Airspace Technology Demonstration 2 (ATD-2)

AOSP R&D Partnership Workshop
Apr 10, 2018

Agenda

- **Introduction**

- IADS system architecture

- IADS system capabilities

- Partnership opportunities

Project Objectives†

- **DEVELOP** an integrated arrival/departure/surface (IADS) prediction, scheduling and management system for a metroplex environment

- **ENABLE** use of collaborative decision-making that is consistent with FAA's Surface Collaborative Decision Making (CDM) ConOps
  - through increased information sharing of prediction and scheduling information between airport, flight operator, and ATC

- **QUANTIFY** current day shortfalls and evaluate the system-level performance for benefits in terms of *predictability*, *efficiency*, and *throughput*
  - using metrics established by NASA and stakeholders

- **DEMONSTRATE** the ATD-2 technologies in an operationally relevant environment with system capable of performing under continuous daily use

- **TRANSFER** an integrated set of technologies to the FAA, airlines, airports, and suppliers

† paraphrase of ATD-2 Level 1 System Requirements

ATD-2 IADS Operational Environment

Field Demo Timeline

Percent of Full Operational Capability vs. Fiscal Year

Technology Transfers

Stakeholder input, NASA Tech maturity, Analysis, Benefits, Costs

16/7/365 Operation of ATD-2 Technologies in Field

Demo Readiness Reviews

Phase 1 Baseline IADS demo begins

ATD-2 system installation @ CLT

Phase 2 Fused IADS demo begins

Phase 3 Terminal IADS demo begins

Full Operational Capability

Joint NASA/FAA Site Selection & Existing NASA/FAA Tech Capabilities

Periodic ATD-2 IADS system releases result in operational capability increases

Fiscal Year: 2014, 2015, 2016, 2017, 2018, 2019, 2020

Phase 1 | Phase 2 | Phase 3

Just 6 months into initial phase. Many partnership opportunities ahead.

# ATD-2 IADS System

TOWER

TERMINAL

RAMP

CENTER

ATD-2 SCHEDULERS

giving traffic managers the tools to reduce congestion.

