Prof. dr. A. E. M. G. Minnaert

Saya mendedikasikan tesis ini kepada Debby, Ade dan Indri, atas kerja sama dan persahabatan mereka selama penelitian PhD.

ACKNOWLEDGEMENTS

It's like the chicken and the egg with this PhD thesis and Indonesia. Without my Indonesia adventure there wouldn't have been a thesis and without this thesis the adventure wouldn't have lasted the full 2½ years that it did. As neither would've been possible without the support of many others, I'd like to take this opportunity to thank the people who've helped me bring both these adventures to a successful conclusion. But first, let me quickly sketch my quite uncommon PhD situation.

It all started in May 2013 at the kitchen table in Haren (the Netherlands), talking to my parents. Berend and I were to leave for Medan in about two months, and my parents and I were reflecting on interesting work opportunities for the years we would be spending in Indonesia. My father suggested contacting Tim Zwaagstra, Program Manager Southeast Asia at the University of Groningen, to discuss the possibility of doing research in Indonesia. And that's where the story begins! Tim put me into contact with an Indonesian exchange student from the Faculty of Law of the University of North Sumatra (Universitas Sumatera Utara; USU) in Medan, who forwarded my email to Ibu Elvi Andriani, the former head of the Developmental Psychology department. By the time I met with Ibu Elvi Andriani and Ibu Irma Irmawati (the former Dean of the Psychology Faculty) in August 2013 to discuss a possible research collaboration, there were still some 'minor' issues to be resolved: I hadn't found a supervisor yet to help me conduct the research I was considering, I didn't have an actual research design outlining my plans or any funding to pay for it... and my Bahasa skills were still at a level where I barely managed to order a *nasi goreng* for dinner. But luckily this all changed shortly after. By September 2013, Professor Frans Zwarts, whom I'd contacted with the question whether he had any suggestions for research that I could be conducting in Indonesia, not only wanted to be part of this project-to-be, but he also forwarded my email to Professor Ben Maassen, suggesting to Ben to get involved as well. By early November, we had our first skype meeting to discuss the possibilities, with us talking over the pre-final version of our research proposal in December 2013 in Groningen. By the end of March 2014, everything was signed and sealed and my PhD research had officially started! I set up an official collaboration between the two universities, and, once this was formalized in Groningen and Medan, I met with my co-researchers Debby Daulay, Indri Nasution, and Ade Siregar for the first time to discuss the details of our research plan.

My promotores - First of all, I'd like to thank my supervisors Professor Ben Maassen and Professor Frans Zwarts. With an enormous amount of energy and enthusiasm you've both joined me in this exciting adventure, making it a great experience thanks to the good teamwork. Even when all internet cables got stolen, the GraphoGame laptops got stuck at customs for 3 months, or when the schools

had forgotten to tell me before getting on an airplane from Zurich to Medan that it would be school holiday during the scheduled follow-up test sessions, you two never felt a single doubt that we would pull it off. Our 2-weekly skype sessions were always extremely productive and meetings in Groningen ended, whenever possible, with a drink in a local café. Your extensive knowledge of reading acquisition and dyslexia, your vision and creative thinking have been a source of inspiration to me throughout this project. I feel very lucky having had you as my supervisors. Thank you for giving me the opportunity to start and complete my PhD research in Medan!

The reading committee - I feel honoured that my PhD thesis was evaluated by such a knowledgeable reading committee. Professor Roelien Bastiaanse, Professor Karin Landerl, and Professor Alexander Minneart, thank you all for your time and effort.

My colleagues in Medan - My dear co-researchers at USU, Kakek Debby Daulay, Kakek Ade Siregar, and Kakek Indri Nasution! I cannot thank you enough for your contributions to this PhD research, which is why I dedicate this dissertation to you three. Without knowing exactly what to expect, you said yes to a project and a foreigner who spoke about 10 words of Bahasa, and stayed committed to the research and me till the very end. Because of your help with the language, your connections, your patience in teaching me about the Indonesian culture and customs, and your practical help with the assessments and GraphoGame sessions, we were able to make the whole project come together. I'm very happy two of the three papers we collaborated on have already been published, and I'll do all I can to get the third one published as well. Terima kasih banyak!

Terima kasih kepada Ibu Elvi Andriani dan Ibu Irma Irmawati, for your kindness and for 'taking me in' at USU. From our first meeting on, you've both welcomed this opportunity to collaborate in this research and you've been supportive throughout the project. Moreover, the opportunity to lecture at USU, to collaborate with Ibu Elvi as a speaker at the Dyslexia workshop at USU and during several presentations at Aliva Klinik, were unforgettable experiences! I am very proud of the close collaboration between USU and the University of Groningen we've set up together and hope this will lead to other interesting shared research projects in the future.

