Department of Accounting, Universitas Hasanuddin.

Abstract: This study aimed to analyze the use of region’s financial accounting information system to the quality of local government financial reports. The quality of the financial statements include the relevance, reliable, comparable, and understandable. The dependent variable in this study is the quality of local government financial reports, while the independent variable in this study is the region’s financial accounting information system. This research method is qualitative research with this type of approach theoretical studies that the methods used to collect data or resources related to the topics in a study. Data obtained from journals, thesis, books, and various other literature related to the study. The results showed that the use of local financial information systems positive effect on the quality of local government financial reports.

Keywords: Accounting Information System, Regional Financial, Quality of Financial Reporting.

1. BACKGROUND

Poor financial reporting from local governments in Indonesia is a rampant phenomenon discussed. It is marked by the government’s financial statements are still many areas that do not provide information in accordance with applicable regulations and there are many irregularities in the financial statements found by the Audit Board of the Republic of Indonesia (BPK - RI) in the audit. According to the Head of BPK - RI (Purnomo, 2013) that as many as 326 local government or 91% of 358 local governments whose financial statements are audited by BPK-RI given a bad opinion, only 32 local governments get an unqualified opinion.

These financial statements are a tool of accountability for financial performance management of a government to the public entrusted to him (Pamungkas, 2012). The financial report is a reflection to enable a government has been running well, so the government is required to be able to produce quality financial reports. According to the Regulation government Number 71 Year 2010 described the qualitative characteristics of financial statements of the government that is normative preconditions necessary for the financial statements of the government can meet the desired quality that is relevant, reliable, comparable and understandable.

One contributing factor in producing high quality financial statements is an accounting information system, in which the financial statements resulting from a process that is based on good input, process and output are both good. These three aspects must be integrated and sustainable as the foundation of good financial reporting systems. (Selamet, 2011). The development of information technology so rapidly makes the technology as part of a support various activities, especially for government entities who expect good governance, economic, effective and efficient.

In line with the expectations of the government, especially the local government to realize good governance, local governments are trying to make it happen by building information technology in the field of finance or accounting in relation to financial management. We have had many local governments use information technology in the form of software accounting or financial management applications developed both by the government such as Financial Management Information System (SIPKD) and Regional Management Information System (SIMDA) and applications developed by the private sector.

Based on the background of the problem, the formulation of the problem in this research is how the use of Regional Financial Accounting Information System for Quality Government Finance Report. The purpose of this research is to know how to use Regional Financial Accounting Information System for Quality Government Finance Report.

2. RESEARCH METHOD

This research method is qualitative research with this type of approach theoretical studies that the methods used to collect data or resources related to the topics raised in a study. Data obtained from journals, thesis, books, and various other literature related to the study.

2.1 Literature Review and Discussion

2.1.1 Regions Financial Accounting Information System

Accounting information systems (AIS) is a framework for coordinating the resources (data, materials, equipment, suppliers, personnel, and
funds) to convert the input in the form of economic data into the output of financial information that is used to carry out the activities of an entity and to provide accounting information for party concerned (Wilkinson, 2002). The purpose of accounting information system is to provide the information required in decision making activities carried out by the so-called information processing. Most of the output required by the information processing is provided by the transaction processing system, such as the financial statements of a transaction processing system.

In general, Management Information System (MIS) is a system that can assist management in data collection, processing and analysis of data evaluation and present to the limits of valuable information and finally came to the decision where this information is useful to support the functions of management operations (Machmud, Rizan. 2013). The area of financial accounting information system is a system of grouping, recording, and processing of financial activities of local governments into a financial statement as an information that can be used by certain parties in decision-making. With advances in information technology is evolving so rapidly and the potential for widespread utilization, the management of, and access to financial information areas can be carried out more quickly and accurately. In the government accounting system, there are some important characteristics or the necessary requirements, including that the government accounting system must be designed in accordance with the constitution and the laws in force in a country. Government accounting system must be able to provide information that can be accounted for and audited. Government accounting system must be able to provide the financial information necessary for preparation of plans / programs and the evaluation of physical and financial execution. (Sonny Loho & Sugiyanto, 2004)

In the preparation and financial management, we need a system that regulates the process of classification, measurement, and disclosure of all financial transactions, called the accounting system. To produce financial information that is useful for the users, the financial statements should be prepared by personnel who have competence in the field of financial management and accounting system (Tuasikal 2007 in Afrianti 2011). It is also that by applying Accounting Information Systems effectively, it can provide the information received to assist management decisions in question. Accounting Information Systems Effectiveness can be evaluated as a value-added benefits. Effectiveness of Accounting Information Systems is a measure of success to meet the goals set. The successful implementation of SIA can be interpreted profitable application, a major concern of the organization, to give satisfaction to many users and improve the quality of their performance. (Moscove et. Al, 2009).

Financial management starting from planning, budgeting income and expenditure (APBD), financial administration to accounting and reporting. Financial administration system applications good area should include all phases of financial management so that there is continuity of processes and data. The continuity of the process and the data input process will eliminate repeated data from one stage to the next so as to reduce the volume of work and improve the consistency and quality of data because there will be no errors in the process of reinputting the data (Andri Koniyo, 2010).

