official)
in Shandong, China

Supervisor

Prof. R.H. Henning

Co-supervisor

Dr. B.J.J.M. Brundel

Assessment committee

Prof. S. Nattel

Prof. D. van Wagoner

Prof. M.G. Rots

Paranymphs

Femke Hoogstra-Berends

Xu Hu

Supervisor

Prof. R.H. Henning

Co-supervisor

Dr. B.J.J.M. Brundel

The research described in this thesis was supported by a grant of the Dutch Heart Foundation (DHF-2009B024)

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

CONTENTS

| | | |
|------------|---|----------|
| Chapter 1 | General introduction and aim of the thesis. | 9 |
| Chapter 2 | Loss of proteostatic control as a substrate for Atrial Fibrillation; a novel target for upstream therapy by Heat Shock Proteins. <i>Front Physiol. 2012 Feb 23;3:36.</i> | 25 |
| Chapter 3 | Effects of different small HSPB members on contractile dysfunction and structural changes in a <i>Drosophila melanogaster</i> model for Atrial Fibrillation. <i>J Mol Cell Cardiol. 2011 Sep;51(3):381-9.</i> | 45 |
| Chapter 4 | Activation of Histone Deacetylase-6 (HDAC6) Induces Contractile Dysfunction through Derailment of α -Tubulin Proteostasis in Experimental and Human Atrial Fibrillation. <i>Circulation. 2014 Jan 21; 129(3):346-58.</i> Media interviews about this article | 63 91 |
| Chapter 5 | PARP1 inhibition attenuates NAD ⁺ depletion and protects against experimental and human Atrial Fibrillation. <i>Manuscript in preparation.</i> | 93 |
| Chapter 6 | Involvement of Class I and Class IIa HDACs in the derailment of gene expression in Atrial Fibrillation. <i>Manuscript in preparation.</i> | 115 |
| Chapter 7 | Inhibition of ER stress-induced autophagy preserves proteostasis and protects against cardiomyocyte dysfunction in experimental and human Atrial Fibrillation. <i>Submitted for publication</i> | 135 |
| Chapter 8 | Summary, general discussion and future perspectives. <i>Partly submitted to Cardiovasc Res.as invited review</i> | 157 |
| Appendices | Nederlandse samenvatting | 183 |
| | Acknowledgement | 188 |
| | Biography | 192 |
| | List of publications | 193 |
