

UTM TCL2 Software Design

Daniel Mulfinger

What is the UTM Software?

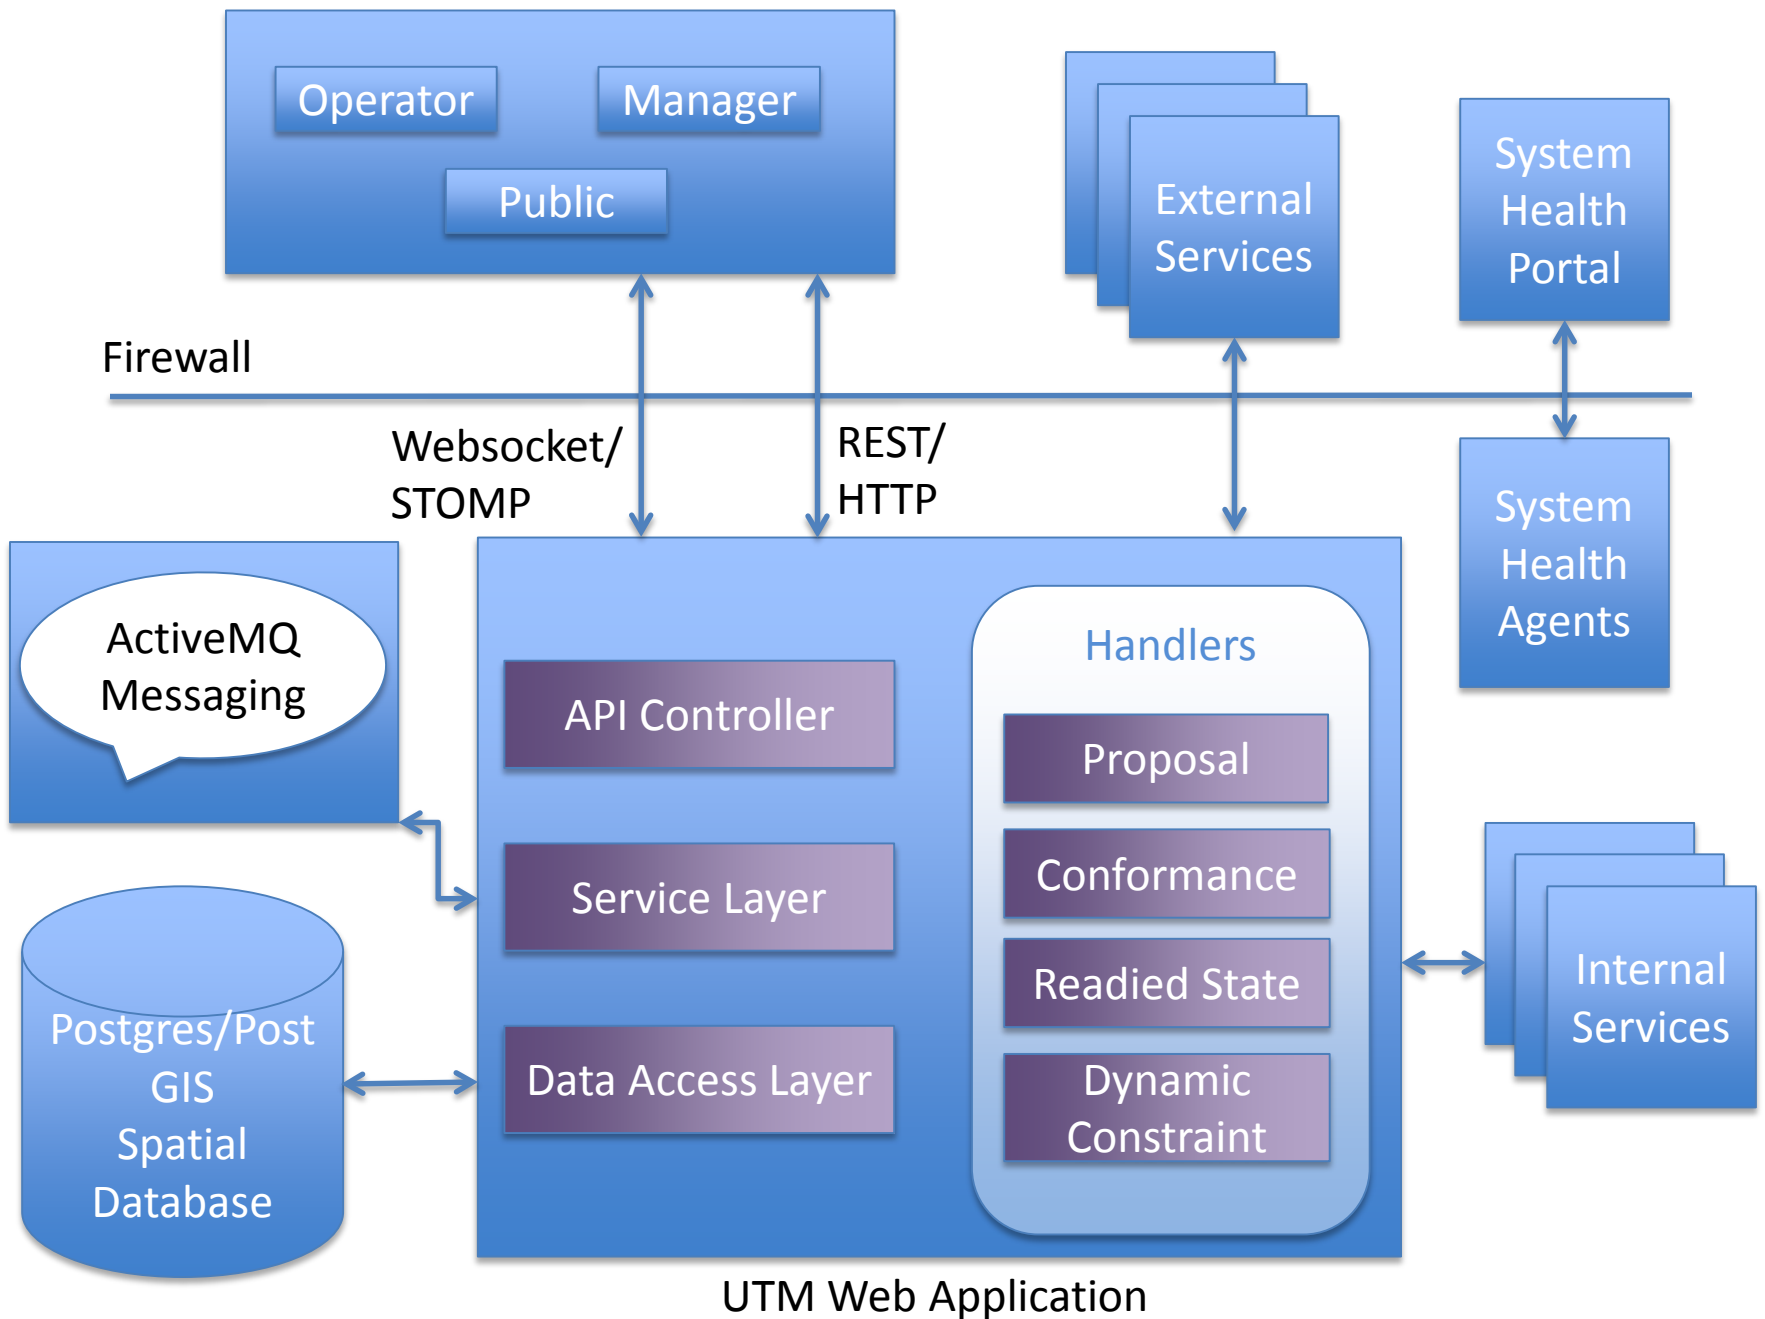

- Research Prototype Software
- Implements the UTM Concept of Operations
- Web Application
- Two pieces
 - UTM Core
 - Set of Services
- ~25K lines of code
- Agile-based with 4-week sprints

Design Principles

- Research prototype, but built with long-term view
- Use state-of-the art software design conventions
- Test-driven design (TDD)

Technologies Used

- Java 
- Spring Framework 
- Apache ActiveMQ 
- Apache Tomcat 
- STOMP **Stomp** 
- PostgreSQL + PostGIS 
- JTS Topology Suite
- REST (Representational State Transfer)
- Jenkins 
- Atlassian 
- SonarQube 

User Roles

- Operator
 - UAS operator
 - Submits/flies operations
- Manager
 - Sees complete picture
 - Can add manager constraints or override existing constraints
 - Can submit/close operations
 - Send messages to clients
- Public
 - Limited access

