WGISS-46 ACCESS Section: IDN Report

Michael Morahan
IDN Coordinator
Michael.P.Morahan@nasa.gov

CEOS WGISS-46
DLR, Oberpfaffenhofen, Germany
October 2018

This work was supported by NASA/GSFC under Raytheon Co. contract number NNG15HZ39C.
This document does not contain technology or Technical Data controlled under either the U.S. International Traffic
in Arms Regulations or the U.S. Export Administration Regulations.

Outline

- I. Overview of NASA's Vision of Services (UMM-S)**
- II. Migration of IDN SERFs to UMM-S**
- III. Metadata Management Tool (MMT): Successor to DocBuilder**
- IV. DocBuilder-10: Create/Update Dataset Records**
- V. Transition of DIF-9 to DIF-10**
- VI. Schedule for UMM-C and GCMD/IDN Keywords**
- VII. IDN's WGISS/WGCV Joint Session: Collaborative Actions**

I. Overview of NASA's Vision of Services (UMM-S)

What is the UMM-S? (Unified Metadata Model for Services)

What is a Service?

We need to recognize SERF legacy for services, but extend NASA web services to include future support for access of NASA data from the cloud. These services provide a method of transforming the data (e.g. subsetting, reprojection or reformatting, or a combination of these).

How to I Discover and Utilize a Service?

In order to locate web services or portals, software or tools, we can use the GCMD client to search and return metadata for services. <https://gcmd.nasa.gov/>

In order to discover and transform data, we can use the EDSC client to search and return *transformed* data via services. <https://earthdata.nasa.gov/>

How to I Describe a Service?

Services are described by their attributes, e.g.

Service Name: “SERVIR”

Service LongName: “Mesoamerican Visualization and Monitoring System (SERVIR)”

Service Type: “WEB PORTAL”

Service Version: “1.8”

Service RelatedURL:
“<https://www.servirglobal.net/default.aspx>”

UMM-S Required Fields

Field Name	Description
Name	The name of the service, software, or tool. (Example: "AIRS_L3_OPENDAP".)
LongName	The long name of the service, software, or tool. It provides a human readable name for the service. (Example: "OPENDAP (Hyrax) framework for AIRS Level 3 data products".)
Type	The type of the service, software, or tool. (Example: OPeNDAP)
Version	The edition or version of the service, software, or tool. The version should be defined in the form x, y, and z, where 'x.y.z' means 'major.minor.incremental' version numbers. Typically, 'x' and 'y' are numbers (0 through 9) and 'z' is a number (0 through 99). (Example: 1.1.1)
Description	A brief description of the service, software, or tool. For example, a description might contain information about what is the service, the purpose of the service, and the parameters (or variables) being invoked, and what are the sources of these data.
RelatedURLS	This element contains important information about the Uniform Resource Locator (URL) for the service.
ServiceKeywords	Allows for the specification of Earth Science Service keywords that are representative of the service, software, or tool being described. The controlled vocabulary for Service Keywords is maintained in the Keyword Management System (KMS). (Example: "ServiceCategory: Earth Science Services, ServiceTopic: Data Management/Data Handling, ServiceTerm: Data Search and Retrieval".)
ServiceOrganizations	The service provider, or organization, or institution responsible for developing, archiving, and/or distributing the service, software, or tool. (Example: "Role: SERVICE PROVIDER, ShortName: INPE, LongName: National Institute for Space Research, Brazil".)

