

Results from a German terminology mapping effort intra- and interdisciplinary cross-concordances between controlled vocabularies

Philipp Mayr, Vivien Petras, Anne-Kathrin Walter
GESIS Social Science Information Centre,
Bonn, Germany

Budapest, September 21, 2007

Outline

- Introduction & background
- Project KoMoHe
- Controlled vocabularies & cross-concordances
- Database and HTS
- Evaluation effort
- Summary & Outlook
- Demo (Online-Thesaurus)

Introduction

Theoretical background

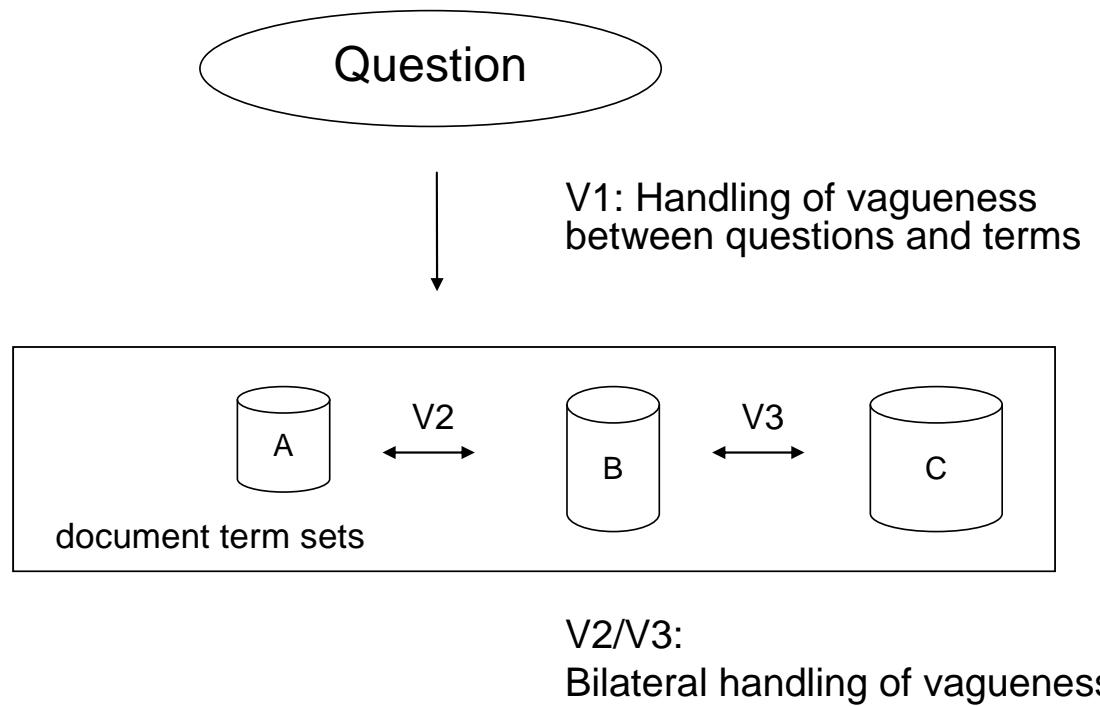

- Vagueness between terms
 - Language ambiguity
 - Meaning of terms
- Semantic heterogeneity in document collections
- Problems while indexing documents
 - Consistency
 - Precision
 - Topicality

Background

2 step methodology

- V1: between user terms and document terms
- V2: between document terms in different collections

