# **1. Documentation of TU data**

This record documents the reported data in the data set TU 2006-12 version 1 covering data from the period May 2006 until 31. December 2012.

Please refer to our website for the most up-to-date documentation of the latest TU data. This record follows, where possible, the data set and is not updated later.

## 2. Interview session

### An interview about a given date with a given respondent.

The survey of transport habits is based on an interview with 1 person about behaviour during 1 day. At individual level there is consequently background information about the person, combined with information about the day in question together with weighting of the data set.

#### SessionId

Primary key for interview

**Table:** session

**Variable type:** Integer

**Origin:** Technical

Unique identification for the individual interview.

#### InterviewType

For analyses it is normally most practical to use the derived variables DiaryYear, DiaryMonth, DiaryWeekday.

## **DiaryYear**

Year of the trip diary

**Table:** session

**Variable type:** Integer

**Origin:** Derived

**Value set:** Year 2006, 2007, ... 2012

## **PseudoYear**

Staggered year

**Table:** session

**Variable type:** Character

**Origin:** Derived

**Value set:** Year 2006/7, ... 2012/13

## **DiaryMonth**

Month of the trip diary

**Table:** session

**Variable type:** enum maaned

**Origin:** Derived

**Value set:**

<b>id</b>	<b>maaned</b>
1	January
2	February

4	April
5	May
6	June
7	July
8	August
9	September
10	October
11	November
12	December

## **DiaryWeekday**

**Table:** session

**Variable type:** enum ugedag

**Origin:** Derived

**Value set:**

<b>id</b>	<b>ugedag</b>
1	Monday
2	Tuesday
3	Wednesday
4	Thursday
5	Friday
6	Saturday
7	Sunday

Weekday of the trip diary in which weekday is the calendar weekday irrespective of public holidays.

## DiaryDaytype

Day type for the trip diary

**Table:** session

**Variable type:** enum dagtype

**Origin:** Derived

**Value set:**

<b>id</b>	<b>dagtype</b>	<b>Description</b>
11	Normal weekday "Mon-Thur"	Weekdays where next day is also a weekday
12	Friday and weekday before public holiday	Weekday which apart from normal commuter traffic is also characterised by outbound traffic for weekend or public holiday.
13	Special weekdays	Monday-Wednesday of Easter week, Friday after Ascension Day, 1 May, weekdays between Christmas and New Year (The days are characterised, in principle, as being weekdays, however the majority of workplaces across the country are completely or partly closed)
23	Saturday	Only Saturdays that are not public holidays
32	Sunday and last public holiday before weekday	Day off/public holiday characterised by homebound traffic after weekend or public holiday.
33	Public holiday or Sunday where the next day is Sat/Sun/public holiday	Day off/public holiday without particular homebound traffic.

The traffic date of the interview converted into day type. Public holidays are defined as: 1 January, Maundy Thursday, Good Friday, Easter Monday, General Prayer Day (Danish public holiday falling on the fourth Friday after Easter), Ascension Day, Whit Monday, 5 June, 24, 25 and 26 December. The field is used for analyses in which certain types of day, e.g. weekdays, are defined. Furthermore combinations of months, weekday and type of day can be used as more sophisticated calendar criteria. For instance, "working days, not July" is characterised by DiaryDaytype ={11,12}, DiaryMonth!=7.

**Origin:** Derived

### 3. Journeys of the day

#### **The whole travel from home and back to home.**

Journey is an aggregation of trips so that travels wherever possible start and end at the same place, 'at home'.

The structure of the journeys is based on **the journey base** which is the home address, or if this is not visited, 'Usual Daily Base', or, if this is not visited, start of the day, if the day's programme returns to this place. Details about the journey base are found in the Session table.

A distinction is made between **open and closed** journeys, according to whether information is available about start and end of journey. Closed journeys take place only within the 24 hours of the interview.

**The primary stay** is defined as the stay with the longest staying time,  $\max(\text{DwellTime})$ . It is specifically defined that in connection with partly open journeys (in which only one end point is the journey base) that the primary stay is the night stay before and after respectively.

In connection with closed journeys to/from abroad the stay abroad is defined as the primary stay. No primary stay is defined for fully open journeys. The purpose is simply defined as the purpose of the primary stay.

Secondary stay is defined as the stay before/after the primary stay closest to being the primary stay without being it.

22	Fully open	Day programme in which the journey base is not involved or for which the journey base is not defined.

Main type of journey, according to whether the journey starts or ends at home/journey base. For several analyses it is relevant to look at, for instance, only the closed journeys.

1. If OrigPurp is unknown, DestPurp is used.
2. If DestPurp is unknown. OrigPurp is used.

5. If DestPurp=1 (home) OrigPurp is used.
6. The purpose of the end of the trip that is closest to the journey's primary stay.
7. The purpose of the end of the trip which gives max TripPurpGroup.

**Table:** tur

**Variable type:** enum janej

**Origin:** Questionnaire

**Value set:**

<b>id</b>	<b>janej</b>
1	Yes

Questions referring to trips which potentially are business trips.

YES brings out the simplified business tour questionnaire. SimplWorkTour=1 is thus used as a filter for trips in the special case of business trips.

## **SimplWorkNumStop**

Number of stops on business trips

**Table:** tur

**Variable type:** Integer

**Origin:** Questionnaire

Simplified business tour questionnaire (SimplWorkTour=1): Number of trips.

## **GISdist**

Distance as the crow flies

**Table:** tur

**Variable type:** Float

**Origin:** Derived

**Units:** km

Distance between specified starting point and end point of the trip as the crow flies.

GISdist is only calculated if coordinates for both trip end points are known, not for trips abroad, not for simplified business tours.

## **NumModes**

Number of different modes of transport used during the trip

**Table:** tur

**Variable type:** Integer

**Origin:** Derived

## **SumLen**

Total travel distance of the trip

**Table:** tur

**Variable type:** Float

**Origin:** Derived

**Units:** km

Total travel distance of the trip, calculated as sum of trip stages.

In the interview situation, the total travel distance of the trip is compared with the distance as the crow flies if both end points have known coordinates. For trips in which one end point is without coordinate or in which coordinates have appeared during post-processing the total travel distance of the trip may be shorter than the distance as the crow flies.

## **SumMin**

Total duration of the trip

**Table:** tur

**Variable type:** Integer

**Origin:** Derived

**Units:** min

Total specified travel time during the trip, incl. any waiting time en route.

### **SumMotorLen**
