Nenad Ignjatović

Joint event of the 11th Young Researchers' Conference: Materials Science and Engineering and the 1st European Early Stage Researchers' Conference on Hydrogen Storage

Book Title: *Joint Event of the 11th Young Researchers' Conference: Materials Science and Engineering and the 1st European Early Stage Researchers' Conference on Hydrogen Storage*
Program and the Book of Abstracts

Publisher:

**Materials Research Society of Serbia
Institute of Technical Sciences of SASA
Vinča Institute of Nuclear Sciences, University of Belgrade**

For Publisher:

**Prof. Dr. Dragan Uskoković
Dr. Jovan Nedeljković
Academician Zoran Đurić**

Editors:

**Dr. Jasmina Grbović Novaković
Prof. Dr. Nenad Ignjatović**

Design:

Dr. Nikola Novaković

Technical editor:

Aleksandra Stojičić

ISBN 978-86-7306-122-1

Print: Materials Research Society of Serbia : 170 e-copies

Mechanical activation is widely used for sample preparation before the sintering process. However, the influence of pressure, which is used for compaction, has not been completely investigated. Cordierite, $2\text{MgO}\cdot 2\text{Al}_2\text{O}_3\cdot 5\text{SiO}_2$, is a very attractive high-temperature ceramic material, due to its outstanding electrical characteristics, such as the low temperature expansion coefficient, low dielectric constant and good mechanical properties. Based on our previous investigation, the mechanical activation of the starting mixtures with 5.00 mass% TiO_2 was performed in a high energy ball mill during 10 minutes. Compaction pressure varied from 0.5 to 6 t/cm². Differential thermal analysis (DTA) was used in order to determine characteristic temperatures within the system during heating. Sintering process was performed at 1350 °C for 4 h in air atmosphere. The phase composition of activated and sintered samples was analyzed by the X-ray diffraction method. Scanning electron microscopy was performed to analyze both compacted and sintered sample microstructure. This paper deals with the influence of compaction pressure on the densities of green bodies as well as on the sintered samples, along with electrical properties