Cross-concordances are used for V2 and V3

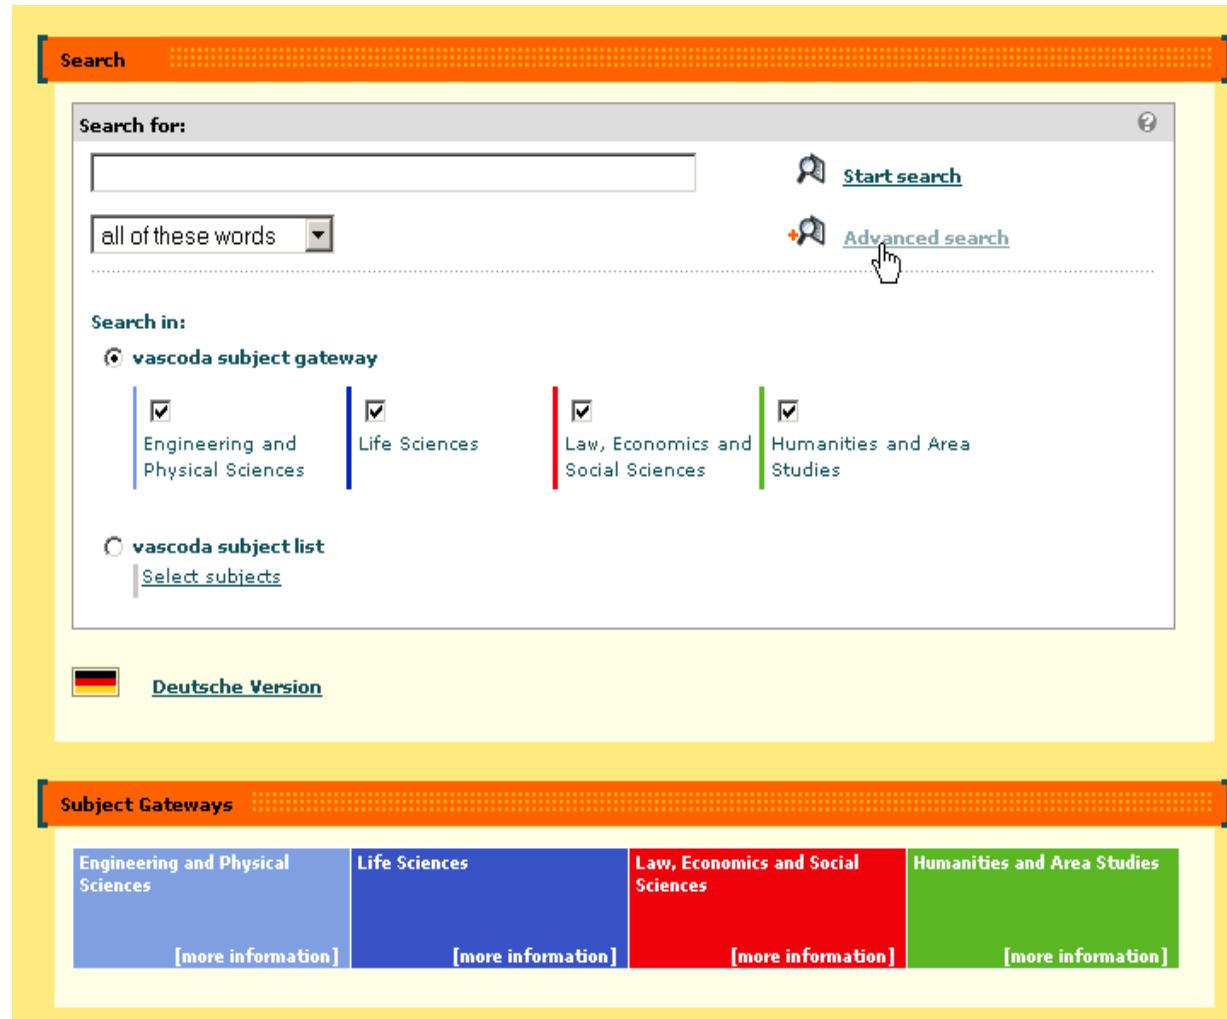

Project - background

vascoda approach: an interdisciplinary portal (DL) for scientific information

- Transfers queries to specialized portals
- Covers information services from more than 40 partners

Consequences:

- Very complex structures (dozens of collections, schemata, interfaces, indexing languages, ...)
- Necessity for semantic integration of relevant information services

The screenshot shows the vascoda search interface. At the top, there is a search bar with the placeholder "Search for:" and a dropdown menu set to "all of these words". To the right of the search bar are two buttons: "Start search" and "Advanced search", with a cursor pointing over the "Advanced search" button. Below the search bar, there is a section titled "Search in:" with two options: "vascoda subject gateway" (selected) and "vascoda subject list" (unchecked). Under "vascoda subject gateway", four categories are listed with checkboxes: "Engineering and Physical Sciences" (checked), "Life Sciences" (checked), "Law, Economics and Social Sciences" (checked), and "Humanities and Area Studies" (checked). Below this section is a link to "Deutsche Version" with a German flag icon. At the bottom, there is a "Subject Gateways" section with four colored boxes representing different fields: blue for "Engineering and Physical Sciences", blue for "Life Sciences", red for "Law, Economics and Social Sciences", and green for "Humanities and Area Studies". Each box contains a link "[more information]".

