Organic Semiconductors for Next Generation Organic Photovoltaics

Solmaz Torabi

PhD thesis

University of Groningen, The Netherlands

Zernike Institute PhD Thesis Series 2018-07

ISSN:1570-1530

ISBN:978-94-034-0399-1 (printed book)

ISBN:978-94-034-0398-4 (ebook)

The research presented in this thesis has been carried out in the research group Photophysics & Optoelectronics of the Zernike Institute for Advanced Materials at the University of Groningen, The Netherlands. This work is part of the research program of the Foundation for Fundamental Research on Matter (FOM), which is part of the Netherlands Organization for Scientific Research (NWO).

Netherlands Organisation
 for Scientific Research

Cover design: Solmaz Torabi

The maze resembles the interpenetrating network of donor and acceptor molecules in a bulk heterojunction organic solar cells. It is a real maze with a solution. Enjoy negotiating it!

Organic Semiconductors for Next Generation Organic Photovoltaics

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 26 January 2018 at 14:30 hours

by

Solmaz Torabi

born on 8 March 1982
in Tabriz, Iran

Promotors

Prof. dr. L. J. A. Koster

Prof. dr. M. A. Loi

Prof. dr. J. C. Hummelen

Assessment Committee

Prof. dr. J. Nelson

Prof. dr. W. Brütting

Prof. dr. K. U. Loos

Contents

1	Introduction	1
1.1	Renewable energies	2
1.2	Solar energy	2
1.3	Solar cell efficiency and characteristic parameters	3
1.4	Organic photovoltaics	4
1.5	Efficiency limits of OPV	5
1.5.1	Enhancement of the dielectric constant	7
1.6	Objective and outline of this thesis	7
2	Theory, Methods	15
2.1	Definition of the dielectric constant	16
2.1.1	Static dielectric constant	17
2.1.2	Dielectric constant in alternating field	18
2.2	Experimental determination of the dielectric constant	19
2.2.1	Impedance spectroscopy	20
2.2.2	Definitions, notations and representations	20
2.3	Determining the dielectric constant from IS data	21
2.3.1	Equivalent circuits for a simple capacitor	23
2.3.2	Biasing and contacts	23
2.4	Determining the charge carrier mobility	25
2.5	Layout of capacitors	26
2.6	Materials	27
3	Strategy for enhancing the dielectric constant	31
3.1	Introduction	32
3.2	Materials	33
3.3	Results and Discussions	37
3.4	Conclusion	40
3.5	Experimental	42

4	Deposition of LiF onto films of fullerene derivatives leads to bulk doping	47
4.1	Introduction	48
4.2	Capacitance measurements reveal doping	49
4.3	Current-voltage characterizations reveal doping	52
4.3.1	Diodes with different cathodes	52
4.3.2	The role of an Al capping layer in the doping effect of LiF	53
4.3.3	The conductivity of PTEG-1 doped with a LiF interlayer	56
4.4	Deposition of LiF onto films of fullerene/polymer blend can lead to doping	56
4.5	Possible doping mechanisms	58
4.6	Conclusions	59
4.7	Experimental	59
5	A rough electrode creates excess capacitance in thin film capacitors	63
5.1	Introduction	64
5.2	Theory	65
5.3	Results and discussion	68
5.3.1	Smooth capacitors	68
5.3.2	Rough capacitors: determining excess capacitance	70
5.3.3	Rough capacitors: polymers	72
5.3.4	Dependence of excess capacitance on the roughness parameters	72
5.3.5	Accuracy of the parameters derived from capacitor equation	74
5.4	Conclusions	75
5.5	Experimental	75
6	Improving the efficiency of bulk heterojunction solar cells	83
6.1	Introduction	84
6.1.1	Electrochemical properties	84
6.1.2	Electron mobility	85
6.2	Optimizing solar cells	87
6.2.1	Device configuration	87
6.3	Morphology	88
6.4	Conclusion	91
6.5	Experimental	91
	Publications	97
	Samenvatting	103
	Acknowledgements	107