Overview video online at: http://aviationsystemsdivision.arc.nasa.gov/research/tactical/atd2.shtml
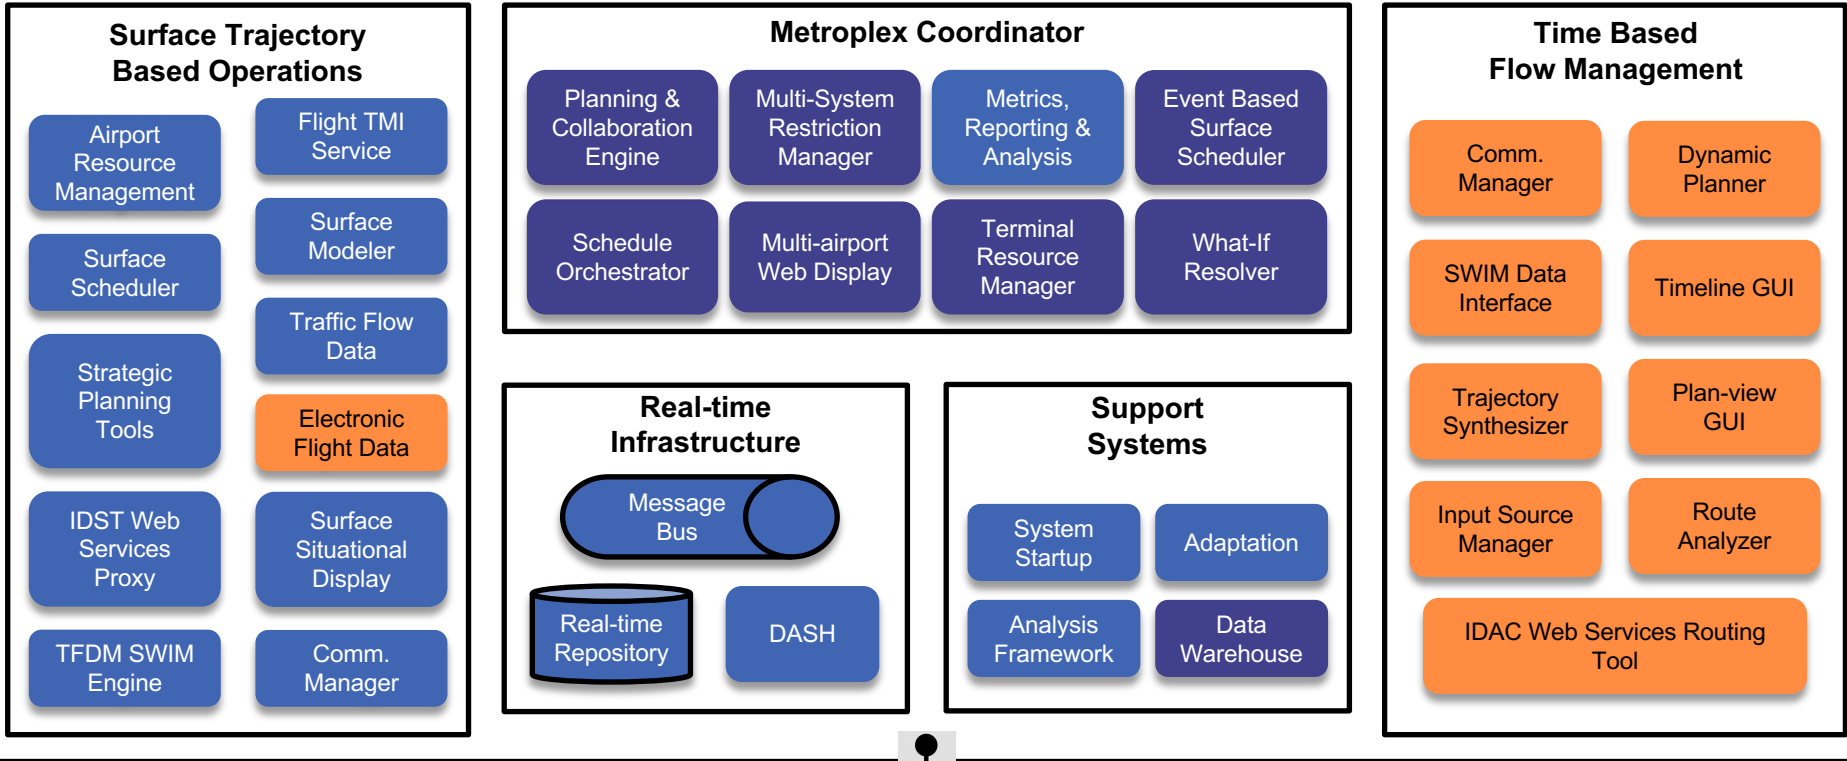

ATD-2 is Technology Integration

ATD-2 combines existing and emerging FAA technologies
with technologies developed through NASA research
to create an Integrated Arrival/Departure/Surface (IADS) traffic
management system for the metroplex.

TFDM Terminal Flight Data Manager

Emerging tower tool with electronic flight data and Surface CDM capabilities

TBFM Time Based Flow Management

Existing en route tool for time based scheduling of arrivals and departure into constrained flows

ATD-2 IADS System

TFDM Elements

Tactical Scheduling Research

TBFM Elements

SARDA Spot and Runway Departure Advisor

Tactical surface modeling and scheduling plus user interfaces for ramp area traffic management

PDRC Precision Departure Release Capability

Uses trajectory-based surface information to improve en route tactical departure scheduling

ATD-2 IADS Logical Architecture

ATD-2 Internal Systems

Legend: by NASA | by FAA | by Others | Phase 3

Surface Trajectory Based Operations
- Airport Resource Management
- Flight TMI Service
- Surface Scheduler
- Surface Modeler
- Strategic Planning Tools
- Traffic Flow Data
- Electronic Flight Data
- IDST Web Services Proxy
- Surface Situational Display
- TFDM SWIM Engine
- Comm. Manager

Metroplex Coordinator
- Planning & Collaboration Engine
- Multi-System Restriction Manager
- Metrics, Reporting & Analysis
- Event Based Surface Scheduler
- Schedule Orchestrator
- Multi-airport Web Display
- Terminal Resource Manager
- What-If Resolver