Project

Title: Kompetenzzentrum Modellbildung und Heterogenitätsbehandlung (Competence Center Modeling and Treatment of Semantic Heterogeneity)

Financing: Federal Ministry of Education and Research (Bundesministerium für Bildung und Forschung, BMBF)

Subproject of "Kompetenznetzwerk Neue Dienste, Standardisierung, Metadaten" (Competence Network: New Services, Standardization, Metadata)

Persons involved: Jürgen Krause, Philipp Mayr, Vivien Petras, Max Stempfhuber, Anne-Kathrin Walter

Project Duration: September 2004 through August 2007

Project

Task: creation, organization and management of cross-concordances

Modeling and implementation of modules to treat semantic heterogeneity for vascoda collections

Largest terminology mapping effort in Germany

First major effort to evaluate the results of using cross-concordance for distributed retrieval

Controlled vocabularies

Various types of KOS: thesauri, classification systems, subject heading lists, descriptor lists

Cross-concordances for vascoda (respective sowiport)

- Mainly KOS centred around the social sciences
- Other disciplines are covered

25 KOS altogether

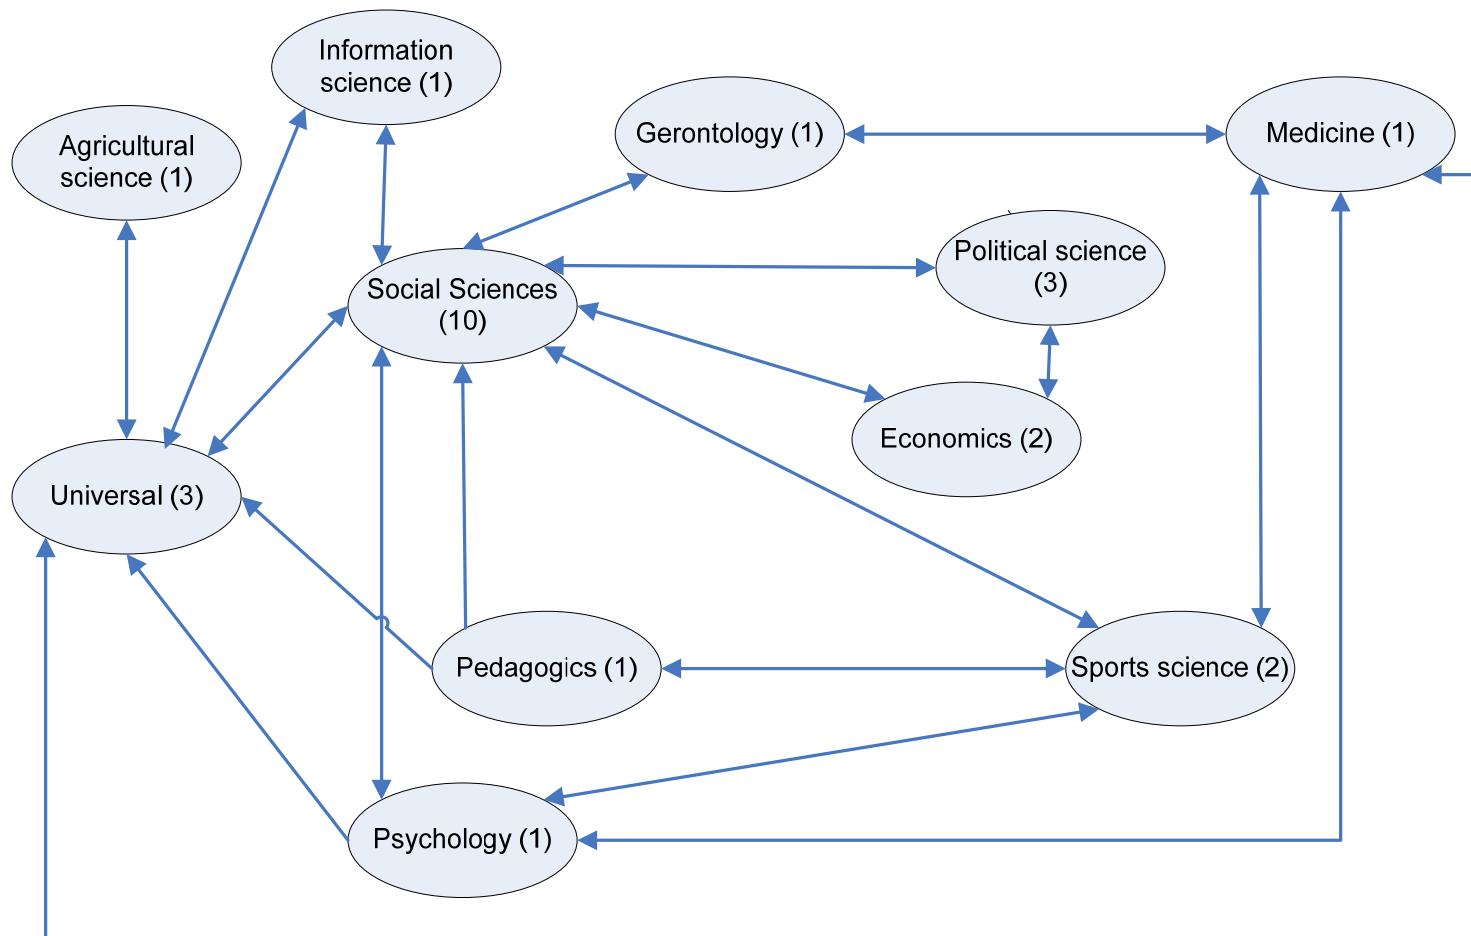

Controlled vocabularies

Types of KOS: Thesauri (16), Descriptor lists (4), Classifications (3), Subject headings (2)

Sizes of KOS: between 1,000 and 17,000 mapped terms; some KOS are mapped partly because of their size

Subjects of KOS: social science and related, political science, economics, medicine – subject specific parts of universal vocabularies

Controlled vocabularies - disciplines

Controlled vocabularies – overview 1

| | Vocabular | Name | Subject | Type | Mapped |
|----|-----------|--|----------------------|------------------|----------|
