NOTICE OF GENERAL MEETING

Unfortunately it has not proved possible to arrange a three-day meeting at a field location for this August/September, the vacation period then being already crowded with conferences and symposia. However, plans are already underway for a full meeting of this kind in August 1978, with Kinchega National Park in western New South Wales as a likely venue. The theme of the meeting will be 'Arid Land Research in Australia'.

In the meantime, it is essential that the Association meet to ratify its proposed constitution and elect a new committee. The last elections of office bearers took place in August 1973. A short business meeting will, therefore, be held during the coming ANZAAS Congress to be held in Melbourne from 29 August to 2 September. Details of time and place will be circulated later.

To facilitate the August meeting, I should be grateful if nominations for office bearers and committee members could be forwarded to me before the end of June. Ballot papers can then be prepared and distributed well before the Melbourne meeting (see Australian Archaeology, April 1976). The positions to be filled are:

President
Secretary
Treasurer
Four other members to act as members of council, one of whom shall be the editor of the Newsletter. (Please indicate nominations for editorship.)

Isabel McBryde
Honorary Secretary

TERRA AUSTRALIS NO.3

Terra Australis is the occasional monograph series published by the Department of Prehistory, Research School of Pacific Studies, The Australian National University. Volume 3 in the series:

New Guinea Stone Age Trade. The Geography and Ecology of Traffic in the Interior

by Dr Ian Hughes

will be published at the end of May 1977.
New Guinea Stone Age Trade examines patterns of trade and exchange for social, ritual and economic purposes within the interior of Papua New Guinea. While inland trade is less well known than some of the Melanesian maritime trading systems it is no less complex or absorbing, particularly when it is recalled that much of the region examined in this work was undiscovered by white men until the mid-1930s. Dr Hughes seeks to separate out traditional trading patterns, to determine the effects of the arrival of exotic goods into the region before whites, and indirectly to gauge the disruption of traditional trading practices by the white presence. Dr Hughes is first and foremost a human geographer but in this work his research has led him into the realms of anthropology, archaeology, linguistics, oral history and material culture, to mention but a few of the areas in which he has pursued his subject. The wealth of data he has accumulated and the conclusions he has reached will ensure that this book remains a fundamental contribution to the subject of traditional New Guinea trade.

This volume contains some 260 pages and includes 17 tables, 37 figures, 17 plates and 7 maps.

Its price in Australian currency is $A7.00 (postage included).

RESEARCH REPORT BY THE DEPARTMENT OF PREHISTORY,
RESEARCH SCHOOL OF PACIFIC STUDIES, 1976

Introductory

The major themes of departmental research into the prehistory of Australia, New Guinea and the nearer Pacific Islands have been established now for some years. They have been chosen because they are seen as decisive for the personality of the region in prehistory and look to take advantage of the unique opportunities it offers for archaeological research. The region itself forms a distinctive part of a wider Indo-Pacific province, the nature of whose place in the early history of man is only now coming to be appreciated. Initial colonisation, effected over 40,000 years ago by sea from tropical regions north and west and made in
