

# Enhancement of Mutual Discovery, Search, and Access of Data for Users of NASA and GEOSS-Cataloged Data Systems

NASA/Goddard Earth Sciences Data and Information Services Center (GES DISC)

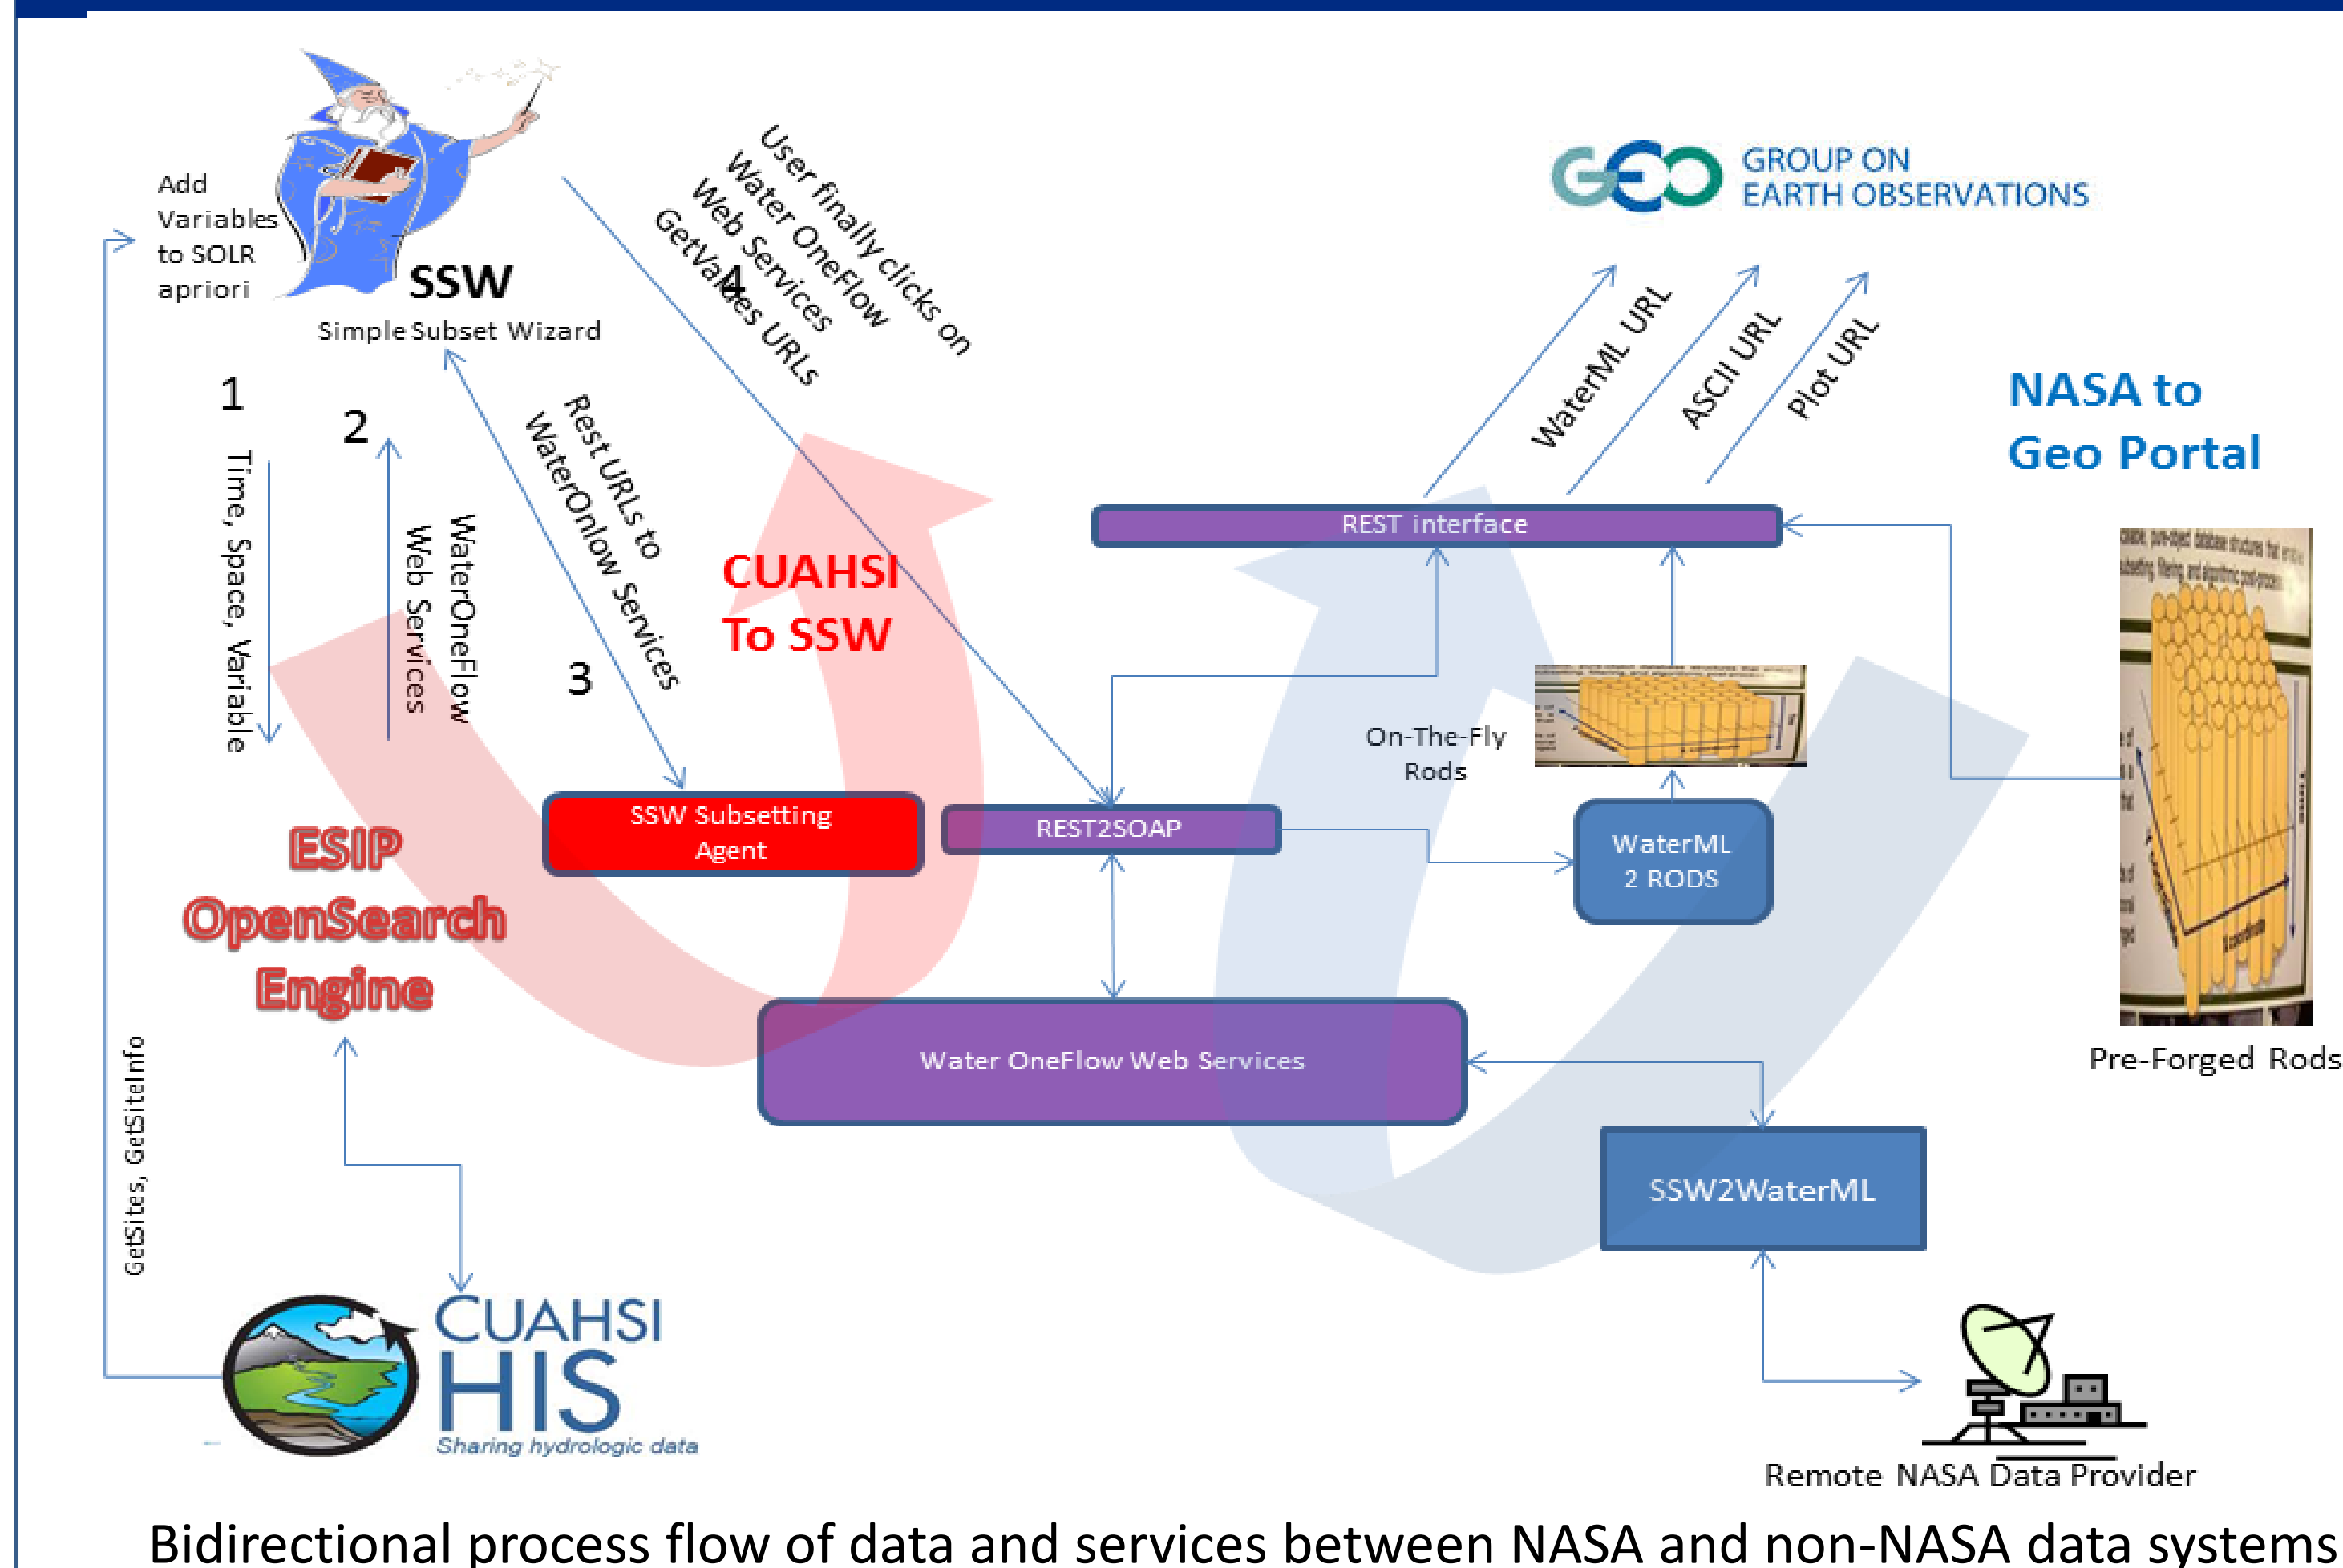

## Exposing NASA data rods to the world

### Motivation and Prior Work

- An ongoing NASA-funded "Data Rods" (time series) project has demonstrated the removal of a longstanding barrier to accessing NASA data (i.e., accessing archived time-step array data as point-time series) for selected variables of the North American and Global Land Data Assimilation Systems (NLDAS and GLDAS, respectively) and other NASA data sets.
- Data rods are pre-generated or generated on-the-fly (OTF), leveraging the NASA Simple Subset Wizard (SSW), a gateway to NASA data centers.
- Data rods Web services are accessible through the CUAHSI Hydrologic Information System (HIS) and the Goddard Earth Sciences Data and Information Services Center (GES DISC) but are not easily discoverable by users of other non-NASA data systems.
