Brookings, South Dakota
1993

INTRODUCTION

The purpose of this index is to provide a practical guide to South Dakota news. Included are biographical articles about South Dakotans, news by local writers, all editorials, reports of committees, conventions, meetings, etc. Articles on local history, arts, business, and musical performances, features on education, employment, population trends, and parks and recreation, etc. National and international items which are indexed in the **New York Times Index** and **Readers' Guide to Periodical Literature** are omitted unless the subject matter is relevant to South Dakota. Also omitted are items in the following general categories: national columns, birth, engagement, wedding, and obituary announcements, daily sports news, public notices, minutes of city and county commission meetings, and hospital and police records.

The **Index** is published monthly with semi-annual and annual cumulations.

Although this is a computer-assisted index, subject headings are not assigned automatically from key words out of headlines. Whenever the headline words do not accurately reflect the content of the article, appropriate subject heading(s) are assigned.

Subject entries are limited to eighteen characters, including spacing. Thus, abbreviations and incomplete headings are sometimes necessary. For example, Community Development is listed as Community Develop as space allows. Place names in subject entries also are abbreviated to save space (cities in two letters, counties in three letters) but are spelled out in the notation whenever possible—e.g.

Abortion

1/04/1990 C012

Abortion bill likely lawmakers

An asterisk at the beginning of a notation indicates that an illustration accompanies the story.

(L) denotes a letter to the editor.

(E) denotes editorial.

() Whenever space allows, a reporter's name is included in parenthesis at the end of the notation.

Instructions For Use

Subject headings are arranged alphabetically under each main heading. The entries are arranged chronologically. The input record is composed of three fields:

1. Subject headings—e.g. Abortion
2. A ten-character alpha-numeric code containing the date (year, month, and day) and pagination (section, page, and column)—e.g.

1/04/1990 C012

1 = January

04 = the day

1990 = Year

C = the section (N = No section designated)

01 = the page

2 = the column

* = illustration

3. The headline notation—e.g. *Abortion bill likely lawmakers. Thus, an entry composed of the above units would read:

Abortion

1/04/1990 C012

*Abortion bill likely lawmakers