| 1 | AGROVOC | AGROVOC Thesaurus | agricultural science | Thesaurus | part |
| 2 | CSA-ASSIA | CSA Thesaurus Applied Social Sciences Index and Abstracts | social sciences | Thesaurus | complete |
| 3 | CSA-WPSA | CSA Thesaurus of Political Science Indexing Terms | social sciences | Thesaurus | complete |
| 4 | CSA-PAIS | CSA Thesaurus PAIS International Subject Headings | political science | Thesaurus | complete |
| 5 | CSA-PEI | CSA Thesaurus Physical Education Index | | Thesaurus | complete |
| 6 | FES | Descriptors of the Friedrich-Ebert Stiftung | social sciences | Descriptor list | complete |
| 7 | BISP | Descriptors of the Bundesinstitut für Sportwissenschaft | sports science | Descriptor list | complete |
| 8 | INION | Descriptors of the Institute of Scientific Information on Social Sciences of the Russian Academy of Sciences | social sciences | Descriptor list | part |
| 9 | IAB | Descriptors of the Institut für Arbeitsmarkt- und Berufsforschung | social sciences | Descriptor list | complete |
| 10 | DDC | Dewey Decimal Classification | universal | Classification | part |

| 22 | TWSE | Thesaurus für wirtschaftliche und soziale Entwicklung | political science | Thesaurus | complete |
| 23 | IBLK | Thesaurus Internationale Beziehungen und Länderkunde (Euro-Thesaurus) | political science | Thesaurus | complete |
| 24 | CSA-SA | Thesaurus of Sociological Indexing Terms | social sciences | Thesaurus | complete |
| 25 | TheSoz | Thesaurus Sozialwissenschaften | social sciences | Thesaurus | complete |

Cross-concordances

Definition: Directed, relevance evaluated/estimated relations between controlled terms of two KOS

Most KOS were bilaterally mapped, but not always symmetrically or completely.

