**Key words:** errata, addenda – methods: data analysis – ISM: jets and outflows – galaxies: active – galaxies: ISM – radio lines: galaxies.

The paper ‘Discovery of H I gas in a young radio galaxy at  $z = 0.44$  using the Australian Square Kilometre Array Pathfinder’ was first published in MNRAS, 453, 1249 (2015). In this erratum, we correct the X-ray luminosity given for PKS B1740–517 in Section 4.2.1. The luminosity was incorrectly calculated as  $4.3 \times 10^{43}$  erg s<sup>-1</sup> from a simple absorbed power-law model fitted to the *XMM-Newton* data. The correct value for this model is  $L_{2-10\text{keV}} \approx 6.2 \times 10^{44}$  erg s<sup>-1</sup>.

This erratum does not change the conclusions reached by Allison et al. (2015) and is still consistent with the distribution of X-ray luminosities measured for other GHz-peaked spectrum (GPS) radio sources (e.g. Tengstrand et al. 2009).

## ACKNOWLEDGEMENTS

We thank Roberto Soria and Ryan Urquhart for bringing this error to our attention.