Time Based Flow Management
- Comm. Manager
- Dynamic Planner
- SWIM Data Interface
- Timeline GUI
- Trajectory Synthesizer
- Plan-view GUI
- Input Source Manager
- Route Analyzer
- IDAC Web Services Routing Tool

Real-time Infrastructure
- Message Bus
- Real-time Repository
- DASH

Support Systems
- System Startup
- Adaptation
- Analysis Framework
- Data Warehouse

External interfaces via SWIM and SWIM extensions

ATD-2 External Systems

Air Carriers
- EOBT Calculator
- SWIM Ingest
- Airline Processing
- RTC Display

Airport Authority
- SWIM Ingest
- Airport Processing

Industry
- SWIM Ingest
- What If

Stakeholders
- SWIM Ingest

Agenda

- Introduction

- IADS system architecture

- **IADS system capabilities**

- Partnership opportunities

ATD-2 is a *field demonstration* that evaluates the benefits of *wholistic consideration* of arrival, departure and surface (*IADS*) traffic flows while introducing new technologies and procedures into its *collaborative operational environment*
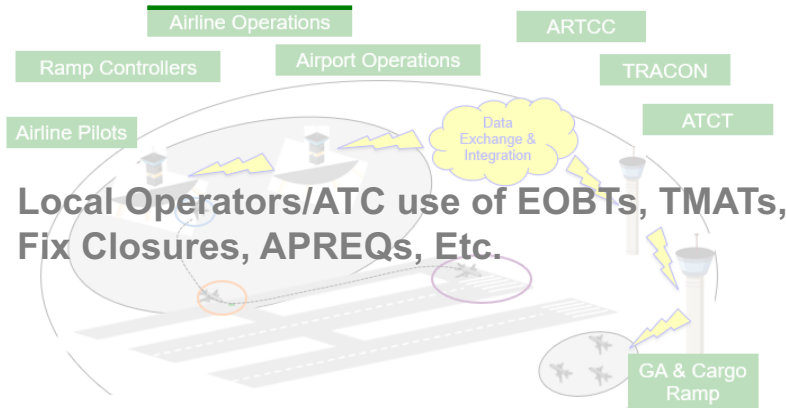

Collaborative Surface Metering w/Ramp Tool
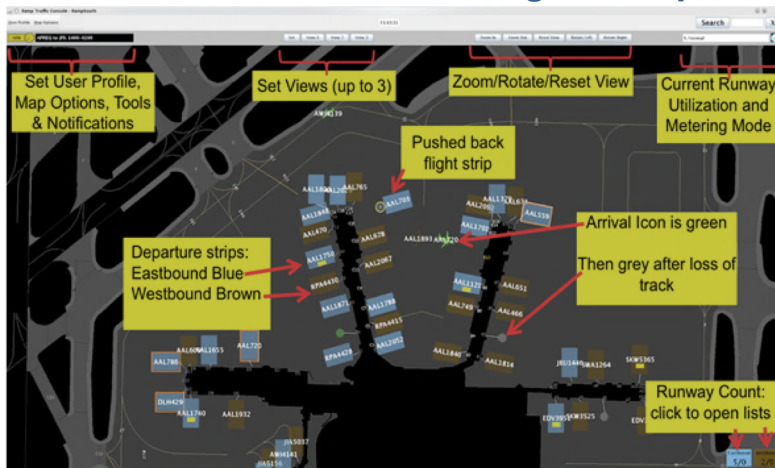

Overhead Stream Operational Integration

ATC/Operator Data Exchange and Integration

Local Operators/ATC use of EOBTs, TMATs, Fix Closures, APREQs, Etc.

Collaborative Planning the Real-Time Flow

IADS Phase 1 Capabilities

Surface Predictive Engine

The IADS system leverages a surface predictive engine to ingest a variety of data feeds and inputs to produce an accurate surface model and associated schedule

Real Time Metrics

Surface Metering

Data Exchange and Integration

Shared situational awareness across the airport surface between ATC and operators

Overhead Stream Insertion

Surface Predictive Engine

The IADS system leverages a surface predictive engine to ingest a variety of data feeds and inputs to produce an accurate surface model and associated schedule

Real Time Metrics

Surface Metering

Data Exchange and Integration

Shared situational awareness across the airport surface between ATC and operators

