**Abstract** – The Resava Gorge is situated in Eastern Serbia in the region of the Gornja Resava River, extending westward from Mt. Globski Krš to the town of Lisine. In floral research conducted during 1997 and 1998, 297 taxa of vascular flora belonging to 68 families were discovered. The families *Poaceae* (28), *Asteraceae* (21), *Fabaceae* (20) and *Lamiaceae* (19) were best represented. The presence of 49 floral elements was also noted. The greatest number of plants are sub-Central European (18,86 %), Eurasian (14,14 %), sub-Mediterranean (8,75 %), Central European (6,40 %) and sub-Eurasian (6,40 %). As for life forms, hemi-cryptophytes (49,50 %), phanerophytes (19,53 %) and geophytes (11,11 %) were noted as dominant.

**Key words:** Resava Gorge, vascular flora, biodiversity, relict, endemics, Eastern Serbia.

UDC 581.9 (479.11-11)

### INTRODUCTION

Owing to their specific geographical position, meso- and microclimatic conditions, and great geological and geomorphological diversity, the limestone canyons and gorges of the Balkan Peninsula, including the Resava Gorge in Eastern Serbia (Fig. 1), represent refugia for many Tertiary species whose ranges shrank during glacial periods in Europe and which are preserved nowadays as relict and endemorelics.

This area belongs to a region with a moderately continental climate. Passing through the gorge this climate collides with sub-Mediterranean and steppe climatic influences and changes in keeping with altitude and exposure, which results in different types of microclimates. Their presence caused the formation of specific kinds of habitats housing a great variety of flora, vegetation, and plots. The orography of canyons and gorges caused inversion of climatic conditions and consequent inversion of vegetation. Owing to the circumstances mentioned, a significant number of geologically and horologically distant species can be found co-existing in a relatively small space.

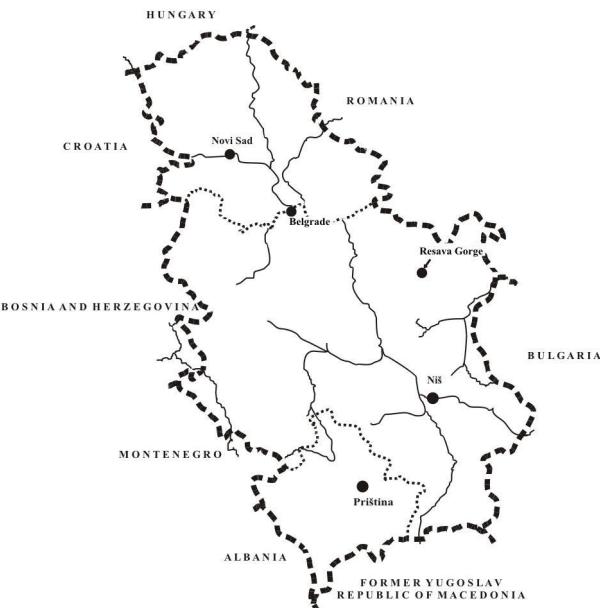

Fig. 1. Geographical position of the Resava Gorge.

Table 1. Vascular flora of the Resava Gorge.

SPECIES	FLORISTIC ELEMENT	LIFE FORM
<b>ACERACEAE</b>		
<i>Acer campestre</i> L.	Sub-Central European	Phanerophytic

<i>Arabis turrita</i> (L.) Scop.	Sub-Mediterranean	Hemi-cryptophytic

The flora of the Resava Gorge was first mentioned in "Flora Kneževine Srbije" (Flora of the Principality of Serbia) by P a n č ić (1874). Investigations were also conducted by J o v a n o v ić (1970), D i k l ić (1970), T u c o v ić (1970), G a j ić (1970–1972), N i k o l ić (1972), S t a j ić (1972), V u k ić e v ić (1992), and others. Relict vegetation in this region was researched and described in studies of M i š ić (1971, 1981, 1982), with special emphasis on forest communities.

#### MATERIALS AND METHODS

Seasonal research on flora in the Resava Gorge was conducted in 1997 and 1998 from Lisine to Globski Krš, in the canyon of the Suvaja, and on the slopes of Mt. Beljanica (Golovršac locality).