My colleagues in Groningen - Toivo Glatz, this work wouldn't've been possible without your support! You are the fellow PhD student I collaborated the most with throughout this project, which resulted in two shared publications. You and I were both working on GraphoGame (you as a German on the Dutch game, and I as a Dutch person on the Indonesian game...), and it was very comforting to know that someone else was working on something similar and was potentially having comparable struggles. I don't know what I would've done without your technical skills and statistical knowledge, both way too complicated for my 'alpha mind' to understand. You downloaded all GraphoGame data for me with just a few mouse

clicks using one of your amazing scripts, something that would've taken me days if not weeks. In return, I was happy I could help you out with things you needed a native Dutch speaker for. Moreover, our weekly skype meeting on Monday mornings to discuss the upcoming week was a great way to start the work week. Toivo, thank you very much for your (practical and mental) support and advice throughout this project!

Bernard Jap, the fact that you contacted Ben Maassen end of 2013 with the question whether he wanted to supervise you in a project with the aim to develop a diagnostic tool for Standard Indonesian, has had an enormous impact on this thesis. Ben, Frans, and I'd just arrived at the point where we realized that we'd been looking at our research design from our own European perspective, not thinking of the possibility that no single standardized reading test would be feasible that could select and assess the reading skills of primary school kids in Indonesia. This first contact resulted in the assessment battery used throughout this thesis and two shared publications. Also many thanks for always being available to answer my questions about Indonesian phonology and for being 'The (male) Voice of GraphoGame'. Bernard, it's been a pleasure working with you!

The GraphoGame team - I'd like to thank co-authors Professor Heikki Lyytinen and Ulla Richardson of the University of Jyväskylä and the Niilo Mäki Institute for letting us use the GraphoGame concept, and I thank the GraphoGame developers for their support with the actual creation of this Standard Indonesian adaptation of the game.

Participating schools, students, and assistants - A special thanks go to all the test assistants who've helped conduct the assessments at SD Harapan and SD Anastasia school, and most importantly, I'd like to thank the teachers, Bapak Elinudin Ndraha (Founder of Panti Asuhan Anugrah Sungai Air Hidup), Bapak Habel Tungka (Principal of SD Anastasia school), Bapak Parlindungan Lubis (Principal of SD Harapan school) and students of both schools for their participation in this research. Lastly, I thank Lisa Lubis for her help with translating official GraphoGame documents.

Hestika Ginting - Thank you Hesti, my Bahasa teacher, with whom I not only worked on my Bahasa skills, but who's also helped me translate test instructions from English to Bahasa and whose voice is heard giving the task instructions in the GraphoGame in-game assessment tasks. Thank you for being a great teacher and for helping me find my way around Medan!

Tim Zwaagstra - With your enthusiasm for Indonesia, you were able to tell me all about the challenges for a *bule* like me living and working in Indonesia, but most importantly you made me see the beauty of this opportunity. With your practical advice and connections, you guided my thoughts and actions on how to actually set up a PhD research about 10,000 km across the globe. Thank you very much for your

support and for providing me with my first contact at USU. You've played a major role in helping me set up this project.

Members of the Graduate School for the Humanities - I'd like to thank Gorus van Oordt (Financial Department) and Marijke Wubbolts (PhD Coordinator) for their practical support and commitment to facilitate this quite uncommon PhD project.

Nicolaas Mulerius Fund - I thank the Board of the Nicolaas Mulerius Fund for their financial support, which's enabled me to travel from Medan and Zurich to Groningen to meet up with my supervisors, fellow PhD students, and to participate in some of the PhD courses.

My parents - I thank my parents, whom I know would rather see me living in the next village, but who've always stimulated me to explore new opportunities, to take on new challenges, and to always look at the bright side of a situation. I don't recall ever having spoken more to my mother than during these years in Medan, and in that sense the physical distance only made our bond stronger. My father, who's been a great support during this PhD project, helped me organize my research plans, wrote the Dutch summary, and even helped me prepare for the defence of my PhD thesis.

My paranympths & co - Marijn Heemskerk, Marleen Olthof and Eveline Pols! Three amazing friends whom I've known since I moved to Groningen in 2002. Even though I've been living abroad for about 6 years now, we generally only need a minute or 5 to update each other and then continue as if I'd been living around the corner these past few years. I'm very happy we've been able to stay close friends and I hope to remain so for many years to come. Marijn and Marleen, I feel fortunate to have you by my side during the PhD ceremony! Eves, I'll miss you during the defense but look forward to celebrating it on the 28th!