- An ongoing "GEOSS Water Services" project aims to develop a distributed, global registry of water data, map, and modeling services cataloged using the standards and procedures of the Open Geospatial Consortium and the World Meteorological Organization.
- Preliminary work has shown GEOSS can be leveraged to help provide access to data rods. A new NASA-funded project is extending this early work.

### NASA Hydrological Data via GEOSS

### Use Cases Development

**NASA hydrological variables as data rods (currently available, pre-generated and OTF)**

Variable Name
<b>NLDAS-2 Hourly 0.125°</b>
<b>Primary Forcing</b>
Precipitation hourly total
2-m above ground temperature
10-m above ground zonal wind speed
10-m above ground meridional wind speed
Potential evaporation
2-m above ground specific humidity
Shortwave radiation flux downwards (surface)
0-100 cm top 1 meter soil moisture content
<b>Noah</b>
0-10 cm soil moisture content
10-40 cm soil moisture content
40-100 cm soil moisture content
100-200 cm soil moisture content
0-200 cm soil moisture content
0-10 cm soil temperature
Surface runoff (non-infiltrating)
Total evapotranspiration
Latent heat flux
Sensible heat flux
Ground heat flux
Precipitation rate
<b>GLDAS-1 3-hourly 0.25°</b>
Rainfall rate
Snowfall rate
0-100 cm top 1 meter soil moisture content
0-10 cm layer 1 soil moisture content
10-40 cm layer 2 soil moisture content
40-100 cm layer 3 soil moisture content
Total evapotranspiration
Near surface air temperature
Near surface specific humidity
Surface runoff
Near surface air temperature
Near surface wind magnitude
<b>Land Diagnostics</b>
Surface total precipitation
Top soil layer soil moisture content
Root zone soil moisture content
Total profile soil moisture content
Top soil layer soil wetness
Root zone soil wetness
Total profile soil wetness
Overland runoff
Bare soil evaporation
Evaporation from land
Transpiration
Mean land surface temperature (incl. snow)
Soil temperature in (layer 1, 2, 3, 4, 5, and 6)
<b>Tropical Rainfall Measuring Mission (TRMM)</b>
Precipitation
<b>Land Parameter Retrieval Model (LPRM) Soil Moisture</b>

**Use Case 1: NLDAS grid and river flow in the Guadalupe and San Antonio Basins, Texas**

- Linking vertical water balance of NLDAS with horizontal transport of water through basins.
- Flows in each reach computed using RAPID model with input NLDAS runoff data rods.