The collected plants were herbarized according to the method of J a n k o v ić (1971) and deposited in the Institute of Botany and Jevremovac Botanical Garden.

The files opened for every plant species contain information about the area, locality, altitude, exposure and slope, geological base, and soil type in the place where the species was found. Identification of plant taxa was carried out according to "Flora SR Srbije" (1970–1992) and "Iconographia Flora Partis Austro-orientalis Europeae Centralis" (1975).

Determination of floristic elements was carried out in accordance with the phytogeographical classifications of G a j ić (1984), S t e v a n o v ić (1992), and J o v a n o v ić (1994).

The life forms defined by R a u n k i e r (1934) are supplemented and developed according to S t e v a n o v ić (1992) and J o v a n o v ić (1994).

#### RESULTS AND DISCUSSION

Floristic research in the Resava Gorge revealed the presence of 297 species and subspecies (Tab. 1) belonging to 68 families, among which Poaceae (28), Asteraceae (21), Fabaceae (20), Lamiaceae (19), Brassicaceae (15), Rosaceae (15), Apiaceae (12), and Caryophyllaceae (11) are the best represented.

Further analysis demonstrates the presence of 187 genera. Of these, *Trifolium* (eight), *Campanula* (eight), *Galium* (seven), and *Acer* (six) have the greatest number of species.

There are 49 floristic elements in the vascular flora of the Resava Gorge, belonging to nine range types. The greatest number of species (27,95 %) belong to the Eurasian range type. In the Moesian province, the Eurasian floristic element is represented with just 14,13 % (G a j ić, 1984). That points to great diversity of habitats and ecological factors in the region of the Resava Gorge, as well as to its refugial character. Fifteen of the total number of Eurasian species [*Cornus mas* L. (Pontic-sub-Mediterranean), *Cotinus coggygria* Scop. (Pontic-Central Asian-sub-Mediterranean), *Allium flavum* L. (Pontic-Central Asian-sub-Mediterranean) etc.] represent a connection between xerothermal Mediterranean - sub-Mediterranean habitats and steppes and forest-steppes of Europe and Asia, their presence occurring due to specific climatic conditions in the gorge created by collision of different climatic influences from the mentioned regions. As for the Eurasian range type, the greatest number of plants (19) belong to the floristic element of the same name: *Juniperus sabina* L., *Calamagrostis varia* (Schrad.) Host., *Epipogium aphyllum* S. W. etc.

In second place is the Central European range type, with 88 taxa. The greatest number of species belong to the category of sub-Central European floristic elements (18,86%).

According to G a j ić (1984), species of this range type found optimal conditions for their survival in oak-hornbeam forests, in which they participate with 20,76%. In these communities, Central European floristic elements are represented with 14 species (4,26%), indicating that the flora of the Resava Gorge is connected to the Central European floristic region through transitional floristic elements (G a j ić, 1984).

The Mediterranean range type is in the third place with respect to the number of species in the investigated area (14,48%) among which sub-Mediterranean floristic elements (8,75%) are dominant. Extending westward, the gorge is surrounded by many mountain ranges, and this is the main reason for the minor presence of Mediterranean species. Sub-Atlantic-sub-Mediterranean floristic elements are represented with nine species, East-sub-Mediterranean floristic elements with seven, and Mediterranean-sub-Mediterranean floristic elements with one. *Acer monspessulanum* L., *Achnaterum calamagrostis* (L.) P. Beauv., *Bromus mollis* L., *Calamintha officinalis* Moench., *Viburnum lantana* L., and *Quercus pubescens* Willd. are typical representatives of this range type.

