

## ARP Case Report nº 19: What is your diagnosis?

### *Caso Clínico ARP nº 19: Qual o seu diagnóstico?*

Manuel Cruz, João Facas, Paulo Donato

Serviço de Imagem Médica, Centro Hospitalar e Universitário de Coimbra, Coimbra, Portugal

### Case Presentation

A 4-year-old male child was referred to our department with an incidental finding reported on an abdominal ultrasound which was performed during the diagnostic workup of an interauricular communication. The patient

was asymptomatic. For further characterization of the aforementioned finding, a contrast-enhanced computed tomography (CE-CT) with multiplanar and maximum intensity projection reformation (MIP) was performed, followed by digital subtraction angiography (DSA).