Overhead Stream Insertion

Automation Assisted Capacity Prediction

ATC TMC Runway Utilization Intent

TRACON controller runway intent

Highly accurate TBFM de-conflicted ON time estimate

TFM SWIM ETAs

TMIs. Controlled Take Off Times (CTOT)

Carrier provided EOBTs

Tactical airline intent (ramp controller)

Surface Automation Assisted **Capacity** Predictions

Surface modeling logic
- Earliest IN time estimate
- Earliest OFF time estimate
- Latest OUT estimate
- Pushback duration model
- Ramp and AMA taxi time
- Hovering logic

Scheduling Logic:
- Converging runways
- Flight spacing requirements
- Dual use runways
- Runway crossing delays
- Departure fix separation
- Use of flight state

Capacity predictions are calculated and automatically used in surface metering calculations without required manual user ADR input.

Helps answer the questions:
- How much runway capacity do I have for a specific flight, on a specific runway, at a specific time given the current runway utilization strategy?
- What queue time/length should this flight expect?

IADS Surface Modeling

The IADS surface modeler combines airport geometry with flight-specific intent and status information to produce continuously-updated 3D (x,y,t) surface trajectories for each flight.

IADS Surface Scheduling
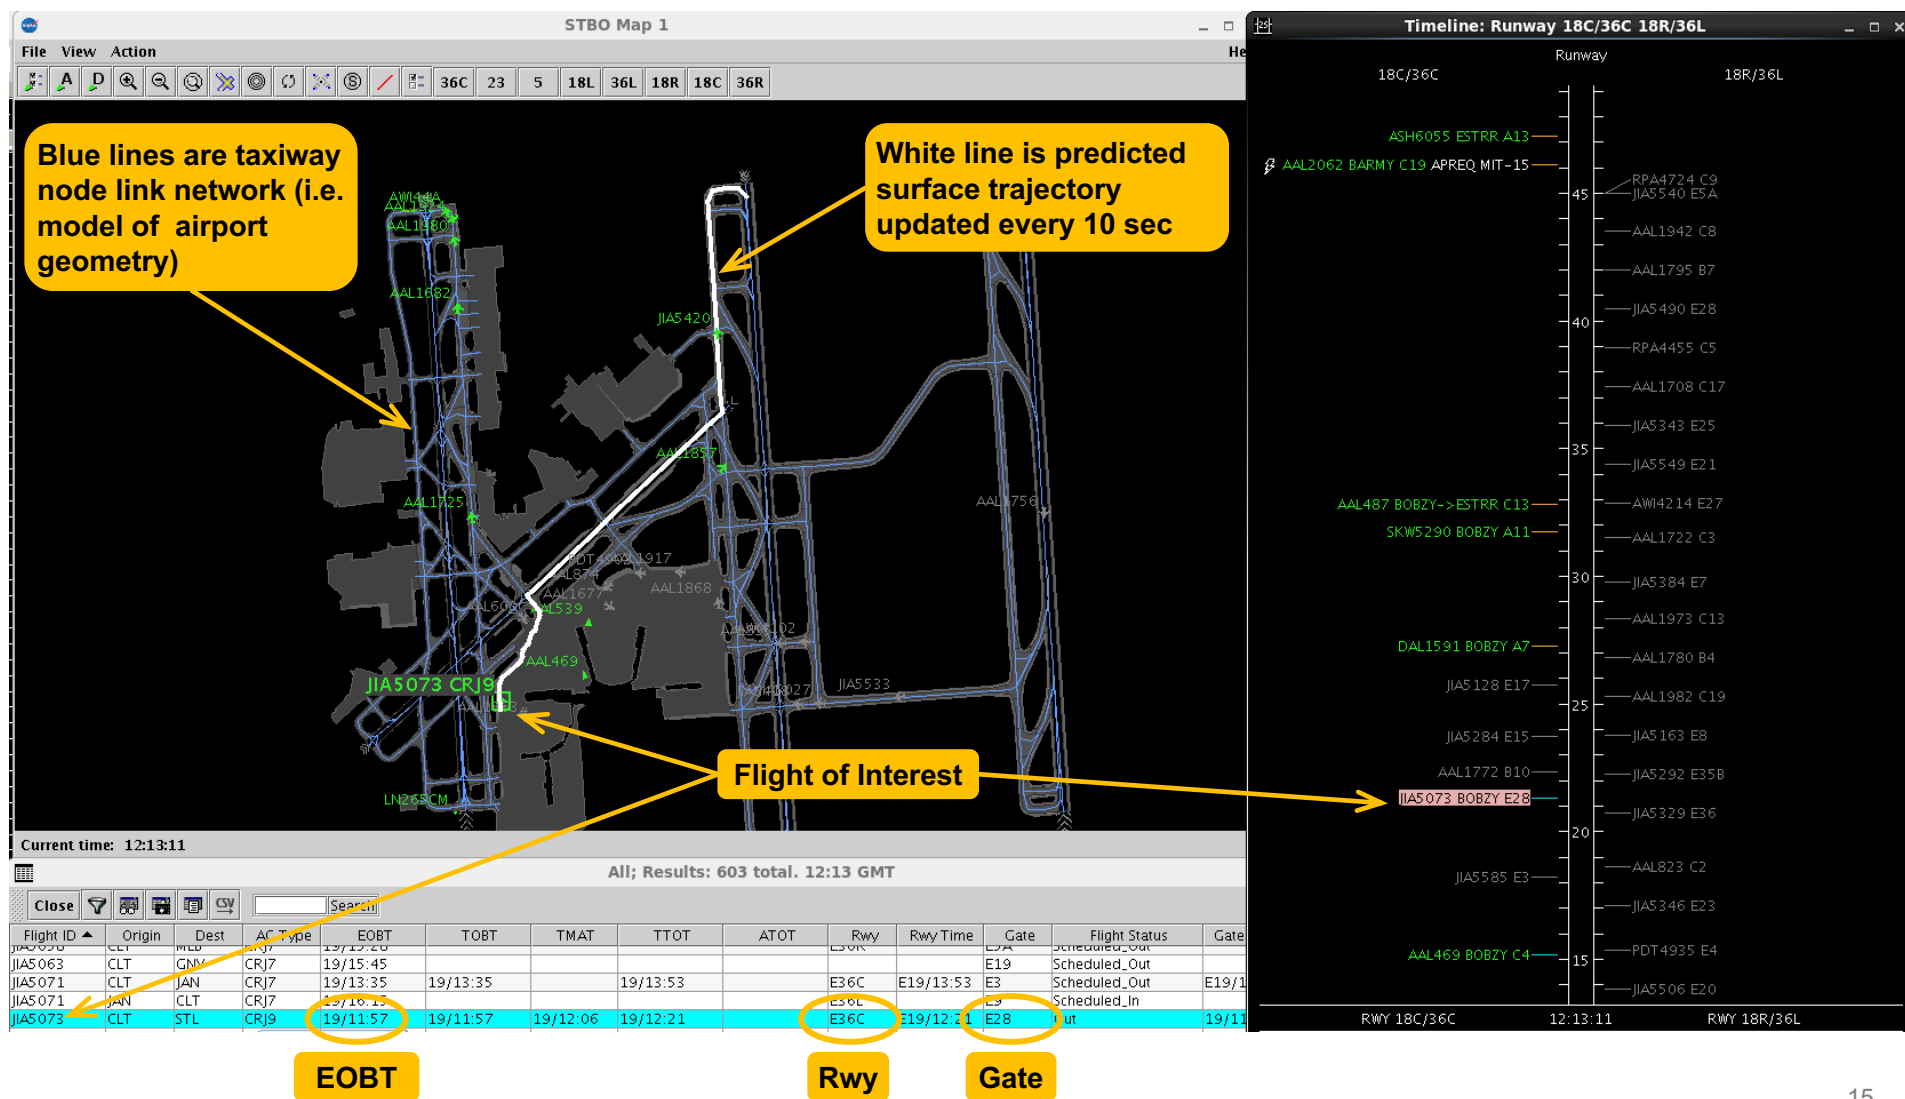

The IADS surface scheduler uses surface modeler inputs to produce target times for takeoff (TTOT), movement area entry (TMAT), and off block (TOBT)
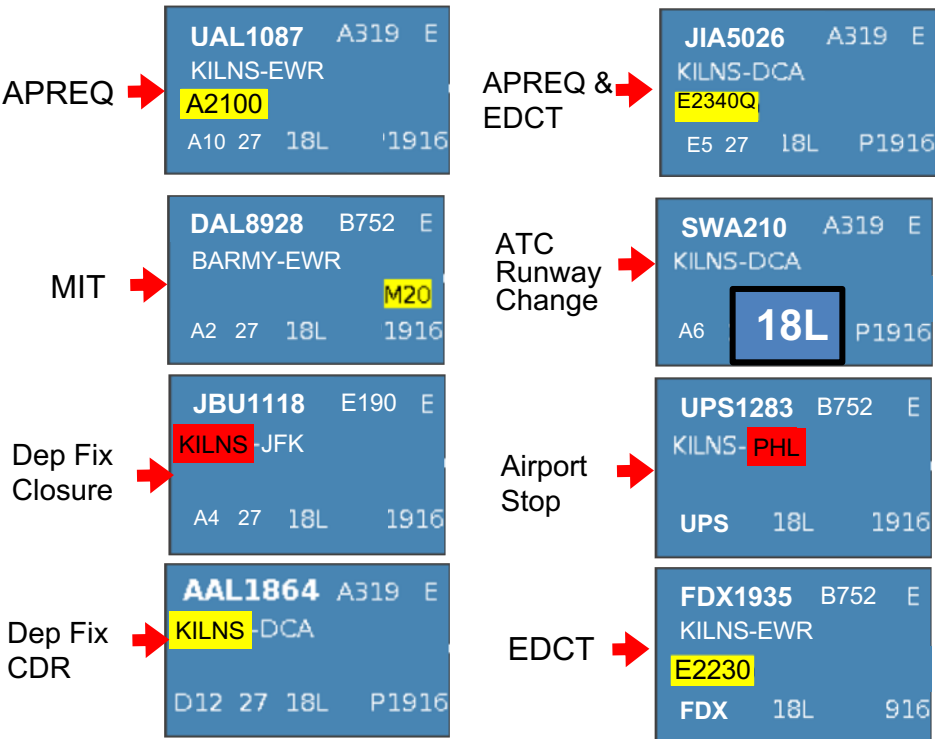

Surface Predictive Engine

The IADS system leverages a surface predictive engine to ingest a variety of data feeds and inputs to produce an accurate surface model and associated schedule

Real Time Metrics

Surface Metering

Overhead Stream Insertion

Data Exchange and Integration

Shared situational awareness across the airport surface between ATC and operators

ATC/Operator Data Exchange and Integration Foundational for Advanced Surface Capability

Better gate conflict information

Better runway intent information

Operator to ATC

ATC Use of Earliest OFF Block Times (EOBT)

EOBT prediction accuracy increases at:

- 10m prior. 40.9% more accurate w/17.6% more predictability
- 15m prior. 27.8% more accurate w/8.7% more predictability
- 20m prior. 35.1% more accurate w/6.7% more predictability
- For 25 minutes and greater. EOBTs are same as legacy

Real Time Metrics

Surface Metering

Overhead Stream Insertion

Data Exchange and Integration

Shared situational awareness across the airport surface between ATC and operators

IADS System Benefits

15% improvement in the number of fights departing within their airline-scheduled departure block times