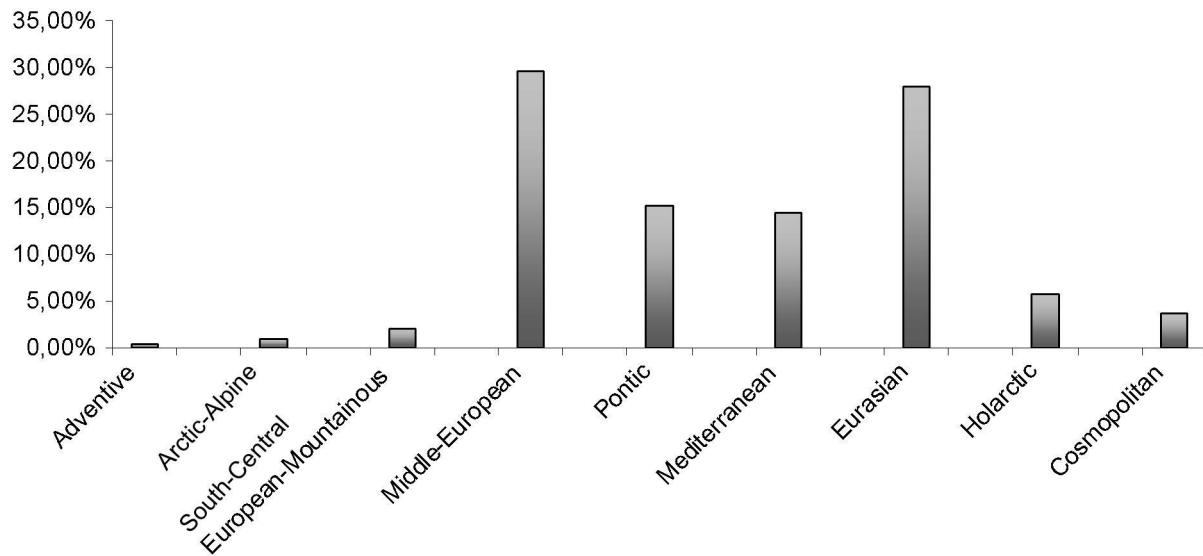

Fig. 2. Percentage of range types in the Resava Gorge.

Wind exposed, relatively dry and thermophilous habitats are populated by species of the Pontic range type (12,12%): *Melica transsilvanica* Schr. (Pontic), *Thymus marchallianus* Willd. (Pontic-Pannonian), *Calamintha acinos* (L.) Clairv. (Sub-Pontic), etc. The most frequent are representatives of sub-South Siberian (3,03%), sub-Pontic-Central Asian (2,69%), Pontic (1,68%), sub-Pontic (1,68%), and other floristic elements.

There are also species of the Holarctic (5,72%),

Cosmopolitan (3,70%), Central-Southern-European-Mountainous (2,02%), Arctic-Alpine (1,01%), and Adventive (0,34%) range types (Fig. 2).

The research revealed the presence of one endemic of the Moesian Province (*Erysimum chrysanthum* Panč.), one west-Moesian endemic [*Dianthus petraeus* Waldst. et Kit. subsp. *noeanus* (Boiss.) Tutin], and two sub-Moesian endemics (*Dianthus petraeus* Waldst. et Kit. f. *lildorius* and *Viola macedonica* Boiss. et Heldr.).

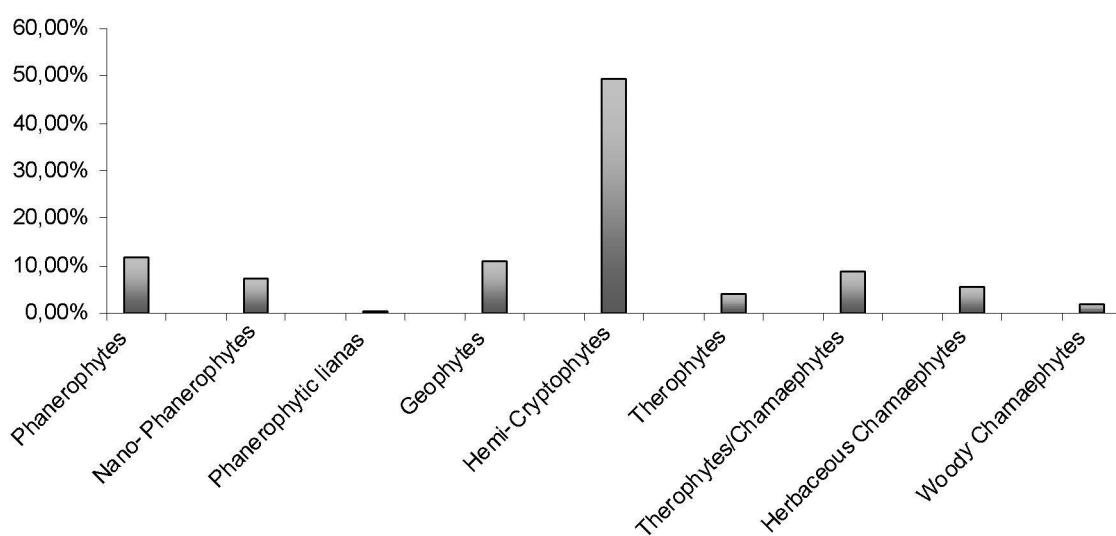

Fig. 3. Percentage of life forms in the Resava Gorge.