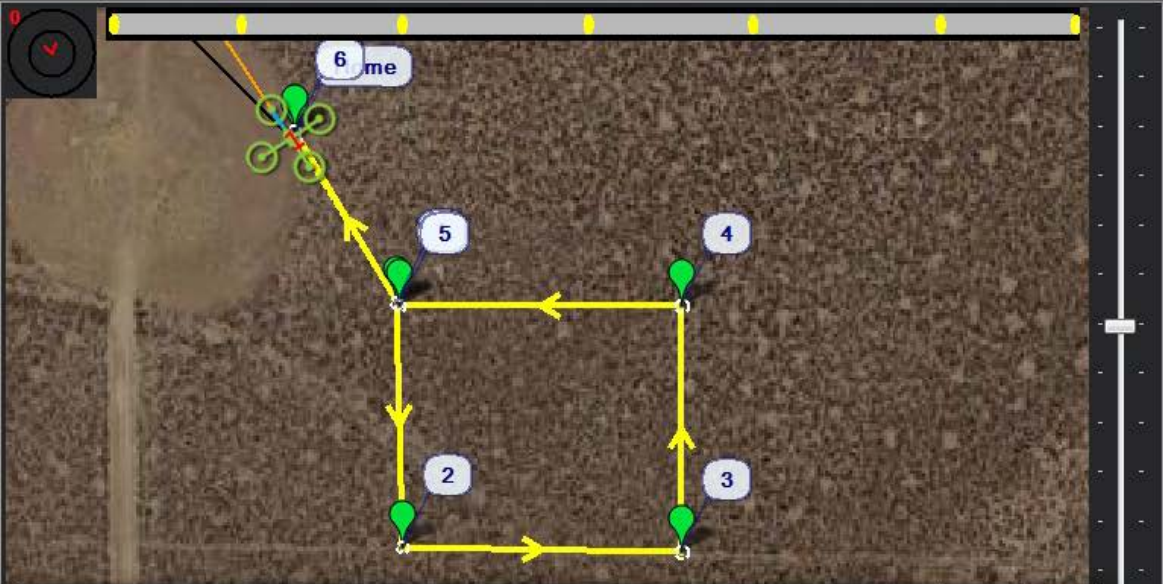

NASA Front-End Implementations

- Mission Planner compatible Python Client
- UTM Manager IOS App
- UTM Web Viewer

Software Demo

- Walk through screen shots
- (UTM Python Client w/iPad App)

Quick Actions PreFlight Gauges Status Servo Telemetry Logs DataF

Software Releases

- Products available via Software Usage Agreement for partners with Space Act Agreement or other qualifying contract:
 - UTM Server (virtual machine, no source code)
 - Python Reference Client (includes source code)
 - UTM Manager Display (IOS App, no source code)
- Dates:
 - TCL 1 – Dec 2015
 - TCL 2 – Dec 2016 (anticipated)

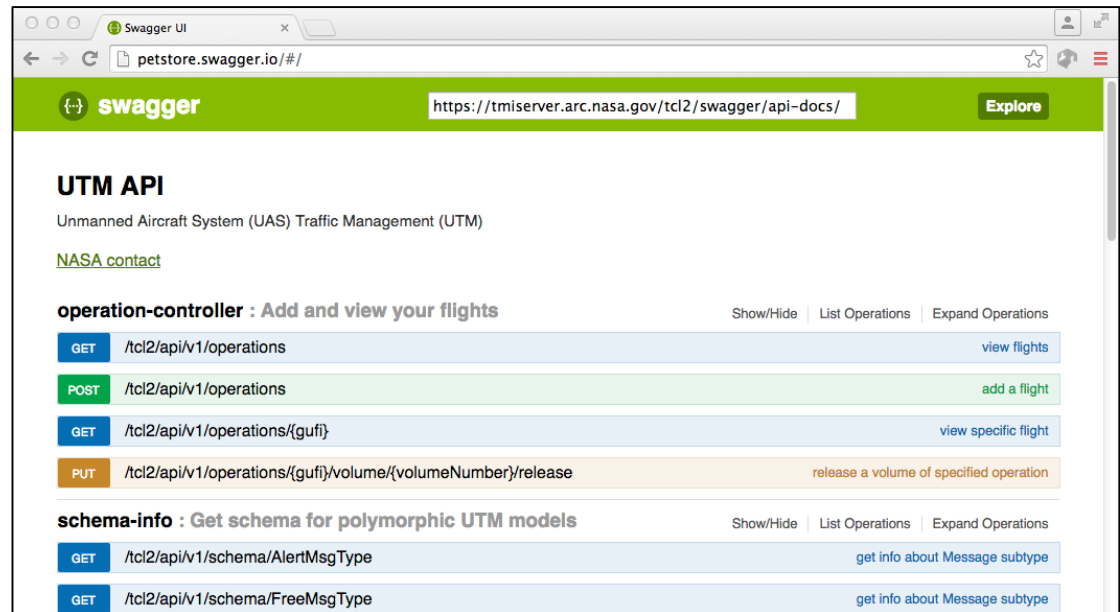

Write your own client?

- Submit an RFI response or sign Space Act Agreement
- Request TCL2 Client ICD and credentials
- Create client
- Test according to UTM Client Test Plan document

API Documentation

Client Interface
Control Document

Online documentation – Swagger compatible
