# **The enzyme DXS as an anti-infective target**

Exploiting multiple hit-identification strategies

**Tiziana Masini**

The work described in this thesis was carried out at the Stratingh Institute for Chemistry, University of Groningen, The Netherlands.

This work was financially supported by the University of Groningen and the Netherlands Organisation for Scientific Research.

Printed by Ipskamp Drukkers BV, Enschede, The Netherlands.

The cover, inspired both by a lecture by Prof. Hugo Kubinyi and the wonderful countryside of Toscana, was drawn by Giacomo Callari, artist and friend.

ISBN: 978-90-367-8257-9 (printed version)

ISBN: 978-90-367-8256-2 (digital version)

# **The enzyme DXS as an anti-infective target**

Exploiting multiple hit-identification strategies

## **PhD Thesis**

to obtain the degree of PhD at the  
 University of Groningen  
 on the authority of the  
 Rector Magnificus Prof. E. Sterken  
 and in accordance with  
 the decision by the College of Deans.

This thesis will be defended in public on  
 Friday 13 November 2015 at 14.30 hours

by

**Tiziana Masini**

born on 6 September 1983  
 in Viareggio, Italy

**Supervisors**

Prof. A.K.H. Hirsch

Prof. ir. A.J. Minnaard

**Assessment committee**

Prof. F.J. Dekker

Prof. W.R. Browne

Prof. C.L. Freel Meyers

*To my father and to myself*

## Table of contents

<b>Chapter 1. Introduction</b>	<b>1</b>
1.1 Drug discovery for poverty-related diseases	2
1.2 Target-based approaches vs phenotypic screening for the development of new drugs for poverty-related diseases	3
1.3 Tuberculosis	5
1.4 The 2C-methyl-D-erythritol 4-phosphate (MEP) pathway	8
1.4.1 Isoprenoids	8
1.4.2 Biosynthesis of isoprenoid precursors isopentenyl diphosphate and dimethylallyl diphosphate: two distinct metabolic pathways	8
1.4.3 Challenges in targeting the enzymes of the MEP pathway	10
1.4.4 Mechanism of regulation of the MEP pathway and branch points with other metabolic pathways	13
1.5 Overview of inhibitors of the enzymes of the MEP pathway	14
1.6 1-Deoxy-D-xylulose-5-phosphate synthase (DXS)	18
1.6.1 Known inhibitors of DXS	22
1.7 Project goals and outline	25
1.8 References	26
<b>Chapter 2. De novo fragment-based design of inhibitors of DXS guided by NMR spectroscopy</b>	<b>31</b>
2.1 Fragment-based drug design	32
2.2 Study of the TDP-binding mode within <i>D. radiodurans</i> DXS	32
2.3 First generation of fragment-like inhibitors for DXS	34
2.3.1 Modeling studies and synthesis of fragments <b>4</b> and <b>5</b>	34
2.3.2 Modeling studies and synthesis of fragments <b>13</b> and <b>14</b>	37
2.3.3 Biochemical evaluation of the synthesized fragments against <i>D. radiodurans</i> and <i>M. tuberculosis</i> DXS	42
2.4 NMR spectroscopy in drug discovery	43
2.4.1 The STI methodology	44
2.5 Determination of the binding mode of fragments <b>13</b> and <b>14</b> in solution using the STI-NMR methodology	46
2.6 Fragment growing and optimization of <b>13</b>	51
2.6.1 Modeling of some derivatives of <b>13</b>	51
2.6.2 Synthesis of <b>34–42</b>	53