The extraordinary presence of different trees (11,78%) and shrubs (7,41%) recorded in the analyzed forest communities is the main evidence of their poly-dominancy. Including one phanerophytic liana (*Hedera helix* L.), the total number of phanerophytes in the Resava Gorge is about 58. Among them there are numerous relics: *Pinus nigra* Arn., *Abies alba* Mill., *Taxus baccata* L., *Juniperus sabina* L., *Juglans regia* L., *Ostrya carpinifolia* Scop., etc.

The significant number of microhabitats with specific ecological conditions resulted in the occurrence of a great number of herbaceous species especially hemicyclopediae, which are represented with 147 species (49,50 %) in the flora of the Resava Gorge - a percentage higher than in the flora of the Republic of Serbia (46,8 %).

With respect to the spectrum of life forms, geophytes (11,11%) were in third place in the flora of the investigated area. *Oxalis acetosella* L., *Pteridium aquilinum* (L.) Kuhn., *Equisetum telmateia* Ehrh., and others were found in humid habitats with low radiant energy.

The spectrum of life forms in this region also includes therophytes/chamaephytes (8,75%), herbaceous chamaephytes (5,39%), and woody chamaephytes (1,68 %) (Fig. 3).

<sup>2</sup>Агенција за заштиту природе, 11000 Београд, Србија

Ресавска клисуре се налази у пределу Горње Ресаве и простире се од Глобског крша на истоку до варошице Лисине на западу. Флористичка истраживања на овом подручју вршена су током 1997. и 1998. године, када је забележено 297 врста васкуларних биљака сврстаних у 68 фамилија. Највећи број врста припада фамилијама *Poaceae* (28), *Asteraceae* (21), *Fabaceae* (20) и *Lamiaceae* (19). Констатовано је присуство 49 флор-

них елемената, од којих су најзаступљенији субредњеевропски (18,86 %), евроазијски (14,14 %), субмеридијански (8,75 %), средњеевропски (6,40 %) и субевроазијски (6,40 %). У спектру животних форми доминирају хемикриптофите (49,50 %), фанерофите (19,53 %) и геофите (11,11 %). Велики проценат дрвенастих врста у овом региону, указује на полидоминантну структуру и на реликтност биљних заједница.

## ERRATA CORRIGE

<b>CELASTRACEAE</b>		
<i>Evonymus europaeus</i> L.	Sub-Central European	Nano-phanerophytic
<i>Evonymus latifolius</i> (L.) Mill.	Sub-Mediterranean	Nano-phanerophytic
<i>Evonymus verrucosus</i> Scop.	Sub-Pontic	Nano-phanerophytic
<b>CISTACEAE</b>		
<i>Helianthemum ovatum</i> (Viv.) Dum.	Mediterranean-sub-Mediterranean-Atlantic-Central European-Pontic-Central Asian	Woody-chamaephytic
<b>CONVOLVULACEAE</b>		
<i>Convolvulus arvensis</i> L.	Cosmopolitan	Geophytic
<b>CORNACEAE</b>		
<i>Cornus mas</i> L.	Pontic-sub-Mediterranean	Nano-phanerophytic
<b>CORYLACEAE</b>		

Table 1. Contuinued.