Example: NOAA_Shoreline_GIS Service

CMR API SEARCH

- Service records can be search using the CMR SEARCH API

Search for all

```
curl 'https://cmr.earthdata.nasa.gov/search/services'
```

Search by Keyword

```
curl 'https://cmr.earthdata.nasa.gov/search/services?keyword=OpenDAP&pretty=true'
```

Search for specific service

```
curl  
'https://cmr.earthdata.nasa.gov/search/services.umm_json?name=AIRX3STD.006&pretty=true'
```

CMR Search API Documentation:

```
https://cmr.earthdata.nasa.gov/search/site/docs/search/api.html#searching-for-services
```

Latest Capabilities and Features

- RelatedURLs increased cardinality to 1 to N
- Options class expanded to include supported Input and Output projections, Input and Output formats.
- ServiceQuality class added
- Platforms and Instruments classes added
- Addition of OperationMetadata class to support a wide variety of server-side operations (e.g. GetCapabilities, GetMap, GetCoverage)
- UMM-S schema 1.2
<https://git.earthdata.nasa.gov/projects/EMFD/repos/unified-metadata-model/browse/service/v1.2>
- UMM-S document:
https://wiki.earthdata.nasa.gov/download/attachments/49448405/UMM-S_V1.2_20180530.docx

II. Migration of IDN SERFs to UMM-S

What is the SERF? (Service Entry Resource Format)

- Metadata standard used to describe Earth science tools, software, and models (e.g. EDSC, Giovanni, Panoply, USGS Model Viewer)
- Supports the discovery and access of these tools, software, and models
- Originated (in year 2000) as a prototype within NASA's Earth Science Technology Office (ESTO) and supported by NASA and the Committee on Earth Observation Satellites (CEOS)

Data Service Types

 DATA ANALYSIS AND VISUALIZATION (680) calibration/validation, geographic information systems, global positioning systems, statistical applications, visualization/image processing show all...	 DATA MANAGEMENT/DATA HANDLING (349) archiving, cataloging, data compression, data delivery, data interoperability show all...
 EDUCATION/OUTREACH (58) curriculum support, exhibit materials, interactive programs show all...	 ENVIRONMENTAL ADVISORIES (110) agricultural advisories, fire advisories, geological advisories, health advisories, hydrological advisories show all...
 HAZARDS MANAGEMENT (49) disaster recovery/relief, disaster response, hazards mitigation, hazards planning show all...	 METADATA HANDLING (87) authoring tools, data discovery, metadata transformation/conversion, service discovery show all...
 MODELS (340) atmospheric chemistry models, atmospheric general circulation models, carbon cycle/carbon budget models, climate change impact assessment models, component process models show all...	 REFERENCE AND INFORMATION SERVICES (93) bibliographic, digital/virtual reference desks, gazetteer, identification/classification systems, knowledge/decision systems show all...
 WEB SERVICES (35) data application services, data processing services, information management services show all...	

Why Migrate to UMM-S in CMR?

- Use the Expanded Model and Infrastructure To Make Services More Useful
 - Extended service capabilities (service invocation, subsetting, reprojection, time aggregation, etc...)
- Link Services With Applicable Data Sets
 - Allows for service capabilities and specific tools to be accessible to/from their applicable data sets, which renders the services discoverable, available, and useful to users that might not already be aware of them
- Search Across a Common Repository for Services
 - Centralized catalogue of all services, tools, software, models across U.S. and international agencies that work with Earth science data

What's Being Migrated?

- All Viable SERFs in GCMD/IDN
 - SCIOPS/IDN provider records
 - EOSDIS provider records
- Should I Stay or Should I Go
 - Does the service describe a tool or software?
 - Is the service still viable/supported?
 - Is the service being deprecated
 - Do the links still work?
 - Is the service from a commercial provider?
 - Are the other attributes still accurate?

Migration Schedule: Fall 2018

- The IDN staff will email IDN Providers with their list of SERF records.
 - The Providers are to review the SERF records.
 - Determine to migration or deprecation the records.
 - Work with IDN staff to cleanup/migrate or deprecate/archive SERF records
 - The IDN staff will ingest viable UMM-S records into CMR.

The CMR Metadata Quality Team will be assisting with the migration of the service records. Please reach out to IDN User services (gsfc-gcmduso@mail.nasa.gov) and/or myself (Michael.P.Morahan@nasa.gov) .