Average of 1.7 minutes taxi out time saved reducing AMA congestion

11.25 hours of delay saved each month by electronically renegotiating a better overhead stream slot
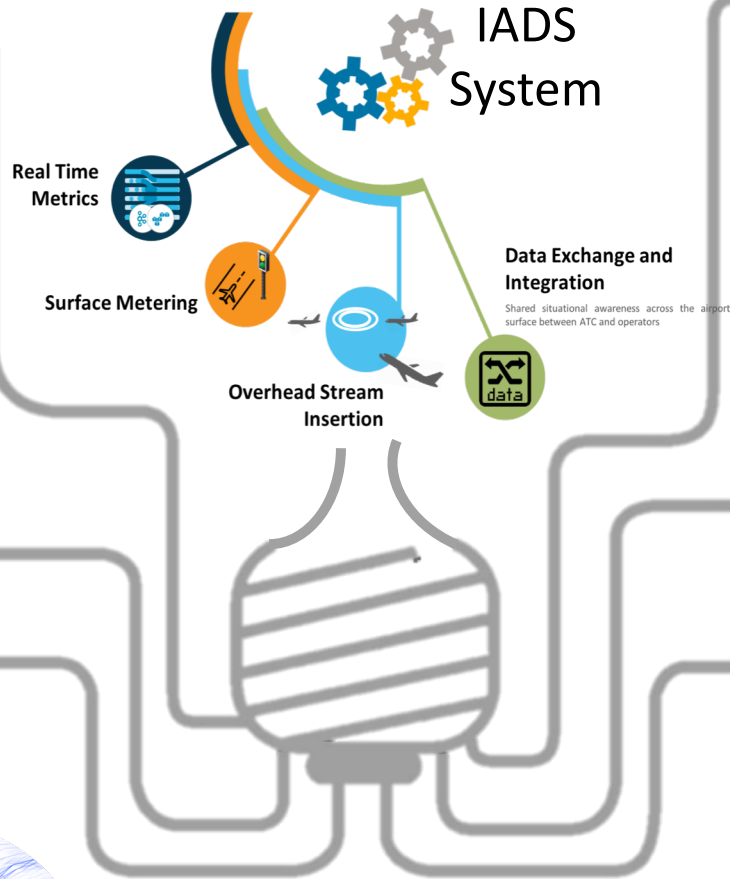

1,000 pounds of fuel saved during each metered departure bank

Reduces emissions by up to 3,000 pounds each bank which is equivalent to planting 36 urban trees

Greater visibility and coordination of flow programs enables better management of controlled times at the gate

Looking Ahead

PHASE 2

Agile

Phase 2 Development
Fused IADS Demonstration

Agile Development Process
Continued engagement with field demo partners to evolve the system

Foundational Groundwork for Phase 3
Leveraging IADS in North Texas

Leveraging Operational Data
Iterating with Field Demo Partners to address metrics needs

Agenda

- Introduction

- IADS system architecture

- IADS system capabilities

- **Partnership opportunities**

IADS Data Sharing via Prototype TTP

NASA and the FAA are collaborating to provide a prototype TFDM Terminal Publication (TTP) feed via SWIM R&D network as part of the ATD-2 Field Demonstration

Applications that Leverage the TTP Prototype Feed

Inputs to Data Fusion and Mediation (Fuser):
- TFDM SWIM
- TFMS SWIM
- TBFM SWIM
- Surface SWIM
- Operational TBFM IDAC
- R-TBFM CAP/SWIM
- R-TBFM IDAC/WSRT
- AAL Flight Hub
- AAL Surface Surveillance
- Commercial Flight Service
- NTML/OIS Operational info

Data Fusion and Mediation (Fuser) → **ATD-2 IADS System** → **SWIM TTP Services** →

- Mobile App for General Aviation
- SWIM feed to Air Carriers
- Future Use

The ATD2 Prototype TTP feed will include these services:
- Flight Data
- Airport Information
- Traffic Management Restrictions
- Flight Delay
- Operational Metrics

IADS Data Sharing via Mobile App

Pilots submit a *Ready-to-Taxi Time (RTT) / Earliest Off-Block Time (EOBT)* for each flight via Mobile App
Pilot can now tell passengers to either relax or get ready to leave

OR

- NASA, the FAA, and MITRE are collaborating to provide a prototype Mobile App for use during the ATD-2 Field Demo
- Objective is to refine concept and transfer to industry for further development

ATD-2 Notice of Opportunity

https://www.fbo.gov/spg/NASA/ARC/OPDC20220/ATD-2_Industry_Technology_Evolution_Collaboration/listing.html

ATD-2 has posted a Notice of Opportunity on FedBizOpps
- Objective: Identify requirements for a successful technology transfer to industry
- Opened on Apr 6th
- Closes on May 11th
- May lead to collaboration enabled via Space Act Agreement (SAA)
- Not exclusive – technology transfer is not limited to partners entering into SAA

Remote Demos / Webinars

- Approximately one webinar per month
- Routinely host 60-80 attendees
- Six sessions recorded and available for replay
- Latest schedule, access info, and recorded sessions online at:

https://aviationsystemsdivision.arc.nasa.gov/research/atd2/remote_demos.shtml

ATD-2 Remote Demos

To Join…

1. Go to: **https://ac.arc.nasa.gov/atd2/**
   Enter as a guest and type your name. NASA Employees can log-in with their email and password (NDC Credentials).