SPECIES	FLORISTIC ELEMENT	LIFE FORM
<i>Carpinus betulus</i> L.	Central European	Phanerophytic
<i>Carpinus orientalis</i> Mill.	East-sub-Mediterranean	Phanerophytic
<i>Corylus avellana</i> L.	Sub-Central European	Phanerophytic
<i>Corylus colurna</i> L.	Euxine-Iranian	Phanerophytic
<b>CRASSULACEAE</b>		
<i>Sedum album</i> L.	Sub-Central European	Herbaceous-chamaephytic
<i>Sedum telephium</i> L.	Eurasian	Hemi-cryptophytic
<i>Sempervivum zeleborii</i> Schott.	Pontic	Hemi-cryptophytic
<b>CUPRESSACEAE</b>		
<i>Juniperus sabina</i> L.	Eurasian	Nano-phanerophytic
<b>CUSCUTACEAE</b>		
<i>Cuscuta europaea</i> L.	Central European	Therophytic
<b>CYPERACEAE</b>		
<i>Carex caespitosa</i> L.	Sub-Central European	Hemi-cryptophytic
<i>Carex pendula</i> Huds.	Sub-Atlantic-sub-Mediterranean	Hemi-cryptophytic
<i>Carex pilulifera</i> L.	Eurasian	Hemi-cryptophytic
<b>DIPSACACEAE</b>		
<i>Dipsacus laciniatus</i> L.	Pontic-Central Asian-sub-Mediterranean	Therophytic / Chamaephytic
<i>Dipsacus sylvester</i> Huds.	Sub-Central European	Therophytic / Chamaephytic
<i>Scabiosa columbaria</i> L.	Sub-Central European	Hemi-cryptophytic
<i>Scabiosa ochroleuca</i> L.	Pontic-Central Asian	Hemi-cryptophytic
<b>EQUISETACEAE</b>		
<i>Equisetum arvense</i> L.	Circumpolar	Geophytic
<i>Equisetum telmateia</i> Ehrh.	Circumpolar	Geophytic
<b>EUPHORBIACEAE</b>		
<i>Euphorbia amygdaloides</i> L.	Sub-Atlantic-sub-Mediterranean	Herbaceous-chamaephytic
<i>Euphorbia platyphyllos</i> L.	Sub-Mediterranean	Therophytic
<i>Mercurialis perennis</i> L.	Sub-Central European	Geophytic
<b>FABACEAE</b>		
<i>Astragalus depressus</i> L. var. <i>depressus</i>	Sub-Mediterranean	Hemi-cryptophytic
<i>Coronilla varia</i> L.	Sub-Pontic	Hemi-cryptophytic
<i>Dorycnium herbaceum</i> Vill.	East-sub-Mediterranean	Woody-chamaephytic
<i>Lathyrus niger</i> (L.) Bernh.	Sub-Pontic	Geophytic
<i>Lathyrus pratensis</i> L.	Sub-Eurasian	Geophytic
<i>Lathyrus vernus</i> (L.) Bernh.	Sub-Central European	Geophytic
<i>Lotus corniculatus</i> L.	Sub-Eurasian	Hemi-cryptophytic
<i>Lotus siliquosus</i> L.	Sub-Central European	Hemi-cryptophytic
<i>Medicago falcata</i> L.	Sub-Pontic-Central Asian	Hemi-cryptophytic
<i>Melilotus dentatus</i> (Waldst. et Kit.) Pers.	Pontic-Central Asian	Therophytic / Chamaephytic
<i>Ononis arvensis</i> L.	Sub-Central European	Herbaceous-chamaephytic
<i>Trifolium alpestre</i> L.	Sub-Pontic-Central Asian	Hemi-cryptophytic
<i>Trifolium campestre</i> Schreb.	Sub-Central European	Therophytic / Chamaephytic
<i>Trifolium diffusum</i> Ehrh.	Pontic-sub-Mediterranean	Therophytic
<i>Trifolium medium</i> Huds.	Sub-Central European	Hemi-cryptophytic
<i>Trifolium meneghinianum</i> Clem.	Moesian	Hemi-cryptophytic
<i>Trifolium pannonicum</i> L.	Pontic-East-sub-Mediterranean	Hemi-cryptophytic
<i>Trifolium repens</i> L.	Sub-Eurasian	Hemi-cryptophytic
<i>Trifolium streps</i> Crantz.	Sub-Central European	Therophytic
<i>Vicia sparsiflora</i> Ten.	Sub-Pannonian	Hemi-cryptophytic
<b>FAGACEAE</b>		
<i>Fagus sylvatica</i> L. subsp. <i>moesiaca</i> (K. Maly) Hjelquist.	Moesian	Phanerophytic
<i>Quercus cerris</i> L.	East-sub-Mediterranean	Phanerophytic
<i>Quercus petraea</i> (Matt.) Liebl.	Central European	Phanerophytic
<i>Quercus pubescens</i> Willd.	Sub-Mediterranean	Phanerophytic
<b>GERANIACEAE</b>		
<i>Geranium dissectum</i> L.	Eurasian	Therophytic
<i>Geranium macrorrhizum</i> L.	East-sub-Mediterranean	Hemi-cryptophytic
<i>Geranium pusillum</i> Burm.	Sub-Central European	Therophytic / Chamaephytic
<i>Geranium robertianum</i> L.	Sub-Circumpolar	Therophytic / Chamaephytic
<i>Geranium rotundifolium</i> L.	Eurasian	Therophytic
<b>GROSSULARIACEAE</b>		
<i>Ribes multiflorum</i> Kit.	Balkan-Apennine	Nano-phanerophytic
<b>HYPERICACEAE</b>		
<i>Hypericum perforatum</i> L.	Sub-Eurasian	Hemi-cryptophytic
<b>JUGLANDACEAE</b>		
<i>Juglans regia</i> L.	Sub-Iranian-East-sub-Mediterranean	Phanerophytic