Cross-concordances - steps

- Estimation of the costs for an inter-thesaurus mapping
 - Analysis of the vocabularies
 - Sizes of the vocabularies
 - Topical overlap
- Selection of the cross-concordance contributors and partners
 - Mostly indexers & terminology workers
 - Institutions holding the rights of a vocabulary
- Project coordination and quality assurance
 - Review of parts of the relations (semantics)
 - Recall measures & syntax check
- Import into the cross-concordance database
- Integration in the terminology service (heterogeneity web service)

Cross-concordances

Mapping is done intellectually by: researchers, terminology experts, domain experts, postgraduates

Practical rules and guidelines:

1. Use intra thesaurus relations (e.g. ND->D)
2. Test the recall and precision of combinations
3. Relevances of the relations are normally depended on the relation type
4. Use 1:1 relations first
5. Map word groups consistently

Cross-concordances

Workflow

1. Understand the meaning of a start descriptor (use start thesaurus relations and database)
2. Search term in end thesaurus
 - Search word stem
 - Search equivalence, synonyms
 - Stop if you find an equivalence, otherwise build a combination or an other relation type
3. Map the term in the cross-concordance file
4. Add a relevance for the relation

Cross-concordances - examples

Equivalence (=) means identity, synonym, quasi-synonym
Hierarchy (< >)

- Broader terms (<) from a narrower to a broad
- Narrower terms (>) from a broad to a narrower

Association (^) for related terms

Null (0) no mapping possible

- Additional relevance for
Relations

(high, medium, low)

| term KOS 1 | relation | term(s) KOS n |
|----------------------|----------|----------------------|
| hacker | = | Hacking |
| hacker | ^+ | Computers + Crime |
| hacker | ^+ | Internet + Security |
| ISDN | 0 | |
| ISDN | < | Telecommunications |
| documentation system | > | Abstracting services |

Cross-concordances - overview

| | Voc. name | Voc. name | type | status | year |
|----|-----------|-----------|-----------|----------|------|
| 1 | TheSoz | STW | bilateral | imported | 2004 |
| 2 | TheSoz | BiSp | bilateral | imported | 2004 |
| 3 | Psyndex | BISp | bilateral | imported | 2004 |

| 24 | SWD | MeSH | bilateral | | 2007 |
| 25 | SWD | AGROVOC | bilateral | | 2007 |
| 26 | JEL | STW | | ready | 2007 |
| 27 | RVK | DDC | | ready | 2007 |