2. Dial the Telecon Number: **1-844-467-6272**, **Passcode: 592382#**

Demo Objectives

- Keep broad group of ATD-2 stakeholders informed of progress in an inexpensive and unobtrusive manner
- Demonstrate actual system capability and lessons learned (as opposed to documents/plans)
- Take input from stakeholders that can be used to improve the ATD-2 system, processes and/or outreach
- Identify areas where more detailed discussion is desired/warranted

Breakout Session Discussion

- Seeking input from industry regarding effective technology transfer

- What are the key barriers to effective technology transfer?

- What can NASA do to reduce these barriers?

- What specific collaboration topics are of value to industry?

Backup

Phase 1: Baseline IADS Demonstration

Surface Components

ATCT Control
- CLT ATCT control positions
- Baseline electronic flight data capability via TFDM EFD

★ Ramp Control
- AAL ramp controller and manager positions
- Tactical pushback advisories via RTC/RMTC display

Surface CDM
- All positions as needed
- Predictive mode: strategic metering info for situational awareness and analysis

Airspace Components

★ ATCT TMU
- CLT ATCT TMU position
- Tactical departure scheduling capability via STBO display

★ ARTCC
- ZDC TMU
- Tactical departure scheduling via modified TBFM/IDAC

Phase 1 Demonstration Goals
- Evaluate the Baseline IADS capability
- Enhance American Airlines CLT "departure sequencing" procedure with ATD-2 surface tactical metering
- Demonstrate improved compliance for a significant percentage of tactical TMIs
- Mature strategic Surface CDM capability via operational use, analysis, and feedback
- Reduce ATCT workload by replacing paper strips with EFD

Interfaces to external systems via SWIM plus ATD-2 SWIM extensions

Airline Ops

★ = IADS user interface

33

Phase 2: Fused IADS Demonstration

ATCT Control
- Phase 1 capability plus:
- Include IADS info on EFD
Ramp Control
- Phase 1 capability plus:
- Fused scheduler pushback advisories honor strategic TMATs

Surface CDM
- Phase 1 capability plus:
- Prescriptive mode: strategic TMATs applied as constraints in fused scheduler

Surface Components

ATCT TMU
- Phase 1 capability plus:
- Improvements as needed

ARTCC
- Phase 1 capability plus:
- Expand to ZTL TMU
- Integrate with arrival metering

TRACON
- CLT TRACON TMU
- ATD-2 UI for TMI entry and situational awareness

Airspace Components

Phase 2 Demonstration Goals
- Evaluate the Fused IADS system capability
- Demonstrate benefits of strategic surface metering during periods of significant demand/capacity imbalance
- Enhance tactical surface metering to improve *non movement area* predictability and throughput
- Evaluate inclusion of IADS data on EFD
- Expand to demonstrate more scheduling scenarios for Washington and Atlanta Centers

Interfaces to external systems via SWIM plus ATD-2 SWIM extensions

Airline Ops

ATCSCC

**ATCT Control**
- Phase 2 capability plus:
- Integrate EFD with ATD-2 scheduling and metering

Ramp Control
- Phase 2 capability plus:
- Improvements as needed

Surface CDM
- Phase 2 capability plus:
- Improvements as needed

Surface Components

ATCT TMU
- Phase 2 capability plus:
- Improvements as needed

ARTCC
- Phase 2 capability plus:
- Improvements as needed

TRACON
- Phase 2 capability plus:
- Metroplex coordinator implemented for DFW TRACON (D10) environment

Airspace Components

Phase 3 Demonstration Goals
- Evaluate the Metroplex IADS system capability
- Integrate EFD with ATD-2 scheduling
- Mature and enhance core ATD-2 capabilities
- Enhance CLT tactical surface metering to improve *movement area* predictability and throughput
- Reduce delay and increase throughput under Metroplex departure constraints *[NOTE: Metroplex Coordinator to be demonstrated for DFW TRACON (D10) environment via HITL or field experiment]*

Interfaces to external systems via SWIM plus ATD-2 SWIM extensions
Airline Ops   **Airport Ops**   **Industry Apps**   **ATCSCC**