Table 1. Contuined.

SPECIES	FLORISTIC ELEMENT	LIFE FORM
<b>JUCACEAE</b>		
<i>Juncus effusus</i> L.	Cosmopolitan	Hemi-cryptophytic
<i>Juncus glaucus</i> Ehrh.	Sub-Circumpolar	Hemi-cryptophytic
<i>Luzula luzuloides</i> (Lam.) Dandy et Wilmett. f. <i>laxa</i>	Central European	Hemi-cryptophytic
<b>LAMIACEAE</b>		
<i>Calamintha acinos</i> (L.) Clairv.	Sub-Pontic	Therophytic / Chamaephytic
<i>Calamintha officinalis</i> Moench.	Sub-Mediterranean	Hemi-cryptophytic
<i>Calamintha vulgaris</i> (L.) Druce.	Circumpolar	Hemi-cryptophytic
<i>Glechoma hirsuta</i> W. et K.	Pontic-East-sub-Mediterranean	Hemi-cryptophytic
<i>Mentha longifolia</i> Huds.	Sub-Central European	Geophytic
<i>Nepeta nuda</i> L.	Sub-Pontic	Hemi-cryptophytic
<i>Origanum vulgare</i> L.	Eurasian	Geophytic
<i>Prunella laciniata</i> L.	Pontic-sub-Mediterranean	Hemi-cryptophytic
<i>Prunella vulgaris</i> L.	Sub-Eurasian	Hemi-cryptophytic
<i>Salvia glutinosa</i> L.	Sub-Central European	Hemi-cryptophytic
<i>Salvia verticillata</i> L.	Sub-Pontic-sub-Mediterranean	Hemi-cryptophytic
<i>Stachys germanica</i> L.	Pontic-sub-Mediterranean	Hemi-cryptophytic
<i>Stachys officinalis</i> (L.) Trevis.	Sub-Central European	Hemi-cryptophytic
<i>Teucrium chamaedrys</i> L.	Sub-Pontic-sub-Mediterranean	Woody-chamaephytic
<i>Teucrium montanum</i> L.	Sub-Mediterranean	Woody-chamaephytic
<i>Thymus jankei</i> Čel.	Moesian-Dacian	Herbaceous-chamaephytic
<i>Thymus marchaliianus</i> Willd.	Pontic-Pannonian	Herbaceous-chamaephytic
<i>Thymus montanus</i> W. et K.	Eurasian	Herbaceous-chamaephytic
<i>Thymus pulegioides</i> L.	Sub-Central European	Herbaceous-chamaephytic
<b>LILIACEAE</b>		
<i>Leopoldia comosa</i> (L.) Burm.	Sub-Mediterranean	Geophytic
<b>LYTHRACEAE</b>		
<i>Lythrum salicaria</i> L.	Pontic-Central Asian-sub-Mediterranean	Hemi-cryptophytic
<b>MALACEAE</b>		
<i>Crataegus calycina</i> Peter.	Central European	Phanerophytic
<i>Crataegus monogyna</i> Jacq.	Sub-Central European	Phanerophytic
<i>Crataegus oxyacantha</i> L.	Sub-Central European	Phanerophytic
<i>Crataegus pentagyna</i> W. et K.	Pontic-Pannonian	Phanerophytic
<i>Sorbus torminalis</i> (L.) Crantz.	Sub-Atlantic-sub-Mediterranean	Phanerophytic
<b>MALVACEAE</b>		