7 further mappings from
the previous projects
infoconnex and
CARMEN

Data base

Vocabularies: 25

Mappings: 28 bilateral, 6 unilateral

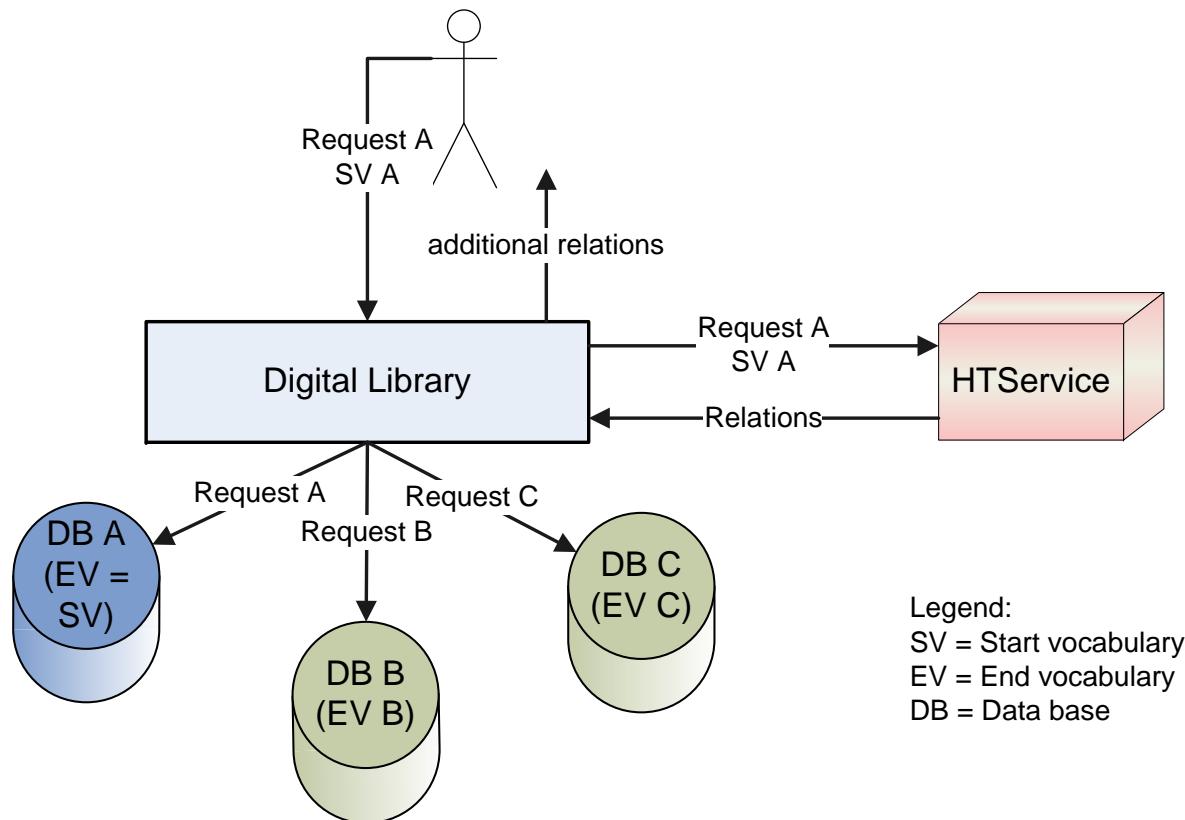

Size: round 396,000 relations to date

Concepts: round 124,000 (incl. combinations)

Cross-concordance relations:

- Equivalence: 165,000 (42%)
- Broader: 84,000 (21%)
- Narrower: 36,000 (9%)
- Association: 56,000 (14%)
- Null: 56,000 (14%)

Heterogeneity Service (HTS)

