Improving the energy system for a rural community in developing countries

Challenges and sustainable opportunities in using renewable energy resources in Ethiopia

Gudina Terefe Tucho

This PhD project was carried out at the Center for Energy and Environmental Sciences (IVEM), which is part of the Energy and Sustainability Research Institute (ESRIG) of the University of Groningen in the Netherlands. IVEM funded my project except three months stay funded by Coimbra group.

Improving the energy system for a rural community in developing countries

Challenges and sustainable opportunities in using renewable energy
 resources in Ethiopia

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on
 Thursday 22 December 2016 at 09.00 hours

by

Gudina Terefe Tucho

born on 30 December 1977
 in Gidami, Ethiopia

Supervisor

Prof. H.C. Moll

Co-supervisor

Dr. ir. S. Nonhebel

Assessment Committee

Prof. A.P.C. Faaij

Prof. J. Herman

Prof. T.H. van der Meer

Contents

Chapter 1:General Introduction	10
1.1 Energy access situation in developing countries.....	11
1.2 Implication of energy demand variation	14
1.3 Availability of resources	15
1.4 Drivers and challenges in addressing the issues.....	16
1.5 Aim and scope of the thesis.....	18
Chapter 2: Assessment of Renewable Energy Resources Potential for Large Scale and Standalone Applications in Ethiopia.....	20
2.1 Introduction.....	22
2.2 Current primary energy consumption in Ethiopia.....	24
2.2.1 Energy consumption by fuel types.....	25
2.2.2 Policy plan on electrical energy production.....	28
2.3 Methodology.....	29
2.3.1 Data and general approach.....	29
2.3.2 Data procedure for solar energy	29
2.3.3 Data procedure for wind energy	31
2.3.4 Data procedure for hydro energy.....	33
2.4 Results	34
2.4.1 Potential of solar Energy	34
2.4.2 Potential of wind energy.....	35
2.4.3 Potential of hydro Energy.....	35
2.5 Discussions	36
2.5.1Contribution of renewable energy to large and stand-alone energy systems.....	36
2.6 Conclusion.....	39
Chapter 3:Bio-Wastes as an Alternative Household Cooking Energy Source in Ethiopia	
3.1 Introduction.....	42
3.2 Methodology.....	44
3.2.1 Description of the system analyses	44
3.2.2 Determining the study assumptions.....	46
3.3 Results	52
3.3.1 Resources required to meet the households' demands.....	52
3.3.2 Availability of resources to meet the households' demand.....	53
3.4 Discussion.....	54
3.4.1 Opportunities and challenges of using bio-wastes as cooking energy sources.....	54
3.4.2 Comparing the results	56
3.5 Conclusions.....	57
Chapter 4: Alternative Energy Supply System to a Rural Village in Ethiopia.....	60
4.1 Introduction.....	61
4.2 Methodology.....	63
4.2.1 System description.....	63
4.2.2 System assumptions	66

4.2.3	System analysis	74
4.3	Results	74
4.4	Discussion.....	77
4.4.1	Consideration of co-digestion and a communal energy system	77
4.4.2	Benefits and challenges of considering human excreta as co-feedstock.....	79
4.4.3	Consideration of biogas energy conversion technologies	80
4.4.4	Consideration of solar energy as alternatives	81
4.5	Conclusion	82
Chapter 5: Problems with Biogas Implementation in Developing Countries from the Perspective of Labor Requirements		85
5.1	Introduction	86
5.2	Methodology.....	87
5.2.1	System description	87
5.2.2	Quantifying system assumptions.....	90
5.3	Results	96
5.4	Discussion.....	99
5.5	Conclusion	102
Chapter 6: General discussion		104
6.1	Availability of resources for meeting the energy demand	105
6.2	Challenges of meeting the energy demand of rural households	109
6.3	Opportunity for a sustainable solution.....	112
6.4	General conclusion	114
References		116
Summary		131
Samenvatting.....		135
Acknowledgments.....		138
About the author.....		140

List of figures

1.1 The top five Sub-Saharan African countries without access to clean cooking facilities and electricity in the years 2009 and 2013 based on	11
2.1 (a) energy consumption by fuel type, (b) energy consumption by sector in 2011	25
2.2 The proportion of rural and urban households fuel sources for cooking in 2011	26
2.3 The proportion of households fuel sources for lighting in 2011	27
2.4 Monthly averaged daily global horizontal irradiation pattern in Ethiopia in 2012	31
2.5 Annual average daily total sum of DNI in kWh/m ² /day for Ethiopia.....	31
2.6 Monthly averaged daily wind energy generation pattern in Ethiopia in 2012	33
2.7 Map of Ethiopian wind energy resources	33
3.1 Households biomass resources holding sizes based on data (a) Land holding, (b) Cattle holding; households are grouped based on the average size of holdings.....	49
4.1 Biogas energy involving direct use for cooking and electricity for appliances	65
4.2 Biogas energy conversion into electricity and use for cooking and appliances.....	65
4.3 A hybrid of biogas for cooking and solar energy for lighting and appliances.....	66
4.4 A hybrid of CSC and PV for cooking and appliances	66
4.5 A solar energy system involving PV electrical energy for cooking and appliances.....	66
4.6 (a) A hybrid of biogas for direct cooking and its electricity for appliances and (b) biogas electricity for both cooking and appliances.....	76
4.7 A hybrid of (a) biogas for cooking and (b) solar PV for appliances and CSC for cooking	76
4.8 Solar energy technology configurations for cooking and electricity	77
4.9 Availability of biogas for cooking when varying biogas yields with different co-digestion options are considered.	79
5.1 Schematic diagram of household energy resources flow.....	88
5.2 A traditional energy system involving common forest firewood and dry dung.....	89
5.3 Schematic diagram of a biogas energy production system	90
5.4 Comparison of average time spent on collection and transportation of biomass, water, and slurry with: (a) mono-digestion; and (b) co-digestion biogas systems without transportation of water and slurry.....	99
6.1 A modified biogas stove for baking “ <i>Injera</i> ” in Ethiopia	109
6.2 Shows a biogas backpack	113

List of tables

1.1	Time spent on different activities by men and women (mean hours per day)	13
2.1	Main statistical indicators of Ethiopia	24
2.2	Ethiopian electrical energy production capacity by fuel sources in 2012.....	28
2.3	Grid and standalone electrical energy production potentials from solar	35
2.4	Ethiopian electrical energy production potential from wind	35
2.5	Ethiopian annual hydroelectric generation potential.....	36
2.6	The contribution of renewable energy to the Ethiopian electric energy production.....	37
3.1	Thermal output of the energy conversion systems with different bio-wastes	48
3.2	Estimated available crops residues for energy based on	51
3.3	Summary of annual average production of bio-wastes and its available fraction.....	51
3.4	Biomass resources required to meet the demand with different energy conversion systems.....	53
3.5	Households' (hh) annual energy production potential from crop residues	54
3.6	Households (hh) annual energy production potential from cow dung	54
4.1	Annual bio-wastes production and its available potential for a village energy system	69
4.2	An overview of biogas yield data from co-digestions available in literature	70
4.3	Annually available useful solar energy potential with different conversion technologies	74
4.4	Annual biogas energy production potential from the village biomass energy resources	75
5.1	The average amount of biomass required for the annual cooking energy demand and resulting waste in different technologies.....	94
5.2	Annual number of loads of biomass and water and the time for collection of each load	95
5.3	Average time spent annually and daily on individual resource collection and transportation in different energy systems.....	97
5.4	Average time spent annually and daily on collection and transportation of biomass and water in different energy systems in hours.	98