Suamiku - And last but absolutely not least, my *suami* Berend! You and your drive for adventure were the reasons why we moved to Medan in the first place, leading to this dissertation. You encouraged me to stay focused on the project and I have to admit that your suggestions have for sure saved me a few months' time. Our years in Medan have given us enough amazing stories for us to enjoy until we are a grey old couple riding happily along in our mobility scooters, and the fact that even in the craziest situations you could still make me laugh, makes me extremely fortunate and proud to have you as my husband. I look forward to the adventures to come!

TABLE OF CONTENT

CHAPTER 1 - General introduction and outline of the thesis	17
1.1 INTRODUCTION	18
1.2 THEORIES OF READING ACQUISITION.....	20
1.3 DYSLEXIA.....	22
1.4 PREDICTORS OF READING IN DIFFERENT ORTHOGRAPHIES.....	23
1.5 BAHASA INDONESIA.....	25
1.6 GRAPHOGAME.....	26
1.7 OVERVIEW OF THE THESIS	28
CHAPTER 2 - Cracking the Code: Modelling orthographic transparency and morphological-syllabic complexity in reading and dyslexia	31
2.1 INTRODUCTION	33
2.2 ORTHOGRAPHIC TRANSPARENCY.....	34
2.2.1 Orthographic transparency and reading acquisition	36
2.2.2 Orthographic transparency and dyslexia	40
2.3 MORPHOLOGICAL COMPLEXITY	43
2.3.1 Morphological complexity and reading acquisition	44
2.3.2 Morphological complexity and dyslexia.....	48
2.4 SYLLABIC COMPLEXITY	51
2.4.1 Syllabic complexity and reading and spelling acquisition.....	53
2.4.2 Syllabic complexity and dyslexia.....	56
2.5 CONCLUDING REMARKS.....	57
CHAPTER 3 - Measuring orthographic transparency and morphological-syllabic complexity in alphabetic orthographies: A narrative review	65
3.1 INTRODUCTION	67
3.2 ORTHOGRAPHIC TRANSPARENCY.....	69
3.2.1 Regularity approach	69
3.2.2 Consistency approach.....	71
3.2.3 Entropy approach.....	72
3.3 MORPHOLOGICAL COMPLEXITY	74
3.3.1 Linguistica.....	75
3.3.2 Juola method	76
3.3.3 Type-Token Ratio.....	77
3.4 SYLLABIC COMPLEXITY	78
3.4.1 Structural Approach.....	78
3.4.2 Behavioural approach.....	80
3.4.3 Syllabification by analogy (SbA).....	80
3.5 DISCUSSION	81

CHAPTER 4 - Towards identifying dyslexia in Standard Indonesian: the development of a reading assessment battery.....	87
4.1 INTRODUCTION	89
4.1.1 The orthography of Standard Indonesian.....	90
4.1.2 Conceptual framework of the test battery	91
4.1.3 Assessment of compliance with dyslexia criteria.....	91
4.2 METHOD.....	93
4.2.1 Participants.....	93
4.2.2 Materials and Procedure.....	93
4.3 RESULTS.....	96
4.3.1 Descriptives	96
4.3.2 Correlations	98
4.3.3 Factor analysis results.....	100
4.3.4 Regression of cognitive and external variables on reading measures	101
4.3.5 Cross tabulation and categorization of reading and decoding difficulties.....	102
4.3.6 Descriptives of typical and at-risk readers	103
4.4 DISCUSSION	107
CHAPTER 5 - Do single or multiple deficit models predict the risk of dyslexia in Standard Indonesian?	113
5.1 INTRODUCTION	115
5.1.1 Underlying skills of reading in different orthographies	115
5.1.2 The models explaining dyslexia	117
5.1.3 Individual prediction of dyslexia.....	118
5.1.4 Standard Indonesian orthography	120
5.1.5 Assessing reading in Standard Indonesian.....	121
5.2 THE PRESENT STUDY	121
5.2.1 Method	123
5.2.1.1 <i>Samples</i>	123
5.2.1.2 <i>Measures and Procedure</i>	124
5.2.1.3 <i>Criteria for the categorization</i>	128
5.2.2 Results	129
5.2.2.1 <i>Predicting individual cases: counting deficits</i>	132
5.2.2.2 <i>Predicting individual cases: linear regression fit</i>	132
5.2.2.3 <i>Overall model fit</i>	133
5.3 DISCUSSION	135
CHAPTER 6 - GraphoGame SI: The development of a technology-enhanced literacy learning tool for Standard Indonesian	141
6.1 INTRODUCTION	143
6.1.1 SI orthography	143
6.1.2 GraphoGame SI.....	144
6.2 PILOT STUDY	149
