Macrophages in asthma

3 different types, 2 bad choices, 1 solution

Christina Draijer

Noordelijke Cara Stichting

The work described in this thesis was performed at the Department of Pharmacokinetics, Toxicology and Targeting, University of Groningen, The Netherlands. The research project was financially supported by grant 3.2.10.056 from the Dutch Lung Foundation (Long Fonds) and the Dutch Northern Cara foundation (Noordelijke Cara Stichting).

Printing of this thesis was financially supported by grants from the Dutch Lung Fund (Long Fonds) and the University of Groningen.

Inhoudsopgave

Chapter 1	General introduction	9
Chapter 2	Characterization of macrophage phenotypes in three murine models of house dust mite-induced asthma	29
Chapter 3	Distinct macrophage phenotypes in allergic and nonallergic lung inflammation	51
Chapter 4	Recruitment and proliferation of macrophage polarization states during allergic lung inflammation	73
Chapter 5	Asthma is characterized by more IRF5+ and CD206+ macrophages and less IL-10+ macrophages	103
Chapter 6	Dual role of YM1+ macrophages in allergic lung inflammation	125
Chapter 7	PGE2-treated macrophages inhibit development of allergic lung inflammation in mice	147
Chapter 8	General discussion	173
Chapter 9	Nederlandse samenvatting	191
	Dankwoord	195
	Curriculum Vitae	199