III. Metadata Management Tool (MMT): Successor to DocBuilder

Metadata Management Tool (MMT): Coming Attraction (2019)

- Login using same ID and password as docBUILDER (NASA Agency login Not required)
- Submit new/updated data and services descriptions to the IDN for review and ingest by the CMR Metadata Team.
- Assess quality of metadata using inline validation.
- Export metadata in DIF-10, NASA MENDs ISO, ATOM formats.
- View metadata using HTML “Pretty View” permanent link.

Features my change pending design review.

Metadata Management Tool (MMT): Data Flow Diagram

Metadata Management Tool (MMT): Manage Collections

The screenshot displays the Earthdata Metadata Management Tool (MMT) interface. The top navigation bar includes the NASA logo, the text "EARTHDATA Metadata Management Tool", a user dropdown menu showing "Michael Morahan" and "SCIOPS", and a search bar with the placeholder "Enter Search Term" and a "Search Collections" button. Below the navigation bar are four tabs: "MANAGE COLLECTIONS", "MANAGE VARIABLES", "MANAGE SERVICES", and "MANAGE CMR". The "MANAGE COLLECTIONS" tab is active. The main content area is divided into three columns:

- Create Collection Record:** Contains a "Create New Record" button and instructions: "OR use the search in the top right corner to find published collections to clone or edit."
- SCIOPS Collection Drafts:** Lists several draft records with their dates and titles, such as "2018-09-14 | Scott_Test_2018-08 <Untitled Collection Record>". A blue arrow labeled "Open drafts" points to this section.
- SCIOPS Bulk Updates:** Displays the message "No SCIOPS Bulk Updates found." and an "Initiate a Bulk Update" button.

Blue arrows provide additional context: "User and Provider" points to the user dropdown, "Search in CMR" points to the search bar, and "Create new draft" points to the "Create New Record" button.

Abstract
A Group for High Resolution Sea Surface Temperature (GHRSSST) Level 4 sea surface temperature analysis produced daily on an operational basis at the Australian Bureau of Meteorology using optimal interpolation (OI) on a regional 1/12 degree grid over the Australian region (20N - 70S, 60E - 170W). This BLUELink Regional Australian Multi-Sensor SST Analysis (RAMSSA) v1.0 system blends satellite SST observations from the Advanced Very High Resolution Radiometer (AVHRR), the Advanced Along Track Scanning Radiometer (AATSR), and the Advanced Microwave Scanning Radiometer-EOS (AMSRE), and in situ data from ships, and drifting and moored buoy from the Global Telecommunications System (GTS). The processing results in daily foundation SST estimates that are largely free of nocturnal cooling and diurnal warming effects.

Purpose
Basic research

Metadata Management Tool (MMT): Editing Fields

The screenshot shows the 'Collection Information' form in the Metadata Management Tool (MMT). The form is divided into several sections, each with a required field indicator (a circled 'i').

- Collection Information Section:** Contains fields for 'Short Name' (gov.noaa.nodc:GHRST-ABOM-L4HRfnd-AUS-RAMSSA_09km), 'Version' (1.0), 'Version Description', and 'Entry Title' (GHRST Level 4 RAMSSA Australian Regional Foundation Sea Surface Temperature Analysis (GDS version 1)).
- DOI Section:** Contains radio buttons for 'DOI Available' and 'DOI Not Available' (selected). It also has a 'Missing Reason' dropdown menu (annotated with 'Information') and an 'Explanation' text area (annotated with 'Select value from drop-down').
- Abstract Section:** Contains a text area with the text: 'A Group for High Resolution Sea Surface Temperature (GHRST) Level 4 sea surface temperature analysis produced daily on an operational basis at the Australian Bureau of Meteorology using optimal interpolation (OI) on a regional 1/12 degree grid over the Australian region (20N - 70S, 60E - 170W). This BLUELink Regional Australian Multi-Sensor SST Analysis (RAMSSA) v1.0 system blends satellite SST observations from the Advanced Very High Resolution Radiometer (AVHRR), the Advanced Along Track Scanning Radiometer (AATSR), and the Advanced'.
- Purpose Section:** Contains a text area with the text: 'Basic research'.
- Data Language Section:** Contains a dropdown menu labeled 'Select Data Language'.

