# The interplay between genetics, the microbiome, DNA-methylation & gene-expression

**PhD thesis**

to obtain the degree of PhD at the  
 University of Groningen  
 on the authority of the  
 Rector Magnificus Prof. E. Sterken  
 and in accordance with  
 the decision by the College of Deans.

This thesis will be defended in public on  
 Wednesday 22 march 2017 at 12:45 hours

By

**Marc Jan Bonder**

Born on 23 march 1989  
 in Tolbert, The Nederland

## **Supervisors**

Prof. C. Wijmenga  
Prof. L. Franke

## **Co-supervisor**

Dr. A. Zhernakova

## **Assessment committee**

Prof. H.M. Boezen  
Prof. E.P.J.G. Cuppen  
Prof. P. van der Harst

## **Paranymphs**

S.C.R. Bonder  
P. Deelen

# Propositions

1. The integration of multiple biological data layers, for example genetic, transcriptomic, methylome and the microbiome data, leads to a more complete understanding of biological effects. (this thesis)
2. Both genetics and the environment influence the microbiome, DNA-methylation & gene-expression. (this thesis)
3. Commonly used medication can have negative influences on your "health". (this thesis)
4. Large-scale (perturbation) studies on the gut microbiome are needed to accurately identify relations between the host and the gut microbiome. (this thesis)
5. The gut microbiome is an attractive target for therapies aimed at improving lipid levels in blood. (this thesis)
6. Genetic risk factors affect both gene-expression and DNA-methylation, at a local and a distal level. (this thesis)
7. Genetic effects on expression and DNA-methylation are tissue-specific. (this thesis)
8. DNA-methylation changes reflect the altered abundance of transcription factors. (this thesis)
9. Analysis of individual genome-, methylome-, microbiome- and transcriptome profiles will become something to be performed on a daily basis for health monitoring.
10. In the coming years, integrative analysis of big data on DNA-methylation, the microbiome, gene expression and genetics will substantially change the healthcare system, all the way from your general practitioner to the ICU.
11. Open access science publications and open access to data and methods will greatly speed up the changes in healthcare and yield major benefits to the public and researchers.
12. A scientist works with others to discover the world around them; science is teamwork.

# Table of contents

## **GENERAL INTRODUCTION**

Page 10 - 13

## **THE INFLUENCE OF A SHORT-TERM GLUTEN-FREE DIET ON THE HUMAN GUT MICROBIOME**

Page 14 - 30

## **PROTON PUMP INHIBITORS AFFECT THE GUT MICROBIOME**

Page 31 - 46

## **THE GUT MICROBIOME CONTRIBUTES TO A SUBSTANTIAL PROPORTION OF THE VARIATION IN BLOOD LIPIDS**

Page 47 - 61

## **POPULATION-BASED METAGENOMICS ANALYSIS REVEALS MARKERS FOR GUT MICROBIOME COMPOSITION AND DIVERSITY**

Page 62 - 78

# **THE EFFECT OF HOST GENETICS ON THE GUT MICROBIOME**

Page 79 - 94

# **GENETIC AND EPIGENETIC REGULATION OF GENE EXPRESSION IN FETAL AND ADULT HUMAN LIVERS**

Page 95 - 113

# **IMPROVING PHENOTYPIC PREDICTION BY COMBINING GENETIC AND EPIGENETIC ASSOCIATIONS**

Page 114 - 132

# **DISEASE VARIANTS ALTER TRANSCRIPTION FACTOR LEVELS AND METHYLATION OF THEIR BINDING SITES**

Page 133 - 151

# **DISCUSSION**

Page 152 - 161

# **APPENDICES**

Page 162 - 172
