rijksuniversiteit
groningen

Large-scale filaments and the intergalactic medium

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus Prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op
maandag 10 december 2018 om 9:00 uur

door

Robin Rinze Kooistra

geboren op 07 september 1990
te Leeuwarden, Nederland

Promotores

Prof. S. Zaroubi

Prof. M. A. W. Verheijen

Copromotor

Dr. M. B. Silva

Beoordelingscommissie

Prof. Y. Hoffman

Prof. J. M. van der Hulst

Prof. N. Sugiyama

ISBN: 978-94-034-1253-5 (printed version)

ISBN: 978-94-034-1252-8 (electronic version)

Cover: Artist's impression of a telescope observing the large-scale structure by Karel Moens. Contains an image of the MeerKAT telescope (credit SARA0)

Printed by: Gildeprint

Contents

1	Introduction	1
1.1	Cosmic web	1
1.1.1	Intergalactic medium	4
1.1.2	Identifying large-scale structure	6
1.2	Observing with hydrogen	7
1.2.1	21 cm line	8
1.2.2	Lyman alpha line	8
1.3	Radio interferometry	9
1.3.1	Apertif	11
1.3.2	Square Kilometre Array	12
1.4	Intensity mapping	12
1.5	Contents of this thesis	15
1.5.1	Outline	16
2	Cosmic web filaments in Lyman Alpha emission	23
2.1	Introduction	24
2.2	The thermal and ionization state of the IGM	27
2.3	Modeling Lyman α emission	30
2.3.1	Lyman α emission from the IGM	31
2.3.2	Lyman alpha emission from Galaxies	34
2.4	Lyman alpha intensity maps and power spectrum	36
2.4.1	Lyman alpha intensity results	36
2.5	Experiments for detecting UV Lyman Alpha emission	40
2.5.1	Experimental setup for Lyman Alpha emission Intensity Mapping	41
2.6	Foregrounds in Lyman α intensity maps	43

2.6.1	Line contamination	45
2.6.2	Continuum contamination	46
2.7	Conclusions	52
3	Integrated HI 21 cm Emission From Filaments	57
3.1	Introduction	58
3.2	Model: Ionization and thermal state in the IGM	61
3.3	HI 21 cm Brightness temperature signal	65
3.3.1	Spin temperature	66
3.3.2	Test: slab model	69
3.4	Cosmological simulations	70
3.5	21cm emission from SDSS Filaments	72
3.5.1	Filament catalogue	72
3.5.2	Signal estimation	74
3.5.3	Observability	76
3.6	The Apertif and ASKAP HI surveys	81
3.7	Contamination from galaxies	84
3.8	Conclusions	86
	Appendix 3.A Recombination and collisional ionization rates . .	90
	Appendix 3.B Cooling rates	91
	Appendix 3.C Lyman alpha	93
4	IGM in filaments with SKA	99
4.1	Introduction	100
4.2	The HI 21 cm signal from simulations	103
4.2.1	The EAGLE simulation box	103
4.2.2	Filament extraction	105
4.2.3	Stacking filament signals	109
4.2.4	Clumping of the IGM	110
4.2.5	UV background uncertainty	110
4.3	Observational strategy	112
4.3.1	Filament catalogues from SDSS, 2MRS and 6dF . . .	113
4.3.2	Contamination by galaxies	114
4.3.3	Noise estimation	114
4.4	SKA signal-to-noise predictions	116
4.5	Effects of interferometers	120
4.5.1	Spatial filtering	120
4.6	Conclusion	123

5 Faint HI emission in filaments with Apertif	129
5.1 Introduction	130
5.2 Simulation	132
5.2.1 EAGLE	132
5.2.2 Bisous filament finder	133
5.2.3 Filament with DisPerSE	133
5.2.4 Bisous vs DisPerSE	134
5.3 Filaments in the Apertif Medium-Deep survey	136
5.4 Tracing filaments with different galaxy surveys	137
5.4.1 SDSS-based galaxy catalog from EAGLE	139
5.4.2 Apertif-based galaxy catalogue from EAGLE	139
5.5 Results and Discussion	142
5.5.1 Properties of filament galaxies	143
5.5.2 Average properties of filaments	143
5.5.3 HI content of filaments	145
5.6 Conclusion	147
Appendix 5.A Spatial filtering of IGM Emission with Apertif	151
6 Summary and future prospects	155
6.1 Conclusions	156
6.2 Future work	158
Samenvatting	161
博士論文概要	165
Acknowledgements	169