2.6.3	Biochemical evaluation of <b>34–42</b>	55
2.6.4	Validation of the binding mode of <b>41</b> using the STI methodology	57
2.7	Conclusions and outlook	59
2.8	Experimental	61
2.9	References	75
<b>Chapter 3. Development of peptidic inhibitors of the anti-infective target DXS by phage display</b>		<b>79</b>
3.1	Peptides as therapeutic agents	80
3.2	Phage display as a powerful tool for the identification of potential peptide-based drugs	81
3.3	Exploiting phage display as a tool for the identification of peptidic inhibitors of DXS	83
3.4	The phage display protocol	84
3.5	First phage display	86
3.6	Second phage display	87
3.7	Rationalization of the binding mode – Ala scan	90
3.8	<i>In vitro</i> activity against <i>Mycobacterium tuberculosis</i> DXS and cell-based assays	92
3.9	Conclusions and outlook	92
3.10	Experimental	93
3.11	References	96
<b>Chapter 4. Rationalization of observed activities of thiamine and thiamine diphosphate derivatives as inhibitors of two orthologues of DXS</b>		<b>99</b>
4.1	Thiamine and thiamine diphosphate analogues	100
4.2	Synthesis and biochemical evaluation of thiamine and TDP derivatives	102
4.3	Comparison of the TDP- and substrate-binding pocket in <i>D. radiodurans</i> DXS and <i>M. tuberculosis</i> DXS	105
4.4	Assessment of docking accuracy and rationalization of the differences in activity between the two DXS orthologues	107
4.5	Phosphate and diphosphate bioisosteres	108
4.6	Sugars as diphosphate mimics	108

4.6.1	Synthesis of the sugar derivatives	110
4.6.2	Biochemical evaluation of the sugar derivatives	111
4.7	Conclusions and outlook	113
4.8	Experimental	114
4.9	References	116
<b>Chapter 5. TPPQuery-based design of potential inhibitors of DXS and their synthesis via multicomponent reactions</b>		<b>119</b>
5.1	Multicomponent reactions in medicinal chemistry	120
5.2	<i>AnchorQuery</i> and <i>TPPQuery</i>	121
5.3	Workflow in <i>TPPQuery</i>	123
5.4	<i>TPPQuery</i> with <i>Deinococcus radiodurans</i> DXS	124
5.5	Scaffold 1: Zhu reaction	124
5.5.1	Problems and limitations associated with the isocyanide building block in the Zhu reaction	125
5.5.2	Selection of the Zhu scaffold	127
5.5.3	Retrosynthesis of <b>8</b>	128
5.5.4	Synthesis of the starting materials for the Zhu reaction	129
5.5.5	Screening of conditions for the Zhu reaction	131
5.6	Scaffold 2: Van Leusen reaction	132
5.6.1	Retrosynthesis of <b>28–30</b>	134
5.6.2	Synthesis of the starting materials for the Van Leusen reaction	135
5.6.3	Screening of conditions for the Van Leusen reaction	136
5.7	Scaffold 3: the Groebke reaction	140
5.7.1	Retrosynthetic scheme of <b>45</b> and <b>46</b>	141
5.7.2	Synthesis of the starting materials for the Groebke reaction	142
5.8	Conclusions and outlook	144
5.9	Experimental	146
5.10	References	150
<b>Chapter 6. Ligand-based virtual screening as a powerful tool for the discovery of DXS inhibitors with potent antituberculosic activity</b>		<b>155</b>
6.1	High-throughput screening and virtual screening in drug discovery	156
6.2	Ligand-based virtual screening	157
6.3	First round of LBVS based on known inhibitors for DXS	158

6.4	First round of LBVS based on three novel scaffolds	160
6.5	Second round of LBVS	164
6.6	Third and fourth round of LBVS	165
6.7	Discussion of structure–activity relationships (SARs)	169
6.8	Distribution of molecular weight and cLogP among all hits of our LBVS project	172
6.9	Biochemical evaluation of the most potent hits against a mammalian TDP- dependent enzyme: pyruvate dehydrogenase	174
6.10	Cell-based assays against multiple strains of <i>M. tuberculosis</i>	175
6.11	Cytotoxicity assays and preliminary cell-based assays against <i>Plasmodium falciparum</i> 3D7	178
6.12	Conclusions and outlook	179
	6.12.1 General approaches for the synthesis of derivatives of the best hits	180
6.13	Experimental	181
6.14	References	185
	<b>Summary</b>	<b>189</b>
	<b>Samenvatting</b>	<b>193</b>
	<b>Acknowledgments</b>	<b>199</b>
