THE BUILDING SKINS AS OPEN BORDER BETWEEN BUILDING AND TERRITORY

The concept

HIPIN (High Performance Insulation Based on Nanostructured Encapsulation of Air) project aims to develop a **sustainable and affordable technology to produce a nanostructured thermal insulating layer** to improve thermal efficiency in new buildings and retrofitting of existing buildings.

HIPIN aerogel

Starting from **TEOS** ($R=CH_3-CH_2-$), **IMS**, **DI water** and **HCl**:

- 1) Sol gel route: hydrolysis and condensation reactions;
- 2) Heating to promote **first level of hydrolysis/ condensation**;
- 3) Second hydrolysis/condensation step to **give an alcogel**;
- 4) Supercritical drying to **give an Aerogel**.

HIGH THERMAL INSULATING EFFECT

AFFORDABLE

HIGH ROBUSTNESS

EASY TO MIX

FIRE RETARDANT

LONG TERM PERFORMANCE

PARTNERS

Incorporation into building materials

3 THERMAL INSULATING SYSTEMS

THERMAL PAINT

Solventless (VOC regulation)
Stable for **2 years/wet** and **5 years/dry**
Colour and gloss are stable over time
Thickness 20-50µm (dry-film)
Thermal Conductivity < **0.7 W/mK**

THERMAL PLASTER

Pre-mixed (fast application)
Finishing and paintable
Breathable
Thickness < **45 mm**
Dry bulk density < **250 kg/sqm**
Thermal Conductivity < **0.03 W/mK**

THERMAL PANELS

Fast application
Vapour **diffusion**
Thickness < **30 mm**
Thermal Conductivity < **0.013 W/mK**

ACKNOWLEDGEMENTS

HIPIN is a collaborative project funded by the **European Union's Seventh Framework Programme** managed by REA-Research Executive Agency [FP7/2007-2013] under Grant Agreement Number 260117 (<http://ec.europa.eu/research/rea/>).