<i>Althea palida</i> (W. et K.) Willd.	Pontic-Pannonian	Therophytic / Chamaephytic
<b>OENOTHERACEAE</b>		
<i>Circaea alpina</i> L.	Sub-Boreal-Circumpolar	Geophytic
<i>Epilobium hirsutum</i> L.	Sub-Eurasian	Hemi-cryptophytic
<i>Epilobium montanum</i> L.	Eurasian	Hemi-cryptophytic
<b>OLEACEAE</b>		
<i>Fraxinus excelsior</i> L.	Sub-Central European	Phanerophytic
<i>Fraxinus ornus</i> L.	Sub-Mediterranean	Phanerophytic
<i>Ligustrum vulgare</i> L.	Sub-Central European	Nano-phanerophytic
<i>Syringa vulgaris</i> L.	Moesian-Dacian	Phanerophytic
<b>ORCHIDACEAE</b>		
<i>Epipogium aphyllum</i> S.W.	Eurasian	Geophytic
<b>OROBANCHACEAE</b>		
<i>Orobanche lutea</i> Baumg.	Sub-Pontic-Central Asian	Geophytic
<b>OXALIDACEAE</b>		
<i>Oxalis acetosella</i> L.	Circumpolar	Geophytic
<b>PINACEAE</b>		
<i>Abies alba</i> Mill.	Central European	Phanerophytic
<i>Picea abies</i> (L.) Karst.	Boreal-European	Phanerophytic
<i>Pinus nigra</i> Arn.	Sub-Mediterranean	Phanerophytic
<b>PLANTAGINACEAE</b>		
<i>Plantago altissima</i> L.	East-sub-Mediterranean	Hemi-cryptophytic
<i>Plantago lanceolata</i> L.	Eurasian	Hemi-cryptophytic
<i>Plantago major</i> L.	Eurasian	Hemi-cryptophytic
<b>POACEAE</b>		
<i>Achnatherum calamagrostis</i> (L.) P. Beauv.	Sub-Mediterranean	Hemi-cryptophytic
<i>Agrostis tenuis</i> Sibth.	Circumpolar	Hemi-cryptophytic
<i>Agrostis verticillata</i> Vill.	Sub-Mediterranean	Hemi-cryptophytic
<i>Arrhenatherum elatius</i> (L.) W. et K.	Sub-Central European	Hemi-cryptophytic
<i>Brachypodium pinnatum</i> (L.) P. Beauv.	Sub-South Siberian	Hemi-cryptophytic
<i>Brachypodium silpticum</i> (Huds.) P. Beauv.	Sub-South Siberian	Hemi-cryptophytic

Table 1. Contuinued.

SPECIES	FLORISTIC ELEMENT	LIFE FORM
<i>Briza media</i> L.	Eurasian	Hemi-cryptophytic
<i>Bromus mollis</i> L.	Sub-Mediterranean	Therophytic
<i>Bromus ramosus</i> Huds.	Sub-Eurasian	Hemi-cryptophytic
<i>Bromus squarosus</i> L.	Sub-Mediterranean	Therophytic
<i>Bromus sterilis</i> L.	Sub-Eurasian	Therophytic
<i>Calamagrostis varia</i> (Schrad.) Host.	Eurasian	Hemi-cryptophytic
<i>Calamagrostis epigeios</i> (L.) Roth.	Eurasian	Hemi-cryptophytic
<i>Cynosurus cristatus</i> L.	Sub-Central European	Hemi-cryptophytic
<i>Cynosurus echinatus</i> L.	Sub-Atlantic-sub-Mediterranean	Hemi-cryptophytic