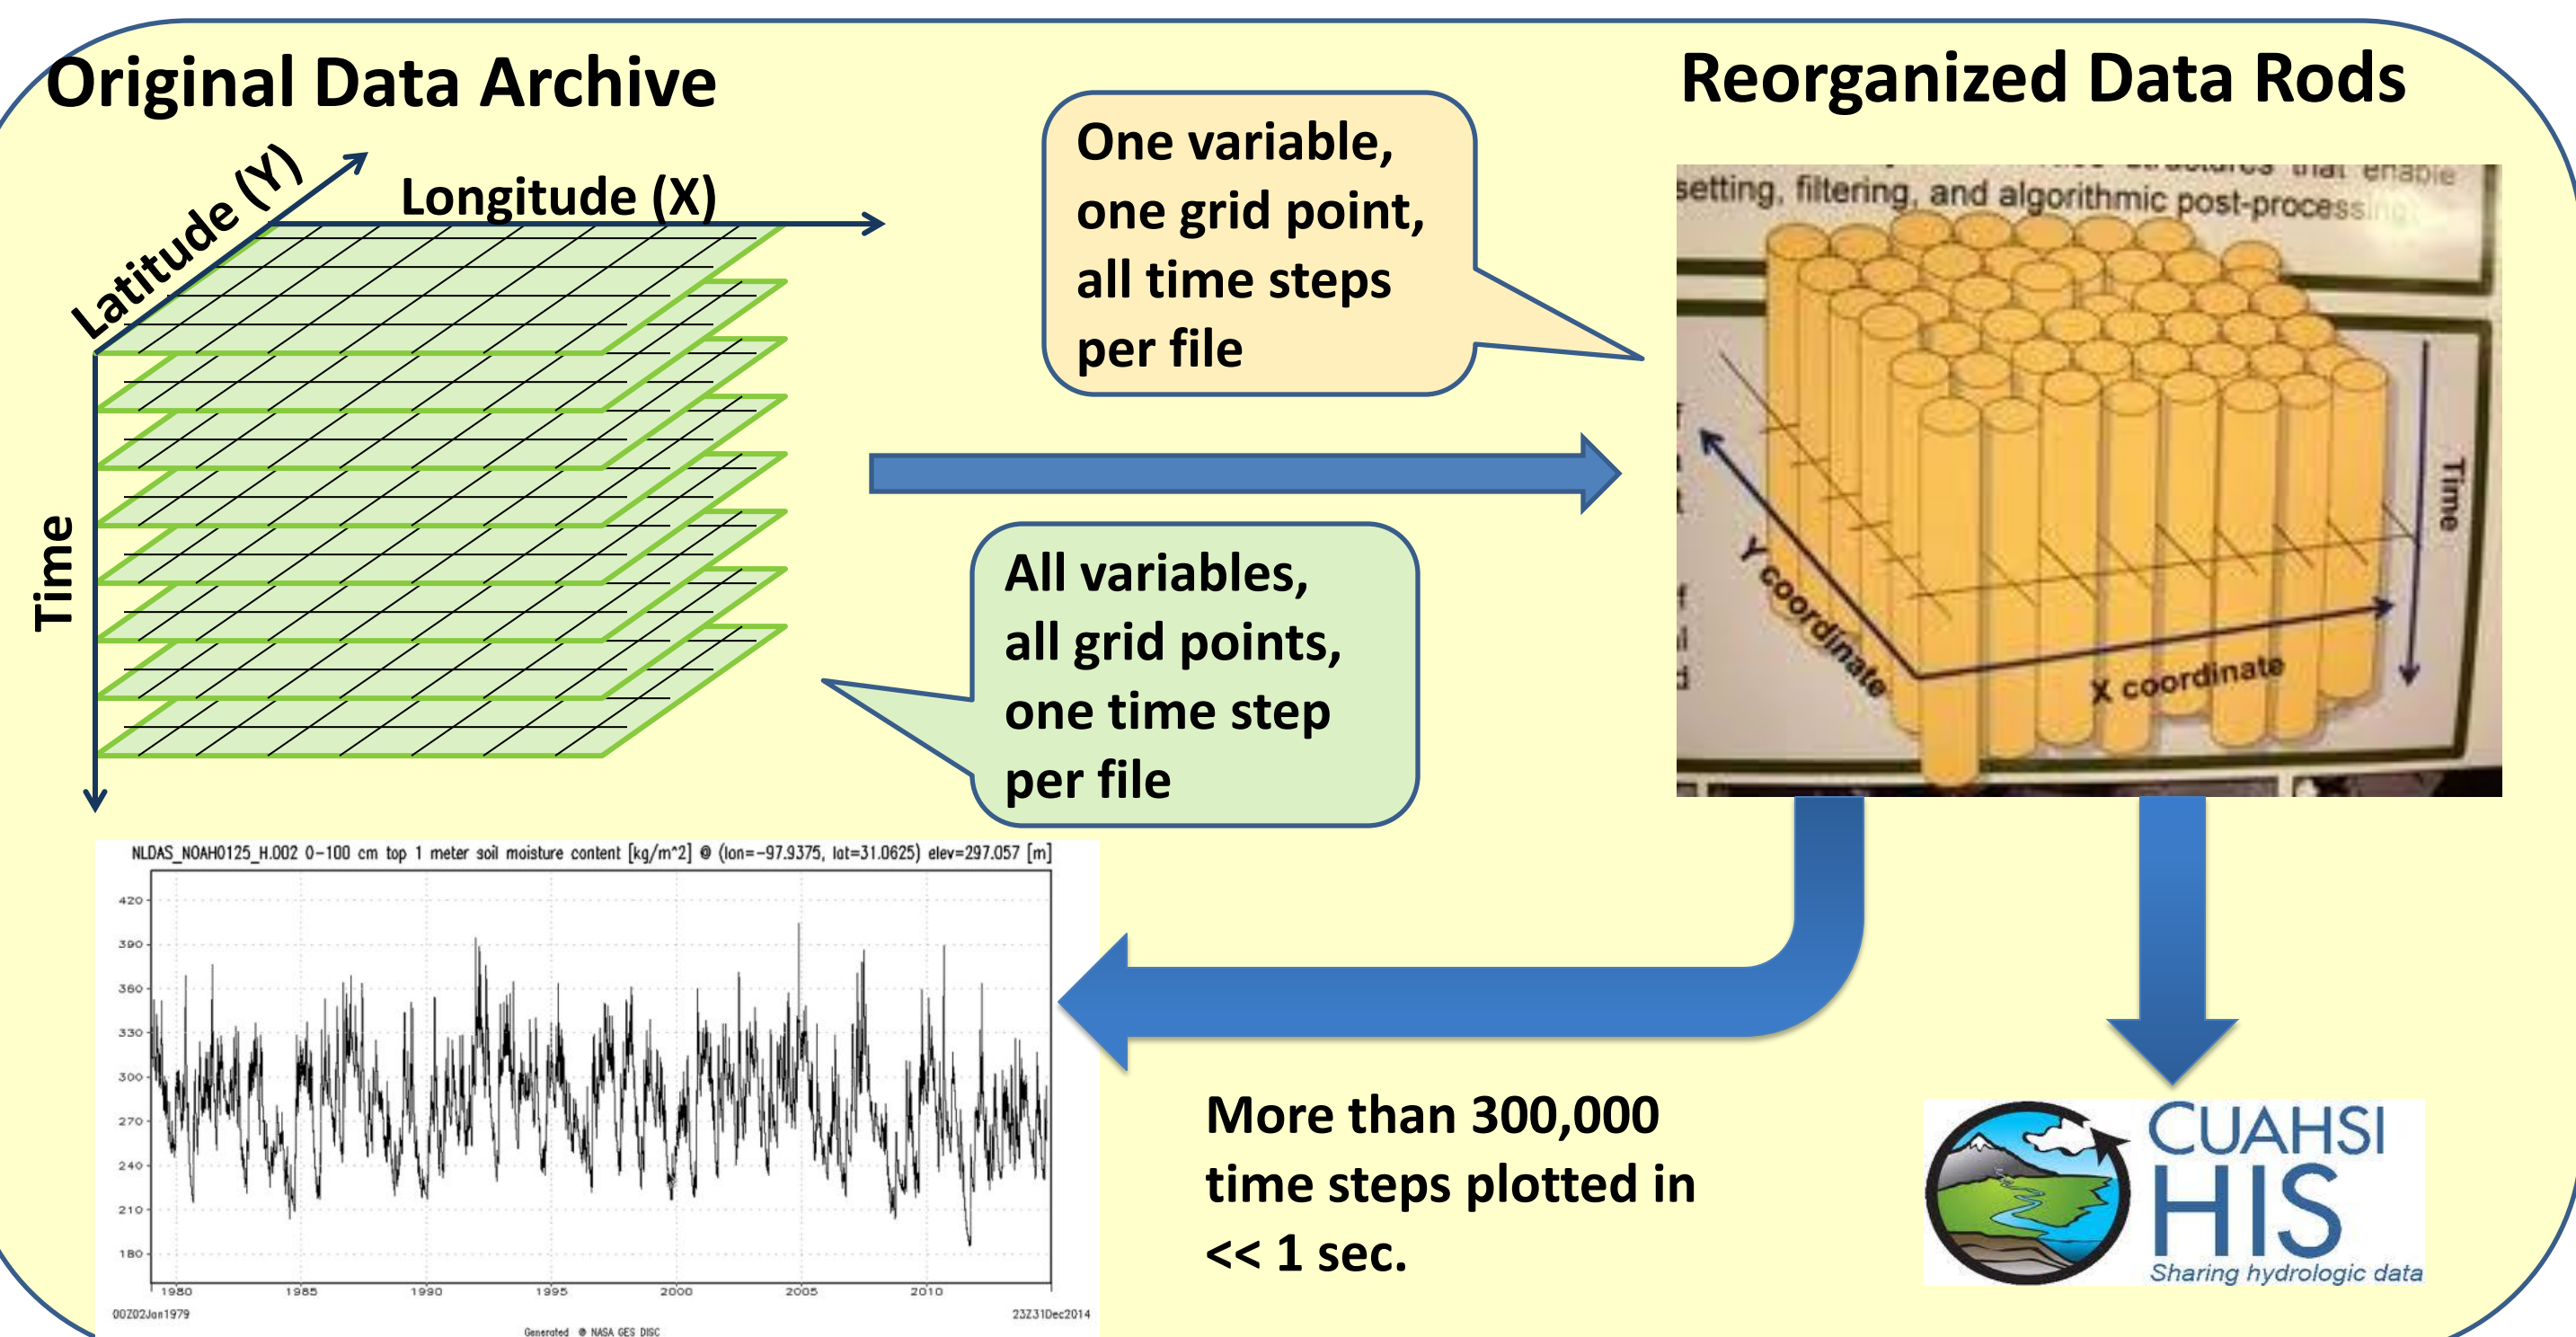

**Use Case 2: GRACE-based Rootzone Soil Moisture (May 27, 2013)**

**Use Case 3: Root zone soil moisture drought indicator map (May 27, 2013)**

Root zone soil moisture drought indicator map (May 27, 2013), based on assimilation of Gravity Recovery and Climate Experiment (GRACE) data into a land surface model.

- See <http://bit.ly/1a4cigk> for weekly maps and complete description.
- Such drought indicator maps will benefit from the availability of data rods, which will aid in the interpretation of wetness conditions.

### Removing Barrier to Accessing NASA Data

Schematic diagram for data reorganization for optimal time series access

### Probability presentation of Data Rods

Last update: Tuesday, October 28, 2014

Map-to-display (Value, Anomaly, or Percentile)