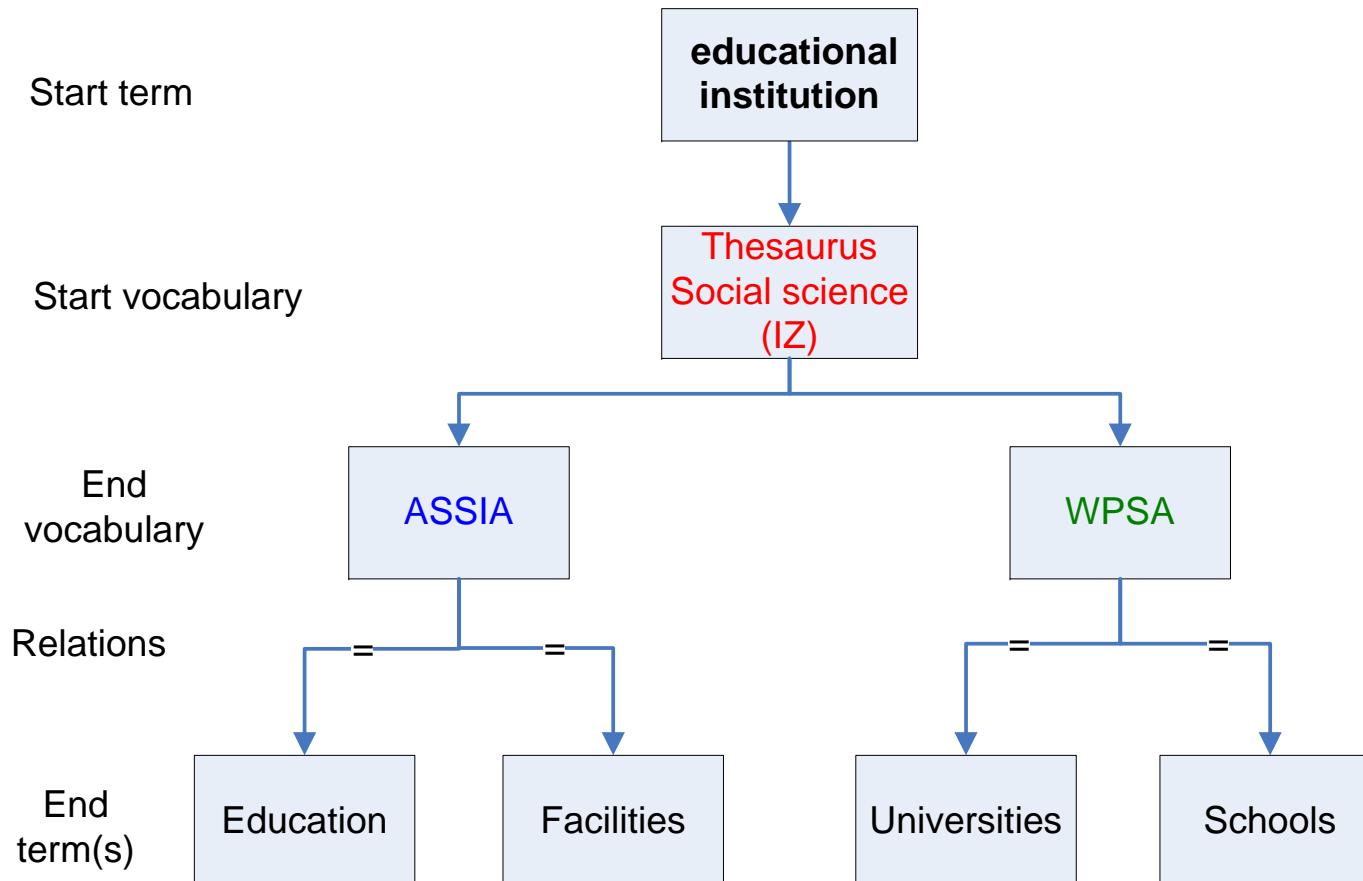

2 scenarios

- Just transform into equivalence relations

- Present additional relations to users

Heterogeneity Service

Evaluation

To date only very small evaluations in previous projects

Do cross-concordances improve search?

How?

Objective: to test and measure the effectiveness of cross-concordance in an real distributed environment

Questions:

- Exactness of the relations
- Relevance of the additional documents
- Intra- vs. Interdisciplinary cross-concordances

Measuring: quantitative analysis and retrieval test

Evaluation - Quantitative analysis

Objective: find trends in the cross-concordances

- depended on the subject and structure of the vocabularies

Measures:

- Distribution of relations
- Ratio of mapped term in the end vocabulary
- Ratio of identities (term a is exact the same as term b)
- Relations for an end term or concept

Evaluation – preliminary results

In the same discipline generally more equivalence relations (TheSoz, DZI, SWD)

- Exact match in the same discipline is high
- Exact match in the same language is high (German)

In interdisciplinary cross-concordances generally more associations and Null relations (TheSoz, Psyndex, STW, IBLK, MeSH)

But differences in creating the cross-concordances (human factor) are visible

Evaluation – Retrieval test

Objective: value-added for the user (additional documents)

Task: Evaluating real user topics (operationalized in controlled terms)

1. Free text query (FT)
2. Descriptor query in the controlled term field (CT)
3. Translated descriptors via cross-concordance (only EQ-relations) (TT)

Relevance assessment of the retrieved documents

Evaluation – Retrieval test

Steps:

1. Real user topics by partners (in operationalized form)
2. Formulation of the queries and pretest of the test
3. Searching the databases (3 queries for a topic) and download of the documents (max. 1,000 doc)
4. Import of the documents in assessment tool and assessment of the documents
5. Analysis of the assessments

Evaluation – Retrieval test

Collections:

Test 1 - Social sciences: SOLIS, CSA Sociological Abstracts, SoLit, OPAC University Library Cologne

Test 2 - Social sciences interdisciplinary: SOLIS, Econis, PsynDEX

Test 3 - Interdisciplinary: Medline, PsynDEX, Econis, World Affairs online

Topics: between 5-10 for a mapping

Documents: max. 1,000 documents for a topic, documents are not ranked

Evaluation – preliminary results

Recall is the percentage of retrieved relevant documents out of all relevant documents

Precision is the percentage of relevant documents out of the retrieved doc.

Evaluation – preliminary results

| SWD-TheSoz | | CT | TT | FT |
|------------|-----------|---------------|---------------|---------------|
| 5 topics | Recall | 0,5817 | 0,5817 | 0,684 |
| | Precision | 0,3663 | 0,3663 | 0,3642 |

- TT improves over CT, but not necessarily over FT

| TheSoz-DZI | | CT | TT | FT |
|------------|-----------|---------------|---------------|---------------|
| 10 topics | Recall | 0.5907 | 0.7602 | 0.5327 |
| | Precision | 0.3173 | 0.3914 | 0.6760 |

- FT generates more doc (FT search controlled terms too)

| STW-TheSoz | | CT | TT | FT |
|------------|-----------|---------------|---------------|---------------|
| 6 topics | Recall | 0.2807 | 0.5859 | 0.5944 |
| | Precision | 0.2351 | 0.3634 | 0.3199 |

Summary & Outlook

All related cross-concordances will be used in sowiport

Results of the quantitative and retrieval evaluation will be finished next month

Other relation types and their utilization in search

Indirect term transformations (experiments)

Merging V1 treatment (V1 is the vagueness between user terms and descriptors) and cross-concordances