In the explanation of the Government Regulation No. 56 of 2005 that has been updated to Government Regulation No.
65 Year 2010 on Regional Financial Information System mentioned that in order to follow up the implementation of the development process in line with the principles of good governance (good governance), local governments are obliged to develop and exploit advances in information technology to improve financial management, and deliver financial information to public service as a form of accountability for the activities carried out by the Government.

2.2 Qualitative Characteristics of Financial Statements

The qualitative characteristics of financial statements in accordance with Government Regulation No. 71 of 2010 concerning Government Accounting Standards (SAP) is a normative measures that need to be realized in the accounting information so that it can fulfill its purpose. The following four characteristics is a prerequisite normative necessary in order to meet the government’s financial statements desired quality:

a. Relevant

Financial statements can be said to be relevant if the information contained therein may affect decisions by helping them evaluate the events of the past or the present, and predict the future, and confirm or correct the results of their evaluations in the past. Accordingly, the financial statements of the relevant information can be linked to the intended use. Information can be said to be relevant if it fulfills the conditions which have the benefit of feedback, have the benefits of predictive, timely and complete. So that relevant information can be presented, the information presented in the financial statements of the government should be based on the information needs of users of financial statements of the government.

b. Reliably

The information in the financial statements are free from errors and misleading understanding of material, presenting any facts in an honest and verifiable. Information may be relevant, but if the nature or presentation of unreliable then use that information could potentially misleading and detrimental to the financial statements. The information reliably meet the characteristics of that presentation honest, verifiable, and neutrality. So that the information produced reliable (reliably), the presentation of information in the financial statements of the government should be based on the legislation in force, and presented thoroughly.

c. Can Be Compared

Users should be able to compare the financial statements of entities between periods to identify trends in financial position and performance and to compare the financial statements to evaluate an entity’s financial position, performance and changes in relative terms. Therefore, measurement and presentation of financial effects of transactions and other similar events done consistently. Information contained in the financial statements would be more useful if it can be compared to the prior year financial statements or other reporting entity’s financial statements in general. Comparison can be done internally and externally. Internal comparisons can be made when an entity apply the same accounting policy from year to year.

d. Can Be Understood

The information presented in the financial statements can be understood if the government said users understand the information presented and is able to interpret it. It can be seen from the benefits of the information presented to decision making. To that end, the presentation of information in financial statements the government should use the format/form and terms that are tailored to the
understanding of the users. Users must be assumed to have sufficient knowledge of the activities and the reporting entity's operating environment and a willingness to study the information presented in the financial statements of the government.

2.3 Empirical Review

Several studies on the application of accounting information systems at the local government is Indriasari (2008), Harifan (2009) and Yosefrinaldi (2013), found no evidence that suggests that a significant difference between the use of information technology to the quality of financial reports of local government and its relationship positive. Research Fikri (2011) states that the area of financial supervision SIKD and positive significant effect on the quality of financial statements. Delanno (2013) showed that a significant difference between the use of information technology to the value of the local government financial reporting information and positive relationship. The influence of the use of information technology to the value of the local government financial reporting information is the greater use of information technology, the value of financial reporting information generated will be the better government. Ratifah (2012) showed that the area of financial accounting systems have a significant impact on the quality of financial statements. Windyaningrum study (2010) showed that in addition to human resource capacity, the quality of local government financial statements are also affected by the use of information technology.

In line with Government Regulation No. 56 Year 2005 concerning Regional Financial Information System that is in line with research conducted by Nurlaela and Rahmawati (2010) with the title of the Organization Keprilakuan Effect Uses Regional Financial Information System. The result is that with the application of financial accounting system is a good area then it will have an impact on the quality of financial reports good area anyway. Halens (2014) in his research entitled Analysis System Implementation Management Information Region (SIMDA) tehadap Quality Financial Statements on education shows that the use of SIMDA has been mandated by the legislation in force, but the level of user participation SIMDA still low which will affect the quality of the financial statements. Correspondingly, Diana (2005), finding the obstacles facing local government in order to implement financial accounting system area of the cash-based to cash a modified accrual, including: the weakness of human resources who understand the accounting in the financial section, require long duration of time (transition) whenever there is a change in the system from the old system to the new system, the slow pace of preparation of regional regulations with respect to changes in the system, the selection of an alternative model of the accounting system of the Indonesian Institute of Accountants based International Public Sector Accounting Standards (IPSAS) that use accrual basis accounting system of governments using a modified cash basis.

3.1 CONCLUSION

Based on the study of theory and to analyze the results of previous studies, the researchers in this case can be concluded that the use of Financial Accounting Information Systems area affects the quality of local government financial reports. If use of Financial Accounting Information Systems dearah operated properly it will create a better quality of financial reporting as well and vice versa. One of the success factors so that an accounting information system
can be a positive influence on the quality of financial statements that human resources be user in the application of the system. Level of competence, participation will be strongly supported in order to realize the effectiveness of the use of the Financial Accounting Information System.

3.2 RECOMENDATION

Based on the above conclusions, some suggestions can be given that:

1) To each government, in order to obtain good quality financial statements, the accounting information system already owned in order to be implemented effectively, especially pay attention to the quality of human resources that support the effectiveness of the implementation of the system.

2) Limitations researchers here are only limited to the study of theory without taking into account the primary data field such as direct observation and interviews with the object of study, it is suggested further research to conduct field research.