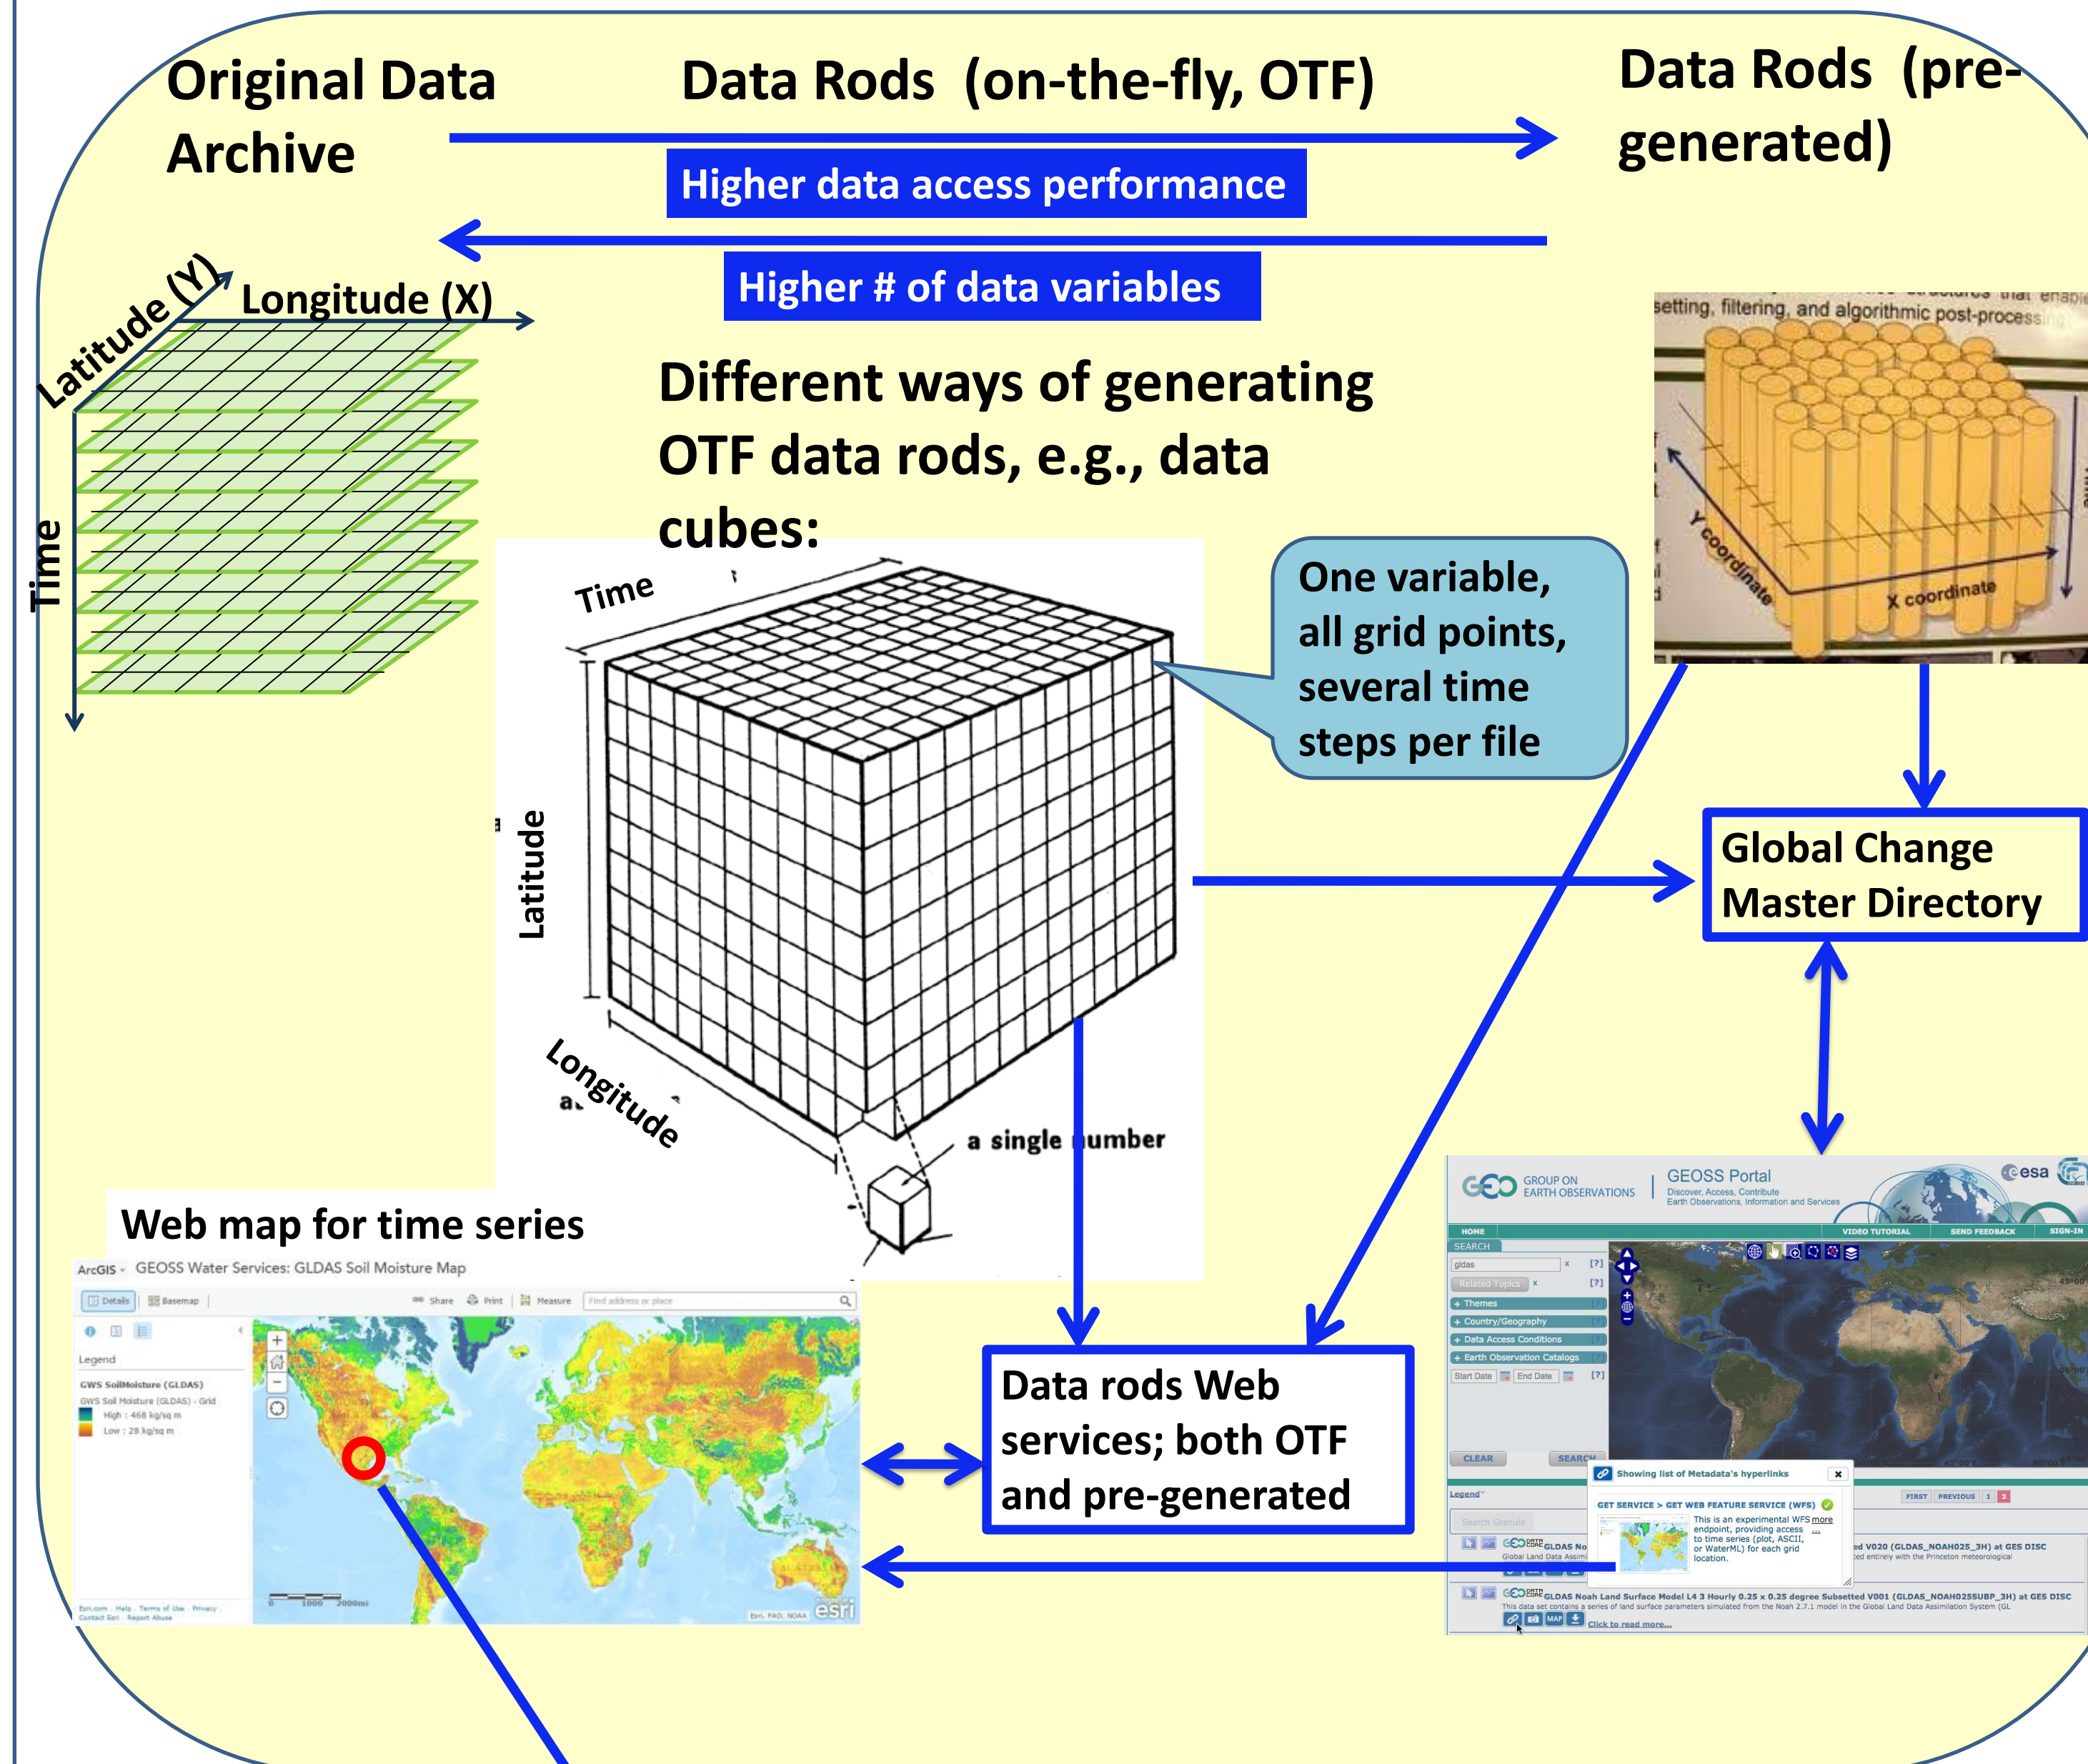

CDF & current value (Azure cloud)

Planned: Other variables - Runoff, ET Extend to rest of U.S.

Spatio-temporal statistics

Previous 30 days (data rods)

Data rods accessible via a Web interface, providing a probability description at each grid cell and for each day. Current values can be seen in the context of a probability distribution of past values, for that location and time.
