KATERINA KOZINA

Abstract
The article presents Master Diploma on the problem of students personal development by means of decorative and applied art at the lessons of Technology in the school №9, the city of Vladimir, Russia.

Key worlds: decorative and applied art, interior, painting, product.

PROJECT ARGUMENTS
Now there is a problem of the revival of national traditions. It is vital for every people to know and understand its culture. Learning our native culture we perceive our human nature and thereby develop our personality. Not only a family but also a school should influence the personal development as pupils spend most of the time at school. Decorative and applied art as a part of a national culture is one of the means of personal development.

The spiritual revival of the society and its national identification arouse. The interest for the folk culture feeds the modern upbringing of the new generations and promotes the society’s spiritual health. The folk art is a unique world of the cultural wealth and realization of the people’s spiritual power keeping and developing its ethical potential. Many scientists wrote about the role and meaning of the folk art for children upbringing. Among them are A.V. Bakushinskaya, P.P. Blonsky, N.S. Shatsky and others. They pointed out that the art awakes the first bright images of the motherland and its culture, contributes to the formation of the feeling of beauty, and develops children creative abilities.

The school years are the beginning of the all-round development and the personality formation. At the time the development of imagination, memory, mind, speech lead to the formation of the world knowledge and the logical thinking.

PROJECT
The school subject «Technology» gives students functional technological literacy, polytechnic knowledge and skills necessary for all trades and forms such important traits like diligence, thrifty, initiative, respect to the labour, persistence, creativity.

The Role of decorative and applied art in the personal development.