Annotations on the form include:

- 'Required section' pointing to the 'Collection Information' section header.
- 'Required field' pointing to the 'Short Name' field.
- 'Change form' pointing to the 'Next' button.
- 'Information' pointing to the 'Missing Reason' dropdown menu.
- 'Select value from drop-down' pointing to the 'Explanation' text area.

The form also features navigation buttons ('Previous', 'Next', 'Save', 'Done', 'Cancel') and a 'Save & Jump To:' dropdown menu set to 'Collection Information'. A timestamp 'Last saved 2018-05-30 08:28 EDT' is visible at the bottom right.

Metadata Management Tool (MMT)

MMT allows users to manage and curate UMM-S metadata records in the Common Metadata Repository (CMR).

Manage Services Page

The screenshot shows the 'Manage Services Page' of the Metadata Management Tool. The header includes the NASA logo, 'EARTHDATA Metadata Management Tool', and a search bar. Below the header is a navigation menu with 'MANAGE COLLECTIONS', 'MANAGE VARIABLES', 'MANAGE SERVICES' (highlighted), and 'MANAGE CMR'. The main content area is split into two columns. The left column has a 'Create Service Record' section with a 'Create New Record' button and a note: 'OR use the search in the top right corner to find a published variables to clone or edit.' The right column has a 'SCIOPS Service Drafts' section with the text 'SCIOPS has no drafts to display.'

Edit Service Record Page

The screenshot shows the 'Edit Service Record Page' for a service draft named 'Demo_1'. The header includes the NASA logo, 'EARTHDATA Metadata Management Tool', a user profile 'Tyler Stevens', and a search bar. Below the header is a navigation menu with 'MANAGE COLLECTIONS', 'MANAGE VARIABLES', 'MANAGE SERVICES' (highlighted), and 'MANAGE CMR'. The main content area shows 'Service Drafts Demo_1' and 'Long Name Not Provided'. A green notification bar says 'Service Draft Updated Successfully!'. Below this are buttons for 'Publish Service Draft' and 'Delete Service Draft'. The 'Metadata Fields' section lists various fields with status indicators: Service Information (5 icons), Service Keywords (1 icon), Service Organizations (1 icon), Coverage (1 icon), Service Identification (1 checked icon, 2 empty icons), Science and Ancillary Keywords (1 checked icon, 1 empty icon), Service Contacts (1 checked icon, 1 empty icon), Related URLs (1 empty icon, 2 empty icons), Acquisition Information (1 checked icon, 1 empty icon), and Options (1 checked icon, 1 empty icon).

IV. DocBuilder-10: Create/Update Dataset Records

Create/Update Dataset Records

- **DocBuilder-10** is a web-based metadata authoring tool that allows metadata authors to add (or modify) dataset descriptions (DIFs) records for the IDN.

https://idn.ceos.org/DocumentBuilder/Home.do?Portal=ceos_idn

V. Transition of DIF-9 to DIF-10

DIF-9 to DIF-10 Transition Schedule

- Providers need to submit new metadata in DIF-10 or any format compatible with NASA's Common Metadata Repository (CMR).
 - Compatible formats: DIF-10, NASA ISO (MENDs), and UMM-JSON.
- docBUILDER supports DIF-10 format.

Transitioned Status

Provider	# of records	# of records transition	# of records not transition	Completion Percentage	State

VII. IDN's WGISS/WGCV Joint Session: Collaborative Actions

IDN Actions Status

- Quality Indicators in Discovery Metadata
 - Action: WGISS (Michael) to start defining best approach for representing and including QIs for the selected test case in discovery metadata searchable by end users.
 - WGISS need one specific and one broader example of SST QI to start analysis. Awaiting input from WGCV
- CEOS Data Cubes and CEOS Test Sites Data Access in support to WGCV Activities
 - Action: WGISS (Michael) to define how to get this info into the IDN for discover and possibly access by August.
 - Will be started after receiving initial input by WGCV, completed by end November
